Edgar T. Conquest, of Colorado, to be register of the land office at Sterling, Colo.

Charles R. Smith, of Colorado, to be register of the land office at Durango, Colo.

Fred C. Stoddard, of Montana, to be register of the land office at Missoula, Mont.

PROMOTION IN THE REGULAR ARMY.

MEDICAL CORPS.

To be captain.

First Lieut. William Le Roy Thompson, Medical Corps, from July 6, 1922.

APPOINTMENTS, BY TRANSFER, IN THE REGULAR ARMY.

AIR SERVICE.

First Lieut. Donald Frank Stace, Coast Artillery Corps, with rank from July 2, 1920.

COAST ARTILLERY CORPS.

First Lieut. Joe David Moss, Field Artillery, with rank from October 7, 1919.

CONFIRMATIONS.

Executive nominations confirmed by the Senate July 10 (legislative day of April 20), 1922.

REGISTER OF THE LAND OFFICE.

Robert Bruce Milroy to be register of the land office, Yakima, Wash.

PROMOTIONS IN THE ARMY.

Clarence Charles Williams to be Chief of Ordnance, with rank of major general.

Joseph Frank Janda to be colonel, Adjutant General's Department.

Louis Stewart Chappelear to be lieutenant colonel, Adjutant General's Department.

Richard Kerr Cravens to be lieutenant colonel, Adjutant General's Department.

Robert Whitfield to be lieutenant colonel, Adjutant General's Department.

Andrew Jackson White to be major, Adjutant General's Department.

Eugene Ross Householder to be major, Adjutant General's Department.

Edward Roth, jr., to be major, Adjutant General's Department.

Paul Theodore Bock to be major, Air Service.

Kenneth McCatty to be captain, Coast Artillery Corps.

William Anthony Woodlief to be captain, Adjutant General's Department.

Sherman Robert Ingram to be captain, Veterinary Corps.

Morton Donald Adams to be first lieutenant, Coast Artillery Corps.

Stephen Richard Wood to be chaplain, with rank of major.

Henry Jouette Geiger to be chaplain, with rank of captain.

POSTMASTERS.

ARIZONA.

Patrick D. Ryan, Fort Huachuca.

ILLINOIS.

William L. McKenzie, Elizabeth.

Mancel Talcott, Waukegan.

LOUISIANA.

Novilla T. King, Simsboro.

NEBRASKA.

Elmer W. Couch, Henry.

Mildred E. Johnson, Mead.

NEW JERSEY.

Edmund A. Kenney, River Edge.

Jennie Madden, Tuckahoe.

NORTH CAROLINA.

Sadie M. Mullen, Huntersville.

SENATE.

TUESDAY, *July 11, 1922.*

(Legislative day of Thursday, April 20, 1922.)

The Senate met at 11 o'clock a. m., on the expiration of the recess.

The Vice President being absent, the President pro tempore (Mr. CUMMINS) took the chair.

THE TARIFF.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes.

Mr. McLEAN. Mr. President, on yesterday in my temporary absence the Senator from Utah [Mr. KING] took occasion again to refer to the effect of protection upon the industries in some of the Eastern States, and especially in the State of Connecticut. I agree with him as to the effect of a protective tariff upon the great industrial States of the country that have "prospered enormously," as he says, but I do not agree with him in some of the conclusions which he reached in regard to the effect of protection upon the workingmen of the country who are engaged in the manufacturing industries. The Senator from Utah took occasion, among other things, to say:

> The steel interests and the textile interests in the past have been beneficiaries of the tariff system, and they have grown rich at the expense of the people by reason of the tariff rates which have been imposed.

I am quoting from page 10109 of yesterday's RECORD.

Mr. President, the fact that this is the greatest and richest Nation in the world, pays by far the highest wages in the world, and the further fact that a day's work in this country will buy anywhere from three to six times as large an amount of the basic necessities of life as a day's work will buy in many other countries in the world, would seem to justify the Senator from Utah, when he discusses the demerits of the protective system, in devoting a few moments to this discussion of the merits of the system as demonstrated by the industrial record of the country under protective tariff.

The Senator went on to say:

> Several days ago I was discussing the tariff, and alluded to a number of States which had been particular beneficiaries of high tariffs. I alluded among others to the State of Connecticut. The able Senator from Connecticut [Mr. McLEAN] challenged some of the statements which I made. I then said that protection undoubtedly had enriched some in his State, but that the great wealth of Connecticut, Rhode Island, and certain protected States was in the hands of a limited number of corporations and individuals. I called attention to the strikes in the mills of his State, to the impoverishment of the people at work in the mills.

I do not remember that the Senator specified any particular strike in Connecticut. I did not know that there was any strike now existing in Connecticut of any consequence.

Mr. KING. Mr. President, will the Senator yield?

Mr. McLEAN. Certainly.

Mr. KING. I spoke in the past, that there had been strikes, a great many strikes. I did not speak of any in the present.

Mr. McLEAN. Oh, it probably is true that there have been strikes in Connecticut in the past, but I think there is no State in the Union whose record is freer from serious strikes than the State of Connecticut, and it is because, as I shall undertake to show later, that the wages paid in Connecticut are probably as high as those paid in any community on earth for similar services.

I quote further from the Senator's remarks of yesterday, where he said that these strikes resulted in the impoverishment of the people at work in the mills, and where he called attention—

> to the poverty which existed, and called attention to the fact that the Republicans had by their legislation made it possible for certain industries to reap enormous profits, and that those industries had driven out the American workmen and had imported labor from abroad and forced the wages of the worker down until the wages paid were so pitifully small that poverty and, in too many instances, gaunt hunger were the constant companions of the employees.

Of course, I realize that when the Democratic Party is in the desperate condition which it now occupies, we must expect exaggeration and misrepresentation from its votaries.

I called attention the other day to the fact that the manufactured products in the State of Connecticut in the year 1919 were greater in value than the entire wheat crop of the United States. I called attention then, and I want to repeat a few facts bearing upon Connecticut industries and what they mean not only to the workmen of Connecticut but to the rest of the people of the United States.

We have in Connecticut 4,800 factories. The people employed in 1919 were 338,000. The wages and salaries paid were $406,467,000. The capital invested was $1,341,000,000. The value of the products was $1,392,000,000. The cost of materials was $685,000,000, and the value added by manufacture was $706,000,000. The average daily wage was $3.56. Now, there may be industries in the country highly specialized where the labor is especially irksome and possibly dangerous, where the average of wage paid will be higher than that, but I challenge any man on this floor to point to any State in the Union where the average paid for wages upon products similar to those made in Connecticut is higher than the average wage paid in Connecticut.

It may be of interest to note that the number of establishments in Connecticut in 1899 were 3,382; salaries and wages paid, $85,000,000. The number of establishments was increased 18 per cent from 1909 to 1919, the number of persons engaged increased 32 per cent, and the wages from 1909 to 1919 increased 172 per cent. I wish to put in the RECORD a brief statement with reference to the different industries in Connecticut and the number of employees.

Connecticut industries consumed in 1919 398,000 tons of anthracite, 2,280,000 tons of bituminous coal, 1,447,000 barrels of fuel oil, 163,000 tons of coke, 32,618 barrels of gasoline, and 627,000 cubic feet of gas. Connecticut ranks first among the States in the value of products in the fur felt hat industry, fourth in silk, sixth in cotton, and sixth in woolen worsted products. In 1919 Connecticut consumed 54,000,000 pounds of cotton, purchased 33,000,000 pounds of cotton yarn, value of cotton $65,000,000, value of manufactured products $105,000,000. In 1919 Connecticut purchased 60,000,000 pounds of wool, made 200,000,000 yards of cloth, and 69,000,000 yards of shirting, valued at $68,000,000. Yet, Mr. President, the output of some of our factories has been decreasing since 1914. Our costs of manufacture have greatly increased. For instance, the cost of materials in the fur felt hat industry increased 163 per cent from 1914 to 1919.

Mr. President, it is true that Connecticut makes about everything that is merchantable, and she makes machinery for other States and countries to make about everything that is merchantable. When the war broke out the Government took advantage of the fact that Connecticut was equipped to make probably a greater variety of articles needed for war supplies than any other State of her size in the Union. It is a matter of history that Paris would have surrendered to Germany in 1914 if it had not been for munitions made in Connecticut. Indeed, sir, a very large portion of the munitions used by our allies during the whole war were made in Connecticut.

It is easy to see that with the tremendous demand for war supplies Connecticut industries were prosperous for a time during the war; but, sir, a great many of our best boys were drafted and sent to the front and our manufacturers were compelled to secure help where it could be obtained and such help as it was possible to obtain. After the war closed we had, as can well be imagined, a very serious period of depression, because the demand for many of our goods ceased. More than that, Germany, after the war closed, specialized in many articles which came in direct competition with goods made in Connecticut, especially the metal goods, all kinds of cutlery, clocks, and so forth. As the result, our factories were compelled either to close or work on short time or reduce wages. There was no alternative. It was true then and it is true to-day that owing to this keen German competition many of our factories were and are working on short time, many of our manufacturers are making no money, yet they are keeping their organizations together and are employing help at a loss, possibly hoping that this Congress will have the wisdom to give to her industries, and all legitimate industries in the country, reasonable protection against the ruinous competition from the low-wage countries across the water.

Mr. President, the junior Senator from Utah [Mr. KING] read into the RECORD yesterday a letter from Patrick F. O'Meara, president of the Connecticut Federation of Labor, portions of which I shall now quote:

> Your statement of the employment of the cheap-wage foreigner in the State of Connecticut is so true that, as I read the speech, I was thinking whether or not your information came as if you were a resident of Connecticut.

I continue to quote:

> During the World War the writer was honored by being selected for membership on one of the three district boards of this State. This, as you will recollect, had to do with all appeals over local boards' decisions and all industrial exemptions, and as the secretary of the board for the war term the great part of the evidence submitted on questionnaires brought forth conditions that no State should be proud of, and thousands of these questionnaires had to be written up and completed by others than the registrant, for the reason that the said registrant could neither read nor write.

Mr. President, Mr. O'Meara, I presume, is a good Democrat, and, if my information is correct, he had a job under the former administration. Apparently he had something to do with the draft. Whether he had any other occupation or not I do not know.

Mr. KING. Mr. President——

The PRESIDENT pro tempore. Does the Senator from Connecticut yield to the Senator from Utah?

Mr. McLEAN. I do.

Mr. KING. Does the Senator from Connecticut refer to the "job" that Mr. O'Meara had as being one with the draft board?

Mr. McLEAN. Yes.

Mr. KING. The Senator does not consider that a very big "job," does he?

Mr. McLEAN. I do not know whether Mr. O'Meara had any other occupation or not. I am not finding fault with Mr. O'Meara; on the contrary, if the Senator will pardon me, I desire to say that if there is anything in the State of Connecticut that deserves criticism, I would be the last man in the Senate to try to suppress such criticism; but when Mr. O'Meara makes the broad and far-reaching statements which he does, I hope he will let the workingmen in Connecticut know before next November comes whether he thinks the remedy for the situation which he alleges exists lies in a continuation of existing tariff rates or in rates which would give the employers in the State of Connecticut reasonable protection against their competitors from abroad. If he adheres to the tariff plank in the last Democratic platform, which denounced protective tariffs, if he adheres to the time-honored policy of the Democratic Party that protective tariffs are not only unconstitutional but that they are fraudulent and a tax upon the many for the benefit of the few, I hope he will frankly state his position in the State of Connecticut, for I want to say, and say emphatically, that Connecticut has no more use for the Democratic theory relative to protection than it has for a frost in August or the Asiatic cholera. The writer goes on to say:

> During the latter part of the year 1921 the city of New Britain, Conn., had to make an appropriation out of the municipal funds to send back to Spain and Portugal large numbers of cheap foreign laborers that they had brought in there (I refer to the manufacturers), and who were living in such filthy conditions that the city authorities of New Britain thought the best thing to do was to send them out of the city.

As I have stated, Mr. President, during the war the manufacturers of Connecticut were compelled to get help where they could and of the best character that could be obtained, and to get along with it as best they could, for a great many of our high-class boys were called to the front, while we in Connecticut were making munitions and arms and war supplies that were absolutely necessary to the conduct of the war. We were fighting for our lives, and we did the best we could. I want to say, Mr. President, that Connecticut is not ashamed of her record in the war of what she said or did. Her record will, I think, compare favorably with the record of the State which is represented in part by the junior Senator from Utah.

When the war was over we had to meet the serious industrial depression. Orders for our goods ceased; we had a large surplus of labor on our hands; but, Mr. President, I want to say that everything was done to help those men who were unemployed to go where they could secure employment, if possible, or to keep them in Connecticut and pay them enough to enable them to subsist until business should revive.

This letter goes on to say:

> But I can not sit idly by and have conditions go on as they are without protesting from time to time against them, and I was elated when I read of your indictment against Senator McLEAN and his constituents—I refer to the manufacturers of Connecticut. * * *

Mr. President, I want to say now, as I have said before, that, as a member of the Finance Committee, I have in no instance, and I shall in no instance, ask for a rate that will give more than reasonable protection to the manufacturers of Connecticut and enable them to pay good wages, and I wish to say further that the highest rates in this bill are the lowest in proportion to the protection which is needed.

I quote further from this letter:

> If the proposed tariff bill goes through they will again reap the harvest that they have for years, and I smile when I read of the claims that German-made watches are being sold so cheaply in the United States, when, as a matter of fact, such a big and influential concern as the New Haven Clock Co., in my home city, is to-day paying wages

so low that they never would be accepted only that men are forced to take them to earn a few dollars for their families; the wages are even lower than before the war.

Mr. President, I have not had an opportunity to communicate with the company referred to, but it is probable that foreign competition in the article manufactured by that company is keen at the present time, and very likely their mill is either working on short time or it may be possible that they have had to reduce wages temporarily, and I wish to say again to the Senator from Utah that this condition must necessarily continue if the competition from abroad is allowed to continue; and precisely the same argument which applies to the manufacture of clocks applies to every single industry in this country. The Senator from Utah has taken occasion, I think, to vote for a protective tariff on the products of his State.

Mr. KING. No.

Mr. McLEAN. I do not know but that the Senator has avoided voting on some of the articles produced in his State which have asked for protection——

Mr. KING. Mr. President, I can not permit such a statement as that to go unchallenged; I deny it.

Mr. McLEAN. Or neglected to do so.

Mr. KING. No; I do not dodge any issue that may be presented.

Mr. McLEAN. Then I gladly withdraw the statement if it is not true; but I do not understand the Senator to say that he is opposed to all protective tariffs, and I want to say to him that a man will drown under an inch of water just as quickly as he will if he is at the bottom of the sea. We have many highly specialized industries in Connecticut, yet, as every Senator knows, the industries of Connecticut are really but a drop in the American bucket. The pay roll in the United States in 1919 was over $10,000,000,000, and a very large percentage of that was paid in the production of articles in the manufacture of which labor constituted a very high percentage of the cost. So the problem confronting us is entirely national in its scope.

It is true with regard to my section of the country that we are now experiencing industrial depression. Conditions have been improving to some extent lately, probably in anticipation of the enactment of the pending bill, but unless this bill is passed, unless the confidence of our great producers is revived, serious results will ensue. Many of them, I know, have their storehouses full of goods which they can not sell, waiting and hoping that the Democratic Party will allow the country to be relieved from the potential and actual ruinous competition of other countries.

I want to say to the Senator further that while I have no controversy with him, taking the view that he does on this question, and I have no controversy with the president of the American Federation of Labor in the State of Connecticut, the Senator's position and the position taken by Mr. O'Meara utterly fail to consider the real cause of the business depression which now exists in Connecticut and elsewhere, and utterly fail to estimate the necessity for the maintenance of the time-honored and fully tested principle of protection if we are to continue to do business in this country and sustain our standard of wages and living.

Mr. KING obtained the floor.

Mr. HEFLIN. Mr. President, will the Senator yield to me to submit a resolution and ask unanimous consent for its immediate consideration? I think it will take but a moment to have it considered.

Mr. KING. I yield.

ABANDONED COTTON ACREAGE.

Mr. HEFLIN. I ask unanimous consent for the present consideration of the resolution which I send to the desk.

The PRESIDENT pro tempore. The Secretary will report the resolution for information.

The reading clerk read the resolution (S. Res. 319), as follows:

Whereas the Crop Reporting Bureau of the Agricultural Department has heretofore made no report on abandoned cotton acreage until the 1st of December each year; and

Whereas there is practically no cotton acreage abandoned after July 1 each year; and

Whereas failure to obtain a good stand of cotton in many places and the increased ravages of the boll weevil in other sections of the cotton-producing States have caused abandoned cotton acreage to be larger than usual; and

Whereas the cotton produced, the spinner, and the public are entitled to know as early as the information can be obtained what per cent of cotton acreage has been abandoned: Therefore be it

Resolved, That the Chief of the Crop Reporting Bureau be, and he is hereby, authorized and directed to immediately confer with the commissioners of agriculture in the cotton-growing States and with the agricultural agents of the various counties in said States and ascertain just what in their opinion is the percentage of abandoned cotton acreage up to July 1, 1922; be it further

Resolved, That the said Chief of the Crop Reporting Bureau shall publish said information in his forthcoming August the 1st crop-condition report.

The PRESIDENT pro tempore. Is there objection to the request of the Senator from Alabama?

Mr. SMOOT. Mr. President, I do not know that I gathered the full import of the resolution. It seems to require a report as to the cotton acreage abandoned up to July 1, 1922. It does not, however, ask that any comparison be made with the cotton acreage abandoned in any other year or period. I can not quite understand how the bureau will answer the question propounded unless some date is specified with which to compare the cotton acreage abandoned on July 1, 1922.

Mr. HEFLIN. I will state to the Senator from Utah that the reports published every year on December 1 show that. They have authority now for obtaining that information, but we want to know now what percentage of the acreage planted in cotton this year had been abandoned up to the 1st of July. There is very little cotton acreage abandoned after that time. Whatever there is, it will be reported in December.

Mr. SMOOT. As compared with the last report made?

Mr. HEFLIN. We can compare this report, when received, and show how much was abandoned each year before, because that information is already on file in the Department of Agriculture; but we want to know how much has been abandoned this year up to July 1, rather than wait until December 1 and have the public, the spinners, and the cotton-buying world believe that the acreage planted in cotton in the spring is in cultivation now, when the truth is much of the acreage planted this year has already been abandoned.

Mr. SMOOT. What I think the Senator wants is the number of acres in cultivation on July 1, 1922.

Mr. HEFLIN. That is what this information will show.

Mr. SMOOT. But that is not what the resolution says.

Mr. HEFLIN. The resolution will get the information, however, because the department has already shown the number of acres planted in cotton, and when we find out how much has been abandoned we will then know, of course, how many acres are still in cultivation.

Mr. SMOOT. I have no objection to the information, but I doubt very much whether the resolution is properly expressed.

The PRESIDENT pro tempore. The Chair hears no objection to the request of the Senator from Alabama.

Mr. WADSWORTH. Mr. President, as I understand, the official to whom this resolution is addressed is a subordinate of the Secretary of Agriculture.

Mr. SMOOT. He is?

Mr. HEFLIN. Oh, yes.

Mr. WADSWORTH. Then I suggest in all seriousness that the resolution should be addressed to the Secretary of Agriculture——

Mr. SMOOT. Oh, absolutely, without question.

Mr. WADSWORTH. And that he should be authorized and directed to have done what the resolution requests.

Mr. HEFLIN. I accept the suggestion of the Senator from New York.

The PRESIDENT pro tempore. The resolution is modified accordingly. Is there objection to its present consideration?

Mr. POMERENE. Mr. President, may it be read again? I was out of the Chamber when it was read.

The PRESIDENT pro tempore. The Secretary will read the resolution as modified.

The reading clerk read the resolution as modified, as follows:

Whereas the Crop Reporting Bureau of the Agricultural Department has heretofore made no report on abandoned cotton acreage until the 1st of December each year; and

Whereas there is practically no cotton acreage abandoned after July 1 each year; and

Whereas failure to obtain a good stand of cotton in many places and the increased ravages of the boll weevil in other sections of the cotton-producing States have caused abandoned cotton acreage to be larger than usual; and

Whereas the cotton producer, the spinner, and the public are entitled to know as early as the information can be obtained what per cent of cotton acreage has been abandoned: Therefore be it

Resolved, That the Secretary of Agriculture be, and he is hereby, authorized and directed to immediately confer with the commissioners of agriculture in the cotton-growing States and with the agricultural agents of the various counties in said States and ascertain just what in their opinion is the percentage of abandoned cotton acreage up to July 1, 1922. Be it further

Resolved, That the Secretary of Agriculture shall publish said information in his forthcoming August the 1st crop-condition report.

Mr. POMERENE. Mr. President, if the Senator will yield for a question, I notice that the Senator has fixed July 1 as being the date after which little or no acreage is abandoned. Does that cover the entire Cotton Belt?

Mr. HEFLIN. Oh, yes.

Mr. POMERENE. Why not say "during this season," or something of that kind?

Mr. SMOOT. That is, from December 31, 1921. They have it up to that date.

Mr. HEFLIN. Certainly; for this season.

Mr. POMERENE. Of course, I do not live in the Cotton Belt, so am not entirely familiar with that; but it occurred to me that the Senator is just as much interested in knowing whether there was any acreage abandoned after July 1 as he is in knowing whether any was abandoned before July 1, because that is what he wants.

Mr. HEFLIN. The Secretary of Agriculture is already authorized to make that report, and makes it on the 1st of December; but we are asking now that this information be given to the public, so that the public will know and the farmer will have the benefit of the public knowing that he is not cultivating as many acres in cotton as he planted in the spring of the year and will not make as much cotton, because hundreds of thousands of acres planted in cotton have been abandoned for various reasons.

Mr. POMERENE. I think that is a very good suggestion; but it ought to be broad enough to include all acreage abandoned, whether it was abandoned before July 1 or after July 1.

Mr. HEFLIN. A report on that which is abandoned after July 1 is provided for now. I am asking that a report on abandoned cotton acreage be obtained and published by August 1 each year.

The PRESIDENT pro tempore. The Chair hears no objection to the present consideration of the resolution.

Mr. SMOOT. Just a moment, Mr. President. I want to ask the Senator from Alabama in all seriousness if he will not withdraw the resolution now and put a limit upon the time when the investigation shall be made. I am quite sure, the way the resolution reads, that there will be no limit at all, and if the Senator gets the information called for it is going to take months and months of time and a great deal of expense to furnish it, and I know that is not what the Senator has in mind.

Mr. HEFLIN. No. For the Senator's information, Mr. President, since he does not live in a cotton-growing State——

Mr. SMOOT. I know about the cotton-growing States, however.

Mr. HEFLIN. I suggest to him that the resolution simply provides that the Secretary of Agriculture shall have communications sent by mail to the commissioners of agriculture in the cotton-growing States and the county agents in those States, asking them to give the information in their possession as to the amount of cotton acreage already abandoned, and that information will be sent back through the mails and it will then be given to the public in the August 1 crop-condition report.

Mr. SMOOT. If the Senator is content with that statement, I have no objection to the resolution, but I will say that the resolution does not call for what the Senator wants.

Mr. HEFLIN. The resolution will get the information we want, and I ask for its adoption, Mr. President.

The PRESIDENT pro tempore. Is there objection to the present consideration of the resolution? The Chair hears none. The question is upon agreeing to the resolution.

The resolution as modified was agreed to.

DISTRIBUTION OF SPEECHES BY FEDERAL RESERVE BANKS.

The PRESIDENT pro tempore. The Chair lays before the Senate a communication from the governor of the Federal Reserve Board, transmitting, pursuant to Senate Resolution 308, letters from the Federal Reserve Banks of Minneapolis and Dallas relative to the circulation of a speech of Senator GLASS on the Federal reserve system. The communication will lie on the table.

Mr. KING. Mr. President, I was about to suggest that perhaps the communication ought to go to the Committee on Banking and Currency.

The PRESIDENT pro tempore. The Chair is advised that it has been the understanding that these communications shall lie on the table until they are all received, at which time they will be properly disposed of.

Mr. HEFLIN. Yes, sir; that is the understanding.

Mr. KING. I have no objection.

Mr. McLEAN. Mr. President, I am obliged to the Senator from Utah for calling my attention to the matter which has just been disposed of, and I should like to know whether these replies have been ordered printed in the RECORD.

Mr. HEFLIN. Not yet.

Mr. McLEAN. I understand that it is the Senator's purpose to keep them on the table until he gets replies from all of the banks——

Mr. HEFLIN. All of them.

Mr. McLEAN. And then have them printed in the RECORD.

Mr. HEFLIN. And then let the Senate decide what disposition they will make of them. I may have objection to some portions of them going into the RECORD.

Mr. McLEAN. I shall not.

Mr. HEFLIN. I am satisfied the Senator will not.

Mr. McLEAN. On the contrary, inasmuch as the Senator from Alabama secured the passage of the resolution requiring these replies, I shall expect that he will not object to their being printed in the RECORD when they are received.

Mr. HEFLIN. I want to make some comments upon some portions of the replies.

The PRESIDENT pro tempore. The communication has been disposed of.

PHILADELPHIA SESQUICENTENNIAL EXHIBITION.

Mr. JONES of Washington. Mr. President, House Joint Resolution 170 was referred to the Committee on Commerce. The principal object of the joint resolution seems to be to provide for an invitation on the part of the President to foreign nations to participate in an international exposition to be held in Philadelphia in 1926. I think it should properly go to the Foreign Relations Committee. I ask unanimous consent that the Committee on Commerce may be discharged from the further consideration of the joint resolution and that it may be referred to the Committee on Foreign Relations.

The PRESIDENT pro tempore. Is there objection? The Chair hears none, and that change of reference will be made.

PETITIONS AND MEMORIALS.

Mr. ROBINSON presented telegrams in the nature of petitions from Bert Johnson, of Nashville, and the Nashville Chamber of Commerce, in the State of Arkansas, praying for prompt action by the Government to settle the railroad strike so that peach and truck crops may be moved to market without loss, which were referred to the Committee on Interstate Commerce.

Mr. PHIPPS presented petitions of the Governor of Colorado, the Public Utilities Commission of the State of Colorado, and the Moffat Tunnel Commission, all of Denver, Colo., praying for full enforcement of the decree of the United States Supreme Court relating to severance of the Central Pacific Railway from the Southern Pacific Co. and opposing reopening the question by legislative action, which were referred to the Committee on Interstate Commerce.

Mr. JOHNSON presented memorials of 262 citizens in the State of California, remonstrating against the enactment of legislation providing for compulsory Sunday observance in the District of Columbia, which were referred to the Committee on the District of Columbia.

Mr. SIMMONS presented a resolution of the North Carolina Pine Box and Shook Manufacturers' Association, protesting against the proposed transfer of the Forest Service from the Department of Agriculture to the Interior Department, which was referred to the Committee on Public Lands and Surveys.

He also presented a resolution of the Medical Society of the State of North Carolina, favoring the passage of House Resolution 258, providing for a select committee of 15 doctors in the House of Representatives to inquire into the subject of narcotic addiction in the United States, etc., which was referred to the Committee on Finance.

He also presented resolutions of the Christian churches of Duke, N. C., favoring the granting of relief to the suffering peoples of Armenia, which were referred to the Committee on Foreign Relations.

He also presented the memorial of Mrs. R. W. Hicks, president of the North Carolina Sorosis, remonstrating against inclusion of the food, tableware, and women's wear schedules in the pending tariff bill, which was referred to the Committee on Finance.

He also presented a petition of sundry citizens of Duplin County, N. C., praying for the enactment of legislation creating a department of education, which was referred to the Committee on Education and Labor.

He also presented resolutions of Guilford Council, No. 23, of High Point; New Bern Council, No. 520, of New Bern; and Greensboro Council, No. 13, of Greensboro, all of the Junior Order United American Mechanics; and Banner Council, No. 30, of Rocky Mount, and Raleigh Council, No. 83, of Raleigh, both of the Sons and Daughters of Liberty, all in the State of North Carolina, favoring the enactment of legislation creating a department of education, which were referred to the Committee on Education and Labor.

Mr. CAPPER presented petitions of members of the Argentine High School, of Kansas City, and sundry citizens of Merriam, all in the State of Kansas, praying for the enactment of legisla-

tion creating a department of education, which were referred to the Committee on Education and Labor.

He also presented resolutions adopted by the chambers of commerce of Junction City and Kansas City, the Lindsborg Commercial Club, of Lindsborg, and the Topeka Traffic Association, of Topeka, all in the State of Kansas, favoring full enforcement of the decree of the United States Supreme Court relating to severance of the Central Pacific Railway from the Southern Pacific Co., etc., which were referred to the Committee on Interstate Commerce.

THURSTON W. TRUE.

Mr. ROBINSON, from the Committee on Claims, to which was referred the bill (S. 2984) for the relief of Thurston W. True, reported it with an amendment and submitted a report (No. 814) thereon.

BILLS AND JOINT RESOLUTION INTRODUCED.

Bills and a joint resolution were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. SMOOT:

A bill (S. 3809) granting a pension to Jane Z. Tolman; to the Committee on Pensions.

By Mr. POINDEXTER:

A bill (S. 3810) providing for a readjustment of sales contracts of Government houses in Bremerton and other points in Kitsap County, Wash.; to the Committee on Education and Labor.

By Mr. SHORTRIDGE:

A bill (S. 3811) to provide for the erection of a public building at Oakland, Alameda County, Calif.; to the Committee on Public Buildings and Grounds.

By Mr. COLT:

A bill (S. 3812) granting six months' gratuity pay to Stanfield A. and Elizabeth G. Fuller; to the Committee on Claims.

By Mr. POINDEXTER:

A bill (S. 3813) authorizing a decoration for valor, to be designated the military star; to the Committee on Military Affairs.

By Mr. SMOOT:

A joint resolution (S. J. Res. 222) authorizing the Federal Reserve Bank of St. Louis to enter into contracts for the erection of buildings for its head office and branches, and the Federal Reserve Bank of San Francisco to enter into contracts for the erection of a building for its branch office in Salt Lake City, Utah; to the Committee on Banking and Currency.

RIVER AND HARBOR IMPROVEMENTS.

Mr. CALDER submitted an amendment authorizing improvement work at Westchester Creek, N. Y., in accordance with report submitted in Rivers and Harbors Committee Document No. 8, Sixty-seventh Congress, second session, and subject to the conditions set forth in said document, intended to be proposed by him to the bill (H. R. 10766) authorizing the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes, which was ordered to lie on the table and to be printed.

THE TARIFF.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes.

Mr. KING. Mr. President, I shall occupy but a short time, because I know Senators are anxious to proceed with the consideration of the schedule dealing with vegetable oils, which is now before us; but the Senator from Connecticut [Mr. McLEAN] has discussed at considerable length a letter received by me and presented to the Senate yesterday. The letter was written by a resident of the State of Connecticut who is in a position to know of the facts to which he refers in his letter.

Mr. President, a few days ago, in speaking upon the tariff, I said:

Mr. President, I repeat what I said a moment ago, that a large part of the population working in the mills in the State of Connecticut was foreign. There were strikes in the mills and factories because of the injustice which the mill owners perpetrated upon the laborers whom they employed. I repeat, the Senator's State has grown rich. I do not mean the great masses of the people have prospered or become rich, but the predatory interests with which the Senator from Connecticut is allied have grown rich. The Senator, believing in their economic views, speaks for policies which they favor and for this bill, which they indorse. When we come to the textile schedule we shall find the able Senator from Connecticut lifting his voice in protest against fair and reasonable rates. He is willing that the favorites of the Republican Party, those favorites against whom Senator Dolliver inveighed, those favorites against whom Theodore Roosevelt inveighed, those favorites who have played the game in the past and who have prostituted the taxing powers of the Government for their enrichment, shall continue their illegal course.

At this point I was interrupted by the Senator from Missouri, and after a short colloquy, I proceeded:

Coming back to the question which I suggested a moment ago, I repeat that the manufacturers and the beneficiaries of the tariff system who reside in the State of the Senator from Connecticut, or who, if they do not reside there, reside in New York or Boston or elsewhere and have their factories in his State, have been willing to get cheap labor and get it from over the seas in order that they might increase their swollen fortunes. The State of Connecticut, small, with but limited agricultural resources, with no mineral wealth, and without having the advantages that are possessed by many other States, has directed its attention largely to manufacturing; and those engaged in manufacturing have perceived that if they could get higher tariff duties and prevent competition from abroad they would be able to exploit the American people by charging them infinitely more for their products than would have to be paid under a legitimate competitive system. Republicans of Connecticut have only done what Republicans—I am speaking now of the brand of Republicans that Roosevelt denounced—have done elsewhere.

A resident of the State of Connecticut, reading the address which I made, and the colloquy between the Senator from Connecticut [Mr. McLEAN] and myself, was prompted to write me the letter which I read in part yesterday, and to which the Senator from Connecticut has just referred. Those who have listened to the Senator will recall that he did not deny what I stated and what was stated by Mr. O'Meara, the president of the Federation of Labor, namely, that cheap labor had been imported and employed in the mills and factories of Connecticut, and that strikes and industrial disturbances had occurred because of the low wages which had been paid.

The Senator does not deny what was declared to be a fact by Mr. O'Meara, that men from Portugal and Spain had been employed in his State, and because of their unfortunate situation an appropriation had been made by the city council of one of the cities for the purpose of sending them back to the country from which they came.

Mr. McLEAN. Mr. President——

The PRESIDENT pro tempore. Does the Senator from Utah yield to the Senator from Connecticut?

Mr. KING. I yield.

Mr. McLEAN. I did not deny it because I had no knowledge on the subject. I stated to the Senator, however, that during the war the overwhelming demand for munitions made in Connecticut, and the fact that a good many of our own boys were drafted and sent to the front, made it imperative for our manufacturers to secure labor from every source possible for the time being, and that after the war was over it may be true that we had in the State a great many men who came from outside—I do not know where. I stated to the Senator that he would find we did everything we could to help those people get employment outside or in the State, and in many instances we kept our factories going at a loss for the express purpose of keeping those people in comfortable circumstances until they could get employment elsewhere.

Mr. KING. Mr. President, Mr. O'Meara corroborates, in his statement, the observations which I made with respect to the effect of the protective tariff system as it applies to the State of Connecticut. He, in effect, states that the perpetuation of that system will result in a condition of servitude. He states that there have been strikes and industrial disturbances, notwithstanding the great profits which have been made by the manufacturers of the State of Connecticut.

Mr. McLEAN. Mr. President, I want the manufacturers to prosper in order that they may pay high wages and maintain the American standard of living. If there are any manufacturers in Connecticut or anywhere else who do not do that, the remedy does not lie in destroying capital. The cure does not lie in universal poverty. We can not help ourselves by descending to the conditions which exist across the water, which these people left in order to better themselves.

Mr. KING. Mr. President, no one was suggesting an assault upon capital. In my opinion, as I have said heretofore, the greatest enemy capital has to-day is the selfishness and the greed of some of the capitalists themselves. Some are not content with a legitimate and fair profit upon their investments. I am not making an indictment of the capitalistic system or of all capitalists, because I believe in private ownership of property and in the right of owners to use their own property and to enjoy the benefits arising therefrom. I am speaking, as I said in that speech to which I referred, of the character of capitalists of whom Mr. Roosevelt spoke, of whom the distinguished Senator who is now occupying the chair [Mr. CUMMINS] and his illustrious colleague, Senator Dolliver, now deceased, spoke when they were discussing the Payne-Aldrich tariff bill, those capitalists who sought to impose tariff duties so high as to build up monopolies in the United States and to give them absolute control of the domestic market and the prices of domestic products.

They were referring to the Steel Trust, which has made not millions of dollars but hundreds of millions; the Steel Trust which secures benefits in the bill before us and demands duties upon steel products notwithstanding the fact that the steel industry of the United States can successfully compete with the steel producers in every country in the world.

The steel manufacturers, and all other corporations and individuals who seek to use the Government and the powers of the Government to secure legislation to enable them to increase the prices of their products, are their own enemies and the enemies of capital. Our country has grown and prospered under its free institutions, the Federal Constitution as well as the State constitutions recognizing the right of individuals to acquire property and to control it. I believe that our country has grown and prospered because of the capitalistic system; it would have failed in its high mission under communism or the conflicting socialistic doctrines or the nationalization of the industries of the country. I believe in an individualism that gives a broad field for the genius and the enterprise of the American people. But I am opposed to a tariff system that will rivet upon the consuming masses the policies and the demands of greedy corporations who are not satisfied with a fair and legitimate profit upon their investments.

The State of Connecticut, as indicated by Mr. O'Meara, has built up great industrial corporations, and those organizations have employed pauper labor from overseas, and have paid wages which have been so low, as indicated by Mr. O'Meara, as to threaten industrial servitude and have been provocative of strikes and industrial disturbances.

Mr. WADSWORTH. Mr. President, the last statement made by the Senator excites my curiosity. Does Mr. O'Meara state what the wages were?

Mr. KING. No.

Mr. WADSWORTH. Then how can the Senator say he states they are so low that the employees can not live on them?

Mr. KING. I did not hear the Senator's statement.

Mr. WADSWORTH. Why does the Senator make the assertion, therefore, that the wages are pauper wages, if he does not even know what the wages are?

Mr. KING. Does the Senator know what the wages are?

Mr. WADSWORTH. No; I do not; but the Senator is making some affirmative statements, and I am seeking information.

Mr. KING. I will state to the Senator that I do not know specifically what the wages are, but I do know——

Mr. WADSWORTH. Does the Senator know generally what they are?

Mr. KING. Will the Senator permit me to conclude my sentence? That wages paid in manufacturing plants of Connecticut at times have been so low as to be provocative of strikes and industrial disturbances, and, as the Senator will recall, in the investigations which were made when there were strikes a few years ago, it was shown that women, and even little children, were either compelled to work or did work in many factories and mills because the earnings of the husbands and the fathers were insufficient to meet the necessities of the family.

Mr. WADSWORTH. I have no recollection of any such incidents, nor do I remember the investigation. To what investigation does the Senator refer?

Mr. KING. The Senator knows that both in Rhode Island and in Connecticut there were strikes a few years ago in the textile mills and plants.

Mr. WADSWORTH. I am speaking of Connecticut. I have no recollection of the strikes in Connecticut to which the Senator refers.

Mr. KING. I have a recollection that there were strikes in both Rhode Island and in Connecticut. There have been strikes in textile plants and in steel plants and many of these great manufacturing institutions of the United States.

Mr. WADSWORTH. I am speaking of Connecticut. I want the Senator to give the information to which he has alluded, but which he apparently does not specify. In what city and in what industry and in what corporation were these pauper wages paid?

Mr. KING. I can not state to the Senator offhand——

Mr. WADSWORTH. I thought not.

Mr. KING. But I shall put in the RECORD to the full satisfaction of the Senator, before this debate ends, data which will support the statement of Mr. O'Meara, and the statement which I have made, that the wages paid in the textile mills of Connecticut were so low as to be insufficient for the proper support of the families of the men who labored there, and I will put in the RECORD facts to show the Senator that in textile mills not only men work, but in many instances the mothers and some of the children have worked.

Mr. WADSWORTH. When the Senator gets all this information, which is going to be so interesting——

Mr. KING. I do not know whether it will be interesting to the Senator. I think it will not be interesting to the supercilious Senator from New York.

Mr. WADSWORTH. I thank the Senator for his observation. I am merely seeking the truth. I did not realize that a seeker after the truth should be called supercilious; but I hope that when the Senator does put this interesting information, of which he has none to-day——

Mr. KING. The Senator from New York is entirely in error.

Mr. WADSWORTH. I have not been able to get any of it from the Senator. I hope that when he does put it in the RECORD he will also ascertain and put in the RECORD the comparative wages paid in Connecticut and the wages paid in other States to show whether Connecticut has thus fattened at the expense of the many and for the benefit of the few, and whether or not it has been the rule in the State of Connecticut to pay pauper wages under a protective tariff system.

Mr. KING. I am sure the Senator will not be interested in all of that information, and if it is a matter of so much interest to the Senator, with his prodigious capacity for work, I suggest that he embark upon this enterprise himself.

Mr. McLEAN. I shall be deeply interested, myself, in the replies which the Senator gets to the question of the Senator from New York. The Senator from New York is a very able Senator, very industrious and very capable in seeking statistics, but I do not think he will succeed in finding anything to corroborate the charges of the Senator from Utah.

Mr. KING. We will leave that for the public to determine, if they should be sufficiently interested in the controversy between the Senator from New York and myself.

I read again what was stated by Mr. O'Meara, the president of the Federation of Labor of the State of Connecticut, where he says, speaking of the system which obtains in Connecticut—

> that system if permitted to continue will have the serf and slave system that existed in the South before the Civil War beaten all to atoms. Your statement of the employment of the cheap-wage foreigner in the State of Connecticut is so true that, as I read the speech, I was thinking whether or not your information came as if you were a resident of Connecticut.

This gentleman was born in the State of Connecticut and knows full well, as he states in his letter, "of the conditions whereof I write, and if either one of the Senators from Connecticut will deny any of the statements that I have written about I will gladly furnish them to you in affidavit form to back them up."

So, Mr. President, we will have the president of the Federation of Labor of the State of Connecticut furnishing, I have no doubt, ample evidence to support the contention which he makes and to justify the statements which I make. The Senator himself has admitted that poor people from Spain and Portugal were employed——

Mr. McLEAN. Mr. President——

Mr. KING. And that they were sent back by appropriation from a municipality.

Mr. McLEAN. I do not see why the Senator should reiterate an admission that I have never made. The Senator knows that I said that I did not contradict that statement because I had no knowledge on the subject.

Mr. KING. Then I modify it; the Senator does not deny the statement.

Mr. McLEAN. I have no knowledge on the subject, and where I have no knowledge I do not deny.

Mr. KING. I put the statement of Mr. O'Meara against the negative attitude of the Senator from Connecticut.

Mr. McLEAN. Where I have no facts I do not assert.

Mr. KING. The Senator does not dare deny it——

Mr. McLEAN. I do not follow the example set by the Senator from Utah.

Mr. KING. The Senator does not dare deny it.

Mr. McLEAN. What?

Mr. KING. Has not the Senator listened to what I have just been reading, what he is contradicting?

Mr. McLEAN. I do not deny that during the war we employed men from Portugal. Is that the point? No; I do not deny it. I do not know anything about it; and if it is true, it is of no consequence.

Mr. KING. Of course it would not be of any consequence to the Senator. I would not claim it was of any consequence to the Senator.

Mr. McLEAN. I fancy that there are men in Utah who were not born there.

Mr. KING. I do not know the pertinency of that observation.

Mr. McLEAN. I hope they have something to do.

Mr. KING. I was contending, in the speech which the Senator has attacked, that the tariff system, as it has been devised and applied by the Republican Party, has benefited and enriched a limited number, and that schedules have been drawn in the interest of predatory trusts, and I aver that schedules in this bill have been dictated by interests which are demanding of the people prices for their products that are inequitable and unjust.

I called attention to the fact that industrial disturbances and strikes had occurred because of the low wages paid, and Mr. O'Meara says:

Your statement on page 6562—

Speaking of the RECORD—

relative to this State having industrial disturbances is as true as any words coming from the mouth of man. I do hope that on account of the position in the life of the community that I hold that you will not feel that I am entirely biased in my claims, for I have plenty of letters in my office from employers of labor, large and small, in this State thanking the writer for the fairness that I have entertained at all times.

Now, Mr. President, the matter under consideration this morning is only important as it is a manifestation of the effect of a vicious tariff system. No one who is asking for a fair and reasonable tariff that will afford reasonable revenue to aid in meeting the expenses of the Government can be charged with making an assault upon capital. Democrats believe that capital should have full opportunity for legitimate investment. They are opposed to socialism. They are opposed to governmental restrictions which would hamper and impede legitimate development and progress. But the Democratic Party is opposed to the prostitution of the taxing powers of the Government and their utilization by certain industries in order to enrich those who are engaged in such industries.

I shall vote for a tariff that will give to the Government adequate revenue. I shall not vote against a tariff bill because it may afford incidental protection if I believe that the rates are fair and just and will raise a reasonable amount of revenue. But I shall not vote for any tariff measure, the sole purpose or the principle of which is to transfer from the pockets of the masses into the pockets of the few the earnings of the people.

Mr. McLEAN. Mr. President——

Mr. KING. I yield to the Senator from Connecticut.

Mr. McLEAN. The Senator said he would vote for an adequate tariff or a tariff that would provide adequate revenue. We need $4,000,000,000, as the Senator knows.

Mr. KING. Of course I did not mean that we should raise all revenues from tariff duties. No one ever suggested such a preposterous thing, particularly when the Republicans are in power. The policy of the Republican Party is to derive but little revenue from the tariff, by cutting off importations, in order that the domestic manufacturers and producers may have a practical monopoly of the domestic market. I am in favor of a legitimate tariff such as the Underwood tariff law, and I would be in favor of supplementing that by a sane and reasonable revenue law that would require wealth and the various industries of the country and the other proper sources of taxation to contribute what would be fair and just to meet the expenses of the Government economically administered.

Mr. McLEAN. The revenue received from the income tax in 1921 was $1,000,000,000 less than it was in 1920. My idea is that the best way to alleviate existing conditions and reduce the per capita tax is to restore the purchasing power of the American people and increase our incomes so that the income tax returns will not drop a billion dollars a year.

Mr. KING. Mr. President, the last sentence of the Senator is a statesmanlike observation. The difference between the Senator and myself is that he suggests a method of accomplishing that desirable end which I think will not bring it about. He believes that in order to restore, as he calls it, prosperity we must cut off all or practically all imports and give the domestic producer a monopoly of the domestic market. I regard that as a foolish, an unwise course. I would increase production, expand our foreign trade and commerce, give to capital fair returns upon investments, afford it a full and fair opportunity for development, remove hampering governmental restrictions, give labor ample reward for its services, and place this Republic in a position to lead the world morally, financially, and in all movements which make for world peace and prosperity.

Mr. EDGE. Mr. President, I desire to consume about 10 minutes' time of the Senate to discuss what appeals to me to be an outstanding feature of the tariff bill, one which appears in the bill and is provided for as reported by the committee, which has not yet been reached in the ordinary way, but which I believe should be given consideration even before it is reached because of its paramount importance.

I refer to that section of the bill which provides for elasticity of administration of the tariff law and which provides discretionary power likewise in the administration of the law. I may say very frankly that if the tariff bill in its final form fails to provide, otherwise than through congressional action, some method through which individual schedules can be revised, downward as well as upward, as circumstances and investigation should warrant, I can not vote for it. I am making this declaration thus early, as I do not wish my possible position later to be misunderstood.

I am a firm believer in some elasticity in the administration of a tariff law. The abnormal trade conditions of to-day and the accompanying necessity for continually revising economic business relations makes it absolutely impossible for any tariff law to long meet situations which are changing so rapidly. It is unthinkable, especially in view of the time consumed in the consideration of this bill, that Congress should be the only authority permitted to readjust tariff schedules.

At the best, because of lack of technical knowledge, Congress is poorly equipped, and, anyhow, there are too many other problems the solution of which the country demands at our hands. I freely admit my lack of knowledge as to the wisdom of many of the schedules I have voted on during the consideration of this measure. I think it is perfectly fair to assume that there is not a Senator who would for one moment claim he could vote with anything like comprehensive knowledge of the effect of a majority of the schedules.

Of course, Senators on either side of the Chamber have their convictions as to general policy, which I do not criticize, but the individual raising or lowering of rates I must assume have been the result of study and investigation upon the part of the committee. Generally speaking, I have followed the recommendations of the committee. I have questioned their wisdom in a number of cases, but in the final analysis I have felt that a committee spending weeks and months studying details of trade, receiving reports from experts and governmental bodies appointed for the purpose, should of necessity be better informed than I could possibly expect to be. So therefore it has been my policy, as stated, usually to support the committee.

However, repeat that I am not entirely satisfied—far from it—with the bill as presented, and I would not feel justified in voting for it if I felt that all these schedules were to remain hard and fast until some future Congress again undertook a revision of the tariff.

I have always felt that legislative authority or responsibility consisted, or at least should consist, mainly of formulating policies and not dealing so much in details of administration. The latter power, to be successfully applied, must not be too greatly circumscribed and much latitude should be delegated to others. Again, may I repeat, with all respect, that this Congress, or no other Congress, is equipped to enact scientific tariff schedules and that to properly serve the country they should be flexible. If delegated power is badly administered, Congress always has the power to revoke or repeal such authority.

Democratic criticism of the bill has not, generally speaking, greatly influenced me, because it has so frequently been followed by glaring inconsistencies. Our friends on the other side of the aisle admit that fundamentally they are opposed to the policy of protection. Fundamentally I favor the policy of protection and firmly believe the history of the prosperity of the country in the past in every way justifies such a conviction.

That even Democratic approval or disapproval, however, is largely influenced by local or sectional conditions and, convictions as to policy goes to the four winds is amply demonstrated and emphasized by many Democratic votes for an increased tariff where the commodity or product was locally produced. Apparently it is not very difficult for an ardent Democratic free trader to suddenly become a shouting protectionist if local interests are affected.

It only all goes to prove if a tariff bill is to be equally fair to producer and consumer alike, some less directly interested agency than Congress must be delegated with greater power.

I look forward to the day when Congress will not be so jealous of its prerogatives and will adopt a policy which will provide for a bipartisan commission of trade and production experts delegated with real authority to prepare and administer tariff bills. As international trade expands, as the various countries of the world are brought closer together because of trade necessities and transportation developments, so the possibility of a tariff bill lasting as an effective measure longer than it takes to write it becomes more and more remote.

Mr. FRELINGHUYSEN. Mr. President, will my colleague suffer an interruption?

Mr. EDGE. I yield to my colleague..

Mr. FRELINGHUYSEN. The Senator is familiar, probably, with an amendment which I have proposed to the pending bill providing for an enlargement of the Tariff Commission in numbers, increase of salaries, and added powers to give them the authority to recommend to Congress certain rates based upon the difference in the conversion costs here and abroad or in the competing countries, and where the conversion costs in the competing country can not be found to take the landed selling cost for an article as compared with the domestic wholesale selling price, the commission to report to Congress their conclusions and leave Congress free to act.

As I understand the Senator's position, he not only approves of that amendment and that policy, but he goes further and is in favor of empowering that governmental agency actually to fix the rates. Am I correct in that assumption?

Mr. EDGE. Not entirely. I do not think it would be constitutional for an agency of that character to fix rates. I am in hearty sympathy, let me say, with the proposed amendment of my colleague, providing for a nonpartisan or bipartisan commission of experts to consider tariff rates. But, I go a step further, as my colleague suggests, by indorsing the provision now appearing in the pending bill, which provides that the President of the United States shall have a certain latitude in lowering or raising tariff schedules upon such information as he deems wise and proper, and upon the promulgating of a proclamation to that effect. So I am, to an extent, combining the features of his proposed amendment with the additional, as I view it, necessary power to give some latitude, so far as it can be done constitutionally, to some official of the Government.

Mr. WALSH of Montana. Mr. President, I should like to get a little more definite information from the colleague of the Senator who has the floor concerning his amendment, with the permission of the junior Senator from New Jersey.

Mr. EDGE. I yield to the Senator from Montana.

Mr. WALSH of Montana. The present commission, as I understand the matter, is authorized to ascertain the difference in the cost of production here and abroad, and it is undertaking to do so and to give that information to the Senate so far as it has been able to secure it. If I understand the amendment offered by the senior Senator from New Jersey, it merely amplifies the powers given to the commission to the extent that it authorizes them to recommend the rate.

Mr. FRELINGHUYSEN. To give that information and those facts which impel their findings.

Mr. WALSH of Montana. I am simply endeavoring to find out how much additional authority is given to the commission by the amendment proposed by the senior Senator from New Jersey. The present commission is authorized expressly by the act creating it to determine the difference in the cost of production here and abroad in the case of each duty. It is not authorized to recommend what rate ought to be imposed. Is there any additional power granted to the commission by the amendment proposed by the Senator?

Mr. FRELINGHUYSEN. Most certainly. In addition to the powers which the commission already has, the amendment provides a fundamental principle for ascertaining the tariff rates based upon the difference in the conversion cost here and abroad; that is, the difference in the production cost. I am not going into that. I shall do so when the amendment is before the Senate. Nevertheless, it provides for ascertaining the difference in the two costs of production and gives power to the commission to call in advisory committees; in other words, it lifts from the present Finance Committee of the Senate the burden of the hearings, but provides that all the facts analyzed which would appear from the hearings of those committees, whether brought out by manufacturers interested in industry or importers or consumers or transportation men, shall be reported to the Congress, together with the findings.

The amendment goes further than that, and confers a power which they do not now have, and that is, where the conversion costs or the production costs can not be ascertained, that they shall take the landed selling price of the foreign article and the domestic wholesale selling price, which can be obtained, and that they shall submit with the facts so ascertained their findings as to what the tariff rates should be.

Mr. EDGE. Mr. President, I wish to be courteous, but I should really like to proceed with my remarks and conclude them.

Mr. FRELINGHUYSEN. I really do not want to infringe upon the Senator's time.

Mr. EDGE. I will be glad to extend every possible courtesy to my colleague.

Mr. FRELINGHUYSEN. I thank the Senator for his courtesy. He has studied the subject in which I am deeply interested, and I wish to understand his position.

Mr. EDGE. I know my colleague is prepared to debate the amendment which he has offered in detail at a later date.

Mr. President, returning to the bill before the Senate, I regret somewhat that the President is called upon to assume this additional responsibility and burden, because I feel the Chief Executive has sufficient to do as it is, but under existing conditions it would seem impossible to place it elsewhere for the present. The President, of course, can not carry on the work personally, and will therefore undoubtedly depend upon a tribunal whose duty it will be to obtain the facts and which will not be governed alone by political party traditions, be they free trade or protection, but whose administration and advice will be first influenced by trade and industrial facts.

As the Government has insisted on assuming control of practically all business activities, then the Government owes it to business to give prompt decisions as to governmental policy. A tariff bill is the very foundation of business development.

This is possibly a bit aside from my discussion, but I sometimes feel that the present tendency toward investigation, regulation, and at times participation is destroying business initiative. Men feel it is useless to endeavor to develop possible resources because of uncertainty as to the Government's position.

It is all very well to try to prescribe a formula for business, but ofttimes I feel that the present determination to control and police every endeavor is resulting in a type of inertia that in the final analysis means plenty of theory in Washington but a national insolvency which will result in final disintegration and disaster.

Now, if on top of this we pass a tariff bill the subsequent administration of which demonstrates that while it affords ample protection it is unnecessarily destructive of American export business, there must be some authority to make quick alterations rather than to await the slow process of congressional action.

Referring to the necessity for elasticity in tariff schedules, President Harding on December 6, 1921, on the convening of the present session, when delivering his message to the Congress, made his position in this regard perfectly clear in the following language:

> Every contemplation, it little matters in which direction one turns, magnifies the difficulty of tariff legislation, but the necessity of the revision is magnified with it. Doubtless we are justified in seeking a more flexible policy than we have provided heretofore. I hope a way will be found to make for flexibility and elasticity, so that rates may be adjusted to meet unusual and changing conditions which can not be accurately anticipated. There are problems incident to unfair practices, and to exchanges which madness in money have made almost unsolvable. I know of no manner in which to effect this flexibility other than the extension of the powers of the Tariff Commission, so that it can adapt itself to a scientific and whole just administration of the law.
>
> I am not unmindful of the constitutional difficulties. These can be met by giving authority to the Chief Executive, who could proclaim additional duties to meet conditions which the Congress may designate.
>
> At this point I must disavow any desire to enlarge the Executive's power or add to the responsibilities of the office. They are already too large. If there were any other plan I would prefer it.
>
> The grant of authority to proclaim would necessarily bring the Tariff Commission into new and enlarged activities, because no Executive could discharge such a duty except upon the information acquired and recommendations made by this commission. But the plan is feasible, and the proper functioning of the board would give us a better administration of a defined policy than ever can be made possible by tariff duties prescribed without flexibility.

Again, I quote from the same message:

> In this proposed flexibility, authorizing increases to meet conditions so likely to change, there should also be provision for decreases. A rate may be just to-day and entirely out of proportion six months from to-day. If our tariffs are to be made equitable and not necessarily burden our imports and hinder our trade abroad, frequent adjustment will be necessary for years to come. Knowing the impossibility of modification by act of Congress for anyone or a score of lines without involving a long array of schedules, I think we shall go a long ways toward stabilization if there is recognition of the Tariff Commission's fitness to recommend urgent changes by proclamation.

A number of Senators, in criticizing the pending bill have suggested that it be returned to the committee to be rewritten. The Senator from Wisconsin [Mr. LA FOLLETTE] only last week gave this necessity as his viewpoint. But how would such action result in any great fundamental change of policy? Many amendments have from time to time been suggested by the committee since the bill has been before the Senate, but there is no indication that a majority of the committee would make the revolutionary changes apparently demanded by some of the critics. It all comes back to the policy suggested by the President, with which policy I am in absolute agreement. There never will be a really scientific tariff bill produced unless its

groundwork, at least, is predicated upon the investigation of nonpartisan interests where sectional demands can not have the controlling effect.

Personally, while fully subscribing to the policy of protection as measured by the honest difference between the cost of production at home and abroad, plus a reasonable profit, I recognize that the problem is more involved to-day than ever before in the history of the country. I am one of those who confidently believe it is absolutely essential to encourage and develop American export business if we are to reach anywhere near the maximum of prosperity necessary to increase employment and, naturally with it, contentment at home. During my short career in the Senate I have very frequently presented this view and endeavored to suggest constructive legislation to help develop export trade. I recognize fully that trade can not alone go in one direction; that if we are to be permitted to export we must import; that if we sell we must buy; and that to-day European countries can hardly reimburse us through any other agency than by an exchange of goods. I believe such exchange should be encouraged, and encouraged on a much larger scale than trade reports register at the present time. I recognize that embargoes and too heavy duties operate against a correction of this condition; but I recognize likewise that positive and distinct discrimination should be made by us as to what commodities we will permit to make up the volume of our imports and those which it is inimical to our domestic interests to encourage. I feel that Congress is hardly equipped clearly to balance the necessity of these discriminations, and it makes me all the more positive that other agencies, purely American agencies, must be employed. I have often said we can not have the cake and the penny both. We must sell a certain proportion of our farm and manufactured products abroad if our people are to be employed, and, conversely, we must receive from the other side certainly products not too directly in competition with our own.

Therefore, I repeat, the passage of this hard and fast tariff bill, without opportunity for certain elasticity of rates, might prove a national calamity. As much as I realize in many cases the necessity for higher schedules for our farm and factory products, I feel that I would fail in my duty if I finally supported a measure which, while it unquestionably provides much needed protection, still might result in a further diminution of our trade with the world, so necessary to the prosperity of every class of citizenship.

A tariff which, while affording better protection, still results primarily and practically in a general raise of prices at home, without a corresponding encouragement of world's trade, narrows our possibility for development to a trade confined to ourselves, which is not, in my judgment, a real interpretation of a broad and enlightened protective policy or a lasting solution of our economic ills.

Mr. HEFLIN. Mr. President, the Senator from Connecticut [Mr. McLEAN] in his speech this morning told us about factories being closed down and wages being reduced in Connecticut, and attributed that condition to the competition of Germany. I thought while the distinguished Senator was speaking of how the deadly deflation policy operated and how much ruin it wrought even to some interests in his State. Not a word did the Senator say about that, but he offers as a cure for all ills the high protective tariff of the Republican Party. He told us the value of the articles manufactured in a year in his State; he gave us figures as to production, running up into the hundreds and hundreds of millions of dollars.

Mr. President, a considerable portion of the manufacturers of the State of Connecticut consist of cotton goods, the raw material of which is raised by the cotton producers of my State and section at starvation prices and bought by the spinners of Connecticut at a price away below the cost of production. The Senator did not mention the cotton industry, but talked of what his State produces in the way of manufactured articles.

Every time, Mr. President, we approach the vital issue before this country, which is the matter of properly administering the greatest banking system in the world, we find the shrewd Republican leaders dodging and going around the main issue. They do not want the people to be informed upon that question; they do not want the people to know that money and credits are as essential to the life of their business as air and water are to the life of the human being. They are moving heaven and earth now to have the present governor of the Federal Reserve Board reappointed. Such a propaganda has never been carried on as that which is going on in the country now. Business men's clubs and bankers' conventions are being asked to indorse him for reappointment; and not long ago, strange to say, Mr. President, the great Harvard University conferred upon him the degree of LL. D.

HARVARD AND HARDING.

Mr. President, the most remarkable instance of a slight-of-hand performance perhaps ever witnessed in our country was that presented not long ago by the faculty of Harvard University when, with perfect control over their risibilities and without moving a muscle or batting an eye, they conferred the degree of LL. D. on W. P. G. Harding. [Laughter.] Horatius at the bridge and Leonidas at Thermopylæ never displayed such grim boldness and reckless daring as did the members of the Harvard faculty when, in defiance of the pride and interest of her honored living and in utter disregard for the memory of her illustrious dead, they conferred the degree of LL. D. on W. P. G. Harding. [Laughter.]

Oh, Mr. President, Columbus discovered America, but I am persuaded to believe that if he had known that such a travesty upon the proprieties attaching to a great American institution of learning would one day be perpetrated here, he would have permitted the legend "Ne plus ultra"—No more beyond—to remain upon the scroll of the Spanish coin around the pillars of Hercules.

Theodore Roosevelt, a brilliant graduate of Harvard in her better and brighter days, used to carry a big stick and terrorize big crooks; but the fates spared him the dreadful ordeal of seeing and hearing the money changers of Wall Street chuckle when Harvard conferred the degree of LL. D. on W. P. G. Harding. [Laughter.]

Verily, LL. D. degrees are in greater abundance at Harvard now than ever before, and those in control of them far more careless and indifferent as to their disposition than ever were their illustrious predecessors.

If there are any others who served Wall Street financiers through the Federal Reserve Board's ruinous deflation policy who feel that they, too, are entitled to a Harvard degree of LL. D., the same as W. P. G. [laughter], I respectfully refer them to Mr. F. H. Curtiss, intimate and influential friend of the faculty at Harvard and a prominent member of the committee of economic research of that institution. In addition to his close and potential connection with Harvard University he is now, by appointment at the hands of W. P. G. Harding, chairman of the Federal Reserve Bank of Boston, at a salary of $18,000 a year.

Mr. President, we can not escape the conclusion that it was deemed advisable to secure for W. P. G. a Harvard degree of LL. D. [laughter] to help Wall Street in its efforts to get him reappointed governor of the Federal Reserve Board.

O tempora, O mores!

Shades of Oliver Wendell Holmes, Emerson, and Lowell!

Come back, O spirits of the cultured and mighty dead, and restore the equilibrium of the Harvard of other days.

Mr. POMERENE. Mr. President, I want to speak very briefly on the subject of vegetable oils.

Very frankly, I should like to see all of these oils placed upon the free list. When I say "these oils," I mean cottonseed oil, coconut oil, peanut oil, and soya-bean oil. These oils are both edible and nonedible; that is, certain qualities of them are edible and certain of them are not edible.

These oils enter not only into the industrial life of the country but into the domestic life of the country as well; and if I understand the amendment which has been proposed by the Finance Committee it is to place these oils substantially on the free list so far as they enter into the manufacturing of articles which are not used for food purposes.

I am glad they have made that concession. I do not think the average citizen realizes the extent to which these oils are consumed in this country in manufacturing purposes. I am going to discuss this question rather from the standpoint of the soap makers of the country.

In the State of Ohio there are 27 large soap manufacturers who use these oils. There are more smaller ones, but there are 27 that may be regarded as large soap producers. The largest of these, of course, is the Procter & Gamble Co., of Cincinnati, manufacturers of Ivory soap. This company manufacture coconut oil. To some extent they would be benefited by having coconut oil put on the dutiable list. They are not asking for it, however. They realize that with their mill making coconut oil it would be an advantage to them over their competitors, but they are taking the larger view, the national view of this tariff question so far as it relates to their business. The coconut oil which these companies use is very largely produced in the Philippines. There is one coconut-oil mill that I

speak of here in the United States, and it is owned by the Procter & Gamble Co.

Other Senators have indicated in what they have said the large extent to which these oils are used. The soap goes into every family and every household. Not only are the manufacturers of the soaps opposed to the duty on these oils but the laundries as well. I have a very large number of letters and other communications, partly oral and partly in telegrams, bearing upon this subject; and, as I now recall, nearly all of them protest against these high rates of duty, because if they are imposed they are going to add substantially to the cost of production, and they are going to add largely to the cost to the consumer.

The rate on coconut oil under the Senate bill is 4 cents; under the House bill 2 cents; under the emergency act it was 20 cents a gallon; under the Underwood Act it was free of duty, and so it was under the Payne-Aldrich Act.

Cottonseed oil under the Senate bill is made dutiable at 3 cents a pound, under the House rate 2 cents a pound, under the emergency act 20 cents a gallon, and under the Underwood Act and the Payne-Aldrich Act it is free.

Peanut oil under the Senate bill is dutiable at 4 cents a pound, under the House rate 2½ cents a pound, under the emergency act 26 cents a gallon, under the Underwood Act 6 cents a gallon, and under the Payne-Aldrich Act free.

Soya-bean oil under the Senate bill is dutiable at 3 cents per pound, under the House rate 2 cents per pound, under the emergency act 20 cents a gallon, under the Underwood Act and the Payne-Aldrich Act free.

The Senate Finance Committee in substance provides that these oils may come in free when they enter into the manufacture of soaps, and possibly when used for some other manufacturing purposes; but if they are to be used in the manufacturing of substitutes for butter, such as oleomargarine, then they are to be taxed.

Let me see if I can present this matter as it appeals to me.

I realize the selfishness at the basis of many of these rates, and it is pure, unadulterated selfishness. On the other hand, perhaps it may be said in some sense of the word that those who advocate that these oils be placed upon the free list are prompted in part by a selfish feeling. That may be so, but it seems to me that we ought to look at this matter from the national viewpoint; so I have been trying to find out in my own mind, if I could, a reason for putting these oils upon the free list when they enter into the manufacture of soaps and putting them on the dutiable list when they enter into the manufacture of edibles.

Reduced to its final analysis, the proposition means this: "Yes; we agree that cleanliness is next to godliness, and for that reason we think that for laundry purposes and for toilet purposes the people should have soap free of duty, and in order that it may be furnished more cheaply to the public we are going to put these raw materials upon the free list, so that the workingman, with his family, can get his soaps made out of oils that are on the free list; but Heaven forbid that his family should be permitted to use oleomargarine or anything else that is used for edible purposes without paying a tax!"

That is the situation. I suspect that the duty is going to be retained on these oils in so far as they are used for edible purposes; but it having been conceded that oils which are used in the manufacture of soaps for toilet and laundry purposes should be on the free list, I can not understand why the plain citizen and his wife and children should not be permitted to use the same oils in an edible form without paying a tax. That is as it appeals to me; and I am not going to take the time of the Senate to dwell upon the matter further. I could go into details. I have a lot of statistics here before me. I could consume several hours of the Senate's time in discussing this matter, but I think I have presented my thoughts in this very brief way, and they will be understood and perhaps as much attention paid to them as if I talked for several hours more and gave all this detailed information.

For these reasons, thus briefly stated, I shall vote to have these oils put on the free list if I have the opportunity. If I do not have that opportunity, I shall vote to have them placed on the free list to the extent permitted by the Finance Committee.

COLUMBIA BASIN IRRIGATION PROJECT.

Mr. JONES of Washington. Mr. President, I report back favorably from the Committee on Irrigation and Reclamation the bill (S. 3808) authorizing the Secretary of the Interior to investigate and report to Congress upon the Columbia Basin irrigation project. I call the attention of my colleague to this report.

Mr. POINDEXTER. I ask unanimous consent for the present consideration of the bill. It calls for an investigation and report by the Secretary of the Interior.

The PRESIDENT pro tempore. The Secretary will read the bill.

The Assistant Secretary read the bill, as follows:

Be it enacted, etc., That the Secretary of the Interior is authorized and directed to investigate and report as early as possible, and not later than the 1st day of January, 1924, on the essential features of the proposed Columbia Basin irrigation project referred to in the act of the Legislature of the State of Washington entitled "An act providing for the survey of the Columbia Basin irrigation project, creating a commission therefor, defining its powers and duties, and making an appropriation, and declaring that this act shall take effect immediately," approved March 1, 1919, in the following particulars:

Its water supply and the permanency and sufficiency thereof; the approximate watershed from which said water supply is to be derived and what, if any, natural reservoirs, such as lakes, are available for the storing of surplus waters for the irrigation of the land, the reclamation of which is contemplated by the said act, and any other lands capable of being irrigated by the waters to be conserved through such project in the said State of Washington or any other State; the character of the climate as it affects the agricultural development of the said land; the transportation facilities available therefor; the prospects and means of settlement; the engineering features of the proposed project, stating point of diversion of the water to be used in the said project and from what streams; the principal dam or dams which may be needed therefor and the general location, nature, length, and character of such aqueducts or canals as may be necessary for conveying the waters to the lands to be irrigated thereby; the cost and feasibility from an engineering and physical standpoint of such work as may be required to accomplish the purposes of the said project, both in the aggregate and the ultimate cost per acre to the land to be benefited thereby; and the views of the commission as to the general benefits to be derived from the completion of the said project in the way of markets for manufactured products, of increased agricultural production, of opportunities for home building, and the effect of the same, both upon the communities immediately affected and upon the Nation at large, and such other matters as in the judgment of the said Secretary may be of importance and pertinent to the proposed development.

SEC. 2. That for the purpose of carrying out the provisions of this act there is hereby authorized an appropriation, from any money in the Treasury not otherwise appropriated, of the sum of $100,000, to be expended under the direction of the Secretary of the Interior in making such investigations, studies, and report.

The PRESIDENT pro tempore. Is there objection to the present consideration of the bill?

Mr. McCUMBER. I will not object, if it does not involve debate.

Mr. OVERMAN. I would like to have the Senator explain the bill.

Mr. POINDEXTER. Mr. President, this is a bill directing the Secretary of the Interior to make an investigation of this irrigation project and report to Congress. It appropriates nothing, but authorizes an appropriation of $100,000 to carry out the investigation.

Mr. CARAWAY. Mr. President, may I ask the Senator a question? Does not that come under reclamation work now being done, and is there not a board or commission to investigate and report on such matters?

Mr. POINDEXTER. This is a special bill.

Mr. CARAWAY. I know it is; but is there not a board to report upon this very question of irrigation and reclamation?

Mr. POINDEXTER. No; there is not. There is a Reclamation Service in the Interior Department. The Secretary of the Interior would have that bureau available to aid him in this investigation.

Mr. CARAWAY. What is the reason why this particular project should be picked out and have a special investigation made of it when we have the bureau for general investigations?

Mr. POINDEXTER. There is a law requiring action by Congress before any irrigation project can be adopted. This bureau has no authority to make either investigations or reports, or to approve projects without the special authorization of Congress.

Mr. CARAWAY. Does not that bureau have any power to investigate?

Mr. POINDEXTER. Not new projects. That requires the authorization of Congress. Furthermore, I will say to the Senator from Arkansas, it is intended that this should be a special undertaking. On account of the size of it and the amount of money that will be required in case it should be approved, it was thought that there should be perhaps some independent authorization for this investigation, and that it should be carried on under special provision of law.

Mr. WALSH of Montana. If the Senator will pardon me, I may say, for the information of the Senator from Arkansas, that the proceeds from the sale of public lands go into what is known as the reclamation fund, and that is utilized for carrying on projects now under way. From time to time Congress has made very meager appropriations, to be utilized by the Reclamation Service in studying the possibilities of new projects; but that is an inconsequential amount. Congress has also

made special appropriations to discover underground sources of water, but there is no fund available, nor is there any authority vested in the Secretary of the Interior, under existing law, to carry out the purposes contemplated by this bill.

Mr. CARAWAY. Then, let me ask this question. What are the bureau's duties, and what useful service does it render, if it can not make investigations?

Mr. POINDEXTER. It can make investigations whenever it is directed to do so. It is the function——

Mr. CARAWAY. Why is it not directed to do so in this particular instance?

Mr. POINDEXTER. Because it was desired to put it upon a broader basis, and to invoke new agencies, on account of the extent of the project.

Mr. CARAWAY. It looks, then, to a very large appropriation in the future?

Mr. POINDEXTER. In case it should be approved, it would require a large appropriation, to be reimbursed, of course, from the land.

Mr. CARAWAY. I do not think the funds we have already appropriated have ever been returned.

Mr. POINDEXTER. They are being returned, and I have no doubt all will be returned.

Mr. CARAWAY. The information I got while I was a Member of the House was, as I remember, that they were postponing even the payment of the interest from year to year. I shall not object to the bill, but I was just trying to find out why this particular project should be selected for investigation.

Mr. POINDEXTER. I think it can all be summed up in the statement that the view of those who are interested in it was that the proposed project is of such extent, and the expenditures would be so large in case it should be approved, that it would be better to provide a special agency by which the investigation should be made.

Mr. BORAH. Mr. President, I have not had time to read this bill, but I understand it is the unanimous report of the committee?

Mr. POINDEXTER. It is.

Mr. BORAH. Does the bill contemplate an investigation by other agencies than those which ordinarily, under the Reclamation Service, would make an investigation?

Mr. POINDEXTER. Not necessarily. It leaves that in the discretion of the Secretary of the Interior. For instance, General Goethals made an investigation of this project and a report on it, basing it very largely upon an investigation made by the State of Washington. If the Secretary of the Interior should choose to avail himself of the information which General Goethals has, he would have the opportunity to do so under this bill.

Mr. BORAH. That is the reason why I asked the question. I am simply seeking information. I am very much interested in this project, as all western men are.

Mr. WALSH of Montana. Let me state to the Senator from Idaho that the bill as originally proposed contemplated the creation of a commission consisting of three members, one to be appointed by the Secretary of the Interior, one by the Secretary of Agriculture, and one by the Secretary of Commerce; but the committee could see no reason why the investigation could not be most effectively carried on by the existing organization of the Reclamation Service under the direction of the Secretary of the Interior.

Mr. BORAH. Then, really all the bill does is to authorize a sufficient fund simply to make the investigation. They might make the investigation now if they wanted to do so?

Mr. POINDEXTER. I suppose they might. I may not be thoroughly informed on it, but my information is that the Reclamation Service does not undertake investigations of special projects. It certainly does not carry them on to the point of complete surveys without special authorization.

Mr. OVERMAN. What is meant by authorization? Does it mean that they will come to Congress at the next session and ask for an appropriation of $100,000 for this purpose? The bill authorizes but does not appropriate.

Mr. POINDEXTER. It does not appropriate.

Mr. OVERMAN. What is the reason of that? When does the Senator think an appropriation will be desired?

Mr. POINDEXTER. In case the bill shall pass the House of Representatives and become a law we will desire it as soon as the Appropriations Committee would approve it. It will have to go before the Committee on Appropriations.

Mr. OVERMAN. Yes; it is only an authorization.

Mr. WALSH of Montana. Perhaps a misunderstanding might arise by reason of something that was said in answer to an inquiry made by the Senator from Arkansas. Of course, before any project was entered upon it became necessary for the Reclamation Service to make an investigation as to whether or not a particular project was feasible. Having found certain projects feasible, those projects were entered upon and have been completed or practically completed. Those projects having taken all the available funds, and no more funds really being available for the purpose of prosecuting investigations, Congress has from time to time made meager appropriations to carry on investigations concerning the feasibility of other projects.

Mr. OVERMAN. I understand General Goethals has made an investigation of this matter. Who paid him?

Mr. WALSH of Montana. He was employed by private parties interested in the project, and the State of Washington has appropriated and expended $150,000.

Mr. OVERMAN. The State of Washington having made a thorough investigation, and General Goethals having done the same, why authorize an appropriation of $100,000 more to make an investigation?

Mr. WALSH of Montana. It is conceded, as I understand the matter, that Congress would scarcely care to enter upon the project without an official investigation made by its own agency.

Mr. OVERMAN. That is what I want to get at. Who is to make the investigation?

Mr. WALSH of Montana. The Secretary of the Interior.

Mr. ASHURST. Mr. President, in reply to the suggestion of the Senator from Arkansas [Mr. CARAWAY] as to no repayments being made of money advanced from the reclamation fund, the Reclamation Service reached its twentieth year on the 17th of June last, and during the first 19 years $171,996,476 were expended, and there have been repaid, in the first 19 years, $46,125,559.

I ask unanimous consent to include in the RECORD at this point a table showing the amount appropriated for each project, and the amount returned to the Treasury of the United States. I hope the bill will pass at this time.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

DEPARTMENT OF THE INTERIOR,
UNITED STATES RECLAMATION SERVICE,
Washington, D. C., August 6, 1921.

Hon. HENRY F. ASHURST,
United States Senate.

MY DEAR SENATOR: In the absence of Director Davis we duly received your letter of July 20, 1921, to him, requesting a revision of figures sent to you in 1919, showing the net investments in several Government reclamation projects.

When your letter arrived we were, for other purposes, compiling such data to the end of the last fiscal year, and as that is a convenient period to use, it seemed best to withhold reply until these figures were available.

I am now sending them herewith in a tabulation similar to the one returned with your letter.

You may recall that these figures were made up in this way originally by specific request from your office by telephone. They are not in the form that we would select for ordinary purposes of publication because there is danger that they will mislead.

In other words, the inclosed figures are bookkeeping data and involve considerable duplication that swell the totals and make these misleading unless there is given and read with them considerable explanation. For example, we are constantly transferring from one project to another machinery, equipment, and materials in order to work the greatest economy and efficiency in utilizing these.

To keep the books showing the investments in any particular project, it is necessary to include an agreed value for such things transferred from and to the project. Thus, the total investment for each project includes "transfers received" of such things, and the column "Reimbursements and credits" includes "transfers issued." On any particular project these two entries necessarily differ, and hence must be included to bring out the net investment for that project, whereas for all projects these items merely balance one another and swell the totals, aggregating upward of $8,600,000.

The figures given for total investments include cash disbursements from the reclamation fund, appropriations for "increase of compensation," and other special appropriations, such as that of a million dollars toward the cost of Elephant Butte Dam under the act of March 4, 1907; others for judgments of the Court of Claims, the funds for the Yuma auxiliary project, etc.

At the bottom of the table you will notice a number of other items added to bring the figures into agreement with our book totals. The "secondary projects" include a great number of possibilities that have been surveyed or examined from time to time in addition to the projects actually undertaken. For example, in Arizona this includes the San Carlos, San Pedro, Sentinel, and other propositions that will occur to you.

The item of "general expense" includes headquarters offices at Washington and Denver for administration, engineering design, and other purposes, legal services, and many other items that can not readily be allocated to particular projects except in bulk from time to time on the basis of expenditures or similar criteria. This item of general expense is the largest one included under the head of transfers already mentioned.

The item entitled "Indian projects" represents expenditures from the reclamation fund reimbursed by the Indian Bureau.

If you intend to publish these figures and want to avoid the possibility of misleading suggested above, you may want to use merely the figures of "net investment." In most cases we find that figures of cost rather than investment answer the questions in the minds of in-

quirers, and if you wish figures on a cost basis, or if we can otherwise be of further service in this connection, we shall be glad to do so.

Very truly yours,

MORRIS BIEN, *Acting Director.*

Reclamation projects investment to June 30, 1921.

(3) The reimbursements exceed the investment.

The PRESIDENT pro tempore. The junior Senator from Washington asks unanimous consent for the present consideration of the bill.

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill.

Mr. POINDEXTER. There is a clerical error in line 22, page 2, where the word "commission" is used. I move to amend by striking out "commission" and inserting in lieu thereof the words "Secretary of the Interior," so as to read:

and the views of the Secretary of the Interior as to the general benefits—

And so forth.

The amendment was agreed to.

The bill was reported to the Senate as amended, and the amendment was concurred in.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

THE TARIFF.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes.

Mr. McCUMBER. I ask that the Secretary report the amendment offered by the Senator from Utah [Mr. KING] to the amendment of the committee.

The PRESIDENT pro tempore. The Secretary will read the amendment to the amendment.

The ASSISTANT SECRETARY. On page 22, line 4, in the committee amendment, the Senator from Utah proposes to strike out "4," before the word "cents," and to insert in lieu thereof "2," so that if amended it will read:

Coconut oil, 2 cents per pound.

Mr. HARRISON. Mr. President, I suggest the absence of a quorum.

The PRESIDENT pro tempore. The Secretary will call the roll.

The Assistant Secretary called the roll, and the following Senators answered to their names:

Ashurst	Glass	McCumber	Shields
Ball	Gooding	McKinley	Shortridge
Borah	Hale	McLean	Smith
Bursum	Harreld	McNary	Smoot
Calder	Harris	Moses	Stanley
Capper	Harrison	New	Sterling
Caraway	Heflin	Newberry	Townsend
Cummins	Johnson	Norbeck	Underwood
Curtis	Jones, Wash.	Oddie	Walsh, Mass.
Dial	Kellogg	Overman	Walsh, Mont.
Edge	Kendrick	Pepper	Warren
Elkins	Keyes	Poindexter	Watson, Ind.
Ernst	King	Pomerene	Willis
Fernald	Ladd	Ransdell	
France	La Follette	Rawson	
Frelinghuysen	Lodge	Sheppard	

Mr. HARRIS. My colleague [Mr. WATSON of Georgia] is absent on account of illness. I ask that this announcement may stand for the day.

Mr. HARRISON. I wish to announce that the Senator from Nevada [Mr. PITTMAN] is detained on account of illness in his family. I will let this announcement stand for the day.

The PRESIDENT pro tempore. Sixty-one Senators have answered to their names. There is a quorum present. The question is on agreeing to the amendment proposed by the junior Senator from Utah [Mr. KING] to the amendment of the committee.

The amendment to the amendment was rejected.

The PRESIDENT pro tempore. The question now is on agreeing to the committee amendment.

The amendment of the committee was, on page 22, after line 3, to insert a new paragraph, as follows:

PAR. 50a. Coconut oil, 4 cents per pound; cottonseed oil, 3 cents per pound; peanut oil, 4 cents per pound; and soya-bean oil, 3 cents per pound: *Provided*, That such oils may be imported under bond in an amount to be fixed by the Secretary of the Treasury and under such regulations as he shall prescribe; and if within three years from the date of importation or withdrawal from bonded warehouse, satisfactory proof is furnished that the oil has been used in the manufacture of articles unfit for food, the duties shall be remitted: *Provided further*, That if any such oil imported under bond as above prescribed is used in the manufacture of articles fit for food there shall be levied, collected, and paid on any oil so used in violation of the bond, in addition to the regular duties provided by this paragraph, 3 cents per pound, which shall not be remitted or refunded on exportation of the articles or for any other reason.

Mr. GOODING. In paragraph 50a, page 22, line 6, after the word "pound" and before the word "*Provided*," I move to strike out the remainder of the paragraph.

Mr. LADD. Mr. President, I desire at this time to make a few observations with regard to the subject before us in connection with the matter of soap. I may say that I hope the amendment proposed by the Senator from Idaho to the amendment of the committee will be adopted.

As a matter of fact, according to the record there is only 4 per cent of the total soap produced in the country that is exported. The balance of the soap is used domestically. The total amount of imported soap is less than 1 per cent, and one-half of that is castile soap. In 1911 there was exported, in round numbers, from this country $4,000,000 worth of soap. In 1918 it had risen to $13,000,000, in 1919 to $21,000,000, and in 1920 it was $19,000,000. That is the latest information I have.

The soap manufacturer has enjoyed a duty on soap continuously, and he has at the present time, under the bill, a proposed duty of from 5 to 50 per cent ad valorem on all the soap that is imported into the country, and yet he has objected. However, the objection has come mainly from the producers of laundry soap and from the laundrymen themselves to a tariff duty on the vegetable oils.

I call attention again to what was stated in the editorial from Wallace's Farmer, which I placed in the RECORD yesterday, wherein it was stated:

The United States can produce her own fats. We don't want to make the mistake of Germany and build up an agriculture which in time of war can not be rapidly modified to furnish our full supplies of fats at home. Our soap manufacturers should be taught again to depend as largely on the fats and oils coming from American farms as they did before the war.

It further said:

It is more important that there be a tariff of 2 or 3 cents a pound on those tropical fats and oils that are used for nonedible or soap purposes than that there be a tariff of 3 or 4 cents a pound on the edible fats and oils. As a matter of fact, there is enough coconut oil coming in free from the Philippine Islands every year to supply the demand for edible fats and oils. Even more important than the tariff on hides is the tariff on tropical oils used for soap purposes.

Mr. President, in 1912 the soap manufacturers were using 35 per cent of vegetable oil and 65 per cent of animal and fish oils. Of this amount 17 per cent was cottonseed oil, but in 1917 the amount of cottonseed oil had fallen to 9.4 per cent of the total amount used. Coconut oil is rapidly displacing other oils, not only in soap making but as a substitute for cottonseed oil, peanut oil, and corn oil in butter substitutes, in lard, and various other preparations.

In 1912 we imported only 32,000,000 pounds of coconut oil. Before that time it was an industry that was practically negligible. In 1919 of coconut oil we were importing 490,000,000 pounds. Of soya-bean oil in 1912 we were importing 28,000,000 pounds, and before that time it had been practically a negligible quantity. In 1919 we were importing 337,000,000 pounds. In other words, from 1912 to 1919, inclusive, there was an increase in the amount of coconut and soya-bean oil of 767,000,000 pounds. This was used to displace oils produced in this country.

In butter substitutes in 1912 coconut oil only constituted 1½ per cent of the total amount used. In 1918 coconut oil in butter substitutes constituted 49 per cent, or practically one-half of all the butter substitute was coconut oil. Cottonseed oil in 1912 in the manufacture of butter substitutes constituted 83 per cent, but in 1918 it had fallen to 29 per cent, being displaced by the oriental cheap oils.

Of lard substitutes in 1912, 22 per cent was cottonseed oil. In 1918, 83 per cent was used of cottonseed oil and the balance of coconut oil.

The use of peanut oil is rapidly increasing, as is the use of coconut oil and soya-bean oil rapidly increasing, in the amount that is used in this country to displace the other oils that can be and are produced here.

I wish to place in the RECORD a letter from the Detroit Reduction Co., of Detroit, Mich., or a portion of the letter, wherein they say:

> The proviso above quoted is the amendment which the Senate committee has placed in the bill that we are interested in having eliminated.
>
> The soap and candle makers who use large quantities of vegetable oils would naturally import these materials under bond as provided by this amendment, but when the oils are once in their factories it will be difficult to tell what proportion will be used for nonedible products and what amount will go into edible products.
>
> You will note that, as the amendment is written, three years may elapse from date of importation or withdrawal from bonded warehouses before proof need be offered to the Treasury Department as to the use of the oils. In my judgment, it would be very difficult for anyone to trace these oils after three years had elapsed. For this reason I think we are justified in asking that the amendment be stricken out and the tariff on vegetable oils be left in.
>
> You will further note that there is nothing in the whole paragraph which contemplates that these oils will be used in the manufacture of products here and then reexported. While this may be an argument used by the soap makers, it is surely not provided for in the bill; in fact, the interests that are working hardest for free oils are the importing and exporting houses. They, however, merely figure that the oils would pass through the country and they would get their commission for handling the same. This would in no way help American manufacturers.
>
> What we are asking is that the duty be placed on the vegetable oils in question, because they come in direct competition with garbage grease and greases produced by small rendering plants throughout the United States. It should be further made clear that if there is no duty on vegetable oils used in the manufacture of soaps and candles, for which purpose garbage grease and other low-grade greases are used, that then it will destroy the industry in which garbage-grease producers are engaged and in which our capital is invested.
>
> Stating the case plainly, therefore, the question of issue is: Are we going to allow Japan and China to ship large quantities of vegetable oils to the United States, free of duty, and in so doing ruin a business to furnish a very liberal supply of low-grade greases for the soap and candle makers?
>
> The case would also be different if the vegetable oils in question were imported from France, Belgium, Italy, or other European countries who are in debt to us and in need of help, but this is purely a product coming from the Orient.
>
> The result would be that the oriental countries, where labor is very cheap, will ship their oils in here to the detriment of those engaged in the reduction of garbage and the recovery of grease therefrom merely to satisfy the demand of a few export and import houses and a number of soap and candle manufacturers.

THE SOAP MAKER AND THE FARMER.

The manufacturer of soaps, Mr. President, is not consistent. He pretends to be favorable to protection for the farmer producing oils like cottonseed oil, corn oil, peanut oil, and soya-bean oil, and it would seem for propaganda purposes offers the farmer an apparent protection on these oils and thereby closes the front door against importation of free oils, but cunningly provides that the back door shall be left open so he can slip in, unobserved, through this back entrance and, "blind pig" or "bootlegger" like, be permitted to have unmolested his protected graft while the farmer, as in the past, continues to pay the bills and is being forced out of farming by competition with cheap oriental labor, and this that the soap maker may continue to profit and prosper. To put an apparent tax on coconut oil and then let in free copra is no protection, and will not long mislead anyone. I shall, therefore, move to make the necessary change when we come to copra. The Senator from Idaho [Mr. GOODING] has already moved to strike out the paragraph that would permit the introduction of coconut oil and soya-bean oil free.

I can not see why oils should be admitted free for soap with which to wash the hands while oils to be used as foods for the stomach should be taxed.

Mr. President, those who try to mislead the public by such a course are not on tenable ground. The soap manufacturer has big protection—on castile soap 15 per cent ad valorem; on toilet soaps, perfumed, 50 per cent ad valorem; on medicinal soaps 20 per cent; and on unperfumed toilet soaps 10 per cent. Even on all other soaps of the cheapest grade he has a protection of 5 per cent ad valorem, yet the soap manufacturer is flooding the country with propaganda against protecting the farmer in order that the soap manufacturer may continue to swell his profits. This is not justifiable.

If we do not intend to afford the farmer a modicum of protection, then let us say so; but let us not try, by this means, to mislead him, for his memory is good and his retaliation will be lasting.

I advise my good friend, the Senator from New Jersey, to inform the soap manufacturers that they do not come into court with clean hands, for they are not interested in seeing that the farmer, the producer of vegetable oils, gets a fair price for his product, but rather that the users of vegetable oils for soap making and other purposes get cheap raw material in an unprotected market produced by cheap oriental labor, in order that the soap manufacturer may have a full dinner pail and an opportunity for European travel, while the farmer is forced to the verge of bankruptcy and compelled to live as do the peasants of the competing nations.

I note from the Manufacturers' Record of Baltimore, under date of May 25, 1922, their editorial view.

I call attention to the fact that the Manufacturers' Record is not a western magazine; it is not a magazine that is supporting the agricultural interests of this country; but is a manufacturing journal which is published in Baltimore, Md., and ordinarily supports the manufacturing interests; but here is what is said editorially by that magazine:

> For years the soap makers have enjoyed protection under Republican and protective tariff laws alike. This protection has been high as 20 per cent ad valorem for common soap, while raw materials had no protection at all. But now, when the farmers demand that they also be given consideration, the soap makers first urge Congress to give them only 5 per cent protection and the raw materials nothing at all; and then, when that appears dubious, aver that they would rather not have any protection at all than to have to let the farmers have it, too. That is, the makers of common soaps, for it is not controverted that the makers of the fancier soaps always want and get protection.
>
> Our contention is that such a change of policy by the soap makers, after they have enjoyed years of prosperity under tariff protection, is unmoral if not immoral. We are not experts in the ethics of selfishness, but we do know that the agricultural industry in the United States is more important than the soap industry, and we do know that it is more important that American vegetable oils sell in a protected market than that some soap makers sell some of their product in foreign lands. Not that the alternative exists, for we are quite confident that America will export soap even after vegetable oils are protected.

As has been the case, I may say, during the period of the emergency tariff. Again, the editorial says:

> The position of the soap makers appears to be quite clear—they were willing enough to have tariff protection, and have had it for years, but the moment it is proposed to give tariff protection also to the manufacturers of raw materials, namely, the farmers who produce vegetable oils, why these same soap makers come into court and say, substantially, "Oh, well, in that case, rather than have the other fellow protected, we'll do without protection." They are not against protection for their product; they are only against it if the producer is also to get protection. There is a condition precedent to their enthusiasm for free trade. Indeed, they are not for free trade in soap at all.

How about the soap manufacturer of the past as compared with the farmer? The article says further:

> But how long has it been since the soap makers began to think that possibly the cheaper soaps did not need much protection? In the act of 1909, when the agricultural bloc had not made protection of vegetable oils a real issue and they were coming in for the most part free, we find that these soap makers were getting 20 per cent ad valorem. It may be assumed that they asked for this high preferential and that it was not crammed down their throats. And makers of fancy soaps were getting as high as 50 per cent protection. Also, when Mr. UNDERWOOD wrote his free trade tariff law, the soap makers somehow managed to get 5 per cent on common soaps and as much as 30 per cent on perfumed soaps, while the makers of vegetable oils, the farmers, were getting nothing.

Let us see what the editorial thinks would be a fair deal for the farmers—and bear in mind all this comes from a journal published not in the interests of agriculture but it comes

from the Manufacturers' Record, published in the interests of the manufacturers. They conclude:

It would be good policy now for the soap makers to let the farmers have some of the same medicine which has made the soap makers themselves prosperous—that is, protection. We wonder how any sane American should want conditions otherwise. For instance, the emergency tariff act has made the peanut-growing industry again profitable in the United States. We think that is a fine achievement, and so do many farmers whose lands, ruined for cotton by the boll weevil, still have a living in them unless the soap makers are allowed to patronize the coolies of China rather than their own fellow citizens.

We had better be fair and give the American farmer a chance to supply raw material if we expect him to purchase the highly protected manufactured products.

I feel, Mr. President, that the tariff as proposed by the committee in this instance is justifiable and that the amendment proposed by the Senator from Idaho should prevail.

Mr. TOWNSEND. Mr. President, will the Senator from North Dakota yield for a question?

The PRESIDING OFFICER (Mr. BURSUM in the chair). Does the Senator from North Dakota yield to the Senator from Michigan?

Mr. LADD. I yield.

Mr. TOWNSEND. My understanding of this provision is that it is not a drawback provision, under which duty is to be paid on goods admitted in bond and then to be rebated when the goods are exported, but that it simply applies to goods shipped here in bond, and then the Government will have to go to trouble and great expense, and with the probability of failure, of detecting what is used for edible purposes and what is not?

Mr. LADD. That is correct; and it is practically, in my judgment, impossible to enforce such a provision.

The PRESIDING OFFICER. The question is on the amendment offered by the Senator from Idaho [Mr. GOODING] to strike out the proviso beginning in line 6 on page 22.

Mr. FRELINGHUYSEN. Mr. President, the Senator from Idaho [Mr. GOODING] has moved to strike out the proviso inserted by the committee allowing a drawback or remittance of the tariff rates imposed on vegetable oils when such oils are used in industry. The situation confronting the committee was this: Vegetable oils prior to the emergency tariff act had been on the free list. The emergency tariff law placed a duty of 2 cents on soya-bean oil and on other vegetable oils which are not produced in this country. I felt, in view of the fact that there was no evidence before the committee that there was any prospect of any of these oils being produced in this country and none of them having ever been produced here, they should remain on the free list; but those who wish this protection for the farmer of the West, not realizing the tremendous ill effect it will have upon other products which vegetable oils take the place of, asked that a duty be placed upon vegetable oils because coconut oil is used in filled milk and soya-bean oil in oleomargarine, and to some extent replaces linseed oil. There was no evidence before the committee that these vegetable oils to any great extent are employed in the manufacture of edible food products, such as milk and oleomargarine, but that the vegetable oils imported from the other side are utilized to the extent of practically 85 per cent in industries which have a capital of nearly $400,000,000 and provide employment for nearly 50,000 wage earners. Therefore, there being no prospect in sight of the production in this country of these vegetable oils, except here and there, I took the position that to impose this duty upon the industry in a case where protection was not needed was unwise, unsound, and uneconomic, and simply amounted to a tax upon the soap-making industry, which is entitled to consideration. Those engaged in that industry are taxpayers; they are employers of labor, notwithstanding the fact that they have been criticized and derided on this floor. The linoleum manufacturers are also equally entitled to consideration, as are the tire manufacturers and the paint manufacturers. There is a crushing industry in this country that is entitled to live; and when a tax is put upon vegetable oils simply from caprice, I claim that it is the duty of the Committee on Finance of the Senate to relieve that condition.

Acknowledging the claim of the farmers that to some extent adulteration might be practiced, although soya-bean oil is not edible, and recognizing the fact that probably some of the oleomargarine products might compete with butter, the dairy farmer's product, the committee provided that wherever these oils were imported for edible purposes the duty should be imposed, but that where they went into the industries they should be admitted in bond and the tariff remitted.

Mr. TOWNSEND. Mr. President——

The PRESIDING OFFICER. Does the Senator from New Jersey yield to the Senator from Michigan?

Mr. FRELINGHUYSEN. I yield to the Senator.

Mr. TOWNSEND. In order to get the matter clear in my own mind, do I understand the Senator to say that there was no evidence before the committee and that there is possibly no evidence now before the Senate that coconut oil and soya-bean oil can be produced in quantities in the United States?

Mr. FRELINGHUYSEN. Yes, sir. The raw material is not available in the case of soya-bean oil. The copra is imported from the South Sea Islands and is crushed to a certain extent in the oil-crushing industry of the country, and coconut oil is produced in that way where the raw material is imported. Of course, the Senator knows that as far as the Philippines are concerned, 85 per cent, I think, of our coconut oil that is imported comes from there, and that if the coconut oil is admitted free this tariff does not reach that and can not reach it, owing to our understanding with the Philippines, and that if the use of coconut oil in filled milk is to be prohibited it can be done only by Federal legislation or by State enactment. Many of the States are passing laws against filled milk because, I am told, it is to a great extent adulterated, but we can not by this tariff law prevent the use of coconut oil in filled milk, because it comes in from the Philippines free. I will ask the Senator from North Dakota if that is not so?

Mr. LADD. Mr. President, coconut oil comes in from the Philippines, and naturally, the Philippines being a part of the United States, it comes in free, and that is enough to supply the domestic needs of this country for replacement oil. It is now replacing very largely the oils—corn oil, peanut oil, and cottonseed oil—that are produced in this country.

I shall have to differ somewhat in one respect from the Senator, however, when he says that soya-bean oil is not edible oil. It is used largely as a food product and is used already in a few preparations in this country after it is properly treated.

Mr. FRELINGHUYSEN. After it is rerefined.

Mr. LADD. Yes. It all has to be refined.

Mr. FRELINGHUYSEN. Does the Senator know to what extent it is used in edible products in this country?

Mr. LADD. No; we have not been able to learn to what extent it is used.

Mr. FRELINGHUYSEN. Do not the records show that during the war only about 8 per cent of the importations, which were very large, were utilized for food products?

Mr. LADD. I presume the Senator may be right. I have not the figures.

Mr. FRELINGHUYSEN. The truth of the matter is, Senators, that soya-bean oil is not edible in the United States, and is not used here as food; but Europe uses it, and it uses coconut oil.

Mr. LADD. Coconut oil, if I may say so to the Senator, is used largely as a food product here. Forty-nine per cent of our oleomargarine to-day is coconut oil.

Mr. FRELINGHUYSEN. Yes; and they use all of the oils. The point I am making is that if you close the market by a duty of 4 cents on coconut oil and 3 cents on soya-bean oil, you drive those oils right back into Europe, where they are utilized, and you force your cottonseed export oil right back into this country.

The statement has been made, and sincerely, by the Senator from North Dakota [Mr. LADD] and the Senator from Idaho [Mr. GOODING] that a soya-bean crushing industry can not be built up in this country. I read from a letter from the United States Department of Agriculture which said that soya-bean oil had not been produced to any great extent in this country since 1918 from American beans. In that connection, because I am convinced that we are chasing shadows in the belief that a soya-bean oil industry can be built up in this country, I ask to have read the letter which I send to the desk from one of the southern crushers.

The PRESIDING OFFICER. In the absence of objection, the Secretary will read as requested.

The reading clerk read as follows:

SOUTH CAROLINA COTTON SEED CRUSHERS' ASSOCIATION,
Columbia, S. C., June 26, 1922.

Senator J. S. FRELINGHUYSEN,
Washington, D. C.

DEAR SENATOR: Absence from my office has caused my delay in answering your letter of the 17th. However, I hasten to reply.

About five years ago when it was realized that the boll weevil was about to make its advent into South Carolina, and would destroy a large part of the cotton crop, oil-mill men who had their money in oil-crushing mills began to look around to find a substantial crop that would bear oil-bearing seed. After making a thorough study, as we thought, of the various plants that might be used, we concluded that the soya beans offered the most.

A committee was appointed from the association to make a tour through the eastern part of North Carolina for the express purpose of studying how soya beans were grown and with what success they were used as oil-crushing material. We were very favorably impressed with the crop of soya beans in the eastern part of North Carolina.

There is no doubt about growing the beans. It is indeed a wonderful crop. We were so impressed that the association, itself, put quite a large tonnage of seed for distribution to the oil mills and to the farmers of the State for planting, hoping to gradually substitute this crop for cotton.

The result, however, of our efforts were sorely disappointing. Crops were grown all right. Good yields made, but the difficulty was in harvesting them. The nature of the bean is such that the entire crop in the field will ripen within a few hours, and is so ripe that the pods break open and the beans scatter on the ground.

I do not believe that 10 tons of beans were harvested. And the crop, so far as it being a money crop was concerned, was an absolute failure. It is a great crop to grow for cattle feed, but for oil purposes it is, in my opinion, a failure in this country.

It is my understanding that soya beans that come from the Far East, Manchuria particularly, are hand picked by cheap labor, which makes the crop entirely too expensive to be grown for oil-milling purposes here.

I do not know of any farmers who planted the beans at our suggestion who put them in the second year.

This brief statement is the experience that the South Carolina crushers had with its efforts to introduce this crop. When millmen are discussing the short supply of cotton seed and the possibilities of substituting oil-bearing seed, soya beans are not mentioned.

I trust what I have written above answers your inquiry.

Yours truly,

W. B. WEST, *Secretary.*

Mr. GOODING. Mr. President, if the Senator will allow me——

Mr. FRELINGHUYSEN. I yield to the Senator from Idaho.

Mr. GOODING. I should like to say to the Senator from New Jersey that yesterday I placed in the RECORD an article from the Country Gentleman telling the story of the soya-bean development in Illinois and Ohio, and it gives a complete story of the improved machinery which they are now using, and how they are saving the beans from being scattered on the ground, and how it is a money crop. If the Senator will be kind enough to read that article I am quite sure he will agree that the soya-bean industry in this country is going to be a great industry if it is properly protected, and if he thinks it is going to be a great industry I believe he would like to see it protected.

Mr. FRELINGHUYSEN. Mr. President, I do not believe it is going to be a great industry, because I do not believe that the farmers of the West will raise, with their other crops, sufficient of these beans, nor do I believe that the capital will be employed to crush them. They can raise other crops more effectively, and I think we are simply trying to protect an infant industry in prospect when the infant has not been born.

In order to procure more information I wired Swift & Co. on June 21, asking them the questions embodied in the telegram which I send to the desk and ask to have read.

The PRESIDING OFFICER. Without objection, the Secretary will read as requested.

The reading clerk read as follows:

JUNE 21, 1922.

SWIFT & Co., *Chicago, Ill.:*

Will you please advise me if, in your opinion, the products—oil and cake—resulting from the crushing of a ton of soya beans are as valuable as those resulting from the crushing of a ton of cotton seed, and if, as oil millers, you could pay as much per ton for soya beans as you could pay for cotton seed?

J. S. FRELINGHUYSEN.

Mr. FRELINGHUYSEN. I ask that the reply may be read.

The PRESIDING OFFICER. The Secretary will read as requested.

The reading clerk read as follows:

UNION STOCK YARDS, ILL., *June 22, 1922.*

Hon. J. S. FRELINGHUYSEN,
Washington, D. C.:

Answering, our opinion oil millers could not pay as much for soya beans as cotton seed, as products manufactured from soya beans are not as valuable as from cotton seed.

SWIFT & Co.

Mr. FRELINGHUYSEN. Mr. President, yesterday my good friend the Senator from Idaho [Mr. GOODING] placed in the RECORD an article, which appears on page 10131 of the RECORD, from the Norfolk Ledger-Dispatch of Tuesday, June 30, 1922, in connection with my criticism of the 2-cent duty on soya-bean oil contained in the emergency tariff bill, which the record showed had resulted in a reduction of the imports from 195,000,000 pounds in 1920 to 2,000,000 pounds for the three months since the emergency tariff went into effect. The Senator tried to show that great importations were coming in and had this article read. I ask that the telegram which I send to the desk be read to go in the RECORD.

The PRESIDING OFFICER. Without objection, the Secretary will read as requested.

The reading clerk read as follows:

NEW YORK, N. Y., *July 11, 1922.*

Senator J. S. FRELINGHUYSEN,
United States Senate, Washington, D. C.:

I understand that Senator GOODING yesterday read into the RECORD from a Norfolk newspaper describing the enormous amount of revenue the Government would receive from 1,800 tons bean oil imported into Norfolk. If that is so, I would ask you to kindly call the attention of the Senate to the facts in the matter, which are as follows: At a personal interview which I, as well as other representatives of the vegetable-oil industry, had with Senator GOODING, at which we complained about the detrimental effects that the emergency tariff bill had had on prices for cotton oil due to Europe getting complete control at its own price of oriental soya-bean oil after American competition had been eliminated, Senator GOODING suggested as a cure that we try to import soya-bean oil and reexport it under drawback and thus break Europe's control. The soya-bean oil referred to as imported in Norfolk has been imported by my company and is the only lot of soya-bean oil that we have bought for importation since the adoption of the emergency tariff bill. It has been imported for the very purpose of experimenting on reexportation under drawback, as with prevailing emergency duty added to the foreign cost it becomes absolutely impracticable to import it for technical use into this country. This oil has all been placed in bonded tanks and we made application yesterday for withdrawal of a first part of same, which, after being refined, will be exported to Canada, where we have sold it. We hope to work off the balance the same way to Canada and Europe, but are afraid that it will be our first and last importation of this kind, because Government regulations for drawback appear to be too costly to allow us to compete with other countries, notwithstanding our better and cheaper refining cost.

JOHN ASPEGREN,
President Portsmouth Cotton Oil Refining Corporation, Portsmouth, Va.

Mr. FRELINGHUYSEN. Mr. President, I want to give the farmers all of the protection necessary, but when they are trifling in this way with one of the greatest commercial products which they produce I believe that my position upon this question is absolutely sound.

In amount, edible fats are one of the greatest products of the farmers of this country, and if we are to put on a tariff simply through caprice or because we believe it affects some other product remotely, and at the same time destroy or impair our great export trade in cottonseed oil and hog lard, I believe I am protecting the farmer better when I say these oils should come in free, and not continue to be distributed in Europe to displace the hog lard and the cottonseed oil which the American farmer raises.

If the Senate is going to adopt this amendment and put this duty on vegetable oils, the result will be observed in the future and closely studied, and I want to put in the RECORD to-day a statement of the danger to the great productive areas of the West by reason of the fact that they are putting up these products in competition with their own home products which are exported to Europe.

In order to understand the position of the United States and American farmers in the world's edible oil trade, it is necessary to understand the position of this country as a producer, exporter, and importer of all kinds of vegetable oils and animal fats. What is our position? We are the largest producers of the highest grade edible oils and fats in the world. We produce the very choicest quality, and of these prime edible oils and fats we produce more than all of the other nations of the world combined.

The statistics which I have here show that for the past eight years our average yearly production, imports, and exports have been as follows:

	Pounds.
Hog lard, edible:	
Our average yearly production	1,900,000,000
Our average yearly imports	None.
Our average yearly exports	559,000,000
Neutral lard, edible:	
Our average yearly production	73,471,973
Our average yearly imports	None.
Our average yearly exports	21,290,000
Cottonseed oil, edible:	
Our average yearly production	1,391,934,375
Our average yearly imports	14,302,569
Our average yearly exports	203,954,624
(NOTE.—Imported variety noncompetitive inedible.)	
Oleo oil, edible:	
Our average yearly production	136,552,000
Our average yearly imports	None.
Our average yearly exports	92,643,000
Oleo stearin, edible:	
Our average yearly production	69,228,334
Our average yearly imports	None.
Our average yearly exports	23,687,334
Peanut oil, edible:	
Our average yearly production (principally from imported peanuts)	39,967,125
Our average yearly imports	47,170,750
Our average yearly exports	1,027,625
NOTE.—Imported variety also used for industrial purposes.	
Corn oil, edible:	
Our average yearly production	103,758,000
Our average yearly imports	None.
Our average yearly exports	36,872,000
Tallow, edible:	
Our average yearly production	38,365,000
Our average yearly imports	None.
Our average yearly exports	None.
Olive oil, edible:	
Our average yearly production	685,412
Our average yearly imports	49,327,333
Our average yearly exports	59,575

From these prime edible oils and fats we manufacture great quantities of products or derivatives, such as vegetable lard, vegetable stearin, and oleomargarine.

We can not take into account the production of these derivatives, because that would result in the duplication of the quantities of the prime oils and fats from which the derivatives are made, but we must take into account the exports of these derivatives, as in the exportation of them large quantities of the prime vegetable oils and fats were exported from the country.

	Pounds.
Vegetable lard, edible:	
Our average yearly production	1,156,084,750
Our average yearly imports	None.
Our average yearly exports	59,417,375

Mr. KING. Will the Senator kindly state the article of which the exports were 59,000,000 pounds?

Mr. FRELINGHUYSEN. Edible vegetable lard. I presume that is cottonseed-oil lard.

	Pounds.
Oleomargarine, edible:	
Our average yearly production	227,626,000
Our average yearly imports	None.
Our average yearly exports	9,615,167
Vegetable stearin, edible:	
Our average yearly production	23,819,334
Our average yearly imports	None.
Our average yearly exports	2,774,667

We are exporting tremendous quantities of our high-grade edible vegetable oils and animal fats.

Our annual production is approximately 3,400,000,000 pounds of these choicest edible oils and fats, and our exports are approximately 1,000,000,000 pounds annually. We have a tremendous exportable surplus of our high-grade edible oils and fats.

INTERCHANGEABILITY.

Mr. President, the vegetable oils and fats which we produce are all interchangeable in usage.

Salad oils are refined cottonseed oil, refined corn oil, refined peanut oil, or olive oil.

Vegetable lard and animal lard are used interchangeably. Vegetable lard is made principally of cottonseed oil, neutral lard, edible tallow, and oleo stearin, but peanut oil or corn oil can be used instead of the cottonseed oil.

Oleomargarine is made of oleo oil, neutral lard, cottonseed oil, peanut oil, corn oil, coconut oil.

All of these high-grade edible oils and fats may be considered as one homogeneous product. They are inseparably joined in market relationship.

Linseed oil is not interchangeable in usage with this great group of edible oils and fats, and from a tariff standpoint it is no more associated with the tariff problem as it relates to other vegetable oils than petroleum. The Senator from North Dakota [Mr. LADD] stated that linseed oil was in a separate department.

Mr. President, American farmers are producing approximately 500,000 tons more of edible oils and fats than we consume. Our cotton growers, corn growers, hog raisers, and cattle raisers are aggressively invading the consuming countries of Europe with their great surplus of edible oils and fats. We dominate the world's markets for high-grade edible fats, and our entire price structure is on an international basis. We must sell our exportable surplus of edible oils and fats in the markets of Europe in competition with the foreign surpluses of animal and vegetable oils produced by other agricultural countries.

Mr. SIMMONS. May I ask the Senator if he has carried out his calculations sufficiently to be able to tell us what proportion of these oils and fats is exported in the aggregate, and what proportion is consumed in this country? I do not mean as to any particular one of these many varieties of oils, but the proportion of all of them combined.

Mr. FRELINGHUYSEN. Before the Senator asked me the question I read that approximately the 500,000,000 pounds of edible oils and fats we consume are produced here.

Mr. SIMMONS. That includes them all?

Mr, FRELINGHUYSEN. I think that includes them all. I had a mass of figures, and I compiled them by taking the totals.

Mr. SIMMONS. We consumed, then, about 500,000,000 pounds of these various oils and fats. How many pounds do we export?

Mr. FRELINGHUYSEN. That would indicate, as I stated before, that we exported 1,000,000,000 pounds.

Mr. SIMMONS. We exported twice as much, then, as we consumed?

Mr. FRELINGHUYSEN. Our annual production of all of these edible products and their derivatives is 3,400,000,000 pounds, and our exports are approximately 1,000,000,000 pounds annually.

Mr. SIMMONS. We produce 3,000,000,000 and export 1,000,000,000?

Mr. FRELINGHUYSEN. We produce 3,400,000,000, according to the figures I have had compiled.

Mr. SIMMONS. The Senator has just made a very illuminating statement. He said a moment ago, before I interrupted him, that these oils and fats were upon a world basis of price; that is to say, that the price of the exportable surplus controlled and regulated the price of the domestic consumption. Am I correct in that statement?

Mr. FRELINGHUYSEN. As I understand it, the Senator is. That was the statement I made. I am informed that the prices of these oils are practically made by a group in Europe, and they are internationally uniform. It is somewhat similar to the price of wheat. I think generally the export price is the price on the Liverpool market.

Mr. SIMMONS. Then the effect of the Senator's statement is that where we export one-third of our domestic production, the price is fixed in the world market?

Mr. FRELINGHUYSEN. In this particular instance.

Mr. SIMMONS. Even as to the part that is consumed at home. If that be true, I desire to inquire of the Senator if he can see any reason why there should be a duty upon any of these products?

Mr. FRELINGHUYSEN. I stated that I firmly believe that the attitude of previous Congresses in admitting free the vegetable oils which are not produced here was a good policy. I also stated that I had not been convinced that our farmers intend to raise sufficient of the raw materials, the vegetables, to press these oils necessary to supply the domestic market. Therefore I believe that they should be free. But I also pointed out what the claim of the farmers of the West was. I want to say at this point that I believe the farmers have never had sufficient consideration by previous Congresses, and that they are entitled to protection where the industry is established and where it exists. I have religiously voted for these duties to protect the farmer.

Mr. SIMMONS. Mr. President——

Mr. FRELINGHUYSEN. I have not finished my statement. If those products were displacing certain dairy products and would give a larger market for the products at home, I was perfectly willing that a tariff should be imposed to keep the vegetable oils out of the edible products, but that I firmly believed it to be unwise to penalize an industry simply from sentiment; and I want to say there is a sentiment or a prejudice against these vegetable oils. But the larger question that impressed me was the fact that when we put a duty on these oils and do not give an outlet and allow them to be absorbed in the industries, we back them up in central Europe, and it backs up our hog lard and cottonseed oil products here and I do not think that is fundamentally sound in tariff making.

Mr. SIMMONS. Does the Senator think that it is a sound proposition to penalize one industry for the benefit of another industry?

Mr. FRELINGHUYSEN. I did not hear the Senator's question.

Mr. SIMMONS. The Senator said a moment ago that it might be to the interest of our dairy products to impose duties upon the oils of which he has spoken. I ask the Senator if he thinks we should impose a duty upon one domestic product for the benefit of another domestic product. Is that a Republican theory of tariff making?

Mr. FRELINGHUYSEN. I am not going to indulge in the philosophy of the question.

Mr. SIMMONS. I was not asking the Senator the question in any captious spirit.

Mr. FRELINGHUYSEN. I wanted to see these oils admitted free, but the committee believed in their judgment, where there was adulteration, as it had information that there was, and where the farmers' products were being displaced to a certain extent by an inferior product, that it was a good policy to impose a duty.

Mr. SIMMONS. I will state to the Senator why I asked the question. I did not know whether it was true or not, but I have heard it stated, and the Senator being a member of the majority of the committee I am trying to ascertain the facts, that it is proposed to put these high duties upon the oils and the nuts out of which the oils are made not in the interest of the oil industry, not because the oil industry was asking it, but because it was thought that the oils come in competition with the dairy products of the country, and it was proposed to place this obstacle and this handicap upon that industry for the benefit of the dairy industry of the country. I was intending to ask the Senator, if that were true, if any part of the purpose of imposing these high prohibitory duties upon these oils and fats which are imported was to protect the dairy industry from competition with those products, does the Senator think that that is a proper exercise of the tariff levying functions of the Congress? Does not the Senator think that

would be using the protective principle for the purpose of discriminating in favor of one domestic industry as against another domestic industry? Has protection advanced to that point in the United States?

Mr. FRELINGHUYSEN. Of course the Senator has asked me a very complex question. We made tariffs, I recollect, in the Underwood bill as to certain manufactured articles, where duties were imposed against articles because they replaced certain articles which were manufactured or produced here. I think that has not been a new thought.

Mr. SIMMONS. This is not a case of replacing certain articles that we produce. It is a case of displacing one article that we produce by another article that we produce; that is, not permitting the consumer in this country to determine the question of which one of those two articles he prefers.

Mr. FRELINGHUYSEN. That is true.

Mr. SIMMONS. As I understand the proposition, it is to settle the question for the consumer in the bill and say to him that we desire and intend that he shall buy dairy products to supply his demands and not vegetable oil products and to coerce him into deciding in favor of one American industry as against another we put a high duty upon vegetable oils because they compete with the dairy products.

I will say to the Senator that there has been legislation here and about this very subject which I have thought ever since the day of its passage—in fact, since I was a Member of the Senate—was one of the most iniquitous pieces of legislation ever written upon the statute books.

Years ago when I first came to the Senate the question of imposing a tax of 10 cents upon oleomargarine was one of the live questions of the day. I was a member of the Committee on Agriculture and Forestry at the time, and the first speech that I made in this Chamber was in earnest opposition to that tax. It was upon the ground that the tax was manifestly and admittedly levied for the purpose of discriminating against the product of the cottonseed producer and in favor of the product of the dairy farm. It was discriminatory legislation, which was not justified, and I think there are very few people in the country who have attempted to justify it. It was the dominating influence of a particular industry in the country that forced Congress into that legislation.

As I understand the Senator, one of the chief purposes of imposing these high duties upon the foreign nuts and foreign oils is to protect not the manufacturers of those oils and the growers of those nuts in this country but primarily to protect the dairy interests of the country from competition with those products. I say if that is the thought in this legislation it is wholly indefensible. It is an application of the protective-tariff system to discrimination among the domestic industries of the country. It is arraying one American industry against another American industry. It is protecting through the tariff the products of one section of the country in favor of the products of another section of the country. It is protecting the product of one American industry against the product of another American industry, whereas protection as originally expounded and as interpreted until the present day, I think, without exception, has been, as alleged by its advocates, for the purpose of levying taxes to protect American industry against foreign industry.

I did not ask the Senator the question in any captious spirit. I think that he and I agree pretty well—not altogether, possibly, but in the main—with reference to the imposition of the duties upon oils and nuts. I was asking the question for the purpose of securing information. I want to find out if that is one of the reasons or if that was the chief reason for increasing the duties up to the high rate provided in the bill. Is it to protect the dairy industry against the vegetable-oil industry of the country? Is it to protect the dairy industry of the country against the products of cotton seed and the products of peanuts and the products of soya beans? If it is, I would like to know upon what principle of tariff protection it can be justified. Nothing more vicious or more un-American has ever been advocated here, if, indeed, that is the reason for the proposed high rates.

Mr. FRELINGHUYSEN. Mr. President, the Senator knows that I am simply trying to defend the position of the committee with regard to the drawback clause. But I should like to ask him a question before I answer the question which he propounded to me. Did the Senator vote for a tariff duty of 2 cents on soya-bean oil in the emergency tariff act?

Mr. SIMMONS. Mr. President, I voted for nothing in the emergency tariff act.

Mr. FRELINGHUYSEN. If the Senator did not vote for that 2-cent duty in the emergency tariff act, I can not answer his question. But I have this to say in regard to the duty imposed by the committee on the vegetable oils where they were used for edible purposes. If the vegetable-oil industry menaced the entire dairy industry of the West and vegetable oils were imported in sufficient quantities to displace—a better word than replace—the farm products of the farmers and dairy farms of the West, I believe that the tariff would be justified. If those products were utilized for edible purposes here in destroying the product of the American farmer, I believe we should protect ourselves against them. Is that a sufficient answer to the Senator?

Mr. SIMMONS. The Senator astounds me. Are not both the vegetable oils and the nuts, as well as dairy products, products of the farm? Is it seriously proposed here that when, as in this case, there are two industries in the country, both legitimate, both recognized by the law, both products of agriculture, both regarded as more or less important, that we shall discriminate between them and say that one of those industries is more important than the other industry and deliberately proceed, through the exercise of the taxing power of the Government, to suppress the one to the encouragement of the other? Is it seriously proposed that we shall do that? If so, sir, it is monstrous.

Mr. FRELINGHUYSEN. Oh, no, Mr. President; that is not what I said. I said I believed the foreign vegetable-oil industry menaced the dairy industry of the country and would destroy it, and that we should protect our own farmers against it.

Mr. SIMMONS. In my part of the country the farmer raises cotton, and cotton seed that is most valuable as a staple. Why would the Senator feel that he was justified in handicapping that product to protect the industry that merges from the dairy in the northern, eastern, and western sections of the country?

Mr. FRELINGHUYSEN. Cottonseed oil is a product of this country. It does not need protection, although we have given it protection.

Mr. SIMMONS. Why did the Senator give it protection, then?

Mr. FRELINGHUYSEN. My answer to the Senator was in relation to vegetable oil produced in foreign countries and not produced here. If I believe that, if those oils menaced the dairy farmers of this country, we would be perfectly justified in placing a high duty upon them to protect the dairy farmers.

Mr. SIMMONS. They are the raw materials of the oil producers of the country, and I do not distinguish the difference. The factories can not run if there is not sufficient raw material to be had to supply them. The argument of the Senator is that if an industry has to import its raw materials it is not entitled to the same protection as the industry in this country that does not have to import its raw materials.

Mr. FRELINGHUYSEN. If the cottonseed oil industry was menaced by foreign competition, the Senator would be very anxious for protection, and I would be in favor of giving it.

Mr. SIMMONS. Mr. President——

Mr. FRELINGHUYSEN. I have not yet finished.

Mr. SIMMONS. Very well.

Mr. FRELINGHUYSEN. The vegetable oils which are imported into this country are not the character of oils which are produced here, nor are the vegetables from which they are produced grown here in sufficient quantity or quality to produce the oil. In the case of soya beans, for instance, the South Carolina Crushers Association testified that the soya beans in this country ripen too quickly; that they can not be produced of proper quality. So, in the case of peanut oil, the Senator from North Carolina knows that the peanuts of this country, and particularly of his section, are so marketable and are in such demand for edible purposes that the nonedible peanut oil that is used in soap making does not come in competition with his product.

Coconut oil is not produced here and comes in free. Therefore the question of a protective tariff on these oils is not a practical one. That is the question I am arguing, although where the foreign oil may be used as an adulterant or a substitute for an article produced here, such as a natural farm product, and competes with the domestic commodity, then I believe that it is perfectly practicable to impose a tariff duty upon it. That is what the bill and this amendment provide.

Mr. SIMMONS. Mr. President, we have in the United States great industries which are engaged in the manufacture of vegetable oils. They use various seeds, such as cotton seed, peanuts, soya beans, and a number of other commodities which it is not necessary to mention. They import a small quantity of those products for the purpose of crushing; they import a small portion of the oil for the purpose of refining it, in order that they may have a sufficient output to satisfy the demand. If I understand the Senator from New Jersey, he says that if any part of the raw material of these oil crushers is imported

from abroad, he feels it is perfectly justifiable to place a high duty upon that part of their raw material, not for their benefit, not for the benefit of the labor which is engaged in the industry, but for the purpose of preventing those oils from coming in competition with the dairy products of this country. That is all I wanted to get from the Senator in a clear unequivocal form, and I have it now.

Mr. FRELINGHUYSEN. Mr. President, I want to show the effect of a restriction of the European market on these products.

In Europe our surplus of hog lard, cottonseed oil, corn oil, peanut oil, oleo oil, oleo stearine, vegetable lard, and other edible fats must sell in competition with coconut oil, peanut oil, soya-bean oil, and cottonseed oil from Oriental countries. We can not possibly enact legislation here which will shut out of Europe cottonseed oil, peanut oil, coconut oil, and soya-bean oil from the Orient.

We can not avoid the competition of those foreign oils, and so the question is entirely how we shall meet the competition which we can not avoid meeting. Our farmers have been exporting a great surplus of oils and fats for the past 50 years, and it would be absurd to say that it has not been profitable for us to enter the competitive markets of the world, otherwise we would not have produced a great surplus and we would not have continued to compete in the open markets of the world for the past 50 years.

The American farmers' market for oils and fats for edible purposes is at home and in foreign countries. The American farmer is not producing these oils and fats for industrial purposes, as can be readily seen by taking a typical year, such as the year 1920. During that year our farmers produced 1,730,000 tons of high grade edible fats, such as hog lard, edible tallow, neutral lard, oleo stearine, cottonseed oil, vegetable lard, oleo oil, corn oil, and peanut oil. Of this 1,730,000 tons the American farmer exported approximately 500,000 tons of the same interchangeable oils and fats.

There is no intentional production of oils and fats of this group in the United States for industrial uses, with the exception of fish oils; and the only available oils and fats for our industries, such as those engaged in manufacturing soap, rubber substitutes, printing inks, leather dressings, imitation leather, and many other products are the refuse fats which unavoidably result from the production of the prime oils and fats. The only domestic supply of industrial fats which our industries have available as raw material is the inedible tallow and greases which are produced from butcher-shop scraps, and by garbage-reduction plants and packing houses. The whole process of producing oils and fats in the United States, both vegetable and animal, is designed to obtain the greatest quantity possible in edible form and to reduce to the greatest extent possible the output in inedible form.

During the typical year 1920 there was produced in the United States only 335,000 tons of industrial grades of oils and fats, and hence our industries must have access to foreign supplies. All of the coconut oil, soya-bean oil, peanut oil, and cottonseed oil imported by our industries is obviously taken away from the nations of Europe, and thereby the competition with our own exportable surplus is greatly reduced in the European markets; at the same time American industries are able to obtain their necessary basic materials and compete with the industries of Europe for export business in their finished products.

The Tariff Commission's report as to the operation of the emergency tariff rates shows conclusively that duties on foreign vegetable oils are inoperative so far as protection is concerned, and are only an obstacle to American industries.

Mr. SIMMONS. Mr. President,——

Mr. FRELINGHUYSEN. I yield.

Mr. SIMMONS. I am heartily in sympathy with the argument which the Senator is now making, and, if it would not interrupt him unduly, I should like right here, for the purpose of fortifying his argument, to make a brief general statement, based upon the proposition laid down by the Senator a moment ago that we could not compete in the purchase of these raw materials in foreign markets with the high rates proposed to be imposed by the pending bill. With the kind permission of the Senator, I wish to say——

Mr. FRELINGHUYSEN. I am very glad to yield to the Senator, but I do not want to yield the floor. I will suspend for a moment, if the Senator wishes to interrupt me, if I do not yield the floor.

Mr. SIMMONS. I merely wish to reenforce the argument which the Senator, as I understood him, was making.

Mr. FRELINGHUYSEN. I will be very glad to have the Senator make the statement, with the understanding that I do not surrender the floor.

Mr. SIMMONS. Mr. President, I have had occasion to investigate this question, because it affects very vitally large interests in my section of the country as well as the country as a whole. I find it to be true that cottonseed oil is the dominant oil; it dominates the price of oils; the price of all the oils follows the price of cottonseed oil. It not only dominates and fixes the price of the other oils of similar kind and character but it fixes the price of the raw materials in this country out of which those oils are produced.

The Senator from New Jersey is absolutely correct when he says that, on account of the large percentage of our domestic production which is annually exported, the product is upon an international price basis; that is to say, the price of cottonseed oil in this country is fixed by the price in Europe, where our exportable surplus is almost entirely disposed of, and as the cottonseed-oil industry dominates the oil trade the prices of other oils follow the price of that particular oil, and so all the other vegetable oils produced in this country are upon a world price basis. We do not fix the price of a single one of our oils in the domestic market, but the price is fixed for us chiefly in London, which is the great international market for those oils and fats.

Mr. President, the source of the raw materials out of which our vegetable oils are made is almost exclusively in America and the Orient—chiefly in this country, but partly in the Orient. The raw materials out of which Europe produces her oils come almost entirely from the Orient. Europe does not import to any considerable extent her raw materials from the United States.

I think the Senator from New Jersey will agree to the proposition that there are probably in Japan and in China and India, where these raw materials are produced, but two purchasers. One of those purchasers, but not the largest, is the United States and the other is Europe, but chiefly Great Britain. They are the only competitors in these great markets for these essential products used in the industries of the two continents.

It is claimed, and I think it is manifestly true—and I ask the attention of the Senator from New Jersey to this statement—that with the high duties upon nuts, peanuts, and beans imposed in this bill and in the emergency tariff it has been found practically impossible for the American purchaser of these raw materials in the Orient to compete with the European purchaser. How can he compete when, after he has paid the price per pound, he must add 3 or 4 cents to that price in order to get his raw material into his American mill, while his English competitor gets his into England without having that burden laid upon him?

That is clearly the effect upon this competition between these two sole purchasers and competitors in the markets of the Orient. American buyers and manufacturers have been driven out. We have left Great Britain in the sole and undisputed control of that source of supply, practically the only purchaser of this exportable raw material raised in the Orient. Of course, it is obvious that Great Britain, therefore, can choose what price she will pay. The price becomes a buyer's price and not a seller's price.

In those circumstances is it not perfectly evident that if Great Britain can get her raw material for a materially lower price than under present conditions the price of the manufactured product in Great Britain will be affected and reduced practically to the amount saved in the purchase of the raw material by reason of the elimination of her chief competitor?

The Senator says that the price of our oils and our fats, of which we are a tremendous exporter, will be fixed by the prices of oils in the European market, and we find as the result of forcing the American purchaser out of the Orient that the European price will, as a matter of certainty, be greatly reduced.

Mr. GOODING. Mr. President——

Mr. SIMMONS. I do not yield now. I want to ask the Senator if it is not perfectly clear that if that takes place the price of our domestic oils will be to that extent reduced, instead of, as it is contended and claimed, increased as the result of these high duties? In other words, indirectly—not directly—these high duties operate not to increase the price of these American oils, which are upon a world basis of price, but to decrease the price of these oils in the American market?

Mr. FRELINGHUYSEN. Mr. President, that is my contention, and I claim——

Mr. GOODING. Mr. President, will the Senator yield to me while I ask just one question? I do not care to take up any time, but I simply want to ask the Senator——

Mr. FRELINGHUYSEN. Mr. President, I have the floor, and I am addressing the Chair.

The PRESIDING OFFICER. The Senator from New Jersey has the floor. Does the Senator yield?

Mr. FRELINGHUYSEN. I am perfectly willing that this question should be asked, but I wish to resume and complete my speech. If the Senator will confine himself to a statement of a few minutes, I shall be very glad to yield.

Mr. GOODING. I just want to ask one question, and that is this: I want to ask the Senator from North Carolina, who had charge of the Underwood-Simmons bill when it was in the Senate, if it is not true that the Underwood-Simmons bill provides for reexport by bonding, so that where any foreign product is brought in here and manufactured and reexported, 99 per cent of the duty is remitted?

Mr. SIMMONS. Mr. President, I am not able to say whether we had a provision of that character with respect to this product or not, but I think there was one.

Mr. GOODING. Yes; I think there was. That is my understanding—that it was a general provision in all of our tariff bills.

Mr. SIMMONS. I think that was true, and I think there is a provision in this bill for that purpose where these products are used for other than edible purposes.

Mr. GOODING. That is my understanding.

Mr. SIMMONS. And I am in favor of it.

Mr. FRELINGHUYSEN. That is the proposition.

Mr. President, when it became apparent that the committee intended to place a duty on these vegetable oils not made here that go into edible products, I took the position that to compel the industries that use 90 per cent of all of the vegetable oils imported to pay this additional duty on these materials that they utilize in soap manufacturing was unjust and unfair, and a tax.

In derision yesterday the soap manufacturer was condemned because he asked relief from this tariff, and it was pointed out that the soap manufacturer was enjoying high rates of duty, and therefore it was said that the farmer was entitled to have this remote protection placed on these vegetable oils not made here because the soap manufacturer was getting protection.

The soap manufacturer is getting 5 per cent ad valorem protection on the cheaper grades of soap, and he does not need it and he does not care for it and he has not asked for it. It is a revenue duty pure and simple. On the high grades of perfumed soap, which form a very small percentage of the product, we do impose high duties because they are luxuries. As far as the soap manufacturer is concerned, he has a clean bill of health on the question of any selfishness regarding this tariff, except a protest against the injustice of it, and he has just as much right to come here and have his rights defended as the farmer of the West.

What is the soap industry of this country? It is not in my State alone. It is in over 25 States of the Union, and there are 348 separate establishments. The capital invested is $212,416,866; salaries and wages paid each year, $35,399,914; number of wage earners, 20,290, and the value of their product each year is $316,740,115.

When you come to the question of paint—and some of these oils are utilized there—there are 601 manufacturers, with $177,314,815 invested.

Mr. POMERENE. Mr. President, will the Senator permit me to read just a sentence in view of what he has just said with regard to the tariff duty on manufactured soap?

Mr. FRELINGHUYSEN. Yes; I yield.

Mr. POMERENE. Mr. S. W. Eckman, of the B. T. Babbitt Co., of New York City, appearing before the committee—and I read from page 1272—says:

> We are not here pleading for any protection on our raw materials or finished product. We are able to look out for ourselves in that respect.

I know that some of the Ohio soap makers said that while this protection was here, they did not care for it.

Mr. FRELINGHUYSEN. The Senator is right, and I thank him for his contribution. I simply want to show that when it was attempted on this floor yesterday to accuse the soap manufacturer of being selfish in this thing, and asking for a high rate of duty himself while he asked to be relieved from this imposition on vegetable oils, that was not so; that he is not selfishly asking for a duty.

The manufacturers of oilcloth and linoleum use some of these oils. The capital invested there is $49,803,688 and the salaries and wages are $8,297,546. The number of wage earners is 5,414 and the value of the products is $52,673,206.

In other words, on these products, not manufactured in this country, heretofore on the free list, industries with nearly $500,000,000 of capitalization, paying $80,000,000 in wages, and employing over 50,000 employees, scattered in every State of the Union, are asked to pay a duty amounting to millions of dollars. I claim that that is an injustice, that it fosters no American industry, and, furthermore, that it injures the farmer more than it helps him, because the absorption of those vegetable oils creates a vacuum in Europe which is filled by our American products. Good business demands that we admit these oils free under the bonding provision and remit the duty and take the burden off of these industries, so unnecessarily placed upon them by reason of the amendment of the Senator from Idaho [Mr. GOODING], asking that this provision be stricken out of the bill. It will seriously injure the oil-crushing industry of this country. It will seriously affect the southern farmer. It will seriously affect the western farmer in the outlet for his hog lard. I claim that it is unwise and unbusinesslike to do something simply because remotely it is hoped that some day we may crush a few soya beans.

I am a business man. I am a protectionist. I am for a tariff that will encourage and build up any industry; but the committee was not shown, and I do not think any of its members were convinced, that it was necessary, simply from caprice or prejudice, or whatever it may be, to put duties of 3 cents and 4 cents on these oils and make these industries pay them. It will not help the farmer. It will hurt the farmer, and it will seriously injure these great industries of our country, and more seriously injure the workingmen who work in them.

I am opposed to this amendment being stricken out. It is a safeguard against an unjust tax, and I hope the Senate will vote to retain it.

Mr. GOODING. Mr. President, I hope the time will come in this country when the farmer will be able to speak for himself and when he will be listened to. There is not a farm organization in America that is not asking that this proviso, which permits the vegetable oils to come in free when used in soap, be defeated. There is no exception to that. The dairy associations, although they are protected in vegetable oils which are used for edible purposes, are more alarmed than any other organization in the country I know of, because they do not believe that they will have proper protection if these oils, which are used for edible purposes and soap purposes, may come in free of duty when used for making soap.

It is my hope as a protectionist that when we get through with this tariff bill we will be able to defend every provision in it. This is a provision that no man who believes in protection can defend, because it gives a great industry in this country a preferred place in this bill. It gives them free raw materials, while the manufacturer of oleomargarine and of lard substitutes must pay a duty of from 3 to 4 cents on vegetable oils.

I can not understand why the farmer who produces the vegetable oils in this country is not just as much entitled to protection when he goes into the making of soap as he is when he goes into the making of oleomargarine. I can not see that distinction at all, and when they talk about backing up the fats of this country or interfering in any way with our export trade, when it is admitted that in all tariff bills there has been a provision by which any commodities may come into this country and be reexported and 99 per cent of the duty refunded, that argument is not worth answering or important enough to warrant taking up the time of an intelligent body of men.

The Senator from New Jersey in his argument admits that our exports of oleomargarine and oil fats which go into edible uses are even greater than those of the products which go into the soap making of this country. Tell me why the soap maker of this country is entitled to any special privileges, why he shall get soya beans, cottonseed oil, coconut oil, or anything else free of duty, while the oleomargarine manufacturer pays a duty?

On all perfumed soaps the soap maker gets 50 per cent ad valorem, and those soaps are made out of coconut oil, soya-bean oil, cottonseed oil, and peanut oil that will come in free of duty unless my amendment prevails. Laundry soaps, which bear a duty of only 5 per cent, are made out of tankage, largely from the slaughterhouses, and the garbage gathered in your great cities.

The duty can not interfere, in my judgment, with the price of laundry soap. I do not think it will make any difference at all in the price of soap, because, in my judgment, if we have one great combination, one great trust in America, it is the soap makers, and they have grown rich, fabulously rich, until they count their millions by the hundreds.

Mr. FRELINGHUYSEN. Mr. President, in the interest of accuracy I want to interrupt the Senator. He stated that the soap maker had a high rate of duty on certain classes of soaps.

Mr. GOODING. Yes; and I stated that that soap was made out of coconut oil, soya-bean oil, and cottonseed oil that the soap maker receives free of duty if the committee amendment prevails.

Mr. FRELINGHUYSEN. We admit that.

Mr. GOODING. And peanut oil, which you would have come in free for the soap makers. That is my statement.

Mr. FRELINGHUYSEN. I think there is a complete answer in the fact that not over 1 per cent of the entire production of soap in this country is of this high-grade perfumed soap; that 95 per cent is the cheaper soap, upon which they need and ask no duty, which they are willing to have free. The other 4 per cent are medicinal soaps. Therefore the duty imposed upon these soaps of which the Senator speaks is almost negligible—in fact, is negligible—and so his argument does not apply.

Mr. GOODING. I do not agree with the Senator from New Jersey at all. I think we pay fabulous sums for perfumed toilet soaps and for shaving soaps in this country, the raw material of which the soap people are to have come in free if this committee amendment prevails. Why shall they have free raw material, when upon the same farm, and through the same crusher, goes the same oil which goes into edible uses, and which bears a duty of 3 or 4 cents a pound? The soap maker is put in a preferred class. I do not think that is the intention of the committee at all, but that is the result of the working of this bill if the committee amendment prevails. I can not believe it is going to prevail.

In 1917 there were 168,000,000 pounds of coconut oil consumed in the soap industry, as compared with 126,000,000 pounds of cottonseed oil and 124,000,000 pounds of soya-bean oil. I have not the amount of the peanut oil that goes into soap, but it is considerable. Fifteen million nine hundred and ninety-seven thousand pounds of corn oil went into the making of soap in that year.

I do not agree with the Senator that the soya-bean industry is not going to be a great industry. I placed in the RECORD yesterday a statement to the effect that last year's crop was something like 3,000,000 bushels for seed. Again I want to say, Mr. President, if there is anything this country needs in all the world, it is some crop that will bring back the fertility of the soil. All of our prosperity in this country must be measured by the fertility of the soil, and the history of civilization shows that when soil goes backward civilization goes backward with it, and it is even true on an individual farm. Show me a farm where there is a struggle to keep the wolf from the door, and where it is hard for them to provide the necessities of life, and I will show you where even civilization, if you please, is going backward. Any citizen is a better citizen in this or any other country when he does not have to struggle too hard for a living. He is in a better frame of mind toward the whole world.

Mr. WILLIS. Mr. President——

The PRESIDING OFFICER. Does the Senator from Idaho yield to the Senator from Ohio?

Mr. GOODING. I yield.

Mr. WILLIS. I am very much interested in what the Senator is so eloquently saying relative to the maintenance of the fertility of the soil, and I want to ask him a question, for information entirely. In the State of Ohio up to this time the soya bean has been raised either as a forage crop or as a means of increasing the fertility of the soil by plowing it under. I am wondering whether, if the use of the crop is changed and soya beans are allowed to come to maturity and are harvested and pressed into oil, the crop so handled acts as a means of increasing the fertility of the soil.

Mr. GOODING. There is no question about that. It is through the roots of the plant that the nitrogen finds its way into the soil and increases its fertility. Soya beans belong among the leguminous plants, such as peas, which improve soil fertility. Yesterday I put an article in the RECORD which, if the Senator will read, he will find covers that very fully. It also tells the story of improved machinery for cultivating and harvesting, and the trouble they found, evidently, in North Carolina, where they had not used this improved machinery in the shelling of beans, has already been obviated. I was never more convinced of anything in my life than that the soya-bean industry is going to prove a great industry, because it must be used to bring back the fertility of the soil. It has been used in the State of Iowa for a number of years with corn, used both for cutting for hay for forage and for hogging down. But they are now beginning to grow soya beans for seed and for crushing into oil. If we can have proper protection, there is no question at all about the success of the industry.

I do not care to take up the time of the Senate. This case seems to be so clear that I do not anticipate that anything I might say would have any influence. But I am unable to understand why a preference should be given to anybody in the framing of this tariff bill, and I can not see it in any other light than that the soap makers are given a preference. I do not see why they should have their raw material free.

The soap manufacturers have always been protected, and why they should have a duty of 50 per cent on their finished product and have their raw materials free I am unable to understand.

I know the committee has labored hard with this, and I appreciate the great work they have done in preparing this bill, but I can not agree with the committee in this matter. and I sincerely hope that in the interest of the great principle of protection, which has made this country what it is to-day, there will be no schedule in this bill which can not be defended. I have not forgotten what Schedule K in the Payne-Aldrich bill did to the Republican Party.

I send to the desk a communication addressed to the Members of the Senate and the House of Representatives by the Texas Cottonseed Crushers' Association and the Oklahoma Cottonseed Crushers' Association. I would like to have it read and appear in the RECORD in 8-point type.

The PRESIDING OFFICER. Without objection, it is so ordered, and the Secretary will read the communication.

The reading clerk read as follows:

TARIFF ON VEGETABLE OILS.

To all Members of the United States Senate and House of Representatives, Washington, D. C.:

We address this communication as representatives of the Texas Cottonseed Crushers' Association, Oklahoma Cottonseed Crushers' Association, and various independent crude cottonseed-oil mills of other States in the South who are for a tariff on vegetable oils that will protect the crude cottonseed-oil industry and the southern cotton farmer and peanut grower.

We are here to reinforce the demands of the producers for a protective tariff on vegetable oil; to take issue with the claims of the Interstate Cottonseed Crushers' Association that the crushers want free trade; to present the interchangeabilities of these oils in their process of distribution; to point out the reasons why the Senate Finance Committee report as written affords no protection whatever to the producer of all fats in this country, and suggest a remedy.

The permanent bill as reported by the Senate Finance Committee has granted sufficient rates to properly protect the crude cottonseed-oil industry and the farmers of the South, as well as the dairy farmers and hog producers, and all others engaged in the production of fats, namely, 4 cents per pound on coconut oil, 4 cents per pound on peanut oil, 3 cents per pound on soya-bean oil, and 3 cents per pound on cottonseed oil. However, the drawback provision in the schedule providing that all oils used in the manufacture of soap and for other inedible purposes, duty paid, will be refunded if the oil is used for these inedible purposes. There is also no duty on dried copra, made from coconuts. These two provisions combined, in our opinion, invalidate the whole bill, and as far as a protective measure is concerned it would be useless.

In the case of imported copra, the supply of which is practically unlimited as far as any possible demand is concerned, we will have to absorb not only the oil produced from it, it being crushed in American mills, but will likewise have the cake and meal that will be produced from it in competition with American feedstuffs.

DUTY URGED ON FOREIGN VEGETABLE OIL, CAKE, OR MEAL.

We urge a duty of one-half cent per pound on soya-bean, copra, cottonseed, and peanut cake as a protection against importation of these materials into this country. We urge this especially in view of the fact that one of the leading manufacturers of soap has circularized the mixed-feed industry urging their support for free importation of dried copra, on the theory that the cake produced in its manufacture here would tend to lower the prices of other concentrated vegetable oil cakes.

Total domestic production of cottonseed oil for seven years—1914 to 1920, inclusive—shows a production of 9,857,146,000 pounds and 915,208,000 pounds of peanut oil, or a total of these two domestic oils of 10,772,354,000 pounds, or an average annual production of the two oils of 1,538,907,714 pounds.

Our imports for that same seven years were—

	Pounds.
Cottonseed oil	113,752,000
Soya-bean oil	1,086,226,000
Peanut oil	374,345,000
Coconut oil	1,201,015,000
Crushed in American mills from imported copra	915,068,000

or a total import for the seven years of 3,690,406,000 pounds, or an average annual import of all vegetable oils for that seven years of 527,201,000 pounds.

Exports for the same seven years were—

	Pounds.
Cottonseed oil (14 per cent production)	1,379,045,000
Soya-bean oil	98,985,000
Peanut oil	6,513,000
Coconut oil	159,640,000

or total exports for seven years of 1,644,183,000 pounds, or an average annual export of 234,833,000 pounds of all vegetable oils, against imports for that same seven years of 3,690,406,000 pounds, or an average annual import of 527,201,000 pounds, or an annual excess of imports above exports of 292,317,000 pounds.

We do not have the complete figures on the distribution and usage of these various vegetable oils in different articles in which they are used in this country, except for the years 1912, 1914, 1916, and 1917. These figures show there were used in the soap industry for the years 1912, 1914, 1916, and 1917, 1,536,637,000 pounds, or an annual average consumption of 384,159,000 pounds. It also shows that for these same four years a total of 572,872,000 pounds of cottonseed oil was used in the manufacture of soap, or an average annual consumption of 143,218,000 pounds, so if these various oriental oils are to be free of duty when used for soap, it would necessarily eliminate the demand for cottonseed oil for that purpose, and inasmuch as a net consumption of all vegetable oils used in the manufacture of soap is greater than the net importable surplus of all vegetable oils, if permitted to come in free for that purpose, it would necessarily invalidate the protective feature of the schedule.

THE ORGANIZATION OF THE COTTONSEED-OIL INDUSTRY.

We are safe in saying that not less than 65 per cent and very probably as much as 85 per cent of all vegetable oils produced in this country and imported into this country are distributed through what are known as the four large refiners and compound manufacturers and the five large Chicago packers. These concerns are also owners of a large number of crude cottonseed-oil mills, and are very active competitors with what is known as the independent crude cottonseed-oil industry in the purchase of cotton seed, and it is a fact that the competition is exceedingly extreme. We believe that a proper protective tariff will assist in preventing a further concentration of the industry. The four large refiners are not to be criticized in their demand for free importations of these various vegetable oils. They are only exercising what is now generally recognized as common to all interests everywhere, the right to conserve and foster their own interests, and as these interests are engaged in importing, exporting, and the conversion of these various vegetable oils into the finished products and distributing the larger portion of them, their best interests, in our opinion, do not lie in a protective tariff, but rather in world trade. The soap manufacturers likewise are in this same position, and they are not to be criticized for looking after their own interests.

The crude cottonseed-oil industry, or rather the independent crude cottonseed-oil mills, in the extreme competition with these large interests, are at this time in rather a demoralized and bad financial condition. So much is this true that it is also attended by a bad psychology, and this is one reason why there has been the apparent indifference on the part of so many independent crude cottonseed-oil mills toward the whole question of tariff.

THE INTERSTATE COTTONSEED CRUSHERS' ASSOCIATION MEETING AT NEW ORLEANS ON JANUARY 4, 1922.

The Interstate Cottonseed Crushers' Association at a called meeting at New Orleans on January 4, through proxies largely held and voted by these four large refiners, committed that association to the policy of free trade, as the following analysis of that vote will indicate. There were counted, all told, 253 votes. Of these 253 votes, 164 were voted by these large interests. The convention became tired and would not wait for the whole vote to be tabulated, and the votes from North Carolina, South Carolina, Georgia, Mississippi, and Louisiana were not counted, but there were more dealers, brokers, and other people associated in the business and in no manner connected with the ownership or management of the cotton mills than there were cotton-oil mills represented over and above those owned by the larger companies. Of the independent crude-oil mills voting, Texas and Oklahoma voted 58 votes in favor of the tariff. Those voting against the tariff there were 37 independent crude-oil mills, 82 brokers and dealers, 5 refiners, and 68 mills belonging to these larger companies. However, there were only 5 votes against the tariff from Texas and none from Oklahoma. We are safe in saying that not over 40 per cent of all independent crude-oil mills belong to the interstate association, and therefore were in no manner represented in that vote. There were also three Japanese firms who voted against the tariff. Therefore we are justified in saying that the New Orleans meeting did not represent the attitude of the independent crude cottonseed-oil industry on the tariff question, and we feel that it is unfair to that portion of the industry to be advertised and understood to be fostering an idea that is against the interests of the great American farmer everywhere.

These large refining interests made some very clever arguments at the meeting, the central thought of which was that a tariff on vegetable oils would not protect. Briefly, that soya-bean and coconut oil, two principal oriental oils that are imported into this country, were used as an edible very extensively in Europe, principally in margarine, but in the United States this oil is of such quality that it would not meet the American standards and could not be used as an edible; also that the industry in Europe is dominated by three concerns, and by reason of our emergency tariff our importers and exporters could not compete in the oriental market, leaving a virtual monopoly of these three European companies, and therefore such a low price when imported into Europe was at such a low level that practically excluded us entirely from the European market in our own vegetable oils and greatly curtailed the market for our hog lard. One of the principal arguments being made for free vegetable oils by these interests is a comparison of our exports of cottonseed oil since January 1, this year, as compared with the volume exported during that same period of 1921, and without any analysis as to the price of cottonseed oil in 1921 and to-day. In March, 1921, cottonseed oil sold for 3¾ cents per pound, crude, f. o. b. oil mills. To-day it is worth 10¼ cents per pound. At that time cottonseed oil was the cheapest vegetable fat in the world as a result of conditions that then existed. It was cheaper than soya-bean, coconut, or any other vegetable oil, so when Europe bought it it was buying the cheapest vegetable fat to be found in the world.

EMERGENCY TARIFF.

The emergency tariff bill was passed in May of last year, and very quickly after that cottonseed oil began to advance, and while it sold at 3¾ cents per pound in March, it sold as high as 7½ cents in July and 8 cents in August. Cottonseed oil has been relatively higher during the whole year than any other animal or vegetable fat. This is in part due, of course, to the small cotton crop, but in a large part to the emergency tariff. To-day it is selling at about 2½ cents higher than coconut oil, duty unpaid; 3 cents per pound higher than soya-bean oil, duty unpaid; and there have been times when coconut oil sold 2 cents per pound higher than cottonseed oil and cottonseed oil at the same price as soya-bean oil. We are fully persuaded that but for the emergency tariff, by reason of interchangeability, one vegetable oil for another, that cottonseed oil would be selling at least 2½ cents per pound cheaper than it is at this time, and we are sure that it has protected the southern farmer and given him an additional price for his seed equivalent to the duty on these oriental vegetable oils, in round figures $8 per ton on his cotton seed and $18 per ton on his peanuts, and on the cottonseed crop alone in aggregate of $25,000,000.

Interchangeability: Notwithstanding the contentions that were made by the refining interests at New Orleans that soya-bean oil and coconut oil could not be successfully used as an edible oil in the United States, the information we have and the amounts of these oils heretofore used in the manufacture of edible products in this country would tend to refute this statement as follows:

[From United States Department of Agriculture Bulletin No. 709; later figures not available.]

	Pounds.
1914. Soya-bean oil used in lard substitute	1,585,000
1916. Soya-bean oil used in lard substitute	14,247,000
1917. Soya-bean oil used in lard substitute	34,351,000
1918. Soya-bean oil used in lard substitute	56,517,000

The consumption of soya-bean oil for 1918 for lard substitutes is equivalent to over 900 tank cars of oil, or nearly one-third of the entire production of cottonseed oil for Texas this past season. Furthermore, United States Department of Agriculture Bulletin No. 439 states:

As the process of refining soya-bean oil is improved and perfected there seems to be scarcely any use in which oil has a part in the manufacture of foodstuffs to which it will not be an important adjunct.

PRESENT STATUS OF INDEPENDENT CRUDE COTTONSEED-OIL INDUSTRY.

The Texas Cottonseed Crushers' Association went on record at its annual meeting last year in favor of a tariff on vegetable oils and the substances from which they are made. At a called meeting of that association, on the 28th of December last, the following resolution was unanimously adopted:

Moved that we again confirm the resolution as passed by our last annual meeting held at Galveston—that is, we especially indorse the action of the Southern Tariff Congress demanding that cottonseed and competing oils be included in the permanent tariff bill now before Congress, and we urgently request all Texas Congressmen to sign this petition and lend their full cooperation to the Southern Tariff Association. The resolution was adopted unanimously.

All except two members of the Oklahoma Cottonseed Crushers' Association are in favor of a tariff on vegetable oils. Many crude oil millmen who were for a tariff before the New

Orleans meeting, who were misled by the arguments made at that meeting, have changed back to their original faith in all parts of the South and are now demanding a tariff on vegetable oils that will protect.

IN THE INTERESTS OF AGRICULTURE.

We hold no brief for the American farmer. Through various farm organizations in the South, dairy interests of the North, and the live-stock producing sections of the West, the farmer is demanding protection and especially against cheap oriental vegetable oils produced by Chinese and South Sea Island labor, 10 cents to 15 cents per day.

Our interest in a tariff is secondary to that of the farmer, as it is immaterial to us what we pay for cotton seed or peanuts provided the products can be sold at such a price as will permit us a reasonable profit. We are, however, interested in a price being maintained that will induce the farmer to market his production of cotton seed and peanuts, as during the business collapse in the fall of 1920 and the early part of 1921 cotton seed was so low in price that 20 per cent of the available supply for that year was not sold to the crushing mills, and therefore was never crushed, and to the extent of 1,000,000 tons. We are further interested in the price of the products being sufficiently high to encourage the farmer in increasing the production of both cotton seed and peanuts.

We believe that our interests and those of the farmer are identical and we do not apologize for demanding protection to his interests as well as our own. It would also seem that all men who have the interest of their country at heart would appreciate that the farmer must be protected in order to be prosperous, and is entitled to receive all that can be granted. With a prostrated agriculture we will have an impoverished Nation.

NECESSITY FOR PROTECTION.

The unusual conditions that surround the independent crude cottonseed oil industry are such that unless suitable protection is granted against oriental vegetable oils and their substances, the industry can not survive in open competition with the larger interests in the business who are also engaged in the importing and exporting of these various vegetable oils and in the distribution of the finished product, including manufacture of these various commodities, for the reason that their largest profits are made in the merchandising end of their business.

TARIFF WANTED.

The duties prescribed in the Senate Finance Committee bill of 4 cents per pound on coconut and peanut oil, and 3 cents per pound on cottonseed and soya-bean oil are sufficient, provided the drawback provision is eliminated, refunding the duty when it is shown it has been used in the manufacture of soap or for other inedible purposes. We also urge a duty of 2 cents per pound on copra, being the same relative ratio as far as its oil content is concerned, as 4 cents per pound on coconut oil.

Inconsistency of various fat schedules: Notwithstanding the demands of soap manufacturers and other interests for free vegetable oils and raw materials and the fact that the Senate Finance Committee schedule on vegetable oil, which provides for these different oils to come in free of duty when used for soap and other nonedible purposes, all of which invalidates the whole schedule as a protective measure in the interest of the producer of the Nation.

Nevertheless laundry soaps carry a duty of 5 per cent and toilet soaps a duty of as high as 50 per cent ad valorem, and notwithstanding that the effects to all intents and purposes of this schedule as now written invalidates the whole as a protective measure which will provide for manufacturers of oleomargarine a free raw material, a duty of 8 cents per pound is given to the oleomargarine manufacturer, the principal ingredient of which is coconut oil.

And notwithstanding that the lard substitutes manufacturers are demanding free importation of oriental vegetable oils and the substances from which it is made, which, in fact, they do receive, if the Senate finance schedule as now written is enacted into law, nevertheless a tariff is given them as protection against foreign manufacturers of lard substitutes and to the extent of 5 cents per pound.

We do not complain at these various interests receiving protection, but we demand for the American producers of competitive fats and oils protection against destructive foreign competition.

CONCLUSION.

We believe the interests of the cotton farmer, peanut grower, dairying farmer, and the hog grower, and the independent crude cottonseed-oil industry are on one side of this question demanding suitable tariff protection, and on the other side are the importers, exporters, soap manufacturers, and distributors of all the products of vegetable oil, and those who want to engage in world trade even though it be at the expense of the great producing element of this Nation.

Respectfully submitted,

J. S. LECLERCQ,
ED. WOODALL,
B. W. COUCH,
Special Tariff Committee,
Texas Cottonseed Crushers' Association.
By A. S. ROBERTS,
Special Tariff Committee,
Oklahoma Cottonseed Crushers' Association.

Mr. WADSWORTH. Mr. President, for the first time in this debate, which has now proceeded for many, many weeks, I make bold to address the Senate on the question of a tariff rate. I do so at this point because my interest in the agricultural schedule generally is very deep. I have believed for a long time, Mr. President, that the producer of the agricultural commodities of this country should enjoy a reasonable measure of protection. I have thought for some time that it was somewhat unfair, and in some instances exceedingly unfair, that the farmer should have to make all his purchases in a protected market and sell his products in a free market. I may confess also, Mr. President, with due humility, that I am especially interested in the rates on agricultural products, because agriculture is my business. I say with "due humility" because in spite of that fact I am not a member of the so-called "agricultural bloc." I have supported to date all the proposals made by the Finance Committee in the matter of rates upon agricultural products, and I expect, unless some new and unexpected arguments reach my mind, to continue to support the committee in the proposals which it has made and which have not yet been acted upon.

My interest in this particular provision, paragraph 50a, on page 22, and my special interest in the live-stock industry—I will not say my knowledge of that industry, for I realize that a little knowledge is a dangerous thing—prompt me more than ever to support the committee in the proposal which it has made, for I believe the proposal made by the committee is in the interest of the agricultural population of this country and its better interest as contrasted with the proposal made by the Senator from Idaho [Mr. GOODING].

I think very few people in the United States except those who are engaged in the live-stock business, or perhaps in the cotton-raising business, realize the astounding position in the trade of the world enjoyed by American fats and oils. We are by far the greatest producers of high-grade fats and oils. Nature has so endowed this continent, has so equipped the United States with resources of an agricultural nature that it has not yet become necessary, and I hope it will not become very necessary, for the American farmer to devote much of his attention to the production of low-grade inedible fat and oil products. The overwhelming proportion of our efforts, agriculturally speaking, is devoted to the production of fats and oils, which lead the world in quality, which are known all over the world, and command their market with the very best.

Mr. KING. Will the Senator from New York yield to me?

Mr. WADSWORTH. I will.

Mr. KING. I should be very glad if we could have a larger attendance present.

Mr. WADSWORTH. I do not think it is necessary to call a quorum. I am quite sure it would be dissipated within two or three minutes after it had appeared.

Mr. GOODING. Mr. President, will the Senator yield to me?

The PRESIDING OFFICER. Does the Senator from New York yield to the Senator from Idaho?

Mr. WADSWORTH. I do.

Mr. GOODING. In view of what the Senator from New York has stated, is it not a very serious mistake to impose a duty on edible oils that come into the country?

Mr. WADSWORTH. I think not; certainly not if they are to be used for edible purposes in this country.

Mr. GOODING. As I understood the statement made by the Senator from New Jersey [Mr. FRELINGHUYSEN], our export trade in oils which are used in oleomargarine and lard substitutes is very much larger than our export trade in nonedible oils, such as are used in manufacturing soap and for other similar purposes.

Mr. WADSWORTH. I emphasized that a moment ago.

Mr. GOODING. So that if a duty on nonedible oils will interfere with our foreign trade, will not a duty on edible oils interfere with it in the same way?

Mr. WADSWORTH. With our foreign trade?

Mr. GOODING. Yes.

Mr. WADSWORTH. The duty on edible oils imported into the United States to be used for edible purposes will not interfere with our export trade; it will interfere with the domestic business of producing edible oils and fats, and I am opposed to that interference. What I want to defend, however, and preserve is the immense export business of the United States.

Mr. GOODING. Mr. President, I also wish to ask the Senator whether, in view of the provision in this bill which permits reexport, it is not idle to talk about a tariff on vegetable oils alone interfering with exports or reexports, because that provision applies to all industries and is used very generally in this country, and has been for a number of years? Why should it interfere with reexport of soap products and not with the reexport of oleomargarine and the products of other industries? If the Senator can explain the exceptions, I should like to hear him do so.

Mr. WADSWORTH. Mr. President, I was about to proceed to develop what little argument I am capable of making. I am not worried about the soap manufacturers; I am not rising here upon the floor of the Senate as their champion or defender. Their business is but an incident in the consideration of this question, although it may be a rather important incident; I have never figured out its relative importance. I am not rising here to defend the linoleum manufacturers or those who used inedible oils and fats in the production of manufactured articles to be sold to the people of the United States, and, if possible, exported to the other markets of the world. What concerns me most is the real object of the whole agricultural schedule, which is the protection of agriculture. If there is one element of agricultural production in the United States which is largely dependent for its prosperity upon its ability to sell abroad it is that element of agriculture which produces fats and oils, for, as the Senator from New Jersey has shown, nearly one-third of all the fats and oils produced in the United States by American farmers are exported and sold elsewhere. If that one-third were thrown back in any considerable degree upon the consuming public of the United States it would so depress the price of fats and oils as to injure the farmer, who is the original producer of those fats and oils.

We can not hope to consume the fats and oils which we produce, and yet we have every right to hope to feed a good part of the world with our surplus, and that we are doing, or, at least, that part of the world that can afford to pay the price for the best article upon the market. People are going to eat fats and oils; they are almost as necessary as salt, but, of course, they are used in infinitely larger quantities, and if people can not get the best, they will eat the second best; if they can not get the second best, they will eat the third best; and so on down the line. They must have them. Witness the desperate efforts of the German people during the latter years of the war to get fats. I undertake the prediction, Mr. President, that in most of the wars which may occur in the future the underlying, impelling instinct will be the acquisition of oils and fats, edible. The human race must have them, and it is that very fact which has lent such immense importance to the so-called oriental oils, some of which can be used, though not all of them, for edible purposes.

American fats and oils command the highest prices in the world. I want that export trade preserved. I know as well as I may know anything—which may not be saying much—that if by direct or indirect means we compel an increased supply of second and third rate fats and oils in Europe, we will, by the same token, decrease the consumption of American fats and oils in Europe. If we impose a duty of 3 or 4 cents a pound on these oils, which are used in the United States almost entirely for so-called industrial purposes, and thereby compel the producers of such oils and fats in the Orient to ship them to Europe and to other parts of the world where teeming populations exist and dump them upon the European and other markets, underselling American fats and oils raised upon our farms, which are the cleanest and whitest fats and oils in the world, I know that they will crowd out of those markets our own products. That is what I fear; that is what I have feared all along, and I think the Finance Committee has put its finger upon the essence of this problem, and has drawn this amendment in such a way as to obviate the danger which I am trying to point out, and at the same time protect the American farmer against the undue importation of foreign oils and fats which, after arriving in this country, may be converted into food products through adulteration or any other means.

What does this paragraph provide for? It starts out by putting a duty on coconut oil at 4 cents per pound. Let me say just a word about coconut oil. Where does it come from? Where does the great majority of the coconut oil imported into the United States come from? Seventy-five per cent of it comes from the Philippine Islands, and every pound of it comes in free of duty under our agreement with the Philippine government; and if we will add to that percentage the copra which may come in from the Philippine Islands, with its oil content, we will find a total of something over 80 per cent of all that we use in this country of coconut oil and the content of copra, which consists of coconut oil, coming from the Philippine Islands free of duty. Why do not the Senators who are so sincerely, and I believe in every instance but this, where I beg leave to differ with them, so intelligently, defending the needs of agriculture in the United Sates move to put a tariff tax on the importations of coconut oil from the Philippine Islands? We get nearly all that we use from there, but nothing is said about that. That situation seems to be accepted.

I can not regard the coconut-oil situation as depicted in this bill, therefore, as being exceedingly important, for the most of it is coming in free of duty, anyway. The percentage we are getting from the Philippines is increasing, slowly but surely, from year to year, and we may get 90 per cent of it from there before we know it instead of 75 per cent.

Cottonseed oil is listed here at 3 cents per pound. That is a fine, splendid, staple American product. It is one of the three or four elements in our whole agricultural situation which has helped make American fats and oils famous the world over—our immense production of first-class cottonseed oil. This paragraph provides that if cottonseed oil is imported into the United States, and it is thereafter proved to the satisfaction of the Treasury Department that it is not used and has not been used for food products, the duty of 3 cents a pound shall be remitted. If it is used for food products, of course it comes into competition with the American food producer, including the American cotton grower. I believe with the Senator from Idaho that he should be protected, and this bill does it. In that event, 3 cents a pound must be paid on the imported cottonseed oil. The same observations hold good for the peanut oil at 4 cents a pound and the soya-bean oil, of which we have heard so much, at 3 cents a pound. Whenever these oils come into competition with the American food producer in the manufacture or production of food products, they are to pay a tariff rate; but if they do not come into competition with our food prducers and our food products, they are not to pay a tariff rate. Personally I do not think they should; for if we build up a barrier, even though it be a comparatively low one, against the importation of foreign fats and oils of a second and third rate in quality which are not to be used for food in the United States we are going to compel the deluging of the European market with those same oils, with which we can not compete in Europe. The people of Europe are bound to eat the oils and the fats. If they can not export, and if the people of the Orient can not export their surpluses of these cheap second and third rate oils and fats to the United States, they will keep them at home and eat them. American people would not care to eat them, but others will. They will have to.

The very exigencies of trade and commerce and their difficult economic situation will compel them to do so; and I fear that in that event the American farmer, the man who produces beef cattle and hogs and sheep and cotton will lose a large portion of that splendid foreign market which has done so much toward building up the live-stock industry and the cotton industry of the United States.

Mr. President, I think the committee is right in this matter. I am told that a good many farm organizations have resolved against the committee's attitude. I fear that some of them do not realize where the American live-stock industry's prosperity comes from, in large part. It comes, Mr. President, in large part from our ability to export American meat food products, fats, and oils at the highest prices commanded in the world's markets; and as long as we can keep doing that, and protect our own domestic market against undue and unreasonable invasion of it by competing food products, just so long will American live stock and agriculture generally be safe. If we should lose our export market on these things, and especially the matters covered in this bill—fats and oils—we can not hope to get the same prices for our cattle and our hogs and our cotton seed when we send them to our domestic markets and endeavor to sell them there in order to keep our business running.

So, Mr. President, I venture to express my approval of the solution reached by the Finance Committee as set forth in paragraph 50a.

Mr. GOODING. Mr. President, I think, in connection with this duty, that I am in pretty close touch with the agricultural interests of the country; and if there is another farmer in

America, outside of the senior Senator from New York [Mr. WADSWORTH], who is asking for free vegetable oils for soap, I have not heard of him.

Again, I can not understand why the Senator, with his clear vision of everything that he discusses in the Senate here as a rule so well and so ably, will insist that a duty on vegetable oils is going to interfere with our export business. That is one of the things that I can not understand in the Senator, because surely, with the provision in the bill that permits the refunding of 90 per cent of the money upon reexportation, the duty can not interfere with any manufacturer of any kind that wants to reexport any product.

Mr. President, if this provision of the committee is adopted this is what is going to happen, and a representative of the soap interests admitted it to me, and, of course, it will happen as a business proposition: They will go into the world's markets and buy the cheapest vegetable oils they can buy and bring them into America, and that will control the price of vegetable oils in this country, because that vegetable oil will be used in interchanging. They do not have to use coconut oil. They can use soya-bean *oil* in making soap. They can interchange them. They will just buy the cheapest oil they can buy and bring it into America and beat down the prices, and this bill as far as protection is concerned to the cottonseed growers and the soya-bean growers and the peanut growers and the producers of fats for soap just becomes a straight farce.

That is all I have to say.

Mr. WILLIS. Mr. President, I think the votes I have thus far cast here in my very limited service bear out rather distinctly the idea that I am in favor of the policy of protection, and particularly in favor of that policy as it is applied to the products of the farm. Because I have favored that policy it has been a delight to me to go along with the distinguished junior Senator from Idaho [Mr. GOODING], who has taken a very active interest in these matters, and who, in my judgment, has rendered a great service to the farmers and to the country in aiding in writing into this bill an agricultural schedule the most favorable to the farmer that has ever been written into any tariff bill, so far as I know, in the history of the country. The Senator from Idaho has had a large part in that.

I want to say at this point that I think the committee which has had the exceedingly difficult problem treated of here in paragraph 50a to deal with has reached a solution that is fair to all.

I am not quite able to agree with my good friend from Idaho [Mr. GOODING] touching some things that he has said regarding this tariff rate and the interests and industries involved. Our situation in Ohio is perhaps somewhat unlike that of some other States. The soya bean has been raised in Ohio and will be increasingly raised there. It is a great crop for the enrichment of the soil. So far as I know, no soya beans raised in Ohio are being used as a source of oil. There may be some. I do not know about that.

Mr. WALSH of Mssachusetts. Mr. President, will the gentleman yield for a moment?

Mr. WILLIS. I yield to the Senator from Massachusetts.

Mr. WALSH of Massachusetts. Will the Senator state whether or not he has received any letters from farmers in Ohio protesting against the duties upon these oils?

Mr. WILLIS. I was just about to take up that matter, and I will take it up now. Because of the fact to which I have alluded our farmers are very much interested in soya-bean growing, but not as a source of vegetable oil. I have received no letter from any Ohio farmer or from any organization of Ohio farmers asking for this duty upon soya-bean oil, except as a means of preventing the use of this and other vegetable oils in the production of filled milk and substitutes for butter and lard, and yet I personally know that there are thousands of them that are very much interested in soya-bean culture, and the reason of that is the fact I have stated—that the soya bean is used there as a forage crop, and it is a splendid one, or as a crop to be plowed under for the fertilization of the soil.

Mr. WALSH of Massachusetts. I suppose the Senator has received no letters either in regard to the duty upon coconut oil or cottonseed oil or peanut oil?

Mr. WILLIS. Yes; I have received some letters, as I shall explain to the Senator in a moment.

I have made some inquiry about this matter amongst the soap people and the varnish people, who have great industries in our State. So far as I have been able to find out from the inquiries I have made, absolutely none of this soya-bean oil produced from soya beans grown in Ohio is offered in any Ohio market, nor have I been able to find any of them—I do not say that there are not any, but so far as my inquiry has gone I have not been able to find any—but that are willing to make affidavit that they have not been offered in the market any soya-bean oil pressed from beans grown in the United States; and I state that recognizing the fact that this report of the Tariff Commission states the undoubted fact that in 1915, 100,000 bushels of soya beans were pressed in this country for oil, but they are not being so pressed to any considerable extent now. It is quite possible that as the years go on that industry will develop, and I am in favor of encouraging it, and encouraging it by a reasonable duty, but I doubt whether it would be wise to impose a practically prohibitive duty on that product just now.

Mr. GOODING. Mr. President——

The PRESIDING OFFICER. Does the Senator from Ohio yield to the Senator from Idaho?

Mr. WILLIS. I yield to my friend from Idaho.

Mr. GOODING. I should like to say to the Senator that the junior Senator from North Dakota [Mr. LADD] read into the RECORD on yesterday, as I remember, a letter in which it is stated that at the present time practically all the soya beans grown in this country are being used for seed—that is, the larger amount of them. There is such a demand for them that they are using practically the entire crop for seed, it is extending so rapidly and so fast; and I think that is correct.

Mr. WILLIS. I think that is undoubtedly true; and, incidentally, that is one of the reasons why under present conditions soya beans would not be used as a source for oil, because they would be worth two or three times as much for seed as they would as a source of oil.

I think my good friend the Senator from Idaho is mistaken in another respect, when he speaks of the "soap trust." I do not know what may exist somewhere else, but I am fairly well acquainted with the industries of Ohio. There is not any soap trust in Ohio, and if there were I would not be speaking for them. I am not their champion, and hold no brief for the soap industries; but fairness compels me to state the fact that so far as I know there is not anything of that sort at all.

I personally know of at least 30 independent soap manufacturing concerns in the State of Ohio, and a large number of concerns manufacturing paints and varnish, all of which, of course, are interested in these duties.

I have received a large number of letters from farmers. I will not take the time to read them, but I ask unanimous consent to insert as an appendix to my remarks just a few of the letters and telegrams which have come to me from Ohio farmers.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

(See Appendix.)

Mr. WILLIS. My friend from Idaho suggests that the farmers are not asking for free oil. They certainly are not; but they are asking for exactly that which the committee has provided for in this amendment. For example, I have before me a letter, all of which I shall put in the RECORD, from one of the leading agricultural men of our State, a man whom my colleague knows as well as I do, the editor of the Ohio Farmer, in which he calls particular attention to the fact that it is desirable, from the viewpoint of the farmer of Ohio, to have such provision in the law as will discourage, if not prevent, the use of these imported vegetable oils in the manufacture of edible products, calling attention to the fact that they are being used in making filled milk, and in butter substitutes, substitutes for lard, and so forth. That is the burden of the letters and telegrams and other communications I have received from Ohio farmers.

Mr. FRELINGHUYSEN. Mr. President, I should like to ask the Senator if the editor of the Ohio Farmer spoke in his communication of coconut oil as well as the vegetable oils used in filled milk?

Mr. WILLIS. I think, in fairness to the editor, I ought to read at least a part of the letter just now. It is as follows:

> In the name of the dairymen and farm producers of Ohio we urge the importance of adequate tariff protection against the importations of oriental peanuts, peanut oil, coconut oil, soya beans, soya-bean oil, etc., which are coming to be a tremendous factor in offering food substitutes which are placed on the market in competition with the products of American farms.

I will not read the rest of the letter, but will put it in the RECORD at the close of my remarks. He was talking about the use of these vegetable oils in making edible products which come in competition with dairy products. Here is a bundle of telegrams to the same effect.

I think the committee and its distinguished chairman, the Senator from North Dakota, who have faced a very difficult task, have done a mighty good job of work in drawing the amendment which they have offered. They have written into the bill this language:

> PAR. 50a. Coconut oil, 4 cents per pound; cottonseed oil, 3 cents per pound; peanut oil, 4 cents per pound; and soya-bean oil, 3 cents per pound: *Provided*, That such oils may be imported under bond in an

amount to be fixed by the Secretary of the Treasury and under such regulations as he shall prescribe; and if within three years from the date of importation or withdrawal from bonded warehouse satisfactory proof is furnished that the oil has been used in the manufacture of articles unfit for food, the duties shall be remitted: *Provided further*, That if any such oil imported under bond as above prescribed is used in the manufacture of articles fit for food there shall be levied, collected, and paid on any oil so used in violation of the bond, in addition to the regular duties provided by this paragraph, 3 cents per pound, which shall not be remitted or refunded on exportation of the articles or for any other reason.

I think, then, that the Finance Committee has made a fair, an earnest, an honest, and I may say, in my humble judgment, a successful effort toward the solution of this problem, upon which I congratulate the chairman. I shall support the committee amendment. It provides fair protection upon vegetable oils produced by American farmers; through the bonding provision free entry of vegetable oils is secured for the encouragement of foreign trade and for the guaranty of a supply of cheap soap material for the United States, and at the same time the use of these vegetable oils is prevented, so far as possible, from entering into edible products that would come into competition with our own dairy products.

APPENDIX.

THE OHIO FARMER,
Cleveland, Ohio, March 25, 1922.

Hon. Frank B. WILLIS,
Senate Office Building, Washington, D. C.

DEAR SENATOR: In the name of the dairymen and farm producers of Ohio we urge the importance of adequate tariff protection against the importation of oriental peanuts, peanut oil, coconut oil, soya beans, soya-bean oil, etc., which are coming to be a tremendous factor in offering food substitutes which are placed on the market in competition with the products of American farms.

We feel that we can look to you to protect the interests of our fundamental industry, which is just getting back onto its feet after the most trying time in our history.

Thanking you for whatever effort you can exert to protect the honest products of American dairies, stock farms, bean fields, cotton plantations, and linseed producers, we remain,

Yours respectfully, JOHN F. CUNNINGHAM.

LIMA, OHIO, *March 20, 1922.*

Senator FRANK B. WILLIS,
United States Senate, Washington, D. C.:

The dairy interests of northwestern Ohio require protection against vegetable oils used for making butter substitutes. The duty should be at least 5 cents per pound on vegetable oils and 3 cents per pound on copra and soya beans.

THE FARMERS' EQUITY UNION CREAMERY CO.,
OREN DICKASON, *Secretary.*

WAUSEON, OHIO, *March 20, 1922.*

Senator F. B. WILLIS,
Washington, D. C.:

Our organization of 4,000 dairy farmers favor duty of 4 cents per pound on vegetable oils and 2 cents on copra and soya beans. This is necessary to safeguard the dairy business.

NORTHWESTERN COOPERATIVE SALES CO.,
J. C. BURR, *President.*

COLUMBUS, OHIO, *March 22, 1922.*

Hon. F. B. WILLIS,
Senate Office Building, Washington, D. C.:

Ohio milk producers insist that you use all possible efforts to secure a duty of not less than 4 cents per pound on vegetable oils and 2 cents on copra and soy beans, thus securing the market for Ohio's dairy products and safeguarding the health of the general public.

E. D. WAID,
Secretary Ohio Dairy Marketing Organization.

JEFFERSON, OHIO, *March 21, 1922.*

Hon. F. B. WILLIS, *Washington, D. C.:*

The Dairymen's Cooperative Sales Co., of Youngstown, Ohio, composed of 11,000 dairymen, urge you to work for a duty of 4 cents a pound on vegetable oils and 2 cents a pound on copra and soy beans. Dairymen must have this protection.

P. S. BRENNEMAN, *President.*

Mr. McCUMBER. Mr. President, paragraph 50a brings to the front one of the thousands of difficult and complex problems which the Committee on Finance has had to face in formulating a protective tariff bill. The formulation of a tariff bill for revenue only is very simple. All the committee has to determine is the amount of the imports, the effect of certain rates upon those imports, and what we need to raise, and then divide that amount among the several classes of imports in a way that will be least burdensome to the American people. That is a simple process.

But when framing a bill from the protective standpoint, you have first to measure the effect of each duty upon the first or primary industry into which the article goes, then the secondary industry. Then you have to take each article which enters into a product and trace it through all the ramifications of the industrial concerns of the United States and ascertain just what effect it has not only in the production but upon the ultimate consumer.

It is a difficult process, indeed, and it brings into the arena all of the conflicting interests and forces, and in an acute form that is true of this particular paragraph.

The primary contestants in the matter of the duty which has been placed upon these oils were the dairy interests on the one side and the general industrial interests on the other. The dairy interests naturally wanted to cut out anything capable of being used in an edible form which might conflict with their product. The industrial interests desired to get the particular products in without their being loaded with any duty whatsoever.

During all the years I have been in the Senate I have been attempting to make not only the Senate understand, but to make the world understand, as far as I could, that it was an erroneous idea to assume that God Almighty created a class of people known as farmers simply to produce food and clothing for the rest of humanity to eat and wear, and that all a farmer was entitled to was an existence out of that business. I have been trying to convince the country that if possible farming ought to be made so remunerative that people could engage in it as a business and could conduct it in the same manner in which they conduct any other business; that they could employ their sons and daughters and pay them wages, the same as the banker would employ his son or his daughter in the bank and pay a wage; and that they could secure from their efforts an amount above the bare expenses of operation sufficient to declare a dividend at the end of the year.

Gradually we are trying to reach that condition, gradually we are bringing the interests of the farmer to the front, and we are trying to protect his interests the same as those of any other industry. I feel under great obligations to the Senator from Idaho and to the farm bloc for the efforts they have put forth to get honest protective duties for the farmer, and I wish to compliment them also on the fact that they have been willing to give protection to every other industry in the country.

But the committee faced a difficult problem in dealing with this particular case. There were the two interests. The farmer should not be blind to the interest of the manufacturer, and the manufacturer should not be blind to the interests of the agricultural producer. We want to so levy and adjust our tariff rates from the protective standpoint at all times that they will not injure any business, but will raise both interests to a higher plane of prosperity. That is what we are trying to do in the final settlement of this case.

I stated that we began some time ago to try to protect the farmers' and the dairymen's interests. When we first began to manufacture oleomargarine it went upon the tables in our restaurants and in our hotels and sold for from a half to two-thirds the price of good butter, and we used it without knowing what we were using. It was colored, and it was so flavored that ordinarily in using it upon the table you could not tell the difference. Thus in the early days we were putting into our stomachs stearin, deodorized lard, and every other kind of stuff out of which they manufactured oleomargarine.

Finally Congress determined that they would stop at least the fraudulent use of it, and they levied a tax upon margarine. They said to the people, "If you want to buy it, you can purchase it, but you have to purchase it identified so that you will know it is not butter." That was our first step to protect the dairy interests of the United States.

We have gone further in this bill. We have not only put a duty of 8 cents a pound upon all imported butter, but we put a duty of 8 cents a pound on everything that is sold as a substitute for butter, no matter what it is. So the dairyman must admit that we have done the best we could to protect his interests.

When he was before our committee all he claimed, as suggested by the Senator from Ohio, was protection on the edible products. He did not want to have these oils brought in and used in competition with cream and milk, butter and cheese, and that is all he did ask. I have talked with a number of those who represented those interests, and they were satisfied with this provision. Of course, they would have been better satisfied if we kept them out entirely, because they argue, just as the Senator from Idaho does, that it has some effect as a displacement of our American fats and oils.

Mr. GOODING. Mr. President, I want to say to the Senator, who, as chairman of the committee, has worked very hard, that I think I am in a position to know what the dairy interests of this country want. No doubt some of them have stated what the Senator has said they did, and indicated that they were

satisfied. But their organizations everywhere are opposing this provision, which permits vegetable oils to come in free for the soap people. I have plenty of telegrams and letters which I could put into the RECORD if I cared to. They feel they are not going to get proper protection if this provision is adopted.

Mr. McCUMBER. Yes; I heard the argument of the Senator and I will answer it most briefly. I do not agree with the Senator from New York and the Senator from New Jersey with reference to the great danger that we would have in disposing of the fats and oils which we produce in this country if we prevent the oils from India and the Orient from coming into the United States. Their argument is—and there is something in it, but I think they give to it a greater weight than it is entitled to—that if the oil of the Orient and India can not come into the United States, it will go to Italy, Great Britain, and France and will be consumed there, and that just to the number of pounds, we will say approximately, that they consume of those oils in those countries they will not consume the tallow and the lard that is manufactured in the United States. Well, each product, as a rule, has a market of its own for the particular purpose, and while I have no doubt that it would affect us to some extent, I do not think we need to give it the weight that is given by the two Senators whom I have mentioned.

But now I want to consider for a moment what we have done for the dairymen and for the American producer of fats in the United States. What do we produce? We have cattle and hogs and we have fish. What have we done? We have protected those. In paragraph 49 we have put on cod and herring and menhaden oils 5 cents per gallon duty. We have put on whale and seal oil 6 cents per gallon duty. We have put that on whether they come in and are made into soap or not. There is no rebate on that. On sperm oil we have placed a duty of 10 cents per gallon and on all fish oils not specially provided for a duty of 5 cents a gallon. So we have defended the American fats and greases against fish oils of every nature, kind, or description. Those are not included in the oils which we say may be used without the payment of duties, provided they do not go into edible products. Those have to pay a duty anyway, no matter for what purpose they are used.

Then again, we have provided on all other oils and fats 20 per cent ad valorem. Then we come down to castor oil, hempseed oil, linseed oil, flaxseed, and olive oil, and upon all of those we place a duty, no matter for what purpose they are used in the United States. Olive oil in containers bears a duty of 60 cents per gallon, and other olive oil not specially provided for 50 cents per gallon. Even poppy-seed oil, raw or boiled or oxidized, bears a duty of 20 per cent ad valorem. All of these bear a duty, no matter for what purpose they are used. We selected four of these oils and stated that if any of those four kinds come in the United States and are not used for edible products, then the duty may be remitted.

Mr. TOWNSEND. Mr. President——

Mr. McCUMBER. But if they are used so that they can in any way come in competition with our dairy products, then the full, heavy duty must be paid.

I yield to the Senator from Michigan.

Mr. TOWNSEND. The thing that disturbed me in that particular was the question as to how we are going to determine that fact.

Mr. McCUMBER. Experts of the Treasury Department say there is no difficulty whatever in doing it. We have similar provisions with reference to the use of certain products. It is just as easy as it is to determine when one gets a drawback what proportion of the product has been exported and what proportion has been used in the United States.

Mr. TOWNSEND. It seems to me it is much easier to determine the question of reimportation, which is a general principle, and to know how to handle it than it is to segregate from this product, as it comes here and is stored for three years under bond, that which can be used and is used for edible purposes from that which is not. Practical men have informed me that this is an almost impossible task.

Mr. McCUMBER. The Senator does not wait until three years have elapsed before anything is done. Of course, the product is brought here in bond, and the moment he takes anything out of bond he has to report it, and he has to report finally what it is used for, or if it is sold it is quite easy to trace where it has gone.

Mr. TOWNSEND. Of course, if I thought that was easy I would not question it, but it seemed impossible to me.

Mr. McCUMBER. For instance, under this bill our carpet wools come in free. We will have to trace to find that those wools actually go into the manufacture of carpets. The department believes that it will find no difficulty in enforcing this provision.

I say there were simply four kinds of oils which we allow to be used, and most of them are used in soaps, and they may come in free provided they are used for a specific purpose and do not go into any other edible product. What are they? Coconut oil is one and bears a duty of 4 cents per pound. Where do we get our coconut oil? Seventy-five per cent of it comes from the Philippine Islands. That comes in free. Now, the Philippine merchant can make his oil out of 80 per cent of Philippine coconuts and 20 per cent of Indian coconuts and still bring it in free. When we come to the question of copra, the crude coconut meat dried, it is simply a question whether our American crushers or oil producers shall surrender their business over to the Philippine Islands. We levy a small duty, but it is not a bagatelle, and it will not affect the soap-making industry or any other industry in the United States. There is not a dollar's worth of copra that can be used in the manufacture of condensed milk or in any other dairy product without paying the full rate of duty.

I believed in going further than that. My own opinion is that we should do with all of these butter substitutes exactly what we did for oleomargarine—put a tax upon it so that they can not drive out of business the dairy industry of the United States. I would not object to the use of these substitutes at all if I considered that the product was just as good, but I believe that it is practically a fraud upon the consumer.

Next is cottonseed oil. What is that used for? Ninety per cent is used in the United States for food products. We can not prevent that. Ninety per cent of it goes into substitutes for lard and other food products. All we have said is that the other 10 per cent or anything that is brought into the United States shall not be used for food products without paying the duty. That is all that was possible for us to do to protect against the use of cottonseed oil in an edible product.

The next is soya-bean oil, 3 cents per pound. The soya-bean oil can not be brought into the United States without paying that full duty unless it is brought in for the purpose of producing something else than an edible product. What can it be brought in for? It can be used in the manufacture of paints. To-day I think the price is so high that it could not be used for that purpose. But assuming that linseed oil goes up so that it would induce the manufacturer of paint to mix in a certain portion of soya-bean oil, he has not as good a product of paint, and that is absolutely certain. It is an adulterant and no good concern would dare to use it if they depended upon maintaining their good reputation. But it may be that to the small extent that it may possibly be used in making paints it will compete with linseed oil. However, I do not think there will be much danger even there.

Mr. KING. Mr. President——

The PRESIDING OFFICER (Mr. NICHOLSON in the chair). Does the Senator from North Dakota yield to the Senator from Utah?

Mr. McCUMBER. I will yield in a moment. I think the soap industry can take care of itself, but I realize the fact that the real wealth of a nation depends upon the balance of trade in its favor in dealing with foreign countries. I would first take care of our home markets and see that the American laborer and the American producer first had his own market, that he might receive a good wage and a fair return upon his investment. I would take care of that first, but as soon as that was taken care of I would reach just as far into the market as possible for the purpose of getting as great a balance of trade in our favor as we could. Therefore when these oils come in and are manufactured into soap and that soap is exported, or an equal quantity of the oil is exported, I do not think that the producer of fats in the United States, the farmer who raises hogs and cattle, is going to be seriously injured. Whether there is a little injury or not, Mr. President, this was a compromise, and it was the best that we could get to satisfy all classes that were interested in the subject.

I now yield to the Senator from Utah.

Mr. KING. I think perhaps the Senator covered the point I had in mind. The Senator in discussing the soya bean said that the product of it, the oil, was used for paint purposes, and indicated that that was the only purpose for which soya-bean oil was used.

Mr. McCUMBER. It can not be used for food purposes.

Mr. KING. It is used for soap.

Mr. McCUMBER. It may be used for soap and for other industrial purposes.

Mr. KING. What I had in mind was that the Senator did not intend to limit its use to paint purposes.

Mr. McCUMBER. No. What I meant to say was that the only thing with which it came directly in conflict which the farmer produced is linseed oil.

Mr. KING. Mr. President, before a vote is taken I desire to submit a few remarks and have read an editorial that I think is pertinent to the question before us and answers some of the arguments suggested by the Senator from South Dakota [Mr. LADD] and the Senator from Idaho [Mr. GOODING] who are representatives of the farm bloc. They have contended, and others have accepted the same view, that imported vegetable oils come into competition with dairy products. In my opinion this view is erroneous and the facts already disclosed by the record do not support such contention.

I join with Senators in paying tribute to the agriculturists of the United States. Upon various occasions I have referred to the difficulties under which they have labored and the hardships which they have encountered. I have stated not only during the course of the debate upon this bill but upon other occasions since I have been in the Senate that there has been too much legislation of a special character and that Congress has too often exhibited a solicitude for the manufacturing interests at the expense of the agriculturists. I have not been able to understand how the farmers of the United States could have given such general support to the Republican Party, particularly during the reign of the extreme Republican protection sts, because that party has been controlled by forces and interests that have been deaf to the needs and welfare of the agriculturists of the United States. The farmers have been compelled to buy many of the commodities essential to their life and welfare from protected interests, and they have sold their products at prices which were fixed by world prices. They have supported policies that enabled the manufacturers of the United States to form combinations, monopolistic in character, under which domestic prices for the products of such organizations have been forced to inordinately high levels.

The farmers have been the victims of the protection policy, and instead of condemning the Republican Party and its oppressive economic policies the agriculturists have given very general support to the party that was hostile to their best interests. And we are told now that certain groups have been formed to procure the passage of this bill. The agricultural interests, it is claimed, will support the bill because of the promises of protection to the farmers, and, of course, the manufacturing interests of the United States will support it because it lays tariff duties so high as to enable the domestic producer to fix prices that will bring enormous profits to the domestic manufacturer.

I believe that the prosperity of the United States goes hand in hand with the prosperity of the farmer. But the farmer and the live-stock producer will not be benefited by this bill and the provisions which are urged as affording benefits to the farmers will prove to be like dead sea apples.

This bill is in the interest of certain great industries, such as steel, the textile and woolen mills organizations, the dye corporations, the chemical interests, and others which I will not now mention. There may be a few paragraphs in the bill which deal with agricultural products from which some benefit may be derived by the farmers of the United States, but generally speaking, I repeat, this bill will prove injurious to the farmers and harmful to the live-stock interests of the country.

Mr. President, I ask that an editorial appearing in the February issue of the California Dairyman, a newspaper published in Los Angeles, Calif., may be read from the clerk's desk. While I do not assent to all the conclusions drawn I think it answers some of the objections urged against the importation of vegetable oils and demonstrates that the importation of such oils will not prove harmful to the dairymen of the United States; also that the emergency tariff bill did not operate as promised by its advocates.

The PRESIDING OFFICER. Without objection, the Secretary will read as requested.

The Assistant Secretary read as follows:

ANOTHER ANGLE OF THE TARIFF QUESTION.

A careful analysis of the trade conditions resulting from the present emergency tariff import duty on foreign vegetable oils clearly shows that the operation of this duty is an important cause of declining prices for butter fat and hog lard.

The intended effect of the emergency import duty was that protection would be given both to the vegetable and the animal fat industries.

It was recognized that the prices received by the American producers and manufacturers of dairy and hog products were directly affected by the market prices of edible vegetable oil products, such as margarine and lard compound.

The framers of the present emergency tariff considered that by imposing a duty on cheap imported oriental oils, fair market prices could be obtained by dairymen, cotton growers, and hog raisers, and, incidentally, the Government could collect some much-needed revenue.

In actual practice none of these desirable results occurred. What did happen was that the duty acted as an embargo and millions of pounds of oriental oil which previously used to find their way in a large measure into American industrial channels were diverted to European markets for use as edible oils. This diversion of inferior oriental vegetable oils from their industrial use in the United States to use in edible form in European countries has caused a decrease in our monthly exports of cottonseed oil of from 60,000,000 pounds in January, 1921, to five to ten million pounds at the present writing.

It has been recently shown to the Committee on Finance of the United States Senate that our import tariff of 20 cents a gallon on coconut, soy beans, and cottonseed oils and 26 cents on peanut oil has permitted European buyers to centralize their purchases of these oriental oils which the duty excluded from our country.

This concentrated buying in Europe and the absence of American competitive buying for industrial purposes caused a decline in foreign edible fat and oil prices below cost of production of our American products.

When we take into consideration that this country normally would export over 60 per cent of its hog-lard production—nearly a billion pounds—and about 400,000,000 pounds of cottonseed oil it becomes obvious that when a considerable portion of this exportable surplus fails to find a profitable export sale it must remain in our domestic market.

Any condition which prevents the widest export sale of cottonseed oil means more and cheaper margarine and lard compound and proportionate declines in butter fat, dairy cattle, and hog prices.

On the other hand, a return to the normal import and export conditions affecting vegetable and animal oils, which prevailed prior to the emergency tariff, will undoubtedly result in an upward price reaction benefiting cotton growers and members of our own dairy and live-stock industries.

A protective import tariff on butter and butter substitutes is a necessity.

It is still more important that the import duty on foreign edible oil, seeds, and beans as now written in the proposed permanent tariff be eliminated.

Mr. KING. Mr. President, I regret that the proponents of the amendment, and particularly those who belong to what is denominated the "farm bloc," were not in the Chamber to listen to the admirable editorial which has just been read and which shows the untenable position of the Senator from Idaho [Mr. GOODING] and the distinguished occupant of the chair, the junior Senator from North Dakota [Mr. LADD].

Mr. President, a statement was made by the Senator from Idaho relative to the increase in the price of vegetable oils following the passage of the emergency tariff act. A sufficient reply to the contention that the emergency tariff law was responsible for any possible increase in the price of vegetable oils is found in the report submitted by the Tariff Commission under date of June 27, 1922. On page 58 of that report the following appears:

> The price of cottonseed oil is influenced chiefly by the price of lard, of which the United States is the largest exporter. When the price of the latter exceeds that of cottonseed oil by a certain amount, the market for lard substitutes, which consumes 80 per cent of our cottonseed-oil production, is improved and the price of the oil advances. Table 13 shows the price trend of cottonseed oil since 1914. It will be noted that minimum prices for recent years prevailed in April, 1921. The subsequent rise in prices, while possibly due—

I presume the words "while possibly due" were deemed proper in view of the nature and character of the work of the commission, but it is obvious, if one may interpret the meaning of the writer by the language employed, that the author of this report did not deem the rise in prices, small though it was, as in any degree attributable to the emergency tariff act—

> The subsequent rise in prices, while possibly due in some measure to the effect of the emergency tariff, was influenced by at least four other factors:
>
> (1) The shortest cotton crop in two decades.
>
> (2) The large increase in lard exports in 1921, which advanced the price of lard and, consequently, of cottonseed oil.

That is exactly the contention of the Senator from New York [Mr. WADSWORTH], the Senator from New Jersey [Mr. FRELINGHUYSEN], and the chairman of the Committee on Finance [Mr. McCUMBER], that because of the interchangeability of these vegetable oils and animal fats, and by reason of the tremendous exports from the United States, aggregating approximately 1,400,000,000 pounds annually, the prices in the world market determine the prices in the United States; and, of course, anything that contributes to the reduction of prices in the world market and as reflected in Europe would immediately lower the prices in the United States.

> (3) A world shortage of vegetable fats. The Mediterranean olive-oil crop, normally in excess of 2,000,000,000 pounds, was 44 per cent short, and the Manchurian soya-bean-oil crop was 20 per cent short.
>
> (4) A gradual relaxation of business deflation with resultant stiffening of prices of nearly all commodities.

Mr. President, some of the farm bloc contend, and properly, that the law of supply and demand determines prices. When the Mediterranean crop of olives was short 44 per cent, when the Manchurian crop of soya beans was short 20 per cent, when the cotton crop in the United States was short, manifestly, whether there was a tariff or not, prices of cottonseed and vegetable oils and animal fats in the United States would rise, and, as the prices rose, so the reservoir of prices of these products would rise throughout the world. It is regrettable that our friends who are the proponents of this amendment, and who defend the law of supply and demand when it suits them, deny

its validity when its operation contravenes their desires and exposes their fallacies.

Reference was made by the Senator from Idaho to the attitude of some Oklahoma and Texas cottonseed crushers. The Senator from Massachusetts [Mr. WALSH] yesterday put into the RECORD, without reading, a number of letters, and I desire now to call attention to one or two of them. I read from a letter written by the Palestine Oil & Manufacturing Co., of Palestine, Tex., wherein it is said:

Without going into any exhaustive argument, I will answer the second paragraph of your letter by stating most emphatically that I do not think American vegetable-oil mills need to be subsidized by a tariff in order to operate successfully. On the other hand, I believe the Fordney-McCumber tariff bill will work a hardship on not only our industry but all industries producing edible fats, including manufacturers of finished edible products, the cotton raiser, the cattle and hog raisers, and I might say the soap industry.

Mr. A. G. Kahn, of Little Rock, Ark., states:

The American vegetable crude-oil mills do not need to be subsidized by a tariff in order to operate successfully. In fact, these mills have no direct concern in a tariff.

I might add parenthetically, Mr. President, that so far as I have been able to discover the representatives of these mills, more than 700 in number, are concerned primarily in finding a supply of raw material for their mills. They are unable now to operate their mills more than 50 per cent of the time because of the inadequate production of oil seeds in the United States and their inability to secure under existing law sufficient supplies in other countries.

They would be glad, of course, to see domestic production of cotton seed increased, because that would increase the productivity of their mills, and consequently increase their profits; but they are primarily concerned in the welfare of the cottonseed producers of the United States. If the cottonseed producers of the United States receive any blow to their industry, it will militate against the crushing industry; and if the world prices of cotton seed and other vegetable oils, or of animal fats, are reduced, the price of cotton seed and cottonseed oil in the United States is reduced, and such reduction injuriously affects the producers of cotton seed and undoubtedly would diminish their output. So it is to the interest of the seed crushers' associations to have the cottonseed industry prosperous, and it will prosper by increasing the world prices. World prices will increase by diverting to the United States instead of to Europe oriental oils and seeds, where they may be converted into what may be denominated the finished products, because in so doing it adds to our exports and prevents Europe from lowering the prices, which she would do if she were the only purchaser of oriental oils and oriental seeds.

Recurring to this letter of Mr. Kahn's, he says:

The function which they perform—

Referring to the mills—

is a manufacturing one. They are presumed to buy their raw materials, crush them, and sell the manufactured products at a margin sufficient to reimburse them for their service. You will therefore see that they are only interested in maintaining this margin or toll. What arguments have recently been made in favor of a tariff by some cottonseed oil mill operators are presumably in the interest of the American farmer or producer of oil-bearing materials.

I personally think that even from the farmer's point of view, so long as we have an exportable surplus of American edible fats, a tariff would be a boomerang.

Mr. President, that seems to me as plain as any proposition in Euclid. When we have 1,400,000,000 pounds of exportable fats, when we determine largely the world price of fats and therefore of oil seeds in the world, it is absurd to say that the importation of a few million pounds of seeds or oils would result in competition with the American product, or injuriously affect the prices of oils and fats, including butter fats, in the United States or in the world.

The Senator from New York [Mr. WADSWORTH] very wisely remarked, though he is interested in agriculture and is solicitous for the welfare of the farmer, that his interests would be best promoted by having a world market for the animal and vegetable fats of the United States. It is manifest what the consequences to the live-stock producers of the United States prior to the war and during and since would have been had it not been for our European market. Their prosperity resulted from the European market. Cut off the European market for our surplus hogs and meats and butter fats and vegetable oils and these great industries will be seriously affected.

The Senator from Idaho, as I stated, had read from the desk what purported to be a copy of resolutions adopted by some Oklahoma and Texas oil-seed crushers' associations. Since then there has been a meeting of the national organization of the interstate cottonseed crushers' associations of the United States. I have before me the National Provisioner, the issue of June 17, 1922, and I read from page 23 of this paper the following paragraph:

The tariff question, which had been before the industry for a long time, required such definite action as was taken in the opinion of the members of the association, and so the convention declared itself in opposition to the tariff on vegetable oils.

As I am advised this national association includes the oil-seed crushers' associations of Texas and Oklahoma, and a resolution was adopted by the national association at their meeting in New Orleans January 4 of this year, which is as follows:

Resolved, That we are opposed to a tariff on foreign vegetable oils and oil seeds in the permanent tariff bill, believing that such a tariff would prove a detriment to the farmer and to our industry; and

Resolved, That our officers, either directly or through appropriate committees, present to Congress these our resolutions and advocate legislation accordingly.

On a separate motion the following additional resolution was adopted:

Resolved, That referring to the above resolutions, it is suggested to our associated State organizations that they take similar action.

I shall not take the time of the Senate to put into the RECORD further extracts from the proceedings of the association.

I think the same day a telegram was sent to the Senate committee by Mr. Watkins, of Atlanta, the chairman of the Crude Cottonseed Oil Tariff Committee, an independent organization of crushers, and so forth. Let me say that the organization to which I am now referring at first advocated a tariff upon vegetable oils, but after an investigation of the effect of a tariff, and after perceiving the effects of the emergency tariff law, it rescinded its former action, and communicated the following resolution to the Finance Committee of the Senate. Let me read from this page:

Following the special meeting of the Interstate Cotton Seed Crushers' Association at New Orleans, January 4, when resolutions were adopted declaring the opposition of its members to a tariff on vegetable oils, and their belief that such a tariff would prove a detriment to the cotton farmer and to the cottonseed industry, a number of leading crushers in the South, who had been foremost in advocating the tariff, joined with the majority in opposing it.

Henry E. Watkins, of Atlanta, chairman of the Crude Cottonseed Oil Tariff Committee, an independent organization of crushers that had actively worked for the tariff and had filed a number of briefs with the Ways and Means Committee of the House of Representatives and the Finance Committee of the Senate, wired officially to the chairman of each of those committees as follows:

"When Crude Cottonseed Oil Tariff Committee was organized and briefs were filed with House Committee on Ways and Means and the Senate Finance Committee asking for duties on foreign vegetable oils and oil-bearing materials, the entire cottonseed oil industry was not represented. The Interstate Cotton Seed Crushers' Association represents a distinct majority of those engaged in the cottonseed oil industry; and that association, at a special meeting held recently in New Orleans, voted by a large majority declaring by resolution that duties on foreign vegetable oils and oil-bearing materials are detrimental to the farmers and to the cottonseed-oil industry. The Crude Cottonseed Oil Tariff Committee concurs in the sentiment expressed in the resolutions adopted by the Interstate Cotton Seed Crushers' Association at New Orleans, and thereupon disbanded; and it now wishes to withdraw its brief asking for duties on vegetable oils.

"CRUDE COTTONSEED OIL TARIFF COMMITTEE,
"By HENRY E. WATKINS, *Chairman*;
"W. M. HUTCHINSON, *Secretary*."

Mr. President, if I believed that a duty upon vegetable oils would be of any advantage to the agriculturists of the United States it would change my attitude respecting this entire paragraph; but I believe that so long as we are exporting animal and vegetable fats to the extent of nearly one-third or quite one-third of our entire products, and are fixing prices for the markets of the world, a tariff will be injurious and not advantageous to the farmers of the United States.

I have here a copy of the telegram which was sent by our consular representative in Manchuria following the enactment of the emergency tariff law, and he states that when that law went into effect it withdrew American purchasers from the oriental market, and that left but one purchaser—to wit, Europe—for oriental oils and seeds, and with only one purchaser the price of oils declined, and as they went down reductions followed in Europe, for it permitted European purchasers to take the oils, bought at a less figure than if Americans had been competitors in the Asiatic market, to Europe, where they were refined and put upon the market in competition with American fats and oils. Owing to the poverty of the people of Europe they were compelled to purchase these inferior oils for edible purposes because the prices were lower than American prices and lower than they would have been if Americans had been in the market to buy oriental oil instead of being excluded by the emergency tariff law. In other words, the inferior oils of Asia, which would have been used to manufacture soap in the United States if they could have been brought to the United States, were sold to Europe and then manufactured into a poor grade of edible fats, thus excluding from Europe the same quantity of American fats—both animal fats and vegetable oils.

The result was that the emergency tariff law proved a boomerang to the agriculturists of the United States in its effects so far as vegetable oils are concerned. This bill would almost pro-

hibit, if not entirely prohibit, the importation of oriental oils, if the amendment of the Senator from Idaho were to prevail, and if we were to prohibit the importation of oriental oils the result would be, as I have stated, the diversion of those oils to Europe and the diminution of the business which is now conducted in the United States of refining oils, and it would have the effect in the long run of lowering the world price of animal and vegetable fats to the detriment of American agriculturists.

I think the proponents of this proposition are inadvisedly, and without full knowledge of the consequences of their acts, working against the interests of the agriculturists of the United States.

Mr. President, the Senator from Idaho has made reference to the tariff upon soap. The Senator knows that the manufacturers of the great bulk of the soap of the United States wanted no tariff. Perhaps 90 or 95 per cent of the soap of the United States bears a tariff of only 5 per cent, and the manufacturers of that character of soap did not want a tariff, and, so far as I am advised, the soap makers of the United States did not desire a duty on the perfumed soaps which are imported, which are limited in quantity, measured by the great production of the United States, and which bear a higher tariff.

Mr. McCUMBER. Mr. President, I think it fair to state that the higher duties imposed upon these perfumed soaps are revenue duties only. They were luxuries, and we levied these duties for the purpose of securing revenue, and not for protection.

Mr. KING. I was about to say that I acquit the soap manufacturers of any efforts to secure a duty. If I understood the attitude of the Senator from Idaho, he was criticizing the soap manufacturers for obtaining a tariff, when my information is that they did not want a tariff, and whatever tariff has been imposed has been for revenue purposes purely. I think it is a disadvantage to them, because to that extent it lessens their ability to compete in the markets of the world with the soap producers and manufacturers of other countries.

Mr. GOODING. Mr. President, I suggest the absence of a quorum.

Mr. SIMMONS. I hope the Senator will withhold that request for just a moment.

Mr. GOODING. I shall be very glad to withhold it.

Mr. SIMMONS. I must leave the Chamber within a few minutes, and before leaving I wish to read a short editorial from the New York Tribune. It is so apropos to the Republican filibuster that has been going on to-day that I feel I must read it.

The New York Tribune, I suppose it will be conceded by everybody, is a Republican paper. This editorial has to do with the extraordinary pronunciamento of Chairman Adams, of the Republican National Executive Committee. It is headed "Chairman Adams blunders" and reads:

CHAIRMAN ADAMS BLUNDERS.

Chairman Adams, of the Republican National Committee, sees fit to echo the charge made by the tariff bill's managers in the Senate that it is being held up by a Democratic filibuster. This charge has little merit. Delay has not been due to a filibuster.

It is gratifying to have that said by this great Republican newspaper, in view of the repeated charges to the contrary by the other side of the Chamber, made for political purposes. The editorial continues:

The Fordney bill came over from the House a year ago. It was so crude as to need to be completely rewritten. The process consumed many months. The revised draft has not been acted on mainly because that draft is still subject to legitimate debate and alterations, and because the pressure from the country is for further consideration rather than for swallowing the bill without examination.

This great newspaper thinks we have not yet sufficiently discussed the tariff bill. It thinks the bill requires more discussion before it is swallowed. I continue reading:

Mr. Adams says that it is necessary to pass a permanent revision at once in order to carry out the pledges of the last Republican national platform. To show the error of this it is enough to quote the tariff plank of that platform. The mandate given for tariff revision was broadly discretionary and highly conditional. The plank reads:

"The uncertain and unsettled condition of international balances; the abnormal economic and trade situation of the world and the impossibility of forecasting accurately even the near future, preclude the formulation of a definite program to meet conditions a year hence. But the Republican Party reaffirms its belief in the protective principle and pledges itself to a revision in the tariff as soon as conditions shall make it necessary for the preservation of the home market for American labor, agriculture, and industry."

There is this further comment by the paper on this Republican platform declaration:

Exchange is more unsettled to-day than it was when this plank was adopted at Chicago. The economic and trade situation of the world is as abnormal as it was then. The fight in Congress, still unfinished, over the question of American or foreign valuation shows how extremely difficult it is to write a permanent tariff in the face of economic fluidity and chaos abroad.

Are conditions ripe for the fulfillment of the elastic promise of the Republican platform? It is open to any Republican to say that they are not. A Republican may go further and say that, in effect, the mandate, so far as there is one, is against enacting a permanent tariff bill until international trade is normal, which notoriously it is not at present. The attempt of Chairman Adams to use the platform to shut off debate is not warranted by the language of the platform itself.

I think it is very timely to put this utterance of this great Republican and protectionist organ into the RECORD.

I want to say just one word in addition to what the Tribune so well said in refutation of the charge that we are filibustering upon this side of the Chamber instead of honestly and sincerely discussing a very imperfect, crude, and untimely bill. The fact that the four amendments to the bill as it passed the House which have excited the longest debate and discussion on this floor are, first, the amendment with reference to barytes; next, the amendment with reference to cyanide; next, the amendment with reference to almonds; and next, the amendment which we are now considering. In each of those instances the fight with respect to the amendment has been conducted largely upon the other side of the Chamber.

Mr. SMOOT. The Senator forgets the four days' fight on vinegar.

Mr. SIMMONS. I have no recollection of the time spent on vinegar.

Mr. SMOOT. Four days was spent on vinegar.

Mr. SIMMONS. If you add up the time spent on those four amendments, and survey those debates, you will see that the great bulk of the time has been taken up on the other side of the Chamber, in each case a fight against the committee on the part of certain Senators on the Republican side of the Chamber. That is the finest proof of the necessity of thorough discussion of the different items of this bill.

It was developed, with reference to those particular items, that there were certain objections on the other side because the amendments were not supposed to have been framed in the committee in consonance with the views of a certain element on the other side of the Chamber, and a controversy arose within the ranks of the Republican Party, which resulted in the most extensive debates upon amendments that have occurred since the bill was taken up by the Senate.

Mr. GOODING. Mr. President, I renew my suggestion of the absence of a quorum.

The PRESIDENT pro tempore. The Secretary will call the roll.

The Assistant Secretary called the roll, and the following Senators answered to their names:

Ashurst	Hale	McLean	Sheppard
Ball	Harreld	McNary	Simmons
Broussard	Harris	Moses	Smoot
Bursum	Heflin	Nelson	Spencer
Calder	Johnson	New	Stanley
Capper	Jones, N. Mex.	Newberry	Sterling
Colt	Jones, Wash.	Nicholson	Townsend
Cummins	Kendrick	Oddie	Underwood
Curtis	Keyes	Overman	Wadsworth
Dial	King	Poindexter	Walsh, Mass.
Edge	Ladd	Pomerene	Warren
Frelinghuysen	Lodge	Ransdell	Willis
Gooding	McCumber	Rawson	

The PRESIDENT pro tempore. Fifty-one Senators have answered to their names. There is a quorum present. The question is on the amendment of the Senator from Idaho [Mr. GOODING] to the amendment of the committee.

Mr. GOODING. I ask for the yeas and nays.

The yeas and nays were ordered, and the Assistant Secretary proceeded to call the roll.

Mr. BALL (when his name was called). Transferring my pair with the senior Senator from Florida [Mr. FLETCHER] to the junior Senator from Maryland [Mr. WELLER], I vote "yea."

Mr. EDGE (when his name was called). I have a pair with the senior Senator from Oklahoma [Mr. OWEN]. I am informed that if he were present he would vote as I propose to vote. I vote "nay."

Mr. FRELINGHUYSEN (when his name was called). I have a general pair with the Senator from Montana [Mr. WALSH]. I am informed that if present he would vote as I am about to vote on this question. I vote "nay."

Mr. HALE (when his name was called). I have a general pair with the senior Senator from Tennessee [Mr. SHIELDS]. I am informed that if present he would vote as I shall vote. I am therefore at liberty to vote. I vote "nay."

Mr. JONES of Washington (when his name was called). I understand the senior Senator from Virginia [Mr. SWANSON] is absent. I promised to pair with him for the day. I find that I can transfer that pair to the junior Senator from Oregon [Mr. STANFIELD], and I do so and vote. I vote "yea."

Mr. McCUMBER (when his name was called). I agreed to protect my pair on this vote, the senior Senator from Wisconsin [Mr. LA FOLLETTE] who if present would vote "yea" and I should vote "nay." I find, however, that I can transfer that

pair to the senior Senator from Connecticut [Mr. BRANDEGEE], which I do, and vote "nay."

Mr. NEW (when his name was called). I am paired with the junior Senator from Tennessee [Mr. MCKELLAR]. On this vote I understand that he would vote as I do, and I therefore vote. I vote "nay."

Mr. STERLING (when his name was called). I have a general pair with the Senator from South Carolina [Mr. SMITH]. Being unable to obtain a transfer I withhold my vote. If at liberty to vote, I would vote "yea."

The roll call was concluded.

Mr. GLASS. I am informed that the senior Senator from Vermont [Mr. DILLINGHAM], with whom I have a general pair, would vote on this question as I shall vote, and therefore I vote. I vote "nay."

Mr. CARAWAY. Has the junior Senator from Illinois [Mr. MCKINLEY] voted?

The PRESIDENT pro tempore. That Senator has not voted.

Mr. CARAWAY. I have a pair with the junior Senator from Illinois [Mr. MCKINLEY] and in his absence I withhold by vote.

Mr. COLT (after having voted in the negative). I have a pair with the junior Senator from Florida [Mr. TRAMMELL]. I understand that if present that Senator would vote as I have voted, and therefore I allow my vote to stand.

Mr. JONES of New Mexico (after having voted in the affirmative). I transfer my pair with the Senator from Maine [Mr. FERNALD] to the Senator from Nevada [Mr. PITTMAN] and allow my vote to stand.

Mr. CURTIS. I wish to announce the following general pairs:

The Senator from Arizona [Mr. CAMERON] with the Senator from Georgia [Mr. WATSON];

The Senator from Maine [Mr. FERNALD] with the Senator from New Mexico [Mr. JONES];

The Senator from Indiana [Mr. WATSON] with the Senator from Mississippi [Mr. WILLIAMS];

The Senator from West Virginia [Mr. SUTHERLAND] with the Senator from Arkansas [Mr. ROBINSON]; and

The Senator from West Virginia [Mr. ELKINS] with the Senator from Mississippi [Mr. HARRISON].

The result was announced—yeas 24, nays 33, as follows:

YEAS—24.

Ashurst	Harris	Kendrick	Poindexter
Ball	Heflin	Ladd	Ransdell
Broussard	Johnson	McNary	Rawson
Capper	Jones, N. Mex.	Nicholson	Sheppard
Gooding	Jones, Wash.	Oddie	Shortridge
Harreld	Kellogg	Phipps	Townsend

NAYS—33.

Borah	Frelinghuysen	Nelson	Stanley
Bursum	Glass	New	Underwood
Calder	Hale	Newberry	Wadsworth
Colt	Keyes	Overman	Walsh, Mass.
Cummins	King	Pepper	Warren
Curtis	Lodge	Pomerene	Willis
Dial	McCumber	Simmons	
Edge	McLean	Smoot	
Ernst	Moses	Spencer	

NOT VOTING—39.

Brandegee	France	Norbeck	Sterling

Elkins	McKellar	Shields	Weller
Fernald	McKinley	Smith	Williams
Fletcher	Myers	Stanfield	

So Mr. GOODING's amendment to the amendment of the committee was rejected.

The PRESIDENT pro tempore. The question is upon agreeing to the amendment of the committee.

The amendment was agreed to.

Mr. MCCUMBER. I ask that we go now to paragraph 51, alizarin assistant.

The PRESIDENT pro tempore. The amendment of the committee to paragraph 51 will be stated.

The ASSISTANT SECRETARY. On page 22, line 25, the committee proposes to strike out "25" and insert "35," so as to read:

PAR. 51. Alizarin assistant, Turkey red oil, sulphonated castor or other sulphonated animal or vegetable oils, soaps made in whole or in part from castor oil, and all soluble greases; all of the foregoing in whatever form, and used in the processes of softening, dyeing, tanning, or finishing, not specially provided for, 35 per cent ad valorem.

Mr. SMOOT. Mr. President, I do not think this amendment will lead to any discussion, and I desire to make only a brief statement about it.

Eighty per cent of alizarin assistant consists of castor oil. We raised the rate on castor oil to 3 cents a pound. Eighty per cent of 3 cents is 2.4 cents, and 2.4 cents on the basis of the price of alizarin assistant is about 25 per cent. Then we allowed 10 per cent additional for the protection of the article, which makes the 35 per cent instead of 25 per cent as the House fixed the rate. I will say that on account of the increase in the rate on castor oil, and because alizarin assistant contains 80 per cent of castor oil, it was necessary to make the change in the rate on alizarin assistant.

Mr. KING. Mr. President, I agree with my colleague that in view of the rating given to castor oil—and this question came up during the consideration of the chemical schedule—this differential is necessary, but when we get the bill into the Senate I shall ask for another vote upon the rate on castor oil. I think it is absurd and improper to put such a high rate of duty upon castor oil when it is so important as a medicine, and to put such a high rate of duty upon alizarin assistant which is so important in dyeing and tanning. But I agree that as we put the rate on castor oil the proper differential would be substantially as stated here.

The PRESIDENT pro tempore. The question is on agreeing to the amendment of the committee.

The amendment was agreed to.

Mr. MCCUMBER. I now ask to return to paragraph 758, on page 111, relative to pecans. On behalf of the committee I move to strike out the figure "1," in line 3, and to insert in lieu thereof the figure "3"; and also to strike out the figure "2" in line 3 and to insert in lieu thereof the figure "6"; so that the rate on pecans, unshelled, will be 3 cents a pound and on shelled pecans the rate will be 6 cents a pound.

The PRESIDENT pro tempore. The Secretary will state the first proposed amendment.

The ASSISTANT SECRETARY. On page 111, paragraph 758, at the beginning of line 3, it is proposed to strike out "1 cent" and in lieu thereof to insert "3 cents."

Mr. WALSH of Massachusetts. Mr. President, will the chairman of the Committee on Finance inform us why he has moved to increase the rate on pecans as originally reported by the committee? In view of the fact that there are no imports of pecans to speak of, I should like to know why the committee has moved to increase so largely the rate upon pecans?

Mr. MCCUMBER. There are a million pounds or so imported, and they come from Mexico. They are of an inferior grade; there is a little revenue derived from the importations; and inasmuch as they are of an inferior grade I do not think the increased duty will affect the price of the American product at all.

Mr. WALSH of Massachusetts. The information which I have is that the production in this country is 31,000,000 pounds annually; that the imports have never been more than 1,000,000 pounds; and in the last year, 1921, they were but 551,000 pounds—at least, during the first nine months of that year.

Mr. MCCUMBER. In the calendar year of 1921 there were imported 1,082,390 pounds.

Mr. WALSH of Massachusetts. For the year 1921?

Mr. MCCUMBER. For the year 1921.

Mr. WALSH of Massachusetts. The information I had only covered the period of nine months. The importation amounts to but one-thirtieth of the production of this country. Pecans are a distinctively American crop; the Mexican pecan is much inferior in quality and does not compete with the domestic pecan. There is no need of a protective duty on pecans.

Mr. MCCUMBER. The duty is only 27 per cent ad valorem.

Mr. WALSH of Massachusetts. I call attention to the fact that there is a very large production of pecans in this country and that the importations are very insignificant in quantity and inferior in quality.

The PRESIDENT pro tempore. The question is on agreeing to the committee amendment.

The amendment was agreed to.

The PRESIDENT pro tempore. The next amendment proposed on behalf of the Committee on Finance by the Senator from North Dakota [Mr. MCCUMBER] will be stated.

The ASSISTANT SECRETARY. On page 111, line 3, after the word "shelled," it is proposed to strike out the numeral "2" and to insert in lieu thereof the numeral "6."

The PRESIDENT pro tempore. The question is on agreeing to the committee amendment.

The amendment was agreed to.

Mr. MCCUMBER. I now ask to return to paragraph 762, on page 112, relative to "Other garden and field seeds."

The PRESIDENT pro tempore. The first amendment of the Committee on Finance in paragraph 762 will be stated.

The ASSISTANT SECRETARY. On page 112, line 3, paragraph 762, after the word "seeds," it is proposed to strike out the words "Sugar beet, 1 cent per pound; other beets," and to insert "Beet (except sugar beet)," so as to read:

PAR. 762. Other garden and field seeds: Beet (except sugar beet), 4 cents per pound.

The PRESIDENT pro tempore. The question is on agreeing to the committee amendment.

Mr. WALSH of Massachusetts. I do not care to discuss paragraph 762, but I should like to ask unanimous consent to have the vote whereby the amendments in paragraph 761 were agreed to reconsidered in order that I may present for the RECORD some protests which have been made against the increases in that paragraph.

Mr. McCUMBER. Very well, Mr. President.

The PRESIDENT pro tempore. The question is upon agreeing to the amendment of the Committee on Finance, which has been stated by the Secretary.

The amendment was agreed to.

Mr. WALSH of Massachusetts. I now ask unanimous consent to reconsider the votes by which the amendments to paragraph 761 were agreed to.

The PRESIDENT pro tempore. The Senator from Massachusetts ask unanimous consent that the votes by which the amendments in paragraph 761 were agreed to may be reconsidered. Is there objection? The Chair hears none, and it is so ordered. The amendments of the committee will again be stated.

The ASSISTANT SECRETARY. The first amendment reported by the Committee on Finance in paragraph 761, is in line 18, page 111, before the word "cents," to strike out the numeral "2" and to insert in lieu thereof the numeral "4," so as to read:

PAR. 761. Grass seeds: Alfalfa, 4 cents per pound.

Mr. WALSH of Massachusetts. Mr. President, I shall not take up much time in discussing the amendments in paragraph 761. I merely wish to call attention to the large number of protests which have been made against the increased rates upon grass seeds.

I can not understand why the Committee on Finance should have penalized the farmers of this country by imposing such high rates of duty upon grass seeds. The proposed duties can be of benefit to but a very small group of farmers, and the great number of farmers who must go into the market to purchase grass seeds will, in my opinion, be heavily penalized.

I desire to call attention to some objections which may well be urged to all the proposed rates on grass seeds:

Grass seeds have always been on the free list of every tariff law ever enacted.

The real value of grass seeds is determined by the crops produced and not by tariff duties which may be levied.

The American farmer will absorb these duties by higher cost of seeds, estimated on prices of date of July 9, 1921, to be an average increase of 17.9 per cent, or 59 cents per sowing acre. That burden will have to be assumed by the farmer. A duty of 3 cents per pound means an increase of $1.80 per bushel on clover seed. Since July 9, because of these threatened duties, prices on grass seeds have advanced 25 per cent.

Some of these grass seeds which are indispensable to the American farmer are not produced in the United States on a commercial scale. They must be imported, and, therefore, the duty is certain to be reflected in increased prices.

Statistics show that the grass seeds produced in this country on a commercial scale are not sufficient for domestic requirements; our farmers are obliged to buy imported seeds, and they ought not to be subject to the duties imposed by this paragraph.

It is further stated that these duties will benefit only 5 per cent of the farmers of the country; that 95 per cent of the farmers are obliged to go into the market and buy seeds, and therefore they will be obliged to pay higher prices for their seeds than they have had to pay heretofore.

I wish to call attention particularly to the fact that some of these seeds are not produced at all in this country. I am informed that orchard grass is entirely imported, and also that crimson clover and various other varieties of the seeds covered by this paragraph are not produced at all in the United States.

I submit for the RECORD some letters of protest which I have received against the duties imposed in paragraph 761, and also a memorandum summarizing the opposition of groups of farmers to the duties levied in the paragraph.

The PRESIDENT pro tempore. Without objection, the matter referred to will be printed in the RECORD.

The matter referred to is as follows:

BOSTON, *Tuesday, April 25, 1922.*

Hon. DAVID I. WALSH,
United States Senate, Washington, D. C.

MY DEAR SENATOR: At our conference in the Senate Conference Room on April 6, I very briefly presented to you the reasons why an injustice was being done to the vast majority of the farmers in the Middle and Eastern States by placing rather heavy duties, under paragraph 761, on grass seeds, most of which are not grown in this country on a commercial scale. I further stated that this schedule had been written by five or six Senators from the States of Utah, Idaho, and perhaps Kansas, where alfalfa is produced; and these Senators very naturally wish to favor their constituents by placing this duty on alfalfa seed in order to increase the price of grass seeds. The great majority of farmers in all the Eastern and Middle States, however, are not advised, apparently, of these duties, and being unorganized have not, except in a few cases, petitioned their Senators for free grass seeds. It seems a fair deal to these purchasers of seeds that the Senator should be fully acquainted with the situation, and I understood you to agree to make such an argument to the Senate in support of an amendment carrying grass seeds to the free list. I now understand that you have been chosen to make a report for the minority members of the Senate Finance Committee on the agricultural schedule, and I therefore took the liberty of wiring you to-day on this matter, as I now confirm by the inclosed carbon copy. I also hand you herewith a brief which was filed with the Senate Finance Committee in support of free grass seeds, an examination of which will possibly assist you in deciding whether or not the claim is reasonable.

I wish to add one point in fairness to the Seed Trade Association, which has attempted to voice the beliefs of the majority of buyers of seeds in the Eastern and Middle States. The seedsmen are entirely neutral in this matter and do not argue for or against free seeds, except as they feel that the interests of seed buyers demand. If it had been shown that the majority of seed buyers preferred to have duties on seeds, the seedsmen would be the last ones to suggest and argue contrary to that position. The seedsmen feel that there is no farmer who wishes to pay $2.40 more per bushel on clover seed, the amount of the duty on such seed imposed by this tariff bill reported by the Senate.

If it is not too great a burden on your time, I would appreciate a reply to this letter and telegram advising me of your position and whether or not you are still interested in amending this paragraph 761.

Yours respectfully,

CURTIS NYE SMITH.

—

BOSTON, MASS., *April 25, 1922.*

Hon. DAVID I. WALSH,
United States Senate, Washington, D. C.:

On April 6, in my conference with you in Washington, you expressed approval of amending paragraph 761 by transferring grass seeds to free list as in all former tariff bills, because vast majority farmers buy but do not produce these seeds, and free importation materially lowers production costs, and only a few growers in Western States have secured duties through energies of their Senators. Questionnaire sent out by American Farm Bureau Federation asking opinion on this question to 60,000 members showed all States except Idaho and New York in favor free grass seeds. Consequently, as you are submitting minority report on agricultural schedule, I trust that in behalf of the vast majority of farmers you will recommend transferring grass seeds to free list. Will submit detailed argument either in person or by mail.

CURTIS NYE SMITH.

—

BOSTON, MASS., *March 31, 1922.*

Hon. DAVID I. WALSH,
United States Senate, Washington, D. C.

DEAR SIR: It has come to our attention that the Fordney tariff bill provides for heavy duties on grass seeds, which have always heretofore been on the free list. This is a great surprise to us, and we think of it as a very serious matter, which we should call to your attention.

This duty on importations of grass seed, paragraph 761, increases the cost of the seed to the American farmer on an average of 17 per cent. This seems to us particularly unfortunate at this time. The major portion of these seeds are not in competition with any seeds commercially grown in the United States; therefore this duty gives no protection or adjustment of prices between foreign-grown and American-grown seeds but is a serious burden of direct taxes on the necessities of the farmer.

We would call to your attention that such a tariff as this will inevitably drive the farmer into purchasing lower grade of seeds, which contain larger percentages of objectionable weed seeds. This is very injurious to the crops and always to the value of farm lands.

The seedsmen's representative, Mr. Curtis Nye Smith, will be in Washington probably Wednesday and Thursday of next week, and we would appreciate it if you would do us the courtesy of giving him a brief interview on this subject.

Very respectfully yours,

JOSEPH BRECK & SONS,
Per LUTHER A. BRECK, *President.*

—

BOSTON, MASS., *May 5, 1922.*

Hon. DAVID I. WALSH,
United States Senate, Washington, D. C.

DEAR SIR:

* * * * * * * *

On May 15 there is to be a hearing before the Federal Horticultural Board regarding further restrictions under quarantine 37. The seedsmen, nurserymen, and florists all feel that further restrictions can not be borne without very serious injury to business.

There is some thought, we understand, of prohibiting the importation of the Dutch bulbs, such as narcissus, tulips, hyacinths, and so on. These bulbs, as you are aware, are the ones which planted in the fall give us our first spring flowers. The narcissus, in particular, is one of the largest sellers that the florists have.

As these bulbs can not be commercially grown in this country, as has been proved by a large number of unsuccessful experiments, it seems to us that it would be folly to restrict their importation, both from the point of view of the various businesses enumerated above and that of the American public at large, who are coming more and more to enjoy and benefit from the first blooms of the year. Think of the thousands of people who visit our own public gardens every year to see the glorious spring bulbs in flower.

We sincerely urge your looking into the actions and policies of the Federal Horticultural Board.

Very respectfully yours,

JOSEPH BRECK & SONS,
Per LUTHER A. BRECK, *President.*

MEMORANDUM OF OBJECTIONS.

During the last war seeds were held of such prime importance that the various Government departments classed them with munitions or food products in all priority classifications. Congress passed a special war act to determine and to increase the supply, especially as seed importations were practically suspended during the large part of the war.

It is therefore too obvious to require further details that grass seeds, though of perhaps relatively small value, have, by reason of what they produce, a very great effect on the welfare of the country.

GRASS SEEDS UNDER FORMER TARIFF LAWS.

Grass seeds under all the tariff laws of this country have always been carried on the free list.

Paragraph 595, Underwood law, act of October 3, 1913.
Paragraph 668, Payne-Aldrich law, act of August 5, 1909.
Paragraph 611, McKinley law, act of August 27, 1894.
Tariff law of October 1, 1890.
Section 2503, tariff act of March 3, 1883.
Section 8, tariff act of February 8, 1875.

PRINCIPAL REASONS WHY GRASS SEEDS SHOULD BEAR NO IMPORT DUTIES.

A. The American farmer, particularly in his present distressing condition, should not be burdened with the heavy increase in the purchase price of grass seeds which will be caused by the duties assessed in paragraph 761 of the Fordney tariff bill.

The inevitable result of these heavy duties on grass seeds will be to increase the prices of grass seeds, whether produced in this country or in foreign countries, because of the economic effect of the substantial elimination of competitive world markets. This is proved by two circumstances:

(1) Certain grass seeds composing a large part of the agricultural demands of this country are not produced in the United States to any commercial extent, to wit: Crimson clover, alsike clover, hairy vetch, spring vetch, rape, Canada blue grass, rye grass, and all the natural grasses.

The following Table A will show in figures the average yearly imports of the aforesaid grass seeds for the years 1910 to 1920, inclusive, the proposed duty to be assessed thereon by paragraph 761 of the Fordney bill, and the potential revenue received from such duties and paid exclusively by the American farmer. This table is prepared from the printed reports of the United States Department of Agriculture:

Department of Agriculture figures average yearly imports 1910–1920.

TABLE A.

	Pounds.	Proposed tax per pound.	Average yearly revenue.
		Cents.	
Alfalfa	4,897,026	2	$97,940.52
Alsike	2,872,936	3	86,188.08
Crimson clover	5,595,504	1	55,955.94
Red clover	10,494,254	3	314,827.62
White clover	355,696	3	10,670.88
Other clovers	3,595,782	2	71,915.64
Millet	1,592,721	½	7,963.60
Timothy	111,619	2	2,232.38
Hairy vetch	857,259	2	17,145.18
Spring vetch	659,293	1	6,592.93
Other grasses	3,448,909	2	68,978.18
Total yearly revenue			740,410.95

That Congress may have an even more striking proof of the burden of these duties on grass seeds which are not produced on a commercial scale in this country Table B is given, showing that the American farmer must pay an average of 17.9 per cent more for these grass seeds, or at the average rate of 59.1 cents per sowing acre. These figures do not tell the entire story, unless one is aware of agricultural conditions. For example, hairy vetch would cost under this Fordney bill $1.20 more per sowing acre, and as this seed is only sown on poor land, worth $2 to $10 per acre, the duty means no planting and no production.

TABLE B.

Kinds of seeds directly affected by imports.	Current July, 1921, wholesale prices per pound.	Proposed import tax per pound.	Resulting wholesale price with duty per pound.	Approximate per cent of increase in price.	Tax per sowing acre.
	Cents.	*Cents.*	*Cents.*	*Per cent.*	*Cents.*
Alsike clover	17½	3	20½	17.1	45
Crimson clover	7½	1	8½	13.3	15
Red clover	18	3	21	16.6	45
White clover	35	3	38	8.5	36
Hairy vetch	8½	2	10½	23.5	1.20
Spring vetch	5	1	6	20.0	60
Rape	7½	2	9½	26.6	20
Canada bluegrass	18	2	20	11.1	80
Orchard grass	20	2	8¼	32.0	1.00

Average increase in price of above grasses, 17.9 per cent.
Average increase in price per sowing acre, 59 per cent.

The PRESIDENT pro tempore. Inasmuch as the amendments to paragraph 761 were reconsidered en bloc, is there objection to agreeing to the amendments en bloc?

Mr. WALSH of Massachusetts. I have no objection. I know that the decision of the Senate will not be changed; I simply wanted to present the objections which were in my hands to the rates reported by the committee in the paragraph.

The PRESIDENT pro tempore. The Chair hears no objection. The question is upon agreeing to the amendments in paragraph 761.

The amendments were agreed to.

The PRESIDENT pro tempore. The Secretary will state the next amendment in paragraph 762.

The ASSISTANT SECRETARY. On page 112, line 5, paragraph 762, after the word "cabbage," the committee proposes to strike out "12" and insert "8."

The PRESIDENT pro tempore. The question is upon agreeing to the amendment.

The amendment was agreed to.

The next amendment was, in the same paragraph, on page 112, line 9, after the word "onion," to strike out "20" and in lieu thereof to insert "10."

The amendment was agreed to.

The next amendment was, on line 12, after the word "tree," to insert the words "and shrub."

The amendment was agreed to.

The next amendment of the Committee on Finance was, in the same paragraph, on page 112, line 13, after the word "pound," to strike out "flower, 4 cents per pound."

Mr. TOWNSEND. Mr. President, I think all those interested in that amendment are prepared to have a change made, and I have an amendment which I intend to offer. The committee has not considered the proposed amendment, but desire to consider it. Therefore I ask unanimous consent that the amendment in line 13 shall be passed over until the committee may have time to consider the amendment which I propose to offer.

The PRESIDENT pro tempore. Without objection, the amendment proposed by the committee, in line 13, paragraph 762, will be passed over.

The next amendment of the Committee on Finance was, in the same paragraph, on page 112, line 16, after the word "this," to strike out "title" and insert "schedule."

The amendment was agreed to.

The next amendment was, in paragraph 763, page 112, line 18, after the word "beans," to insert "not specially provided for."

The amendment was agreed to.

The next amendment was, in line 19, after the word "dried," to strike out "1¾" and insert "2," so as to read:

PAR. 763. Beans, not specially provided for, green or unripe, one-half of 1 cent per pound; dried, 2 cents per pound.

Mr. WALSH of Massachusetts. Mr. President, I am not going to take the time of the Senate to reiterate the objections to this amendment. Whatever I might say would be similar to what I have said in regard to very many of the other amendments in this schedule.

Beans are produced in very large quantities in this country and are exported in considerable quantities. We have practically no importations. The fact that beans are sold on an export basis does not seem to justify any increase in the tariff duties which have been suggested by the committee in paragraph 763.

The average annual harvest of dried beans is 9,000,000 bushels. During the war this production was greatly increased. Our average imports are only about 2,000,000 bushels and our exports are equal to the amount of our imports.

The rate proposed is an increase over the rate in the Payne-Aldrich law amounting to 167 per cent, and an increase of 380 per cent over the rate named in the Underwood law. I believe, however, it is similar to the rate named in the emergency law. It does not seem to me that this industry is of such an infant character as to justify these excessive rates.

The PRESIDING OFFICER (Mr. ODDIE in the chair). The question is on agreeing to the amendment of the committee.

The amendment was agreed to.

The ASSISTANT SECRETARY. On line 20, at the end of the line, it is proposed to strike out "2" and insert "2½," so as to read:

In brine, prepared or preserved in any manner, 2½ cents per pound.

The amendment was agreed to.

Mr. McCUMBER. I ask now to go to paragraph 766.

The ASSISTANT SECRETARY. Paragraph 766 is on page 113.

Mr. McCUMBER. On line 4, I ask to strike out the committee amendment of "55," and to insert in lieu thereof "45."

The ASSISTANT SECRETARY. It is proposed to modify the committee amendment by striking out "55" and inserting "45," so as to make the paragraph read:

PAR. 766. Mushrooms, fresh, or dried or otherwise prepared or preserved, 45 per cent ad valorem; truffles, fresh, or dried or otherwise prepared or preserved, 25 per cent ad valorem.

Mr. WALSH of Massachusetts. Mr. President, the amendment now proposed by the committee is, of course, a reduction of the original amendment offered by the committee; but even the reduced rate is altogether too high. It is still a substantial increase over the House rate, and a very large increase over the rates named in previous laws.

The rate named originally by the committee, 55 per cent ad valorem, was an increase of between 600 and 700 per cent

over the Underwood law and the Payne-Aldrich law. Of course, the modified amendment reduces that increase somewhat. There is absolutely no competition through imports with the domestic fresh mushrooms. Whatever competition there is is confined entirely to the prepared or dried mushrooms; and it does not seem to me that the record of importations has been of sufficient amount to warrant the imposition of such a very high duty as is suggested by the committee.

I have nothing further to offer on this subject.

The PRESIDING OFFICER. The question is on the agreeing to the amendment of the committee as modified.

The amendment as modified was agreed to.

The ASSISTANT SECRETARY. On page 113, lines 7 and 8, the committee proposes to strike out "75 cents per 100 pounds" and to insert in lieu thereof "1 cent per pound," so as to read:

PAR. 767. Peas, green or dried, 1 cent per pound—

And so forth.

Mr. WALSH of Massachusetts. Mr. President, I think some Senator upon the other side of the Chamber desired to discuss that paragraph. I did not ask to have it held up for consideration. Does the Senator from North Dakota recall who it was?

Mr. McCUMBER. I think the Senator from Washington [Mr. POINDEXTER] was the one who made the suggestion, and it was passed over at his request; but, as I understand, he does not desire to be heard on it.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the committee.

The amendment was agreed to.

The ASSISTANT SECRETARY. On line 8, page 113, the committee proposes to strike out "1 cent" and to insert in lieu thereof "1½ cents," so as to read:

Peas, split, 1½ cents per pound.

The amendment was agreed to.

Mr. McCUMBER. I ask now to turn to paragraph 774, on page 114.

Mr. WALSH of Massachusetts. Mr. President, may I ask the Senator to reconsider the action taken upon paragraph 769, referring to potatoes? Through inadvertence I permitted the amendments in that paragraph to be agreed to some days ago. I consider that a very important paragraph, and I should like to discuss it.

Mr. McCUMBER. Very well; I will consent to reconsideration.

Mr. WALSH of Massachusetts. I move that the action taken by the Senate on the committee amendments in paragraph 769 be reconsidered.

The motion to reconsider was agreed to.

Mr. WALSH of Massachusetts. Mr. President, I consider the amendments in this paragraph among the most objectionable in the whole agricultural schedule. To appreciate how very excessive these duties are that are levied upon potatoes, we ought to consider what duties were levied in previous laws.

First of all, the Senate committee amendment increases the duty on potatoes from 42 cents per 100 pounds, as provided in the House bill, to 58 cents per 100 pounds.

Under the Underwood law potatoes and potato products were free except when imported from a country imposing a duty on such articles imported from the United States, in which case the duty was 10 per cent ad valorem. Under the Payne-Aldrich law potatoes were dutiable at 25 cents per bushel of 60 pounds. The duty in this amendment amounts to 35 cents per bushel. Under the emergency tariff potatoes were dutiable at 25 cents per bushel of 60 pounds. The proposed rate of 58 cents per 100 pounds represents an increase of 27½ per cent over the Payne-Aldrich law and over the emergency law.

That is a very excessive increase—27½ per cent over the Payne-Aldrich law, and even over the emergency law, in which law we thought we were levying the very highest possible rates that the consumers could stand upon agricultural products; and when we consider what an essential food potatoes are, particularly for the poor people of this country, we can appreciate the great burden that is to be levied upon them through these excessively high duties upon potatoes.

The harvest of potatoes has fluctuated very greatly. From 1916 to 1920 the harvest ranged from 287,000,000 bushels to 430,000,000 bushels. Owing to quarantine restrictions imports of potatoes come only from Canada and the Bermudas. We receive only from 150,000 to 200,000 bushels per year from Bermuda and we import from Canada only from 200,000 to 6,000,000 bushels per year. The importations are trivial, a very small fraction of 1 per cent, being at the highest 6,000,000 bushels, as compared with a domestic production of 430,000,000 bushels of potatoes. Our exports are about 3,500,000 bushels, so that on the average we have exported more potatoes than we have imported.

The imports come almost entirely from Canada, and they come into New England and are consumed in the New England market. This duty will prove a very serious burden to the consumers of New England. The only purpose of imposing this duty, so far as I have been able to learn, is that it is supposed to benefit the producers of potatoes in one county in northern Maine—Aroostook County. Potatoes of a very excellent quality are produced there in great abundance; but the production in that county in Maine is not sufficient to take care of the consumption in New England. Potatoes must come from Canada, and the only effect of this very high duty will be to increase the price to the consumers and increase the price particularly of the domestic potato produced in Aroostook County, Me.

I can not help but feel that this duty, which is so high, has been put in this bill at the request of the Senator from Maine [Mr. HALE], whose term is expiring, and who will use this as a campaign argument in favor of his return; and it goes to confirm the allegation made against this bill by the junior Senator from Wisconsin [Mr. LENROOT] some days ago, that this bill is full of rates that are fixed and put into the bill at the request of Senators who are desirous of making an appeal in their home districts to show that they have been influential in obtaining high protective duties on the products they produce.

Mr. HALE. Mr. President, I was out of the Chamber when the Senator made his statement. I should like to have him repeat it.

Mr. WALSH of Massachusetts. I said that the production of potatoes in the county in Maine where very excellent potatoes are produced is not sufficient to take care of the consumption in New England; that I could not conceive of any reason for this increased duty being levied upon potatoes—an increase over the high rates of the emergency law—except at the request and solicitation of the Senator from Maine in his desire and purpose to get protection for the farmers of Aroostook County by shutting out the Canadian supply, and that I thought it would prove a very helpful political argument in favor of the Senator's return by reason of his being able to show that he had obtained from the United States Senate such high protective rates on potatoes.

Mr. HALE. I trust that it was a helpful argument. I think the people of Aroostook County appreciate what their Senators do for them down here.

Mr. WALSH of Massachusetts. I am not criticizing the Senator, but rather commending his political sagacity. I am criticizing those Senators who accept the arguments of the interested producers in Aroostook County, and are concerned only about their point of view, rather than the point of view of the great consuming public.

Mr. HALE. The Senator admits, however, that from the point of view of the producer the increase in the tariff is a good thing, does he not?

Mr. WALSH of Massachusetts. I consider this duty one of the most outrageous in this whole bill. I consider that it is going to increase the price of potatoes at certain intervals in New England very materially. I consider that it will be the most destructive item in this whole bill against the Republican Party in New England. If I were to choose one of the features of this bill that, in my opinion, would be most harmful to Republican chances in New England, outside of one county in Maine, it would be this item. You can not justify a duty of 58 cents a hundred pounds upon potatoes. It can not be proven that the difference in cost between the production of potatoes in Canada and in Maine, just over the border line, amounts to 58 cents per 100 pounds.

Mr. HALE. Does the Senator think there is an increase of 58 cents per 100 pounds over the emergency tariff?

Mr. WALSH of Massachusetts. I stated when the Senator was absent from the Chamber that this increase in the rate was 27½ per cent over the Payne-Aldrich law and over the emergency law; that the proposed duty of 58 cents per 100 pounds was the highest duty ever levied upon potatoes, one of the foods most necessary and commonly used by the great masses of our people, a duty that I think is indefensible in view of the record of production, and in view of the fact that we produce over 400,000,000 bushels, and in view of the fact that since the production in New England is not sufficient, we must go to Canada, and if we go to Canada this duty will be reflected in increased prices for our potatoes.

Mr. HALE. I think the Senator is mistaken. The rate is 10 cents a bushel higher than the rate in the emergency tariff law.

Mr. WALSH of Massachusetts. Let us see how this is going to work out. Let me repeat, in my judgment, speaking broadly of the items of this bill which are going to injure the majority

party just such items as this will be picked out, analyzed, and studied, and shown to be a very great burden to the consumer. Let me present some figures.

First of all I want to call attention to the annual consumption. The annual potato crop is about 400,000,000 bushels. The maximum has been 600,000,000. The imports of potatoes vary from 200,000 to 6,000,000 bushels.

Our annual exports are about 3,500,000 bushels.

It will be noted, therefore, that the maximum imports constituted only a small fraction of 1 per cent of our production and are offset in large part by our exports. Our total annual consumption can be estimated at about 402,792,000 bushels.

The proposed tax of 58 cents per 100 pounds is equivalent to approximately 35 cents per bushel; and if, as is claimed by the majority Members who are urging this duty, the tariff results in an increase of 35 cents to the price of potatoes, it will mean a total tax on the people of the United States of $140,977,200 for their potato consumption.

Mr. President, I repeat if the proposed tax becomes effective it will increase the price of potatoes in this country to the staggering figures of $140,000,000. There is nothing like it in this bill.

It can not be justified. It is almost criminal to ask the poor people of this country, many of whom depend upon potatoes very largely for their principal food, to pay 58 cents per 100 pounds, or about 35 cents per bushel, as a subsidy to the potato growers.

The price and production of potatoes fluctuate from year to year. When the crop is short and the supply consequently scarce the price rises, and when there is an abundant crop the price falls below the cost of production.

Under such conditions it would be in the interest of the producer and consumer alike to permit a free movement of this staple food product between the United States and Canada. When there is a large domestic crop there will be an outlet for the same by exports, which will stabilize prices; and when there is a short crop the public will be protected against exorbitant prices and obtain the necessary supply through imports from Canada.

It must be borne in mind that the Northeastern States, so far as the demand for food supplies is concerned, is dependent upon sections beyond the Canadian border line and the Allegheny Mountains. If New England is cut off from the Canadian supply by high tariff taxes, the people of that section of the country will be forced to pay the cost of long hauls in freight rates on shipments from distant sections of the country, and this will mean an increase in the cost of living that will prevent the steady progress and advancement of these States. Moreover, the increased cost of living will eventually react on the price of products of this section of the country, and the effect of the tariff would be a raise in the general level of prices without benefit to the farmer or the consumer.

I want to repeat. I consider this rate exorbitant; I consider it indefensible. While I believe it will undoubtedly be favorable to the political fortunes of my friend the Senator from Maine [Mr. HALE], I think it is indefensible. I do not make any criticism of his effort to get protection for the potato producers of Maine; the Representatives of every other State have done the same thing. He is not chargeable with any blame; but it is the duty of the rest of us to consider the consumers' interest, to consider that this duty is levied for the purpose of shutting out the few potatoes which come over the border line from Canada and find their way into the New England market and help to take care of the wants of our people when there is a short crop.

How is any Senator on this floor going to answer a campaign argument to the effect that the result of the levying of this duty means $140,000,000 to the consumers? You can say, of course, that it will not be operative; that it will not be reflected; but the purpose of putting it in this bill is to make it operative.

The purpose of putting it into this bill is to increase prices or to deceive and mislead the farmers. Those who have put this duty in the bill will say that it means more prosperity and more profit to the producer, and if it means more prosperity and more profit to the producer it means that the consumer must pay that profit. I am surprised at the judgment of the committee in levying this very high duty upon this product.

There are a good many of these items I have not discussed at any great length. The chairman and the other members of the committee know that I have tried to center the debate upon the items of importance in this schedule, and I do want to make a vigorous protest for the RECORD against this high rate upon potatoes.

Mr. HALE. Mr. President, the Senator's protest seems to be in line with his general action in regard to the agricultural schedules. Apparently he has been assigned, or has assigned himself, to oppose the increase in the agricultural schedules, and I am entirely ready to admit that he has done it very ably.

As far as this increase in the duty on potatoes is concerned, whether it may or may not have helped me in my fight for a renomination, I favored it because I thought the interests of my State and of the farmers and potato growers of Aroostook County demanded this increase.

Potatoes are a variable sort of a crop. During the war the price of potatoes went up to $4 or $5 a bushel. At certain times the price goes down to 15, 20, or 25 cents a bushel. No one can tell, when he plants his potatoes, what he is going to get on his product. So unless we know that we are going to be protected from Canada our farmers are very apt to cut down their planting. After two or three poor years they get discouraged. But with this duty on potatoes, I predict that they will plant far in excess of what they have done before, and the result will be that we shall grow more potatoes in this country, and the price will go down on account of the increased production. So I do not think the Senator's fears that the consumer will have to pay so much higher a price for his potatoes on account of this duty are well grounded.

The PRESIDING OFFICER. The items in this paragraph having been reconsidered in gross, the question is whether they will be considered in gross. Is there objection? There being no objection, they will be so considered. The question is on agreeing to the committee amendments.

The amendments were agreed to.

Mr. McCUMBER. I ask that we now go to paragraph 774.

The PRESIDING OFFICER. The Secretary will state the amendment of the committee to that paragraph.

The ASSISTANT SECRETARY. On page 114, line 11, the committee proposes to strike out paragraph 774, as follows:

PAR. 774. Broom corn, $2 per ton.

Mr. WALSH of Massachusetts. I think the Senator from Arizona [Mr. ASHURST] wanted to discuss paragraph 770. I call the attention of the Senator from North Dakota to that fact.

Mr. ASHURST. The amendment I want to have adopted is to the text, and I believe would not be in order at this time. It will be in line 16, and I doubt if it will be in order now.

Mr. WALSH of Massachusetts. I knew the Senator was interested in that paragraph, and I wanted to protect his rights. I did not ask to have paragraph 774 passed over. I think some Senator on the other side of the Chamber wanted to discuss that paragraph. Does the Senator from North Dakota recall who it was?

Mr. McCUMBER. I think the Senator referred to appeared before the committee again; the committee gave him a hearing and decided to stand by what it had reported; that is, that broom corn should be placed upon the free list.

The PRESIDING OFFICER. The question is on the amendment of the committee.

The amendment was agreed to.

Mr. McCUMBER. I ask that paragraph 776 be passed over, at the request of one Senator, and the next will be paragraph 778.

The next amendment of the committee was, in paragraph 778, page 114, line 24, to strike out "$4" and insert in lieu thereof "$3," so as to read:

Hay, $3 per ton.

Mr. McCUMBER. I ask that the Senate disagree to the amendment in line 24, where we proposed to strike out "$4" and insert in lieu thereof "$3," leaving the duty on hay $4 per ton.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment.

Mr. WALSH of Massachusetts. Mr. President, all I care to say about this item is contained in a letter which was addressed to Hon. Charles M. Cox, a member of the Boston Chamber of Commerce, by a group of hay dealers. The letter reads in part, as follows:

At a meeting of the principal hay dealers of this city, held on the 5th instant (last December), it was unanimously voted that we request you to serve as our representative in appearing before the Finance Committee of the United States Senate, at the hearings soon to be held in regard to the proposed tariff act.

Requesting a member of a committee of the chamber of commerce to appear in protest against the duties upon hay. I continue reading:

We note that in paragraph No. 778, it is proposed that the duty on hay shall be $4 per ton and $1 per ton on straw. This is exactly double the duty which we have been paying. We ask you to inform the Senate committee that in certain years when the crop of hay in New England and New York State happens to be light, it be-

comes important for us to be able to secure hay from Canada, and we respectfully request that the duty on hay be continued as it has been in the past, namely, $2 per ton and 50 cents on straw.

New England is peculiarly situated in that the price of hay and grain is higher here than in any other section of the eastern half of our country. We are at the end of the line.

That rather surprised me, that the price of hay and grain is higher in New England than in any other part of the country. I continue reading:

Our farmers can not possibly raise all the hay which they need, and it is clearly to the economic advantage of New England that she be able to secure her supplies of all kinds of agricultural needs at as low cost as possible. The imposition of a higher duty on hay will constitute a real hardship.

The letter is signed by a number of distinguished citizens.

Mr. President, I think to increase the duty upon hay 100 per cent over the present rate is not justified and can not be supported by the facts. Increasing the duty upon straw 200 per cent is likewise indefensible. These duties benefit only a few farmers.

Mr. WILLIS. Mr. President——

Mr. WALSH of Massachusetts. Many of the farmers of the country and of New England will feel the effects of these high rates and will have to pay $2 a ton more for their hay and $1 a ton more for their straw by reason of the duties levied in the bill. I yield to the Senator from Ohio.

Mr. WILLIS. Mr. President, I notice the Senator said that the duties would affect only a few farmers. He certainly does not mean to make that statement. They will affect a very large number of farmers. Certainly more than two-thirds of them in my State, and farmers all over the country are very greatly interested in this matter, hay being one of their money crops. I was just wondering whether the Senator ever worked in a hay field on a day like this. If he did, I am certain he would not begrudge the slightly increased income that the amendment will bring to the farmers.

Mr. WALSH of Massachusetts. I am rather proud to say to the Senator that I have worked in the hay field on days like this.

Mr. WILLIS. I congratulate the Senator.

Mr. WALSH of Massachusetts. As a boy I worked in the New England hay fields, where the soil is rocky and difficult to work, and where the farmers have to toil and labor hard, and do not enjoy comfortable farming conditions. I am now pleading for them, because when I referred to the effect of this duty upon the farmers I should have referred particularly to New England, where hay is imported and straw is imported. Almost all of the straw used there is imported and very little produced.

These duties will be a burden and a hardship upon the farmers of New England. I protest in their name against the rates. I repeat that the number of farmers in the eastern section of the country who produce hay on a commercial basis is insignificantly small. I do not know about the extreme West, but the number that produce hay and straw in the eastern part of the country is very small, compared with the total number of farmers. These high duties mean an additional burden to those farmers.

When this schedule is analyzed and the few duties which appear to protect the farmers of the country are compared with the duties which extract large sums of money in increased prices from them, the farmers will be as vigorously protesting against the bill as the business interests and some of the manufacturing interests of the country are now protesting against it.

Mr. LODGE. Mr. President, I merely desire to put in the RECORD a few figures about the hay crop in New England. It is one of the few profitable crops we have and it is a very important crop in New England.

The area in Maine employed in the growing of hay is 1,668,000 acres and the production is 1,191,000 short tons, a pretty good production of hay. In Massachusetts, of course, a small State, the area is 436,000 acres and 610,000 short tons were produced; in New Hampshire 450,000 acres produced 540,000 short tons; in Vermont 910,000 acres produced 1,320,000 short tons.

Mr. WALSH of Massachusetts. Will my colleague permit an interruption?

Mr. LODGE. I would like to complete the figures. In Connecticut 355,000 acres produced 460,000 short tons; in Rhode Island 46,000 acres produced 51,000 short tons. I have not added up the figures, but that would indicate a pretty large hay crop, and it is pretty valuable to the farmers of New England, especially to the three northern States of Maine, New Hampshire, and Vermont. Horses are not used as much as they were at one time in New England, and I rather think we can come pretty near to making our supply, although I have not figured it out. The supposition that there are no farmers interested in hay in New England, I think, is a mistake.

Mr. WALSH of Massachusetts. Mr. President, my colleague did not see fit to permit me to interrupt him and I shall now make the inquiry I was going to make. I inquire whether the figures given by him were of hay produced for commercial purposes or whether they gave the total production of hay?

Mr. LODGE. The figures I gave were the total hay production. Of course it is almost all used locally in the States except in Vermont and Maine. I take it there is hay exported from both, as they produced between them 2,500,000 tons.

Mr. McCUMBER. Mr. President, I desire to say that this is the same rate as that provided in the Payne-Aldrich law, and is equivalent, under the 1921 imports, to about 20 per cent ad valorem.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment reducing the rate on hay from $4 to $3 per ton.

The amendment was rejected.

The next amendment was, on page 114, line 24, to strike out "$1" and insert "$1.50," so as to read:

Straw, $1.50 per ton.

The amendment was agreed to.

The next amendment was, on page 115, line 1, to strike out "$1.50" and insert "$2.40," so as to read:

PAR. 779. Hops, 24 cents per pound; hop extract, $2.40 per pound.

The amendment was agreed to.

The next amendment was, on page 115, line 2, to strike out "75 cents" and insert "$3," so as to read:

Lupulin, $3 per pound.

Mr. McCUMBER. I ask that the Senate disagree to this amendment.

The amendment was rejected.

The next amendment was, on page 115, after line 2, to insert a new paragraph, paragraph 779a, sago flour and tapioca flour.

Mr. McCUMBER. At the request of several Senators I ask that paragraph 779a may go over until to-morrow.

The PRESIDING OFFICER. Without objection, the paragraph will be passed over.

The next amendment was, on page 115, in lines 14 and 15, to strike out "curry and curry powder, 2 cents per pound," and the semicolon.

Mr. McCUMBER. That is transferred to the free list.

The amendment was agreed to.

The next amendments were, on page 115, line 21, to strike out the word "ground" and the comma and insert "ground or," and in line 21 to strike out "5" and insert "8," so as to read:

Mustard, ground or prepared, in bottles or otherwise, 8 cents per pound.

The amendments were agreed to.

The next amendment was, on page 116, in line 5, to strike out "turmeric, 10 cents per pound," and the semicolon.

Mr. McCUMBER. That is also placed on the free list.

The amendment was agreed to.

The next amendment was, on page 116, in line 8, to strike out "20" and insert "25," so as to read:

Mixed spices, and spices and spice seeds, not specially provided for, including all herbs or herb leaves in glass or other small packages, for culinary use, 25 per cent ad valorem.

The amendment was agreed to.

Mr. McCUMBER. This completes the agricultural schedule and takes us up to the next schedule with the exception of two paragraphs passed over, paragraph 776 and paragraph 779a.

Mr. President, I ask unanimous consent at this time that when the Senate closes its session on this calendar day it recess until to-morrow at 11 o'clock a. m.

The PRESIDING OFFICER. Without objection it is so ordered.

Mr. WALSH of Massachusetts. Does the Senator intend to take up paragraphs 776 and 779a to-morrow?

Mr. McCUMBER. Yes; to-morrow morning.

Mr. WALSH of Massachusetts. Those are the only two paragraphs remaining for consideration in the agricultural schedule?

Mr. McCUMBER. They are.

Mr. WALSH of Massachusetts. Very well.

EXECUTIVE SESSION.

Mr. McCUMBER. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to, and the Senate proceeded to the consideration of executive business. After five minutes spent in executive session the doors were reopened, and (at 6 o'clock and 15 minutes p. m.) the Senate, under the order previously made, took a recess until to-morrow, Wednesday, July 12, 1922, at 11 o'clock a. m.

NOMINATIONS.

Executive nominations received by the Senate July 11 (legislative day of April 20), 1922.

UNITED STATES JUDGE.

James H. Wilkerson, of Illinois, to be United States district judge, northern district of Illinois, vice Kenesaw M. Landis, resigned.

APPOINTMENTS, BY TRANSFER, IN THE REGULAR ARMY.

ORDNANCE DEPARTMENT.

Capt. Clarence Francis Hofstetter, Coast Artillery Corps, with rank from July 1, 1920.

SIGNAL CORPS.

Capt. Joshua Ashley Stansell, Cavalry, with rank from September 21, 1920.

CONFIRMATIONS.

Executive nominations confirmed by the Senate July 11 (legislative day of April 20), 1922.

UNITED STATES PUBLIC HEALTH SERVICE.

Ralph E. Porter to be passed assistant surgeon.
Joseph W. Mountain to be passed assistant surgeon.

POSTMASTERS.

CALIFORNIA.

Earl B. Birmingham, Hilts.

MAINE.

Roger S. McGown, Carmel.
Byron E. Lindsay, Kingman.
Carroll M. Richardson, Westbrook.

MASSACHUSETTS.

Edward L. Diamond, Easthampton.
Edgar T. Brickett, North Cohasset.

MONTANA.

Orson B. Prickett, Billings.

NEW YORK.

Robert A. Lundy, Ray Brook.

PENNSYLVANIA.

Harry A. Borland, Indiana.
Samuel E. Crawford, Petrolia.

TEXAS.

Robert A. Jackson, Chillicothe.

SENATE.

WEDNESDAY, *July 12, 1922.*

(Legislative day of Thursday, April 20, 1922.)

The Senate met at 11 o'clock a. m., on the expiration of the recess.

NATIONAL MONUMENT IN RIVERSIDE COUNTY, CALIF.

Mr. JOHNSON. Mr. President, I ask unanimous consent for the present consideration of the bill (H. R. 7598) authorizing the Secretary of the Interior to dedicate and set apart as a national monument certain lands in Riverside County, Calif. The monument is desired in order to preserve what are probably the only remaining large groves of natural wild Washington palms in the United States. Three adjoining canyons, Palm, Murray, and Andreas, each containing an extensive grove of these desert palms, are embraced within the area of the proposed monument. Many other specimens of desert flora of major scientific interest are also to be found there.

The bill has the approval of the Department of the Interior, including the Bureau of Indian Affairs. It safeguards the Indians and it costs the Government nothing at all.

Mr. SMOOT. I suggest that perhaps this may be a good time to pass several bills, as there is not a Democratic Senator in the Chamber.

The PRESIDENT pro tempore. Is there objection to the present consideration of the bill named by the Senator from California?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill, which was read, as follows:

Be it enacted, etc., That the Secretary of the Interior be, and he is hereby, authorized to set apart upon the following-described lands located in the county of Riverside, in the State of California, as a national monument, which shall be under the exclusive control of the Secretary of the Interior, who shall administer and protect the same under the provisions of the act of Congress approved June 8, 1906, entitled "An act for the preservation of American antiquities," and under such regulations as he may prescribe: The west half of the southwest quarter of section 2, the southeast quarter of section 3, all of section 10, the west half of the northwest quarter of section 11, all of section 14, all in township 5 south, range 4 east, San Bernardino base and meridian, containing 1,600 acres: *Provided*, That before such reservation and dedication as herein authorized shall become effective the consent and relinquishment of the Agua Caliente Band of Indians shall first be obtained, covering its right, title, and interest in and to the lands herein described, and payment therefor to the members of said band on a per capita basis, at a price to be agreed upon, when there shall be donated for such purposes to the Secretary of the Interior a fund in an amount to be fixed and determined by him as sufficient to compensate the Indians therefor.

SEC. 2. That in order to determine the amount to be paid under the preceding section the Secretary of the Interior is authorized and directed to negotiate with said Indians to obtain their consent and relinquishment, and when such consent and relinquishment has been obtained and an agreement reached the Secretary of the Interior is further authorized to make payment from said donated fund for the lands relinquished to the enrolled members of the said Agua Caliente Band as authorized by section 1 of this act: *Provided*, That the consent and relinquishment of the Indians may be obtained and payment made for the lands in such manner as the Secretary of the Interior may deem advisable: *Provided further*, That the water rights, dam, pipe lines, canals and irrigation structures located in sections 2 and 3 of township 5 south, range 4 east, San Bernardino meridian, and also all water and water rights in Palm Canyon, are hereby excepted from this reserve and shall remain under the exclusive control and supervision of the Bureau of Indian Affairs.

SEC. 3. That the provisions of the act of Congress approved June 10, 1920, known as the Federal water power act, shall not apply to this monument.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

PETITIONS.

Mr. WARREN presented resolutions adopted by the directors of the National Farm Loan Associations of Cokeville and Cody, both in the State of Wyoming, favoring amendment of the Federal farm loan act increasing the loan limit from $10,000 to $25,000, so that actual farmers operating a standard farm unit may enjoy the benefits of the farm-loan system and that they may borrow money through the said system at the lowest possible net cost, not higher than 5 per cent, etc., which were referred to the Committee on Banking and Currency.

Mr. LADD presented resolutions adopted at a session of the North Dakota Federation of Nonpartisan Clubs, at Bismarck, N. Dak., favoring the passage of Senate bill 2604, the so-called Ladd honest money bill, which were referred to the Committee on Banking and Currency.

Mr. SPENCER presented resolutions adopted at a mass meeting of citizens at Herculaneum, Mo., favoring the granting of relief and protection to the suffering peoples of Armenia, which were referred to the Committee on Foreign Relations.

Mr. CAPPER presented resolutions adopted by the Chamber of Commerce of Abilene, Kans., favoring full enforcement of the decree of the United States Supreme Court ordering the divorcement of the Central Pacific Railway from the Southern Pacific Co., etc., which were referred to the Committee on Interstate Commerce.

Mr. ROBINSON presented a telegram in the nature of a petition from the Nashville (Ark.) Chamber of Commerce, praying for Government protection of mails and trains in interstate commerce during the present railroad strike, which was referred to the Committee on Interstate Commerce.

PHILADELPHIA SESQUICENTENNIAL EXHIBITION.

Mr. LODGE, from the Committee on Foreign Relations, to which was referred the joint resolution (H. J. Res. 170) to approve the holding of a national and international exhibition in the city of Philadelphia in 1926 upon the Fairmount Park and parkway site selected by the Sesquicentennial Exhibition Association, and lands contiguous thereto that may be acquired for that purpose, as an appropriate celebration of the one hundred and fiftieth anniversary of the signing of the Declaration of Independence, reported it without amendment.

FRAUDULENT USE OF THE MAILS.

Mr. TOWNSEND. I ask unanimous consent that the Committee on Post Offices and Post Roads be discharged from the further consideration of the bill (S. 1973) to amend section 213, act of March 4, 1909 (Criminal Code), affixing penalties for use of mails in connection with fraudulent devices and lottery paraphernalia; the bill (S. 1974) to amend section 215, act of March 4, 1909 (Criminal Code), penalizing fraudulent use of the mails; and the bill (S. 1975) to amend section 3929, Revised Statutes, relating to exclusion of fraudulent devices and lottery paraphernalia from the mails, and that these bills be referred to the Committee on the Judiciary. They properly belong to that committee.

The PRESIDENT pro tempore. Without objection, that change of reference will be made.

BILLS AND JOINT RESOLUTION INTRODUCED.

Bills and a joint resolution were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. LADD:

A bill (S. 3814) to provide for an emergency tariff to be levied on all linseed oil coming into the United States from foreign countries, and for other purposes; to the Committee on Finance.

By Mr. FLETCHER:

A bill (S. 3815) granting a pension to Michael Yallowich; to the Committee on Pensions.

By Mr. WALSH of Montana:

A bill (S. 3816) granting an increase of pension to William Cowan (with accompanying papers); to the Committee on Pensions.

By Mr. PHIPPS:

A joint resolution (S. J. Res. 223) authorizing the Federal Reserve Bank of Kansas City to enter into contracts for the erection of a building for its branch office at Denver, Colo.; to the Committee on Banking and Currency.

AMENDMENT TO RIVER AND HARBOR BILL.

Mr. FLETCHER submitted the following amendment intended to be proposed by him to the bill (H. R. 10766) authorizing the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes, which was ordered to lie on the table and to be printed:

On page 20, line 9, strike out the word "Palatka" and insert in lieu thereof "Sanford."

PROTECTION OF MIGRATORY BIRDS.

Mr. ROBINSON submitted an amendment intended to be proposed by him to the bill (S. 1452) providing for establishing shooting grounds for the public, for establishing game refuges and breeding grounds, for protecting migratory birds, and requiring a Federal license to hunt them, which was referred to the Committee on Military Affairs and ordered to be printed.

THE TARIFF.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes.

Mr. McCUMBER. I ask that the Senate proceed to the consideration of paragraph 776, page 114.

Mr. SIMMONS. Mr. President, I make the point of no quorum.

The PRESIDENT pro tempore. The Secretary will call the roll.

The reading clerk called the roll, and the following Senators answered to their names:

Ashurst	Ernst	McKinley	Robinson
Ball	Fernald	McLean	Sheppard
Borah	France	McNary	Simmons
Brandegee	Gooding	Moses	Smoot
Bursum	Hale	Nelson	Spencer
Calder	Harris	New	Sterling
Cameron	Harrison	Newberry	Townsend
Capper	Johnson	Nicholson	Trammell
Colt	Jones, N. Mex.	Norbeck	Wadsworth
Culberson	Jones, Wash.	Oddie	Walsh, Mass.
Cummins	Kellogg	Overman	Walsh, Mont.
Curtis	Kendrick	Pepper	Warren
Dial	Ladd	Phipps	Watson, Ind.
du Pont	Lodge	Ransdell	Willis
Edge	McCumber	Rawson	

Mr. HARRISON. I wish to announce that the Senator from Nevada [Mr. PITTMAN] is detained on account of illness in his family. I ask that this announcement may stand for the day.

The PRESIDENT pro tempore. Fifty-nine Senators have answered to their names. A quorum is present.

Mr. McCUMBER. In paragraph 776 I ask the Senate to disagree to the committee amendment beginning in line 17 on page 114 and ending in line 20 with the words "per pound."

The PRESIDENT pro tempore. The amendment will be stated.

The READING CLERK. On page 114, lines 17 and 18, the committee proposes to strike out "17½ per cent ad valorem, but not less than 2 cents per pound," and insert "valued at 20 cents per pound or less, 1 cent per pound; valued at more than 20 cents per pound, 2 cents per pound," so as to read:

Chocolate and cocoa, sweetened or unsweetened, powdered or otherwise prepared, valued at 20 cents per pound or less, 1 cent per pound; valued at more than 20 cents per pound, 2 cents per pound.

Mr. WALSH of Massachusetts. Mr. President, will the Senator state what substitute he intends to offer for the amendment he requests be disagreed to?

Mr. McCUMBER. After the amendment is disagreed to, I desire to substitute 25 per cent ad valorem in line 17 and also to strike out 30 per cent ad valorem in line 21 and insert 25 per cent ad valorem, so that it places them all on a 25 per cent ad valorem basis.

Mr. WALSH of Massachusetts. All that I care to say upon the substitute amendments to be offered to this paragraph is that they are probably urged because of the high duty fixed upon cacao butter. The duty fixed upon cacao butter is considerable of an increase over previous and existing law, and in order to make the duty upon chocolate and cocoa have some relationship to the duty upon cacao butter, which is a by-product, I assume the committee now are seeking to increase the rates upon cocoa and chocolate. I think the rate upon cacao butter is altogether too high and it should be reduced so that the House rate upon chocolate and cocoa can remain.

The manufacture of chocolate and cocoa is an extensive American industry. There are some importations of a certain quality of cocoa from Holland. Evidently at the outset the committee did not feel and believe that it was necessary to increase the duties heretofore existing, because they actually lowered the rates, but they did increase the rate upon cacao butter and that very naturally brought a protest from the manufacturers of chocolate and cocoa; but instead of reducing the rate upon cacao butter the committee have retained the high rate upon cacao butter and now ask to increase the rate upon chocolate and cocoa.

The PRESIDENT pro tempore. The question is upon agreeing to the committee amendment.

Mr. STERLING. Mr. President, let us understand the situation. What is now proposed, I understand, is a disagreement to the committee amendment as printed in the bill.

Mr. McCUMBER. It is.

Mr. STERLING. With the intention on the part of the committee to move another amendment?

Mr. McCUMBER. That is true.

The PRESIDENT pro tempore. The question is upon agreeing to the amendment of the committee.

The amendment was rejected.

Mr. McCUMBER. The next amendment is, in line 17, to strike out "17½" and insert in lieu thereof "25."

The PRESIDENT pro tempore. The amendment will be stated.

The READING CLERK. On page 114, line 17, it is proposed to strike out "17½" and insert "25," so as to read:

Chocolate and cocoa, sweetened or unsweetened, powdered or otherwise prepared, 25 per cent ad valorem, but not less than 2 cents per pound.

Mr. STERLING. Mr. President, I wish to be heard briefly upon this question. I hope the committee amendment to the House provision will not prevail. I am particularly interested in the first two items, chocolate and cocoa, sweetened or unsweetened. I am not so immediately concerned in the rates relating to cacao butter as provided for in the bill and as provided for in the amendment now proposed by the Senator from North Dakota.

Mr. President, I see no good reason for an increase of the rate on chocolate and cocoa over that provided for in the House bill; indeed, I think the House rate is higher than is necessary. I see, on the other hand, several good reasons why the Senate committee amendment should not prevail.

Here are articles, chocolate and cocoa, which are of almost universal use; they are used in every household in the land; they are recommended by physicians and dietitians for the sick, for their health-giving and health-restoring qualities; and it ought to appear reasonably necessary for the protection of a home industry in order that we impose any high tariff duty upon the importation of these articles. I think the report of the Tariff Commission on the subject is very significant. I call attention first to the language of the House provision in paragraph 776, which provides:

PAR. 776. Chocolate and cocoa, sweetened or unsweetened, powdered or otherwise prepared, 17½ per cent ad valorem, but not less than 2 cents per pound; cacao butter, 3½ cents per pound.

And in this connection I call attention to the rate provided for in the act of 1913, being the present law, and to refer to the condition of the domestic industry, the increase in the number of chocolate and cocoa manufacturing plants in this country, and the quantity and value of the product in this country under the Underwood tariff law. I quote the provision of that law:

PAR. 231. Unsweetened chocolate and cocoa, prepared or manufactured, not specially provided for in this section, 8 per cent ad valorem.

So the proposition now is to increase the rate to more than three times its present amount by making it 25 per cent ad

valorem instead of 8 per cent ad valorem, as provided for in the present law—this on unsweetened chocolate.

In this connection let us look at the production and see whether, in view of the production in this country, there is any necessity for an increase in the rate. Mind, Mr. President, I am not contending for the Underwood law rate now, but I am contending for the House rate rather than the rate under the Underwood law, the House rate being 17½ per cent ad valorem on both sweetened and unsweetened chocolate.

Mr. LODGE. Mr. President, may I ask the Senator from South Dakota a question?

Mr. STERLING. Yes.

Mr. LODGE. The Senator, as I understand, does not object to the House provision to the effect that the rate of duty shall not be less than 2 cents a pound for all grades?

Mr. STERLING. I am not objecting to that.

Mr. LODGE. The Senator is not trying to differentiate between the various grades?

Mr. STERLING. If the House provision may stand as it is written, I shall not object.

I quote now from page 806 of the Summary of Tariff Information:

> Production: The output of the cocoa and chocolate industry increased about tenfold from 1895 to 1918. In 1914, 36 factories (exclusive of confectioners) had a capital of $24,000,000 and a product valued at $36,000,000. The industry is localized in the Eastern States, four plants producing about half the domestic output. Automatic machinery is employed almost exclusively and raw materials constitute the principal item of cost. In 1917 the 29 largest factories reported the following production, which is substantially the total for this country.

I shall not take the time of the Senate to read the production of the different kinds of this product in 1917; but, proceeding, the report states:

> In 1919 the total value of the products of the 48 establishments was $139,000,000, divided as follows: Chocolate cakes, sweetened and unsweetened, $51,000,000; chocolate liquor and coating, $36,000,000; chocolate, including milk chocolate, $12,000,000; cocoa, $24,000,000; cacao butter, $14,000,000; all other products, $2,000,000.

That was the output in this country of the 48 establishments during the year 1919. What was the total value of the imports of chocolate of all kind, sweetened and unsweetened, cocoa, sweetened and unsweetened, and cacao butter in the year 1919?

It was only $235,000—slightly over one-quarter of a million dollars—as against our domestic production of $139,000,000.

Mr. President, I think we have from time to time recognized the principle in our tariff discussions here that where the volume of exports is tremendously large and far in excess of the imports brought into the country there is no great need for a high protective tariff. That principle has been announced again and again on the floor and on this side of the Chamber.

Mr. President, we do not import to exceed 1 per cent of the quantity consumed in this country, according to the figures.

There is another significant thing——

Mr. KELLOGG. Mr. President, will the Senator yield?

Mr. STERLING. I yield to the Senator from Minnesota.

Mr. KELLOGG. What is the rate for which the Senator is asking?

Mr. STERLING. I am asking for a restoration of the House rate, I will say to the Senator, which is 17½ per cent ad valorem.

Mr. WALSH of Massachusetts. Mr. President, will the Senator be kind enough to yield to me?

The PRESIDENT pro tempore. Does the Senator from South Dakota yield to the Senator from Massachusetts?

Mr. STERLING. I yield to the Senator.

Mr. WALSH of Massachusetts. I am very much in sympathy with what the Senator is saying. This whole difficulty, however, has arisen because of the increase in the rate on cacao butter. If the Senate committee will accept the House duty levied on cacao butter, we could accept the House duty upon chocolate and cocoa, and everybody, so far as I know, would be satisfied. The manufacturers are not asking for the increased duty on chocolate and cocoa except by reason of the increase in the rate on cacao butter, which they must use in the preparation of certain kinds of chocolate. If the cacao-butter rate is reduced, then all other rates in the paragraph can be reduced to the House level.

Let me further call the Senator's attention to the fact that the cacao-butter rate has been increased simply because there has been a sudden and rapid importation of cacao butter, due to the vogue of that very popular ice, known as Eskimo pie, in the making of which cacao butter is largely used. This demand may disappear in two or three months and never occur again.

I repeat that I fully sympathize with what the Senator is saying, but the basic trouble is that the cacao-butter rate is too high and ought to be reduced to the House rate, and the House rates on cocoa and chocolate ought to be retained in this paragraph.

Mr. STERLING. I thank the Senator for what he has said as a contribution to this discussion. I agree with him that the rate proposed by the Senate committee upon cacao butter is too high, but I am more deeply concerned with the duty on chocolate and cocoa, because those commodities, rather than the cacao butter, come into general household use, and any proposed duty on these appeals to me more than does the rate prescribed for cacao butter.

Mr. McCUMBER. The Senator has been quoting some figures with reference to exportations. Does he know what the exportations have been for the last two months?

Mr. STERLING. I can pretty nearly tell the Senator what the exportations have been for the last four months, at any rate.

Mr. McCUMBER. The reason I ask as to the exportations for the last two months is that the committee is informed that all of the chocolate-producing countries have levied very heavy duties against the importation of chocolate, much heavier duties than ours.

Mr. STERLING. If the Senator will allow me, I will call attention to the figures a little later. I think I have some figures here upon that question. However, I wish now to call attention to this feature of the case: It is fundamental, Mr. President, in our tariff discussions that we desire a protective tariff for the purpose of protecting the labor interests of the country, so that the laboring man may have higher wages and as a consequence enjoy a higher standard of living. Comparatively little labor is employed in this industry, as appears from the statement in the Tariff Commission's report which I have already read, but to which I wish to call attention anew:

> Automatic machinery is employed almost exclusively and raw materials constitute the principal item of cost.

So the importance of this increase can not be stressed because of the manner in which it will affect or benefit labor in this country.

> Raw materials—
>
> Says the report—
>
> constitute the principal item of cost.

And upon the raw material there is not one cent of tariff; the cacao beans under the present law and under the bill we are now considering come in free of duty.

So, Mr. President, in view of the conditions, the fact that the proposed rate of duty will give no protection to American labor, and the further fact that the manufacturers of chocolate and cocoa are not compelled to pay any tariff at all on the raw material which they use, ought to be, it seems to me, determining factors in our consideration of this question.

Shall we, by the imposition of this high rate of duty—25 per cent ad valorem—give the manufacturers in this country, who have grown and developed and increased under a duty of 8 per cent ad valorem, the excuse to increase their prices of this necessary household article? I do not think we should. Nothing calls for it; the building up of an infant industry or the protection of such industry in this country does not call for it, and protection to American labor does not call for it.

Mr. President, the Senator from North Dakota asked me a moment ago about recent importations. A statement from the Department of Commerce shows the total imports of manufactured cocoa and chocolate, except confectionery, for 10 months ending April, 1922, were 1,632,396 pounds. We will keep in mind, I hope, that this is not a tariff imposed upon confectionery. Such a tariff duty is provided in another paragraph of this bill, namely, paragraph 506. We are now considering chocolate and cocoa, sweetened or unsweetened, and powdered cocoa, for which the purchaser pays 25 or 30 cents for each half-pound package. If it is chocolate it comes in the form of a cake, and if it is cocoa, powdered, it comes in a can, and according to the latest information from my grocer, the cakes are selling for 25 cents a half pound and the cans for 25 cents a half pound.

The same report shows the exports of manufactured cocoa and chocolate from the United States for January, February, March, and April, 1922, as follows:

January, 1922,, cocoa, powdered, 1,183,599 pounds.

Mr. McCUMBER. The Senator is now referring to the exports?

Mr. STERLING. I am referring to the exports. I have given the figures as to imports, which were for the 10 months ending April, 1922, 1,632,396 pounds.

Mr. CALDER. Mr. President, will the Senator inform the Senate if that is cocoa, powdered, in those exports?

Mr. STERLING. These are imports of manufactured cocoa and chocolate, except confectionery.

Mr. CALDER. I am speaking of the exports.

Mr. STERLING. It is the same; it is cocoa, powdered, and chocolate, except confectionery.

Mr. CALDER. My information is that those exports are of cocoa, powdered, which is a by-product here in America.

Mr. STERLING. It is to a great extent a by-product, and that is only another reason against this proposed rate. Chocolate is itself to a great extent a by-product, the principal thing being, as stated by the Senator from Massachusetts a while ago, cacao butter; and the powdered cocoa and the chocolate, especially the cocoa, are to a great degree by-products of the manufacture of cacao butter. They produce it also in the manufacture of the butter.

In February our exports were 1,740,306 pounds of cocoa, powdered; of chocolate, 54,098 pounds.

For March our exports were 1,061,944 pounds of cocoa, powdered, and 56,592 pounds of chocolate.

For April our exports were 2,276,708 pounds of cocoa, powdered, and 48,027 pounds of chocolate.

Making a total, Mr. President, of exports for the four months of 6,510,124 pounds; and thus these figures show that in four months we exported four times more of chocolate and cocoa than we imported in 10 months.

Under circumstances like these, is there any need for a higher protective tariff than the House bill has provided? I think that is too high. I think 8 or 10 per cent ad valorem is high enough to protect every interest concerned.

Mr. McCUMBER. Mr. President, if the Senator will yield to me a moment——

Mr. STERLING. Yes.

Mr. McCUMBER. The export figures which I have do not at all agree with those that are being read by the Senator, if I have followed them rightly. The exports of cocoa and chocolate, prepared or manufactured, not including confectionery, for the full nine months ending in March, 1922, were only $308,307 worth, and the exports of cocoa, powdered, were only $168,420 worth, and the exports of chocolate, except confectionery, were only $46,829, as shown by the monthly summary, and that takes in the nine months ending in March, 1922. That is only about half a million dollars' worth altogether.

Mr. STERLING. Mr. President, the Senator's figures surely are wrong. I read from the Department of Commerce statement. This is the authority for the figures I give. They show of imports for the first 10 months ending April, 1922, 1,632,396 pounds. They show of exports for the first four months of 1922, 6,510,124 pounds of cocoa, powdered, and chocolate, except confectionery.

Mr. McCUMBER. Mr. President, I think there must be some error in that statement, because here is the Monthly Summary of Foreign Commerce of March, under the head of "Exports of domestic merchandise by articles and principal countries," and it shows, as I have stated, that the exports of cocoa and chocolate, prepared or manufactured, not including confectionery, for the whole nine months preceding March, 1922, were only $308,307 worth, and that the exports of cocoa, powdered, were $168,420, and the exports of chocolate, except confectionery, were only $46,829. That is not for a month, but for the full nine months. I do not suppose it makes a great deal of difference, as that is merely a matter of exports, and most of our exports would be, I think, to Cuba, where there is a differential in our favor.

Mr. STERLING. Mr. President, I reiterate my statement that the figures referred to and which I have quoted, showing imports and exports during these 4 months and these 10 months, are correct, and they come from that source which surely, of all others, ought to be informed, and, I think, is informed upon this subject of exports and imports of any particular product. So, Mr. President, considering the fact that the industry of making chocolate and cocoa in this country has developed as it has, increasing tenfold from 1895 to 1918, and that it is still increasing since 1918, as shown by the report of the Tariff Commission, when in 1919 they produced $139,000,000 worth in this country and when during that same year there was imported into this country only $235,000 worth, and when we consider that there is no claim here that labor is to be benefited by this increase; also that the industry itself does not need any further assistance by way of a protective tariff, and when, too, we consider the danger that the higher rates will be made the excuse for the manufacturers and the dealers to charge a high price, a more than reasonable price, for their product of chocolate and cocoa, used in every household in the country, I think we would be doing almost an absurd thing if we should increase this rate beyond what the House provided.

Mr. CALDER. Mr. President, as the figures quoted by the Senator from South Dakota indicate, the production of chocolate and cocoa in this country increased very largely between 1914 and 1919. This was caused by the fact that through the war the markets of the world were closed to Germany and Austria, large producers of chocolate and cocoa, and in a sense to Great Britain and Switzerland also. We therefore had the world market for the production of American chocolate and cocoa. These productions in America increased fourfold. Our manufacturers increased their plants. All over America we saw great chocolate and cocoa plants doubling and trebling and becoming even four and five times their former size, and the exports increasing by leaps and bounds.

Now, what has happened? With the war over, and these European countries returning to their former capacity, they have taken over again their markets in South America and in other places in the world where they formerly had the trade; and as far as these countries themselves are concerned—and this I would call to the attention of the Senator from South Dakota—all of these countries—Canada, Germany, France, and England—have put up a wall against us in the matter of chocolate and cocoa that prevents our sending any of our products to them. I am informed that Canada has placed a duty of 5 cents a pound against our chocolate, and that other countries have rates almost in the same proportion; so that we face a situation to-day whereby we may make this rate low enough, and I think the committee recommendation is low enough, to encourage importations here, when these markets of Europe are absolutely closed to us. They have taken the position that chocolate and cocoa are luxuries, and that upon these luxuries they can afford to levy a very heavy tax.

The rates proposed by the committee, Mr. President, are less than the Payne-Aldrich rates, when you examine them closely, and except for the duty on unsweetened chocolate carried in the Underwood Act they are even less than the rates of the Underwood Act. That act provides a duty of 2 cents a pound up to 20 cents a pound, and after that 25 per cent ad valorem. In fact, the rates here are about the same, except in the matter of unsweetened chocolate, as those fixed by the Underwood law.

Mr. STERLING. Mr. President, let me call the Senator's attention to this fact: The Underwood Act provided, for unsweetened chocolate and cocoa prepared or manufactured, not specially provided for, 8 per cent ad valorem, and the great bulk of the chocolate that comes into this country is the unsweetened chocolate. Comparatively little of the sweetened chocolate comes in.

Mr. CALDER. I repeat that except for the rate on the unsweetened chocolate, the rates provided by the Finance Committee are not higher than the rates in the Underwood Act.

Mr. STERLING. Let me just call attention to this fact——

The PRESIDENT pro tempore. Does the Senator from New York yield to the Senator from South Dakota?

Mr. CALDER. I yield.

Mr. STERLING. The rate proposed now by the Senate committee is a little more than three times the rate upon the great bulk of chocolate manufactured that comes into this country unsweetened. Nearly all of it is unsweetened.

Mr. CALDER. Mr. President, we have this condition concerning cacao butter: We have importations during this year of cacao butter very greatly in excess of anything that we have ever had before. While cocoa, powdered, or chocolate, powdered, is a by-product of cocoa and chocolate manufactures, cacao butter is the by-product of the chocolate and cocoa manufacturers in Europe, and they have been sending here large quantities. In fact, they have completely overwhelmed our market in cacao butter; and the committee have felt compelled, in justice to the manufacturers of cacao butter here, to put a reasonable duty upon that commodity. Not only must we do that to protect the cacao-butter man here, which adds to the cost of the chocolate, but we have a higher tax on sugar and almonds and walnuts and all the other things that enter into the manufacture of these commodities.

It seems to me there is no item in this bill more justified than the rates submitted by the Finance Committee in this matter. They are less than the rates in the Payne-Aldrich bill, and except, I repeat, in the case of the unsweetened chocolate, not higher than the rates of the Underwood Act.

Mr. McCUMBER. Mr. President, I want to call attention to the fact that the rates on chocolate and cocoa under the present law are as follows: Sweetened, valued at not over 20 cents per pound, 2 cents per pound. That is the same as we have here. Valued at above 20 cents per pound, 25 per cent ad valorem. That is what we propose to put in our amendment, the same as the Underwood tariff. The only place where a

difference would lie would be in the unsweetened product. The rate on the unsweetened product in the present law is 8 per cent ad valorem, while this, as suggested by the Senator from South Dakota, would leave the rate 25 per cent, as against the House provision of 17½ per cent.

Since coming in this morning I have talked over the matter with the Republican members of the committee, and they are satisfied to have me withdraw the proposed amendment to strike out "17½" and to insert "25"; and if the Senate will allow me to do so, I will withdraw that proposed amendment, leaving it at 17½ per cent.

The PRESIDENT pro tempore. Without objection, the amendment is withdrawn. The Secretary will state the next amendment of the committee.

The next amendment was, on page 114, line 20, to strike out "3½ cents per pound" and, as modified, insert "25 per cent ad valorem" in lieu of "30 per cent ad valorem," so as to read:

Cacao butter, 25 per cent ad valorem.

Mr. WALSH of Massachusetts. Mr. President, I ask the chairman of the committee to make the same request in regard to this amendment in order to even matters up.

Mr. McCUMBER. The amendment as modified reduces the rate on cacao butter, and so forth, to 25 per cent ad valorem. Under the evidence which was given to the committee, which I have not before me at this time, we felt justified in requesting the small duty of 25 per cent ad valorem.

Mr. CALDER. It is proposed to strike out "30" and to insert "25."

Mr. McCUMBER. Yes; it is proposed to strike out "30" and insert "25."

Mr. WALSH of Massachusetts. That is about a 200 per cent increase over the House rate of 3½ cents per pound. Cacao butter sells for about 30 cents per pound.

The only argument I have heard from any source in favor of increasing the rates upon cocoa and chocolate was from the leading chocolate manufacturers of my State, and they apparently were satisfied with the House rates; but when the Senate committee reported this increase in the rate on cacao butter, they, and doubtless other manufacturers of chocolate, complained because the cacao butter rate left a disparity between the rate on cacao butter and the rate upon chocolate and cocoa.

I read from a letter which I received to that effect:

The reason for the increase in the selling price of cacao butter was because of the extraordinary increase in the sale and demand for Eskimo pie, in the manufacture of which cacao butter is mixed with the sweet chocolate to make the covering of this article. For a short time Eskimo pie took like wildfire throughout the entire country. The result was that many manufacturers of ice cream and sweets loaded up with the constituents that go to make up this article and caused a very great shortage in the market. This, however, is, I am assured by Mr. Gallagher, the president of Walter Baker & Co., a temporary condition. Mr. Gallagher tells me that the country can produce considerably more cacao butter than it ordinarily required, and that therefore in placing this increased duty on cacao butter the Senate Finance Committee did not even the thing up for the chocolate manufacturers as they intended to do.

That seems to be the whole cause of the agitation in favor of increasing the rates upon chocolate and cocoa; that the Senate Finance Committee, increasing the rate upon cacao butter, did not even the thing up for the chocolate manufacturers. In other words, cacao butter is a by-product of chocolate and cocoa, and the by-product has a higher rate than the main product itself.

It is preposterous. It is all due to the fact that for a few months last year there was a tremendous importation of cacao butter, because the home market did not begin to supply the demand for that commodity needed in the manufacture of Eskimo pie. It seems to me this high rate can not be justified.

I hold in my hand a table showing the imports and exports of cacao butter from 1910 to 1922, which I ask to have inserted in the RECORD with my remarks.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Imports and exports of cacao butter, 1910–1922.

	Imports.			Exports.	
	Pounds.	Dollars.	Value per pound.	Pounds.	Dollars.
Fiscal year:					
1910	3,755,140	750,333	$0.200	(1)	
1911	4,395,452	1,112,778	.253		
1912	5,832,063	1,552,973	.266		
1913	3,631,986	990,568	.273		
1914	2,876,967	801,259	.279		
1915	126,028	35,863	.284		
1916	69,888	15,824	.226		

[1] Exports not separately given prior to 1919.

Imports and exports of cacao butter, 1910–1922—Continued.

	Imports.			Exports.	
	Pounds.	Dollars.	Value per pound.	Pounds.	Dollars.
Fiscal year:					
1917	24,289	7,581	$0.312		
1918	14,852	4,633	.311		
Calendar year:					
1919	8,179	2,539	.300	7,320,255	3,031,748
1920	14,080	6,705	.477	5,377,188	1,948,617
1921	1,723,385	380,985	.222	2,855,278	755,544
January, 1922	172,091	37,915		85,184	23,921
February, 1922	1,833,001	463,555		57,055	19,319
March, 1922	2,101,654	546,467		69,547	23,071
April, 1922	819,407	191,257		131,488	49,334
May, 1922	452,375	101,070		109,070	31,580

Mr. WALSH of Massachusetts. This table shows that there were very heavy importations in 1921 and the first five months of 1922, but even in 1921 we exported 2,855,278 pounds of cacao butter, while our imports were only 1,723,385 pounds. So that even with the increased importation of cacao butter there has been a very heavy exportation of this product.

The rates fixed upon the other items in this paragraph are an improvement over the committee amendment, but I think, to complete the relativity of these products one to the other, the duty upon cacao butter ought to be lowered.

Mr. McCUMBER. Mr. President, the Senator has stated that the 25 per cent ad valorem would be equivalent to about three times as much as the House rate. The Senator is mistaken in that statement. The entire importations for 1922 show about 22 cents per pound as the invoice price. With the article selling at 22 cents a pound, a rate of 3.5 cents per pound gives an equivalent ad valorem of 16 per cent. We have added to that 9 per cent, to make it 25 per cent. Instead of being two or three times as much it is a little more than one-half greater than it would be at 3½ cents per pound, taking the average prices for 1921.

Mr. WALSH of Massachusetts. Instead of being 200 per cent increase it is over 100 per cent increase?

Mr. McCUMBER. No; the increase would be 50 per cent, an increase of about one-half.

Mr. WALSH of Massachusetts. With cacao butter selling at 30 cents a pound an ad valorem of 25 per cent represents 7½ cents.

Mr. McCUMBER. The Senator is in error again. The 3½ cents per pound is an equivalent of 16 per cent ad valorem. We have proposed a duty of 25 per cent ad valorem. Therefore our increase is 9 per cent ad valorem, or a little more than one-half. One-half would be 8 per cent.

I desire to insert in the RECORD a memorandum concerning cacao butter, and in this memorandum appear the comparative costs of production in several countries abroad and the cost of production in the United States, with the conclusion as to what would be a reasonable duty. It is stated in this memorandum that the figures show conclusively that cacao butter can be sold by European manufacturers for 9¼ cents a pound less than by United States manufacturers.

Mr. STERLING. May I ask if the memorandum to be printed in the RECORD shows the price of cacao butter on the market now?

Mr. McCUMBER. No; it gives the cost of production. I am informed that it reaches from 26 to 30 cents a pound in the United States. The information I am presenting is simply to give the cost of production abroad and in the United States, for the purpose of showing what differential should be made. I do not care to read it if I may have it printed in the RECORD.

Mr. WALSH of Massachusetts. I have no objection.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

COCOA BUTTER MEMORANDUM.

I.

The cocoa bean produces two basic products, viz: Cocoa butter and cocoa powder.

In the United States of America cocoa powder is mainly a by-product and is used for ice cream, beverages, and pastry.

In Europe it is used almost entirely as a food.

In the United States of America 90 per cent of the cocoa butter produced is used in making confectionery.

In Europe cocoa butter is the by-product and the manufacturers must look to foreign markets for the sale of their surplus.

In the United States of America the average selling price of bulk cocoa powder obtainable to-day is 3½ cents per pound. In Europe it is 10 cents to 12 cents per pound.

II.

Three and one-third pounds cocoa beans yield 1 pound cocoa butter and 1⅔ pounds cocoa powder.

III.

The selling price of cocoa butter in the United States of America is determined by foreign quotations. A monthly auction is held in Amsterdam and the prices the world over for the succeeding month are practically ruled by this auction. The present market price of 29½ cents per pound in the United States of America is based solely on foreign offerings and domestic competition, and not on actual cost production.

To illustrate: The following figures show conclusively that cocoa butter can be sold by European manufacturers for 9¼ cents per pound less than by United States manufacturers:

Comparative costs.

UNITED STATES OF AMERICA.		EUROPE.	
1,250 pounds cocoa beans, at 9 cents per pound	$112.50	1,250 pounds cocoa beans, at 9 cents per pound	$112.50
Conversion cost of cocoa beans	29.25	Conversion cost of cocoa beans	14.70
	141.75		127.20
YIELD.		YIELD.	
375 pounds cocoa butter, at 29½ cents pound	$110.62	375 pounds cocoa butter, at 24 cents pound	$90.00
625 pounds cocoa powder, at 3½ cents pound	21.88	625 pounds cocoa powder, at 10 cents pound	62.50
	132.50		152.50
Loss in United States of America	9.25	Profit	25.30
Loss in United States of America			9.25
Profit in Europe			25.30
			34.55

Differential of $34.55 on 375 pounds cocoa butter in favor of Europe, 9¼ cents pound.

IV.

Under the present tariff of 3½ cents per pound cocoa butter importations by calendar years were as follows:

	Pounds.
1912	6,074,741
1913	3,606,332
1914	2,838,761
1915 to 1920, inclusive (war conditions prevailing)	793,766
1921	2,372,669
1922 to June 1 (Port of New York only)	4,821,835

Attention is called to the fact that in the Reynolds report, page 13, schedule 7, the import statistics given are for "cocoa butter or butterine, refined deoderized coconut oil, and all substitutes for cocoa butter."

The above figures cover cocoa butter imports only.

It is obvious that the 3½ cents duty has not shut out the importation of cocoa butter, although the United States manufacturers were and are equipped to supply all the cocoa butter required for domestic consumption, and a large surplus in addition

V.

The fact is that the markets of Europe (which are the principal consuming markets of the world) are closed to the United States manufacturers, as is shown by the following rates of duty:

1. GERMANY.[1]

	Rates per 100 kilograms.	Equivalent in American currency per pound.
		Cents.
Cocoa butter	150 gold marks	16.2
Cocoa powder	160 gold marks	17.3

2. GREAT BRITAIN.

		Cents.
Cocoa butter	4½ pence per pound	8½
Cocoa and other cocoa preparations	28 shillings per hundredweight on raw cocoa used in manufacturing plus 4½ pence per pound on cocoa butter used; equivalent to 6½ cents on average mixture of chocolate.	

3. ITALY.

		Cents.
Cocoa butter	70 gold lire	8.1
Cocoa powder	120 gold lire	10.4

4. FRANCE.

		Cents.
Cocoa butter	150 paper francs	5½
Cocoa powder	do.	5½

[1] All now under embargo subject to special import license only.

5. SPAIN.[1]

	Rates per 100 kilograms.	Equivalent in American currency per pound.
		Cents.
Cocoa butter	750 gold pesetas	65
Cocoa powder	do.	65

[1] Favored nations products, 250 pesetas; equivalent to 21.8 cents per pound.

These facts, together with the difference in conversion costs, have resulted in over one-half of the cocoa butter and cocoa powder equipment in the United States of America being shut down and the piling up here of enough unsold cocoa powder to supply the United States of America for two years.

VI.

The only United States exportations of cocoa powder for the last 18 months have been made for American relief purposes in Europe. This powder was sold at an average price of 3 cents per pound packed in export cases free alongside steamer.

VII.

Therefore, to equalize these conditions 25 per cent ad valorem should be the minimum import duty on cocoa butter, although the foregoing comparative statement justifies a 30 per cent ad valorem rate.

A 25 per cent ad valorem rate will, however, harmonize with the rates now proposed for chocolate and cocoa in paragraph 776.

Mr. WALSH of Massachusetts. Will the Senator inform us in what country it is made for 9 cents less per pound than it can be produced for in America?

Mr. McCUMBER. I will take the table.

Mr. WALSH of Massachusetts. May I say, while the Senator is looking for the information, that cacao butter is the by-product of the cacao bean, as cocoa and chocolate are, and if cacao butter can be made for 9 cents less per pound abroad, chocolate and cocoa can also. They all come from the same bean. Therefore the committee is discriminating in favor of cacao butter and against chocolate and cocoa, and these rates upon chocolate and cocoa are absurd, if the corresponding reduction in the cost of production is shown in cocoa and in chocolate as is shown in respect to cacao butter.

Mr. McCUMBER. The report, which is quite lengthy, takes the cost in the United States, in Germany, and in Great Britain, and the difference of the landing prices I mentioned. It shows that it can be produced and placed on our market for about 9 cents less when made in Germany than when produced in the United States, according to the figures.

Mr. WALSH of Massachusetts. I find in the Summary of Tariff Information, on page 807, the statement that one German manufacturer has moved his factory to this country because he can make chocolate and cacao butter and cocoa cheaper here than he can in Germany, where the bean is taxed, while here it is admitted free.

The PRESIDENT pro tempore. The question is on agreeing to the amendment as modified.

The amendment as modified was agreed to.

Mr. CALDER. Mr. President, before this subject is passed, I want to make my protest, and a strong protest, against the agreement on the part of the chairman of the Finance Committee and the Senate to the rate of 17½ per cent. This rate on the higher-priced chocolate and cocoa is 7½ per cent less than that in the Underwood Act, and, in my judgment, will tend to largely increase the importations of chocolate and cocoa into this country. I repeat, Mr. President, the European countries which have been manufacturing chocolate and cocoa in the past have put an embargo against the importation of those commodities from this country.

I want to call attention to the rates in the Payne-Aldrich Act. In that act chocolate and cocoa valued at not over 15 cents per pound were given a rate of 2½ cents a pound. Valued at above 15 and below 24 cents per pound, the rate was 2½ cents per pound and 10 per cent ad valorem. Valued at above 24 and not above 35 cents a pound, the rate was 5 cents a pound and 10 per cent ad valorem. Valued at above 35, the rate was 50 per cent ad valorem.

We take these high-priced chocolates and cocoas, which can flood this country from countries where we are denied the opportunity of entering, and we fix our rate at 17½ per cent, as against 50 per cent in the Payne-Aldrich Act. The proposal is unjust to the cocoa and chocolate manufacturers of this country. The rate should be left at not less than 25 per cent.

Mr. McCUMBER. I desire to state in reply that I think the provision for not less than 2 cents per pound will amply take care of the industry.

Mr. CALDER. In reply to the Senator from North Dakota may I say that that will only be helpful in the case of the lower-

priced chocolates. In the higher-priced chocolates, those that sell for over 20 cents a pound, the rate will not be sufficient, but will tend largely to increase the importation of those commodities and is really a very great injustice.

Mr. LODGE. Mr. President, I want to say a single word, although I know the paragraph has been passed, and I hope gone for good. The grading is due to the fact that we have added to the duties on sugar, the grading making lower rates on the low-priced chocolate and higher rates on the higher-priced chocolate. It simply reverses the compensation which ought to be given, because the cheap chocolates carry more sugar than the expensive chocolates. The only fair way is to have an even specific for all grades of sweetened chocolate.

Mr. CALDER. I think it should be understood, too, that the rates carried in the bill as passed by the House are based upon the American value of the commodity, and that the actual tax under the House provision is one-half of that proposed by the Senate committee, because the Senate committee rates are based upon the foreign valuation.

The PRESIDENT pro tempore. The Secretary will state the next amendment.

The ASSISTANT SECRETARY. On page 115, after line 2, the committee proposes to insert a new paragraph to read as follows:

PAR. 779a. Sago flour and tapioca flour, one-half of 1 cent per pound; tapioca flake or pearl, three-fourths of 1 cent per pound.

Mr. NEW. I ask that consideration of this paragraph may be postponed for the present.

Mr. McCUMBER. Very well, I am willing to pass it over temporarily.

The PRESIDENT pro tempore. Is there objection to the request of the Senator from Indiana? The Chair hears none, and the paragraph will be passed over.

CANDY MANUFACTURERS' PROFITS.

Mr. WALSH of Massachusetts. Mr. President, I ask permission to have printed in the RECORD a letter which I have from a leading candy manufacturer, Mr. Herman L. Heide, a member of the executive committee of the National Confectioners' Association, in reply to a statement made on the floor during the debate upon almonds and walnuts in reference to the profits of candy manufacturers. The letter gives some valuable information as to the actual profits of the candy manufacturers and denies the claim that their profits have been excessive.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

NATIONAL CONFECTIONERS' ASSOCIATION
OF THE UNITED STATES,
July 11, 1922.

Hon. DAVID I. WALSH,
Senate Office Building, Washington, D. C.

DEAR SENATOR WALSH: Referring to the CONGRESSIONAL RECORD of July 3 and 5, I note that Senator JOHNSON in seeking to justify the unreasonable and indefensible rate that California is asking for protection on almonds and walnuts advances the false argument that "the candy industry has gone on record that they were making 300 per cent profit" and therefore can well afford to pay the preposterous tariff imposed.

Now, Senator JOHNSON, whom we all know to be capable and intelligent, can not seriously believe that the candy industry is making or ever has made 300 per cent profit. I do not hesitate to make the statement that the net results for any year of the candy manufacturing industry throughout the United States averages less than 10 per cent on the capital invested. Certainly this return is entirely legitimate and can not be found fault with. While it may be true that during the war period the profits were somewhat better than the average, that situation was typical of all industries throughout the country and in fact throughout the world. On the other hand, it is equally true that the confectionery industry suffered severely when the terrific slump in sugar and other raw materials took place. With many concerns the profits of previous years were wiped out and in numerous instances bankruptcy ensued.

During a hearing before the Internal Revenue Department several years ago some of the gentlemen on the board that conducted the hearing inquired as to the reason the confectionery manufacturing industry showed such negligible profits as compared with other industries. It is obvious that such interrogation would not have been forthcoming did the confectionery industry reap the fabulous profits that Senator JOHNSON has attempted, and perhaps successfully, to fix in the minds of his hearers and to the country at large through the medium of the press. The origin of that 300 per cent profit myth may, to the best of my knowledge, be traced as follows:

On August 1, 1921, Mr. Benjamin Miller, head of the Miller Bros. Candy Co., operating a few retail stores in Greater New York, and a small manufacturing plant, publicly issued fictitious statements that were given wide publicity by one of our leading New York newspapers, and particular emphasis was laid upon the alleged 300 per cent profit, which Senator JOHNSON, to serve his own ends, has seen fit to use notwithstanding that it is an utter falsehood.

In this connection it may be of interest to note that on April 14, 1922, an involuntary petition of bankruptcy was filed against the Miller Bros. Candy Co., and against whom suits had previously been instituted for bills outstanding from February 28, 1921, right through to the present period. Herewith are inclosed several lists showing the dates and the amounts, as well as the names of the plaintiffs by whom judgments or suits have been filed. Now, then, if the Miller Bros. Candy Co. were actually making the 300 per cent profit reported to have been declared by Mr. Benjamin Miller, why would it have been necessary to file a petition in bankruptcy? Why has the Miller Bros. Candy Co. been unable to pay its bills and have a very handsome profit left? It is quite apparent that the present predicament of that firm clearly proves the falsity and the injustice of the 300 per cent profit statement.

As the confectionery industry has been falsely and unfairly accused in public of profiteering by a personage of such prominence as Senator JOHNSON, it would be no more than fair and just to the confectionery industry were the situation corrected through the presentation of the foregoing to the United States Senate, from the floor of the Senate, in order to dispel, so far as possible, the erroneous impressions Senator JOHNSON has created, and in order that the correction be made part of the CONGRESSIONAL RECORD.

Yours very truly,

HERMAN L. HEIDE,
Member Executive Committee.
National Confectioners' Association.

Mr. WALSH of Massachusetts. I ask to have inserted in the RECORD a special article written for the New York Evening Post upon the effect of the duties levied in the pending bill upon the ultimate consumer, also an extract from an editorial in the New York Herald.

There being no objection, the articles referred to were ordered to be printed in the RECORD, as follows:

THE "ULTIMATE CONSUMER"—WHAT HAPPENS TO THE COST OF LIVING ON THE WAY FROM BED TO BREAKFAST.

(By W. O. Scroggs in the New York Evening Post.)

We may recount the short and simple but somewhat intimate annals of a morning hour in the life of a plain middle-class American consumer and see how the tariff penetrates into the inner temple of his existence.

His day begins when he is aroused by an alarm clock, and the new tariff bill raises the duty on this article 67 per cent. His first act is to throw off the counterplane, on which the duty has been increased 60 per cent, and the sheet, on which the duty is higher by 20 per cent. He jumps from his bed, on which the duty is advanced 133 per cent, and dons a summer bathrobe, with the duty up 50 per cent, and slippers, with the duty increased 40 per cent.

He walks over a Brussels carpet (duty up 100 per cent) to close the window, the duty on the pane of which has been raised 400 per cent, and adjust the shade (duty up 20 per cent) and curtains (up 33 per cent). Then he enters the bathroom, stands before a mirror, on which the duty has been raised 60 per cent, and turns on the electric light, with a 50 per cent higher duty on the bulb.

SHAVING COSTS JUMP.

Next he sets out his shaving stick, subject to an increase in duty of 67 per cent, his shaving brush (duty up 57 per cent), and razor (up 50 per cent), and begins his tonsorial operations, after giving the blade a few strokes on a strop (duty up 15 per cent). This over, he devotes his attention to the bathtub, on which the duty has been raised 100 per cent. Towels (with the duty up 60 per cent), soap (up 67 per cent), toothbrush and hairbrush (up 57 per cent), and comb (up 40 per cent) are next in demand. Cleanliness may be next to godliness, but the new tariff bill taxes it just the same.

As our consumer dresses, it may be noted that the new bill increases the duty 60 per cent on his underwear, 33 per cent on his hose, 50 per cent on his shirt and collar, 20 per cent or more on his necktie, 60 per cent on his suit of clothes, and imposes a duty of about 8 per cent on his shoes, which were formerly on the free list. On the collar buttons and cuff links which he transfers to a fresh shirt the duty has been increased 33 per cent.

The only articles he has touched so far on which the duties have not been increased in the Fordney-McCumber tariff bill are his dentifrice and his talcum powder.

As the weather is growing warmer our consumer decides to discard his waistcoat. This necessitates a change from suspenders, with a duty 60 per cent higher, to a leather belt, with the duty raised 75 per cent higher. He then transfers pocketbook (duty up 148 per cent), fountain pen (up 100 per cent), penknife (up 200 per cent), and lead pencil (up 70 per cent) from waistcoat to coat pockets, picks a fresh linen handkerchief (up 50 per cent) from the dresser (up 133 per per cent), polishes his eyeglasses (up 15 per cent), and after giving his clothes a touch with the whiskbroom (up 57 per cent), is ready for breakfast.

HIGHER DUTY ON BREAKFAST.

On entering his dining room, our consumer draws up a chair the duty on which has been raised 133 per cent, to a table (subjected to a similar increase), covered with linen damask on which the duty is advanced 43 per cent. He spreads a napkin (duty up 43 per cent) on his knees, and turns on the current for his electric toaster, on which the duty has been advanced 160 per cent. Then he toasts some bread, removed from the free list and made dutiable at 15 per cent ad valorem. He drinks water from a glass on which the duty is 45 per cent higher, and begins his breakfast with an apple (duty up 200 per cent) baked with sugar (duty up 60 per cent) in an aluminum dish (up 150 per cent) on a cast-iron stove (duty up 100 per cent).

The duty is also advanced 27 per cent on his chinaware, 20 per cent on his table silverware, 200 per cent on his oatmeal, and 225 per cent on his butter. The cream for his coffee has been removed from the free list and subjected to a duty of 22½ cents a gallon, and his eggs also have been taken from the free list and made dutiable at 8 cents per dozen. The salt for his eggs likewise comes off the free list, and so does his bacon. Even the duty on the salt shaker gets a boost of 45 per cent. A favorite expression of western cowboys is, "Skin 'em from hell to breakfast." The framers of the new tariff bill apparently took this for their motto.

THE TARIFF BILL.

The people demand that their taxes shall come down, their cost of living shall come down, and the barriers against selling their goods abroad shall come down. If the only kind of tariff measure they can get from the present Congress is one that will jack up their cost of living still higher when it already is too high, and make it all the harder to export their surplus products when it already is hard enough to export them, then the American people do not want any statesmen to rush himself out of breath over the passage of this tariff. They will be content to wait till the cows come home, for a Congress that has sense enough to know costs must be reduced, not inflated, and that has ability enough to frame the kind of tariff that is necessary to the welfare of the country.

This does not mean the American people want the United States to be a free-trade country. It does not mean the American people would

throw the floodgates wide open for the pauper labor products of Europe and Asia to come down upon our markets in tidal waves and wipe out our own industries.

It does mean the taxpayers and bill payers of America demand a rational tariff that will be reasonably protective, not insufferably burdensome. * * *

Mr. WALSH of Massachusetts. Mr. President, I think we have finished discussion of all the amendments offered by the Senate Finance Committee in the agricultural schedule. That means that my work in presenting the views of the minority is completed for the present.

The PRESIDENT pro tempore. The Chair reminds the Senator that one amendment has been passed over at the request of the Senator from Indiana [Mr. NEW] and the Assistant Secretary advises the Chair that one other amendment was passed over relating to flower seed.

Mr. WALSH of Massachusetts. The latter amendment went over at the request of the Senator from Michigan [Mr. TOWNSEND]. But so far as the schedule as a whole is concerned the debate is practically ended. I desire very briefly to call attention to the result of the discussion in and votes by the Senate upon this schedule.

I had some hopes, but I find they were vain, that the discussion on the various amendments offered by the Senate Finance Committee would result in reducing some of the high rates, but practically every amendment, several hundred of them in all, providing for substantial increases in the rates levied upon agricultural products in the House text have been adopted. Practically no reductions have been made. The committee's position has been uniformly sustained. The rates fixed by the agricultural tariff bloc which, of course, were urged solely from the viewpoint of the producer, have been accepted without any regard for the consumers.

In addition to the amendments offered by the committee, as printed in the bill when we commenced the discussion of the schedule, there have been offered upon the floor 24 amendments of a substitute character, all of which have increased the rates even above those named by the Senate Finance Committee when the bill was originally reported to the Senate. So that 24 additional amendments have been offered to the bill since the discussion commenced, all of them increasing the duties originally proposed. Eight amendments have been offered by the committee reducing the rates originally fixed by the committee when the committee reported the bill.

I think that information is of some value. It goes to show that notwithstanding the general discussion throughout the country and the general criticism of this bill, that so far as agricultural products are concerned there has been absolutely no attempt to reduce the rates named in the bill.

I want once more to call attention to the fact that many of the rates are bound to be operative, and the Congress of the United States is presenting to the American people a tariff bill which must in certain particulars very materially increase the cost of living to the American people, and this at a time when wages are being reduced and when the cry throughout the land is to reduce prices and the cost of production. I repeat, the demand from one end of the land to the other for reduction in the prices of the things that we eat and the things that we wear is here answered by passing through Congress a tariff bill which places higher duties than ever before in the history of the country upon agricultural products, upon raw materials, and upon the things that our people must eat. Of course, it will result in a very serious protest from the consumers of the country.

Attention should be called to the fact that the schedules in this bill are so numerous and the increases so many that even those groups which are here and there benefited by an increased protective duty will have to pay more than they receive in increased prices upon the articles they produce when they come to buy other articles produced by other groups which also bear a heavy protective duty. Evidently the protests of those who have insisted that the time was at hand for levying moderate protective duties have gone unheard and unheeded, and any effort to reduce the rates in the bill appears to be unsuccessful. The protests from press and people is falling on deaf ears. The Senate is not concerned or interested in levying low duties, but is trying to see how high it can make these rates. Fortunately, an appeal can soon be made to the American people, and what their verdict will be is not, in view of recent political activities, uncertain.

Mr. McCUMBER. Mr. President, what the Senator says is true in one respect. We have given a higher rate of duty for the protection of the farmers and for the protection of agriculture than has ever been given in any previous bill. Those rates, Mr. President, are justified. Notwithstanding the fact that rates are higher upon agricultural products than ever before, those rates do not anywhere nearly measure up to the duties which are given for the protection of manufactured articles other than agricultural.

The PRESIDENT pro tempore. The Secretary will report the first amendment in the next schedule.

The ASSISTANT SECRETARY. The next amendment of the Committee on Finance is under "Schedule 8.—Spirits, wines, and other beverages," on page 116, after line 14, to strike out:

PAR. 801. Liqueurs, as defined in the national prohibition act, when imported in compliance with the provisions of that act, shall be dutiable at the rates hereinafter provided in this title.

And in lieu thereof to insert:

PAR. 801. Nothing in this schedule shall be construed as in any manner limiting or restricting the provisions of Title II or III of the national prohibition act, as amended.

The duties prescribed in Schedule 8 and imposed by Title I shall be in addition to the internal-revenue taxes imposed under existing law, or any subsequent act.

The amendment was agreed to.

The next amendment was, on page 117, line 4, before the word "containing," to insert "(except Angostura bitters)"; in line 6, after the word "component," to strike out "part," and insert "material," and in line 7, after the word "proof," to strike out "gallon" and insert "gallon; Angostura bitters, $2.60 per proof gallon," so as to make the paragraph read:

PAR. 802. Brandy and other spirits manufactured or distilled from grain or other materials, cordials, liqueurs, arrack, absinthe, kirschwasser, ratafia, and bitters of all kinds (except Angostura bitters) containing spirits, and compounds and preparations of which distilled spirits are the component material of chief value and not specially provided for, $5 per proof gallon; Angostura bitters, $2.60 per proof gallon.

Mr. SIMMONS. Mr. President, I would like to inquire of the Senator in charge of the bill why this differentiation as to bitters. That seems to be a new provision of a tariff bill, and I have discovered nothing in any of the literature about it. I suppose there must have been some testimony on the subject. I should be very glad to have the Senator explain the proposed amendment.

Mr. SMOOT. The reason is very simple. Angostura bitters come in under the prohibition law to-day; they are not prohibited at all. Therefore we only impose a rate of $2.60 per proof gallon of the alcohol that is in the bitters. Otherwise it would have been $5 a gallon. That would have been on account of the prohibition law, but under the prohibition law itself the bitters are allowed to come in. Therefore we only charge exactly the rate that was charged for alcohol under the Payne-Aldrich law.

Mr. SIMMONS. In other words, as I understand the Senator, we are charging really the same rate—$5—upon the proof liquor in the bitters?

Mr. SMOOT. Yes; that is all it is.

Mr. SIMMONS. I have no objection to the amendment.

The amendment was agreed to.

The next amendment was, on page 117, line 10, before the word "gallon," to strike out "proof," so as to make the paragraph read:

PAR. 803. Champagne and all other sparkling wines, $6 per gallon.

The amendment was agreed to.

The next amendment was, on page 118, line 10, after the word "this," to strike out "title" and insert "schedule," so as to make the paragraph read:

PAR. 809. When any article provided for in this schedule is imported in bottles or jugs, duty shall be collected upon the bottles or jugs at one-third the rate provided on the bottles or jugs if imported empty or separately.

The amendment was agreed to.

The next amendment was, on page 119, line 3, after the word "this," to strike out "title" and insert "schedule," and at the beginning of line 10, before the word "gallon," to insert "proof," so as to read:

PAR. 811. No lower rate or amount of duty shall be levied, collected, and paid on the articles enumerated in paragraph 802 of this schedule than that fixed by law for the description of first proof; but it shall be increased in proportion for any greater strength than the strength of first proof, and all imitations of brandy, spirits, or wines imported by any names whatever shall be subject to the highest rate of duty provided for the genuine articles respectively intended to be represented, and in no case less than $5 per proof gallon.

The amendment was agreed to.

The next amendment was, on page 120, line 6, after the word "this," to strike out "title" and insert "schedule," so as to make the paragraph read:

PAR. 813. No wines, spirits, or other liquors or articles provided for in this schedule containing one-half of 1 per cent or more of alcohol shall be imported or permitted entry except on a permit issued therefor by the Commissioner of Internal Revenue, and any such wines, spirits, or other liquors or articles imported or brought into the United States without a permit shall be seized and forfeited in the same manner as for other violations of the customs laws.

The amendment was agreed to.

The next amendment was, on page 120, line 15, after the word "this," to strike out "title" and insert "schedule," so as to make the paragraph read:

PAR. 814. The Secretary of the Treasury is hereby authorized and directed to make all rules and regulations necessary for the enforcement of the provisions of this schedule.

The amendment was agreed to.

The next amendment was, on page 120, line 16, after the word "cotton," to strike out "manufactures," so as to read: "Schedule 9.—Cotton and manufactures of."

Mr. SIMMONS. Mr. President, I make the point of no quorum.

The PRESIDENT pro tempore. The Secretary will call the roll.

The Assistant Secretary called the roll, and the following Senators answered to their names:

Ashurst	Fernald	McNary	Smith
Ball	Glass	Moses	Smoot
Borah	Hale	Nelson	Spencer
Bursum	Harris	New	Stanley
Calder	Harrison	Nicholson	Sterling
Cameron	Heflin	Norbeck	Townsend
Capper	Jones, Wash.	Overman	Trammell
Caraway	Kellogg	Phipps	Wadsworth
Colt	Kendrick	Ransdell	Walsh, Mass.
Cummins	Keyes	Rawson	Walsh, Mont.
Curtis	Lodge	Robinson	Warren
Dial	McCormick	Sheppard	Watson, Ind.
du Pont	McCumber	Shortridge	Willis
Ernst	McLean	Simmons	

Mr. STANLEY. I take this occasion to announce that the junior Senator from Louisiana [Mr. BROUSSARD] is absent on this roll call on business of the Senate. He will be so engaged for a day or so more. I desire that this announcement may stand for subsequent roll calls.

Mr. HARRIS. My colleague, the junior Senator from Georgia [Mr. WATSON], is absent on account of sickness.

The PRESIDENT pro tempore. Fifty-five Senators have answered to their names. There is a quorum present. The Secretary will state the first amendment proposed by the Committee on Finance in Schedule 9.

The amendment of the Committee on Finance was, on page 120, line 16, in the heading of the schedule, after the word "Cotton," to strike out the word "Manufactures" and to insert "and manufacturers of," so as to make the heading read:

Schedule 9.—Cotton and manufactures of.

The amendment was agreed to.

The PRESIDENT pro tempore. The Secretary will state the next amendment proposed by the Committee on Finance.

The next amendment of the Committee on Finance was, on page 120, after line 17, to insert a new paragraph as follows:

PAR. 900. Cotton having a staple of 1⅛ inches or more in length, 7 cents per pound.

Mr. CAMERON. Mr. President, I wish to offer an amendment to the committee amendment proposing a duty on long-staple cotton. In paragraph 900, on page 120, line 19, before the word "cents," I move to strike out the numeral "7" and to insert in lieu thereof the numerals "15," so that the paragraph if so amended will read:

PAR. 900. Cotton having a staple of 1⅛ inches or more in length, 15 cents per pound.

The PRESIDENT pro tempore. The question is on the amendment proposed by the junior Senator from Arizona to the committee amendment.

Mr. ASHURST. On that I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. SMITH. Mr. President, before a vote is taken on the amendment offered by the Senator from Arizona to the amendment reported by the committee, I think the Senate ought to be thoroughly advised as to the necessity for the duty which is now proposed on the so-called Yuma, or Arizona-Egyptian long-staple cotton. There has been printed by the Tariff Commission a pamphlet entitled "The Emergency Tariff Act and Long-Staple Cotton," and from the facts set forth by the commission an erroneous impression has arisen.

Arizona cotton does not enter into competition with the so-called long-staple Egyptian cotton. The facts as presented by the Tariff Commission are to the effect that the Egyptian cotton under present conditions sells for a higher price and finds a readier market in America than the Arizona cotton. The Egyptian cotton is practically a vegetable silk. I doubt very much if a competitor for it can be found in the world at all.

Few of those who have not made a close study of cotton production are aware of the fact that identically the same seed planted in different soils and under different climatic conditions produced radically different fibers. To illustrate, on the coast of the Carolinas there was developed what was known as sea-island cotton. That cotton is in a group to itself. The seed of the cotton grown in the islands off the coast of the Carolinas when imported even into the neighboring State of Georgia and planted under what seem to be similar conditions of climate and soil in a year or two will have a tendency to revert to the mother or parent type, which is the ordinary staple cotton. So that the peculiarities of environment, such as humidity, sunlight, and soil, radically change the nature of the fiber produced by the identical seed.

We in the Carolinas had a practical monopoly of that wonderful cotton known as sea island, which developed a staple of 2 inches and above and sold in the field without being gathered for in the neighborhood of $1 a pound. It was used by the thread people. The J. & P. Coats and the Willimantic Mills monopolized the sea-island cotton and used it for the specific purpose of making thread and fine lace. There was no competition with the sea-island cotton. It was of a peculiar fiber and peculiar nature, produced by the combination of season and oil, and did not find a duplicate elsewhere.

I will say in passing that this wonderful production, of almost inestimable value, practically without a competitor, has now been eliminated or destroyed by the advance of that pest known as the weevil. Our production has dropped to where it is negligible and a substitute will have to be found elsewhere.

As an evidence of the fact that even that staple was without a competitor, it sold at a higher price per pound, with no duty on it and open to the competition of the world, than the cotton which is the nearest approach to it in length of staple, the Egyptian cotton. As to the Egyptian cotton, which my friends fear so greatly, if they will take the trouble to read this monograph gotten out by the Tariff Commission, they will find that it is used for a specific, definite purpose that does not compete with our Arizona Egyptian cotton. Its fiber is different; the uses to which it is put are different, as evidenced by the fact that it is bringing a higher price to-day in the market, even with the emergency tariff duty, than the Arizona cotton. It is brought in here and sold at a higher price.

That is another illustration of the mistakes that we may make in putting duties on different forms of raw cotton. India produces 4,000,000 bales of raw cotton. It is practically under the control of Great Britain, and Great Britain uses less than 200,000 bales of that cotton in her ordinary cloth and textile manufacturing plants, because the fiber is so short and coarse and indifferent in its use that it can not enter into competition with the American middling upland cotton; so that the price that is paid per pound and the demand for a given cotton will be determined by the locality in which it is produced and the peculiar fiber as the resultant thereof.

Right in our own country you have the Mississippi or bender cotton as contradistinguished from the ordinary upland cotton. That classification is not so rigid in the general terminology used by the trade; but the mills of this country understand that cotton grown in the Delta of the Mississippi and on certain lands in Texas from the same identical seed produces a different fiber that can not be duplicated with the same seed in other parts of the country.

It is true that we have hybridized a cotton now, increasing the length of the staple by cross breeding, and we are producing in the uplands of the South Atlantic States a very high grade of extra-staple cotton; but even that extra-staple cotton partakes of the nature of the peculiar fiber produced in America that has not yet been successfully duplicated anywhere that American seed has been tried on the earth.

It is my opinion, based upon statistics which I have and which I hope to-morrow to be ready to furnish, together with what I have to say on the cotton question, that there is not a spot on the globe that can grow cotton in competition with America if quality is taken into consideration. It will be remembered that in 1863, 1864, and 1865 there was a cotton famine in America. The negroes were taken from the cotton fields, our credit was destroyed, our country was bankrupt, and American cotton went to $1.89 per pound in gold, in the face of the fact that the production of cotton in the rest of the world was unimpaired by the Civil War. England had about 61 per cent of her liquid capital invested in cotton manufactures, and had unlimited capital to exploit a supply elsewhere. She employed Russia in this terrible famine of cotton brought about by the failure of the American cotton crop. She employed a man from my own county to take American seed, and, with his American knowledge—he was a cotton grower—to try the whole Empire of Russia as to the feasibility of producing the kind of cotton that the world must have to make clothing. After seven years of tremendous expenditure on the part of the Russian Government, the project was given up as impractical.

The same thing has been true in the English possessions in India. I will give to the Senate to-morrow a more detailed

statement, because these are facts that ought to be known to us in order to govern us intelligently in levying a duty upon a given product for the benefit of the American people. If it should be clearly demonstrated that American cotton is without a competitor, that we have a monopoly of that peculiar quality of the fiber that the world can not duplicate, I think it will go far toward modifying certain tariffs that are being asked upon the finished goods produced from American cotton. Whatever else may be said, any economist in the world must admit—speaking now according to the operation of natural law—that the man whose mill or whose manufacturing plant is right in the region of and contiguous to the supply of the raw material certainly has an advantage over the man or the manufacturer who is not so situated.

The only competitor that America has is from two to three thousand miles away, and there has to be transportation partly if not almost entirely transcontinental, because we are so situated here in America, for some reasons that doubtless we may develop later on, but which are now a fact, that cotton to be exported abroad must find other ports than the southern ports, causing a land haul that never should have been tolerated. You have to have a partial continental haul. You must have compression. There is not a cotton manufacturer but will testify that the compression of the cotton, either at the gin by the roller process or under hydraulic pressure and steam pressure, to bring it to the form that will conserve the most space in shipping, does affect the fiber. The core of a bale that has been compressed by the roller process has been found to have almost what is known as perished fiber. Next, you have the damage incident to handling. The American bale is not put up in such form as to stand the rough usage incident to transportation abroad. The result is that a tremendous per cent of the lint itself is either damaged or lost in transportation from this country abroad. In addition to that, you have two to three thousand miles of ocean transportation.

It does not seem reasonable that the world, dependent upon America for its supply of cotton for manufacturing purposes, can come to America, buy the raw material, transport it across the continent, transport it across the ocean, manufacture the goods, retransport the goods back, and undersell the product of the American manufacturer. I have tables here showing the difference in the freight rates from here to the great distributing center in Europe—namely, Liverpool—and you will note the advantage.

One of the great drawbacks to the exportation of American cotton is the fact that the per cent of damage is so great. I am calling attention to these general features in order to show that the proposed duty of 15 cents a pound on the Arizona or Yuma cotton, having a staple of 1⅛ inches, which is practically all produced in the section referred to, is not justified by the facts. According to the findings of the Tariff Commission, as I have said, and upon investigation I think my colleagues will find that that is the case, its only competitor—if competitor it is to have—will be the Egyptian cotton; and yet the Egyptian cotton with your emergency tariff in force is selling for a higher price than the Arizona cotton and finding a market for the peculiar manufactures that it enters into. The fact of the matter is, Mr. President, I am sure, that the Arizona cotton will find a ready market at its comparative value without any duty on it at all.

I do not pretend to stand here and say that any cotton sold in America is selling within 50 or 100 per cent of the intrinsic value; but that is another story. Look at the cotton manufacturers, and compare the profits that have been made by them with those that have been made by the cotton producers. I am not complaining of the profits that the mills of America have made. A man engages in a business to make what profit he can out of the business in which he engages, and he would be untrue to himself and untrue to the business if he did not get from that business all that thrift and enterprise could get out of it; but the thing that handicaps the cotton producers in America is the fact that we have no system of marketing and no system of financing that will incorporate in the sale of the cotton the cost of production plus a profit to the producer. The artificial producers are so organized that all overhead charges are included in the price current, so that when the goods are disposed of the producer gets back the cost of production plus the profit that he has placed upon them; but not so with the production of cotton and other agricultural products. The question is, What does the man or the organization or the market that is buying this stuff propose to give, regardless of cost or supply or demand, practically speaking?

It is rather an indictment of the intelligence, not alone of the cotton producers of America but of the business men, bankers, merchants, and commercial interests over this country, that Liverpool dictates and fixes the price of the world's cotton crop, America included.

According to a table I have here on cotton production in the United States, issued by the Census Bureau, 70 per cent of all the cotton produced in the world is produced in America, and about 90 per cent of all the real spinnable cotton is produced here in America. Yet the United Kingdom, solely dependent upon America for her supply of raw cotton to compete with American manufacturers, dictates the price of American cotton.

Let us get that condition clearly in our minds. Nature has given us a monopoly of the production of cotton for mill purposes, cotton preeminently superior to any the rest of the world produces for ordinary cotton goods. England was the first to establish cotton spinning as it is now known. Her progress in that respect was phenomenal. England is absolutely dependent upon America for her supply of the raw material to make cotton goods. Previous to the war we exported to England, and she consumed, something like 4,000,000 bales of American cotton. That was about the capacity of her spindles.

Were there to be an absolute failure in the American cotton crop, the English mills would have to close and the English manufacturers would be bankrupt. Sir William Capper, in an address before the cotton interests of England in 1912 or 1913, called attention to the fact that they must find some means of encouraging greater production in America. Yet here we find the curious complication of having to erect a tremendous tariff on cotton manufactures produced abroad while those manufacturing have to buy American cotton to produce those cloths.

The ordinary business man knows that there is something wrong somewhere. Where the freight alone is from $5 to $15 a bale, to say nothing of the shipping damage, to say nothing of marine insurance, or the ordinary insurance, the conversion abroad, and the incidental waste, and then the rebaling and shipping back, it does seem that the mere proximity of the American mills to the world's supply of cotton would be a sufficient protection to guarantee her immunity against the world. Yet there is not a schedule that has a higher rate of duty than the cotton schedule. The raw material is produced in this country, not produced by pauper labor, but produced by American farmers. I do not say they get anything like a price commensurate with the value of the stuff they produce, for they do not; but none of us can say that America produces cotton with pauper labor. We produce the raw material with American labor, on land owned by American landowners. Europe buys that stuff, converts it into the finished product, reships it, and our manufacturers complain that without a tremendous duty they can not successfully compete with their foreign competitors.

Mr. SHORTRIDGE. Mr. President——

The PRESIDENT pro tempore. Does the Senator from South Carolina yield to the Senator from California?

Mr. SMITH. Certainly.

Mr. SHORTRIDGE. Theoretically what the Senator says would seem to have great force, but as a practical fact, is it not so that the English purchaser of American cotton who purchases it at a given price, plus cost of transportation, insurance, and other incidental expenses, can and does transform the raw material into the finished product, and can ship the finished product back to America, paying the freight and other incidental expenses, if you will, and sell the finished product at a price less than the American manufacturer must charge? Is not that so as a fact, leaving theory entirely apart?

Mr. SMITH. According to the statistics, that is not so.

Mr. SHORTRIDGE. Of course, we contend the contrary.

Mr. SMITH. I have tables here, which at the proper time when we get to the other schedules I shall be glad to submit to the Senate, showing the amount of production under each schedule, the amount exported, the amount consumed here, and the value of the imported article of like kind, which will show that the goods imported in sufficient quantity to be noticeable at all are of that character of goods which, under the conditions prevailing in America, we have not found it profitable to manufacture at all, and we have not entered that domain.

There are finer counts of thread which are produced in England, and a finer character of goods. I will take as an illustration Swiss dotted goods. The American manufacturers have found that it is really hardly profitable for them to enter into that field of manufacture at all. That is a peculiar form in which the goods come. There is a considerable quantity of it, but we have not even attempted to make it, finding it more profitable to make that which is generally used. Those goods are used by a certain clientele here which is not of sufficient importance to justify our manufacturers to enter into it at this stage of American production, and they have not entered that field at all. There is no competition from this

side, unless it would be the competition of an individual buying another character of goods and substituting it for that as his choice. In other words, the American mills have nothing to offer as a substitute for that particular form of goods.

Mr. SHORTRIDGE. But are there not many comparable goods?

Mr. SMITH. No. I am speaking of those classes of goods the production of which our manufacturers have not attempted at all.

Mr. SHORTRIDGE. Just one final question, to get the view of the Senator. Are there not certain kinds of goods manufactured in England, for example, and manufactured in America, the same kind, out of the same material, by substantially the same processes? Are not those facts? If so, how does the Senator account for the fact that the English manufacturer can manufacture, ship to America, and undersell the American manufacturer? How does the Senator account for that?

Mr. SMITH. I think I will be able to show that in the goods made from thread up to 60, which comprise the vast majority of American goods, no country can manufacture and undersell America. That comprises the bulk of the cotton manufacturing.

Mr. SHORTRIDGE. I assume the Senator has taken into account the question of labor, the price paid for American labor and that paid for foreign labor?

Mr. SMITH. I am taking into account everything which enters into the goods as they are laid on the counters for sale.

Mr. SHORTRIDGE. Very well.

Mr. SMITH. I think this information will prove what I have stated. This is about as good a time as any for me to call attention to the fact that we are pleading here for a higher rate of duty, and yet it is startling to find that under some manipulation of freight rates its costs very nearly as much to ship cotton from Galveston, Tex., to Boston, Mass., as from Galveston to Bremen.

Mr. SHORTRIDGE. How does the Senator account for it?

Mr. SMITH. The only explanation I have is that there is some arrangement made with the transportation companies, as we have in this country, known as the flat rate on a given commodity, where it is converted from the raw material into the finished product. Of course, you may write this rate into the law, but I doubt very much if the cotton producers of Arizona will have the power to benefit by the 15 cents a pound, because you are going to take the price which Liverpool quotes you.

Mr. SHORTRIDGE. The Senator's contention is that it will not benefit the Arizona or the California cotton raiser?

Mr. SMITH. That is my contention.

Mr. SHORTRIDGE. Will it injure anybody; and if so, whom will it injure?

Mr. SMITH. I think it will do this—and this is the dividing line between me and some others in this Chamber: I do not believe in the doctrine of protection to the degree that we should shut out competition and have the purchasers of the goods made from this cotton paying a higher price than they would otherwise pay, when, in the last analysis, because there is a provision in this bill made to take care of it, the manufacturer will get it; the farmer will not get it, and the farmer's wife who wears the goods that are made out of the so-called protected cotton will pay into the pockets of the manufacturers the difference, while the producer will not get a penny.

Why do I say that? Simply because until the producers of the agricultural products of this country are in a position to name the prices of the things they produce, what advantage will a tariff give unless there should be a tremendous influx of goods from abroad? In that event they might get some incidental benefit by the inevitable operation of the law of supply and demand. Yet the Senator from California and other Senators here know that under modern conditions of trade the law of supply and demand scarcely operates at all.

I shall use one illustration. With the modern facilities for manufacturing steel, the cheapening of the process of manufacture in the open furnace and the blast furnace, and the adaptation of material forces to the conversion of the raw ore into the finished product, with unlimited iron ore in the world, and facilities for producing iron and steel universal, does anybody suppose that the law of supply and demand had anything to do with the arbitrary lifting of steel $16 a ton at the behest of the steel manufacturers? Does anybody to-day suppose that the law of supply and demand has governed the rise in the price of gasoline from about 6 or 7 cents a gallon to 32 and 33 cents a gallon?

With the processes of refining being cheapened every day and the elimination of expense going on apace, and with possibly a greater stock of raw material, the world's greatest stock of raw oil, and the best facilities for refining that the world ever knew, the price still mounts. Does the law of supply and demand alone govern that? Under modern conditions the law of supply and demand might very well be transcribed, to use the etymological meaning of the word, or might be expressed by saying the law of supply and the man, and not demand, because with organized resources, organized forces of distribution, organized control of the world's supply, the owner and holder of those franchises can dictate his price regardless of the clamor of the people or their indifference.

These are things that we must take into account in discussing these vital questions which affect the American people. The fact of the matter is that the question for us to decide along with the discussion of the bill now is, to what extent has organized capital or organized resources got its forces at work to control prices regardless of the laws we may enact?

Mr. SHORTRIDGE. Mr. President, would it interrupt the Senator if I were to ask him a question or invite his attention to a thought?

Mr. SMITH. I am glad to yield to the Senator from California.

Mr. SHORTRIDGE. Assuming what the Senator says to be correct, namely, that the law of supply and demand does not control or fix prices——

Mr. SMITH. I mean that it does not entirely control.

Mr. SHORTRIDGE. Are we not driven to the conclusion that it becomes the duty of our Government to protect our American industries—including, of course, when I use the word "industries," the people engaged in them—from those gigantic foreign combinations over which our laws do not extend and which combinations we can not control? In other words, if the Senator will permit me—and I hope he knows that I am very greatly interested in his remarks—the law of supply and demand cutting a large figure, the foreign combinations over which we have no control exercising their power, does it not become a practical, economic truth that we here in America should, for example, protect by a tariff the rice growers, the sugar growers—for example merely—and having regard to my own State, the quicksilver industry? For, to answer in a measure my own question, if we do not, then the foreign combinations can import into this country and destroy these industries. Only the people of Louisiana, the people of Arkansas, the people of California can, by changing their life and living, produce those several things as cheaply as we know they are and can be produced in foreign countries.

Mr. SMITH. Back of that lies the question which it is hardly worth our while to discuss now, and that is for what purpose would we protect the Louisiana rice grower? For what purpose would we protect the Arizona cotton grower? For what purpose would we protect anything? The only purpose we could have in view would be to produce an adequate supply for the needs of the people at a competitive price with those produced abroad, the infant industries idea. We produce rice to do what? To feed the American people. If the American people are to be denied an adequate supply of rice in order to make prosperous the rice growers of Louisiana and Texas, then we have the question, which are we going to protect, the millions of people who eat rice or the few who produce it? We must decide that question, whether we think it is a good economic proposition that the food products must forever be protected at a price which tends to increase the cost of living and impoverish the American people in order that the producers of that article may be prosperous, or whether we would rather have an abundant supply at a low cost, no matter whence it should come, for the sustaining of the life of the people.

That is the question for us to decide and not the other question. But if by a little protection an industry might be started which, under the fostering care of a little governmental help, which, even though my predecessor Calhoun was led into that trap after the War of 1812 and repented it the balance of his days——

Mr. SHORTRIDGE. He was a protectionist.

Mr. SMITH. Taking that theory, I know that there is a fundamental truth there, and I am not going to gainsay it, because the old pump in front of the first school I attended was an illustration of how we are inveigled into this question of protection. The pipe of that pump——

Mr. WATSON of Indiana. Mr. President——

The PRESIDING OFFICER (Mr. WILLIS in the chair). Does the Senator from South Carolina yield to the Senator from Indiana?

Mr. SMITH. Just let me finish my statement and I think I shall anticipate what my delightful friend from Indiana is about to say.

That pipe ran down to an inexhaustible supply of water. The pump was all right; the pipe was all right; but the old valve was loose and you could go there and pump your arm off and never get a drop of water. However, if you took a quart of water and poured in while you were pumping until you started suction you could get water enough to water the whole county. But without the quart of water you never could get a flow.

There was a basic reason and philosophy in a new country just starting to say, "Let us get the quart of water to start the flow"; but most of them have gotten where they say, "Furnish the quart all the time and we will practically quit pumping." That is where the danger lies. The whole question to me is one of what would inure to the best interests of all the American people in enriching them and adding to their power and progress.

Mr. STANLEY. Mr. President, if the Senator will permit me, I think a certain President of the United States made a very famous remark to the effect that the fellow who furnished the quart was the first fellow to get it back.

Mr. SMITH. Yes; and then he got about four-thirds of the balance of the profits.

Mr. CARAWAY. I thought the Shipping Board had the quart.

Mr. SMITH. Perhaps so. I know the general public has not gotten it. Now, Mr. President, if my good friend from Indiana desires to interrupt me, I am glad to yield to him.

Mr. WATSON of Indiana. The Senator is very kind. I do not want to ask questions about the general policy of protection or a revenue tariff, because he and I would not agree about it and we could argue here all day without reaching any agreement. But the Senator made a statement a little while ago to the effect that he is not in favor of the doctrine of protection to the degree that it would support a monopoly. I do not think he is in favor of the doctrine of protection in any degree, from the third degree up to the thirty-third degree.

But I want to ask him this question: The question now under discussion is, as we familiarly called it in committee, "long-tail" cotton. I understood the Senator to say a while ago that pima cotton raised in Arizona does not in any respect or for any purpose compete with the sakellarides cotton raised in Egypt. Did the Senator make that statement? I could not hear distinctly whether he did or did not.

Mr. SMITH. According to the Tariff Summary of Information and the showing made, it is practically without competition with that particular form of Egyptian cotton to which the Senator refers.

Mr. WATSON of Indiana. The figures show that for all purposes in 1921 we used in the United States 159,000 bales of 500 pounds each.

Mr. SMITH. From what page is the Senator reading in the report?

Mr. WATSON of Indiana. I am reading from the report of the United States Tariff Commission, Tariff Information Series No. 27, the emergency tariff act, and long staple cotton, page 15. The Egyptian cotton in 500-pound bales consumed in 1921, in 12 months, was 159,196 bales, but of the American Egyptian cotton consumed there were 16,771 bales, or one-tenth the amount of the Arizona cotton consumed as compared with the Egyptian cotton.

Further analyzing the table, if the Senator has it before him, I will say that for tire fabrics 12,298 bales were used, while of the Egyptian cotton for tire fabrics 84,505 bales were used. I am assuming from the testimony given before the committee that the Arizona cotton is just as valuable for the purpose of making tires as the Egyptian cotton. Is that the information of the Senator?

Mr. SMITH. Yes.

Mr. WATSON of Indiana. If that be true, then why had we not better protect the American crop from competition with the Egyptian product raised at the lower price, so that we could produce and sell the whole quantity of 84,505 bales now produced in Egypt?

Mr. SMITH. The Senator is overlooking the fact that even though the Egyptian cotton can be used or may be used for tire fabric purposes, together with whatever cotton may be used or can be allowed to come from the Arizona cotton, we would still have not nearly enough——

Mr. WATSON of Indiana. That is quite true.

Mr. SMITH. Not enough to meet the demand, and in addition to that it will be found, under a table given in the same monograph, that Egyptian cotton, even for those purposes, was selling at a higher price in the American market than the Arizona cotton.

Mr. WATSON of Indiana. That is not the information adduced before the committee. However, I desire to ask the Senator this question. Of course, before the war, which afforded a very high tariff, as we know, we produced but very little of that cotton in this country. Under the prohibitive tariff afforded by the war, it was produced to some extent in the Salt River Valley. After the emergency tariff law was enacted we went on producing that cotton in Arizona. They did produce there a large number of bales. There is some dispute about the number. Mr. Heard said, I think, 105,000 bales, and Mr. Lippitt said 92,000 bales. But be that as it may, they actually did make a sale, for the purpose of making tires, of 16,771 bales in 1921, of cotton which is just as good, according to the Senator's own statement, as the Egyptian cotton for that purpose.

Mr. SMITH. Yes.

Mr. WATSON of Indiana. If we properly protect it, could we not produce enough cotton in Arizona to supply the other 84,505 bales, which were used for tire purposes in the United States; and, if we could do that, why should we not do it?

Mr. SMITH. Although the purchasers of that character of cotton were giving a higher price for it for the uses to which it is restricted, still they did not have enough of that cotton to meet the tire demand. Practically the entire amount of Egyptian cotton which is imported is used for a different purpose. No matter how much cotton may be produced in Arizona, there will be a demand for that Arizona cotton at the price of that particular kind of cotton, and it will not enter into competition with other cotton in the ordinary uses.

To illustrate: Thousands and thousands of pounds of American upland cotton are used to make rope and cordage, because conditions are such that there may come a time when the surplus on hand will justify its use; but the short-staple India cotton and the semitropical cotton are used universally throughout the world at a fixed trade price for those purposes, while the American cotton for the other purposes brings a higher price. The same thing is true in reference to what is called the Egyptian cotton and the Arizona cotton. It is also true of the upland long-staple cotton which is being produced in the Southern States. We get a price that is not competitive for the long-staple cotton which is produced in the South Atlantic States, because it fills a peculiar place. We could use some of that for tire manufacturing purposes, but it is cheaper than the Arizona cotton and ordinarily would not come in competition with it, because it does not possess the peculiar characteristics which adapt it to that purpose.

Mr. WATSON of Indiana. Now, may I ask the Senator from South Carolina a question?

Mr. SMITH. Yes.

Mr. WATSON of Indiana. The Senator from South Carolina I know is a great authority on the question of cotton cultivation. Former Senator Lippitt stated before our committee that, I should say, within the last eight or nine years, as I recall as to the "sak" cotton, as it is ordinarily called, which is produced in Egypt, and of which there are seven or eight varieties, those varieties have been constantly changing; that the seed apparently are becoming impure; and that the higher grades of sakellaridis cotton are becoming more and more inferior from time to time, so that they are hard put to it to keep up the high quality of the "sak" cotton. Is that true?

Mr. SMITH. My information is exactly to the contrary.

Mr. WATSON of Indiana. That was former Senator Lippitt's statement.

Mr. SMITH. My information is to the effect that Great Britain, which really fosters and is in control of that production, has used the same methods which our Department of Agriculture and our progressive farmers are using, which are designed to eliminate, as far as possible, the coarser and shorter varieties and to substitute therefor the longer grades. All through the South Atlantic and Gulf States to-day there is not perhaps 10 per cent of short-staple cotton grown—I mean the very short staple—as compared with merely a few years ago. It was found that the tensile strength of the longer grade was superior; that it was cheaper in conversion than were the shorter grades; that it would stand the twist of the loom better; and it could be made into finer counts and would make finer goods. So the whole tendency the world over has been to develop a better staple of cotton. My information is that in Egypt the cotton has adapted itself to a similar development to a certain degree, but beyond that point, of course, the development can not be carried. I wish to state to the Senator from Indiana in this connection, as a matter of information which has come to me, that in India on account of the climatic and soil conditions they have been totally unable to improve the staple of cotton.

I think that everyone familiar with cotton growing will agree that the Egyptian acreage for the growth of cotton has already

been exploited; that Egypt has reached her limit in that direction; that there is no more soil there adapted to the cultivation of this particular variety of cotton; that every acre which is available for the growth of this variety of cotton has already been devoted to its cultivation. Therefore, whatever competition may be feared from that source has already reached its maximum. In view of the fact that the Arizona cotton is bringing a higher price in the American market to-day than is any competitive article or any cotton which is an approximate substitute for it, there need be no fear at all that there will be competition from the Egyptian cotton with the Arizona cotton. The reason for that Senators must understand. I will to-morrow bring in the figures in reference to the matter, if the subject is not finally disposed of to-day, to show that about 80 per cent of the aggregate of the cotton produced in Egypt is consumed in Europe; so there is only a limited supply—about 20 per cent—which can come to America. In order to get it here we shall have to give a better price than Europe is giving for this superior cotton. When we take into account the fact that sea island cotton has passed almost out of existence and cotton manufacturers are now using a great amount of the Egyptian cotton in the manufacture of thread, the great monopolies such as J. & P. Coats, the Willimantic people, the sewing-thread people, using vast amounts of this cotton, and when we consider the quantity which is being consumed in Europe, the competition of the Egyptian cotton with the Arizona cotton, though it could compete, would be absolutely negligible. There is little of the Egyptian cotton sent to America, and the only way America can get it is to offer advanced prices over what Europe is giving. That is the situation.

Mr. WATSON of Indiana. Mr. President, I think what the Senator says is quite true as to the limit of the capacity of the production of Egypt; I have no doubt about that; but we did not produce any of this cotton before the war. We began to produce it because of the prohibitive tariff afforded by the war, which amounted to an embargo, and we produced up to 105,000 bales. The testimony is that if we have sufficient protection—and we never produced any of it until protection was afforded—for a sufficient length of time we can produce enough to supply the entire American demand.

Mr. SIMMONS. Mr. President, does the Senator mean——

Mr. WATSON of Indiana. What I want to get at is this: If the statement of former Senator Lippitt be true—and I am not an authority on this question at all; I merely listened to both sides, pro and con, before the committee—but, if it be true that the quality changes in Egypt from time to time and that they may not be able to produce for a long series of years the finer grade of sakellarides cotton that is used in cotton manufactures in the United States, would it not be the part of wisdom for us to develop the production of this cotton in our country and thereby employ our own labor, invest our own capital, and utilize our own resources? We have the great western section of the country; it is a part of the United States; we have got to do something with it; cotton can be cultivated in the great Salt River Valley and, I think, beyond, in the Imperial Valley to very great advantage, and perhaps to greater advantage than other crops.

Mr. SMITH. The Senator answered his argument, I think——

Mr. WATSON of Indiana. No.

Mr. SMITH. When he said that the staple of the cotton of Egypt is deteriorating to where it will not suit the purposes of the American manufacturer and the European manufacturer, and asked if it would not be the part of wisdom on our part to develop and supply the finer grades.

Mr. WATSON of Indiana. The very best we can under protection, but we can not do it in any other way.

Mr. SMITH. Why is protection desired when there is no competition, if we can produce a staple that has no superior but the Egyptian, and the Egyptian is deteriorating? The Senator admits that the supply even now is totally inadequate for the world's demand of that kind of cotton. So what have we to fear?

Mr. WATSON of Indiana. I have just shown my friend that for the manufacture of tires we did use in one year 12,298 bales of Arizona cotton and in the same year we used 84,505 bales of Egyptian cotton.

Mr. SMITH. That is true.

Mr. WATSON of Indiana. There is, then, competition.

Mr. SMITH. No; for this reason: The Egyptian cotton was used, but all the cotton of the Arizona type that was available for that purpose was also used.

Mr. WATSON of Indiana. I do not think so.

Mr. SMITH. I shall attempt to show that to be the fact.

Mr. WATSON of Indiana. The Senator and I disagree about that.

Mr. SMITH. They used whatever amount of Egyptian cotton they could get for that purpose at a higher price than the Arizona cotton, showing that there was no competition, but just a question of supply. The amount of Egyptian cotton for this country is limited; it can not be obtained in quantity; the great bulk of it is taken abroad.

Mr. SIMMONS. Mr. President——

Mr. SMITH. If the Senator from North Carolina will bear with me for just a moment, then I will be glad to hear from him. Even in the Southern States we get an enhanced price for long-staple cotton by the millions of bales. As the length of the staple is increased, the value of the cotton is enhanced. The Senator would not pretend to say that we ought to protect the universal upland long-staple cotton of the South because it brings a better price than the other. There is no competitor for it; there is no competitor for the Arizona cotton. When it comes to the question of supply and demand, the world will take every bale that Arizona can make for the specific purposes for which it is adapted and at such prices as the users and the producers may work out, but certainly of a higher value than the ordinary cotton.

Mr. SIMMONS. Mr. President, I simply want to understand the statement made by the Senator from Indiana. I understood the Senator from Indiana to say that we never made any of this Arizona long-staple cotton until it was protected.

Mr. WATSON of Indiana. We produced a little. It was not introduced in this country until in 1901, and the production amounted to but little until 1917, when it ran up to $6,000,000 and in 1918 to about $11,000,000 and in 1920 to about $20,000,000.

Mr. SIMMONS. But there was no protection on it then.

Mr. WATSON of Indiana. There was the embargo created by the war.

Mr. SIMMONS. Oh, the war embargo.

Mr. WATSON of Indiana. That was the best kind of protection, the same kind of protection which started the dye industry and 40 other industries which I might name.

Mr. SIMMONS. I think the Senator is mistaken in the statement that we did not produce a rather considerable quantity of this cotton before the war.

Mr. WATSON of Indiana. No; we did not. How much was it?

Mr. SIMMONS. I am not now in possession of the figures. Possibly the Senator from Arizona could tell us how much of this cotton we were producing before the war. My recollection is that we were producing a very considerable quantity.

Mr. SMITH. I have before me the figures of the production of Arizona cotton.

Mr. SMOOT. We were producing very little.

Mr. SIMMONS. Not as much as we are producing now, of course.

Mr. WATSON of Indiana. There were 375 bales produced in 1912, 2,000 in 1913, 6,000 in 1914, 1,000 in 1915, 3,000 in 1916, and then in the following years 1917, 1918, 1919, 1920, and 1921 the production ran up to 15,000, 36,000, 40,000, 92,000, and 37,000 bales. The Government reports the production to be 92,000 bales, while the representatives of the cotton producers in Arizona, including Mr. Heard and others, insist that they produced 105,000 bales. Of course, we will take the figures of the department and say that 92,000 bales were produced in the year given, whereas the production amounted practically to nothing or was a negligible quantity before the protection in the shape of an embargo afforded by the war.

Mr. SMITH. Mr. President, if the Senator is to be accurate, he must remember that from 1901 up to about 1907 and 1908 it was a question of pioneering. They had to understand the method of cultivation; they had to understand the method of irrigation and the selection and hybridizing of the seed. There has not been, according to the reports, a single year in which they could not dispose of the product at fancy prices.

Mr. WATSON of Indiana. I do not agree with my good friend about that. In 1920 they produced 92,000 bales. Why? Because they did not have competition from abroad; that is all. Then the competition set in after the war was over, and they began to produce less down there because of the foreign competition. According to my theory, I will say to my friend, all in the world that they need now is a protection in order to build up that industry to a point where the entire American demand will be met by the American supply.

Mr. SIMMONS. Mr. President, the Senator says the war was protection. I am not ready to admit that the war operated

as an embargo against the importation of Egyptian cotton into this country.

Mr. SMITH. It had nothing in the world to do with it.

Mr. SIMMONS. The war did operate as an embargo upon the importation of products from the Central Powers, but during the war we had communication with the Allies, and Egypt was controlled by the Allies.

Mr. SMITH. Not only did we have open exchange and interchange of goods, but we had what was known as the unified buying that supplied the Allies with their cotton. The Senator knows that we had one buyer who supplied the different ones with their raw material.

Mr. SIMMONS. There was no interruption of our transportation with Great Britain.

Mr. WATSON of Indiana. Mr. President, I call the attention of the Senator to the fact that for the year 1915–16 we imported 269,000 bales and for 1916–17, 259,000 bales. We got into the war, and what happened then? The importation ran down to 136,000 bales; then, the next year, 126,000 bales; then, as soon as the war was over, it ran up to 323,000 bales. So that it was interfered with, and our imports were not over 50 per cent of what they had been before; and when that 50 per cent from abroad was cut off we began to use the Arizona cotton to the extent of the 50 per cent which before we had been buying abroad. In other words, the prohibitive tariff afforded by the war built up the industry so that we did not import from abroad, and we did use what we made at home. Now, all that we need is to continue that condition, and we will continue to build up that industry and we will continue to use an American supply to meet an American demand.

Mr. SMITH. Mr. President, the Senator is saying that the war acted as a tariff. He must not overlook the fact that though there was no interruption of traffic between this country and Great Britain, her taking of American cotton incident to the war fell from about 4,000,000 bales to about 2,000,000 bales; but the price of the American cotton rose, even then, on account of the distribution of this cotton elsewhere. There was no interruption. The mills of this country had as free access to this cotton during the war as they had beforehand, and just after the war the price of the Egyptian cotton dropped and the price of the Arizona cotton dropped, and dropped just about in the same proportion.

Mr. WATSON of Indiana. My friend says there was no interruption. What about the submarines that swept our merchant marine practically off the sea? Here are the figures, though, showing where the imports of Egyptian cotton fell off from 269,000 bales to 126,000 bales, and in proportion as those imports of foreign cotton fell off we enhanced the production in the United States and used Arizona cotton.

Mr. SMITH. May I ask the Senator, then, why it was in 1920, when practically no Egyptian cotton was coming in here, that the Arizona cotton dropped to a point where they could not sell it?

Mr. WATSON of Indiana. Because, they claimed, of the competition.

Mr. SMITH. What competition?

Mr. WATSON of Indiana. From abroad.

Mr. SMITH. Why, there were practically no stocks of Egyptian cotton and very little coming in, and yet overnight the Arizona cotton dropped from something like $1 a pound down to where they could not get the cost of production.

Mr. WATSON of Indiana. Not only that, but the Senator must remember that the Arizona producer behind the prohibitive wall afforded by the war began the production, and then came the fear that that tariff would be taken away.

Mr. SMITH. Oh, Mr. President, I am not going into that field, but the trade does not take into account the fear of something that may happen a year from now. If these tire men wanted a fabric for their tires and knew they could get it, do you suppose that a fear that some Egyptian cotton might come in a year from now would break the price of the Arizona cotton? The demand was on. The supply was here. There was practically no Egyptian cotton on the market, in stock or in transit, because in 1921 the Egyptian acreage was cut, and the crop was almost a failure; and yet has Arizona cotton gone up?

Mr. SMOOT. Mr. President, will the Senator yield?

Mr. SMITH. I yield.

Mr. SMOOT. I think the real reason why the Arizona crop was not sold was this: The Arizona people claimed that it cost so much per pound to raise that cotton, and they did not propose to sell it for less than it cost. The Egyptian cotton came in here at a very, very much lower price on the basis of comparative quality and what the goods were to be used for—I will say to the Senator that I know what I am talking about——

Mr. CARAWAY. Then, the Senator from Indiana was wrong. The two authorities differ.

Mr. SMOOT. And, refusing to sell that product, they held it in Arizona; and, in fact, I take it for granted that the Senator from South Carolina knows that nearly every one of the people who were raising cotton down in Arizona went broke.

Mr. SMITH. So they did in the South; but the Senator here is contradicting what his colleague said. His colleague said that there was an embargo, and you got a big price.

Mr. SMOOT. On account of the war.

Mr. SMITH. On account of the war, and then they got afraid that this cotton would come in and put the price down.

Mr. WATSON of Indiana. Which they testified to before our committee.

Mr. SMITH. Very well; but here is the argument of the Senator from Utah now to the effect that the reason why it went down was because the Egyptian cotton did come in and was sold at a less price and not because they were afraid of it.

Mr. WATSON of Indiana. As far as it did come in; and the Senator's statement is exactly right and borne out by the facts.

Mr. SMOOT. And I will say to the Senator that I think the Senator from Arizona will bear me out in the statement that those people had borrowed upon that cotton more money than they could sell the cotton for at the time they were undertaking to sell it.

Mr. SMITH. All right. Now, let me take the Senator's argument. Just let me take his own argument.

Mr. SMOOT. I want the Senator to know the facts.

Mr. SMITH. All right. I want to take the facts just as the Senator gives them. Now, you have an embargo tariff on Arizona cotton. That shuts out your Egyptian cotton, unless it pays that tariff. There is the Arizona cotton for sale. The Arizona cotton, with your tariff, with the Egyptian cotton, according to one, not coming in, does not go up in spite of your tariff. If the supply of American cotton was inadequate, and by protecting it you will raise the price, because the supply is not adequate here, and you will get a good price, why did it not respond when you put on your emergency tariff, shut out the Egyptian cotton, and left the Arizona cotton to supply the demand? Why did it not go up?

Mr. SMOOT. It did respond up to about 7 cents a pound, but no more, and that was all there was in the emergency tariff bill.

Mr. SMITH. Precisely; and the short staple of the South responded 10 cents a pound. There was no tariff on that. There was no tariff on American cotton, and yet the short staple that was unprotected advanced more than the long staple that was protected.

Mr. SIMMONS. Has not the short staple advanced more than the long staple?

Mr. SMITH. That is the point I am making.

Mr. SIMMONS. Not only that which is imported but that which is produced in the United States.

Mr. SMITH. To be sure. I say that the short-staple cotton, without any tariff, open to world competition, has advanced more per pound than the Arizona cotton that is of a fine type has advanced.

Mr. SMOOT. There was more of a chance for an advance on the low-priced cotton than there was on the high-priced cotton. I think the Senator will admit that.

Mr. CARAWAY. Mr. President, as I gathered from the Senator from Indiana [Mr. WATSON] before he got scared and quit the argument, this cotton is being used for tires. Does the Senator from South Carolina know anything about the life of a tire? It was said that the manufacturer was afraid that some time in the future there might be competition from Egyptian cotton.

Mr. SMITH. The life of a tire?

Mr. CARAWAY. It must be manufactured and used within a comparatively short time or it dry rots.

Mr. SMITH. Yes.

Mr. CARAWAY. And yet that was the fear some years in the future, and it scared the Arizona cotton buyers, and they would not buy their cotton.

Mr. SMITH. In this connection, I want to read what the Tariff Commission said, after discussing this duty on this cotton:

> The only conclusion to be drawn from the above is that, with the exception of two months during the dull season just after the duty went into effect, the emergency tariff act has had no effect in increasing or even in upholding the price of Pima cotton. Even during the period stated the effect was slight, inasmuch as there were few purchases, and it is to be noted that American purchases of Sakellarides were most largely during the fall, when the margin of Sakellarides over Pima was much greater. It is clear that American spinners are willing to pay a much higher price for 1 1/16-inch Sakellarides than they are for 1⅛-inch Pima.

That is the very point I have been making—that the staple of the Egyptian cotton is superior to the staple of the Arizona cotton, and they are willing to pay a higher price to get the advantage of the better fiber.

In conclusion, I want to say this, Mr. President, and I shall take occasion, later on, to elaborate this point:

Any tyro, the merest schoolboy, must admit that something is radically wrong where a country such as America, with her genius for skilled production and invention, leading the world in the application of mechanical devices to the manufacture of the necessities of life, having a monopoly to the extent of 70 per cent of the actual production of all the cotton of the world and 90 per cent of that which is available for ordinary cotton cloths and yarns, with her mills in the cotton fields, can not compete with a country as highly civilized as she, whose labor organizations are as perfect as hers, whose condition of life and civilization are going pari passu with ours, 3,000 miles away. There is something wrong when she can come here, buy the raw material, pay the freight and the loss incident to the transportation, convert it into the finished article, bale it, with all the overhead and incidental charges, bring it back here, and sell it in competition with the American product.

Mr. CARAWAY. And, if the Senator will permit me, very largely we spin with water power, while they have to burn coal.

Mr. SMITH. Mr. President, taking the average freight cost from America abroad as being around $10 a bale, the incidental loss in the c. i. f. contract and 30 per cent off for tare, cost, insurance, and freight will easily put it up to $15 a bale. Then there is the cost incident to the return of the goods—I am speaking of freight alone—the cartons in which it is held, the paper in which it is wrapped, the boxes that encase it, the marine insurance and marine freight and the overland freight, and yet it is claimed that they can bring it back here and undersell the producer of the raw material! There is something radically wrong somewhere. I will guarantee the assertion that any mill man in America could prosper if you could guarantee him a profit equal to the freight on the raw material from here to Europe and the freight on the finished goods back, to say nothing of anything else.

Mr. President, I want to say that I for one want to see every pound of American cotton manufactured on American soil. I believe it is an economic waste, an economic loss, for us to send abroad in the raw state this priceless gift of the gods to the American people. We have the facilities, we have the ingenuity, we have every element that could enter into its manufacture. We have also the splendid profits which have grown out of the manufacture of this article, and I want to see the American manufacturer converting every pound of American cotton. There is no necessity for artificial aid in accomplishing that purpose. He has a monopoly of the raw material. He has more than a competitive chance in the devices for manufacturing. He has a control of both fundamentals in this proposition, and there is no reason why we should guarantee such enormous profits on the manufacture of a part as to discourage the manufacture of the whole, and it is for that I am pleading.

Mr. SIMMONS. Mr. President, before the Senator concludes I want to ask him one question, because the Senator is a great authority upon the subject he has been discussing with such enlightenment to the Senate this morning. Is it not a fact that of all the cotton goods we produce in this country only about one-fourth of them are confronted with foreign competition?

Mr. SMITH. I think it is in the neighborhood of 2 per cent, according to the best figures I can get.

Mr. SIMMONS. It is less than I thought it was. I thought the statistics bore out the fact that there was competition in about one-fifth of the manufactures of cotton goods.

Mr. SMITH. No; nothing as large as that.

Mr. SIMMONS. Let us assume the Senator is right, that the competition is very small, less than I supposed it was, that competition is almost entirely between this country and Great Britain, is it not?

Mr. SMITH. It is.

Mr. SIMMONS. And that competition is confined to the very finest quality of goods?

Mr. SMITH. That is correct.

Mr. SIMMONS. The quality of goods out of which this competition grows requires Egyptian cotton in its manufacture. That is true, is it not?

Mr. SMITH. That is true.

Mr. SIMMONS. Then we have this state of facts: We have no competition in our cotton manufacturing industry except as to a few per cent of the entire products of our mills; that competition comes almost entirely from Great Britain; the character of goods out of which that competition grows form the very finest quality of cotton fabrics; and the fine goods out of which the competition grows are produced by the use of Egyptian cotton. If we impose a duty of 7 cents or 15 cents upon Egyptian cotton, and our manufacturers must pay that duty, while our competitor, Great Britain, does not have to pay that 7 cents a pound, or the 15 cents a pound, if we shall impose that rate, then will we not be put at a great disadvantage in competing with Great Britain in this quality of goods, not only in our own markets but in all the markets of the world, and will not that disadvantage be the disadvantage of 7 cents a pound on cotton out of which the goods are produced, if we fix the duty at 7, or if we raise it to 15, then will not that disadvantage be measured by the extent of the duty we impose upon the Egyptian cotton? In other words, the raw material out of which we must make the extra fine quality of cotton goods we have competition in will cost us 15 cents a pound more than the raw material of our competitor will cost him, not only in this market but in the markets of the world, in that line of goods.

Mr. SMITH. Granting that the quality of the cotton is equal, the researches of the Tariff Commission have shown that the Egyptians produce a long-staple cotton about one-eighth inch longer than ours, even considering the maximum length of our cotton. Then you will have shut out from the use of the American mills a finer grade of cotton which they might get at competitive prices, and prohibit them from using it, giving the foreigner not only the advantage of a cheaper price but of a cheaper price for a finer quality than you can get in America.

Mr. SIMMONS. If we can compete at all with Great Britain under these new conditions we shall have to do it by imposing a higher duty upon the British products.

Mr. SMITH. Certainly.

Mr. SIMMONS. The general consumers of the country will have to pay that higher duty upon all our imports from Great Britain, so that if the Arizona cotton producer is benefited by the 7 cents a pound—and that is very problematical—it is certain that the consumers of this country will have to pay 7 cents more for all the manufactures they buy from Great Britain.

Mr. SMITH. Of that character of goods.

Mr. SIMMONS. Yes; of that character of goods.

Mr. SMITH. That is inevitable, Mr. President, no matter what the volume of importations composed chiefly, or in part, or wholly of this character of cotton may be. If this duty goes on, every importation which comes from abroad containing this cotton must of necessity reflect that duty, or you will have no protection, and as the Senator from North Carolina has said, in order to protect the few hundred thousand bales of Arizona cotton, you will impose a duty upon the importation of goods made abroad of this character to meet that tariff and impose it on the consumers of America.

Mr. SIMMONS. If we continue to import from Great Britain under these higher rates of duty the same amount of these fine goods we now import—and we will have to do it, because we do not make them, and can not make them——

Mr. SMITH. That is true.

Mr. SIMMONS. If we continue to import the same amount we now import, and the consumers have to pay these higher rates of duty, which would be necessary, then does not the Senator think that the American consumer of this class of goods would have to pay from five to ten dollars for every dollar of benefit the Arizona producer of long-staple cotton would receive?

Mr. SMITH. That is absolutely inevitable.

Mr. SIMMONS. Even if he gets the benefit of every penny it is proposed to levy upon his cotton.

Mr. SMITH. That is true.

Mr. WALSH of Montana. Mr. President——

The PRESIDING OFFICER. Does the Senator from South Carolina yield to the Senator from Montana?

Mr. SMITH. Certainly.

Mr. WALSH of Montana. I recollect that the Senator from Arizona, my esteemed friend, some time ago told us that the real difference between the cost of production of long-staple cotton in this country and in Egypt is not at all represented by the rate which he asks, but that it rises as high as 30 cents a pound. In that case if paragraphs 315, 316, and 317 remain in the bill, and the rate is fixed at 15 cents a pound on long-staple cotton, it will be the duty of the President of the United States to raise that rate to 30 cents a pound.

Mr. SMITH. Certainly.

Mr. SIMMONS. I did not catch what the Senator said.

Mr. WALSH of Montana. I recall that the Senator from Arizona told us some time ago, what I do not undertake to dispute at all, that the difference in the cost of production of long-staple cotton is not represented by 7 cents, nor even by 15 cents, but that it is as much as 30 cents a pound, and that is the difference in the cost of production. So I call attention to the

fact that if the rate is fixed by the Senate at 7 cents a pound, or even at 15 cents, under the operation of paragraphs 315, 316, and 317 it will be the duty of the President of the United States to raise the rate to 30 cents a pound, and the industries of this country, as indicated by the Senator, will be burdened by a duty not only of 7 cents a pound but of 30 cents a pound.

Mr. SIMMONS. Mr. President, what I said a little while ago about the increase in the price of these high-grade goods which we now import from Great Britain, most of which we do not make ourselves, in addition to the amount the increase will force the American consumer to pay on the imported goods, it will not be confined to the imported articles at all, but, as we know very well, the American manufacturer of goods at all comparable with them would advance his price to the same extent as the British price was advanced, and the American consumer would be again mulcted as a result of the increase in the price of the imported article.

Mr. SMITH. Mr. President, just let me state, in this connection, that the tariff investigations show that in the goods of which we have the largest importations from abroad there is no competition in this country at all. We have not established the manufacturing processes, and it has not been told why we put such an exorbitant duty upon those goods which are really noncompetitive.

Mr. SMOOT. Mr. President, I think if the Senator from Montana will reconsider the statement he has just made, he will want it modified. He said that there would be 30 cents a pound on cotton if the President exercised his power under the bill to fix a rate representing the difference between cost of production here and abroad.

Mr. WALSH of Montana. Of course he is limited by the 50 per cent provision.

Mr. SMOOT. Therefore it could not be 30 cents. If it were 7 cents, he could fix a rate of 10½ cents, if he exercised the power given him.

Mr. WALSH of Montana. If it was 15 cents, he could fix the rate at 22½ cents.

Mr. SMOOT. Yes; but not 30; and I do not think for a moment it will be 15 cents.

Mr. WALSH of Montana. If it is fixed at 7, of course the Senate must consider that it will have to be raised to 10½.

Mr. SMOOT. No; it will not have to be raised to 10½.

Mr. WALSH of Montana. Why not?

Mr. SMOOT. Simply because the question arises, when the investigation is made, as to whether there would be a justification for it. When the Senator from Arizona spoke conditions were quite different from the conditions of to-day.

Mr. WALSH of Montana. That is to say, it may be shown that 7 cents represents the difference in the cost?

Mr. SMOOT. Absolutely.

Mr. WALSH of Montana. Of course; but I am assuming it does not.

Mr. SMOOT. I think the Senator from Arizona himself will admit that conditions have greatly changed since he made the speech in which he said that would be the difference.

Mr. ASHURST. That is quite true; but I wish to get the floor as soon as I may.

Mr. WALSH of Montana. I understand the Senator from Arizona to contend that at this time it would take at least 15 cents to represent the difference in the cost of production here and abroad.

Mr. ASHURST. Yes; that is my contention.

Mr. SMITH. Mr. President, I think every student of the possible effect upon the American purchasing public of the imposition of this duty—and every Senator here ought to have studied it—will see, by looking at the table of imports of cotton goods from abroad, that the major part of those imports are composed of this very character of cotton, and they are considerable. It is interesting to note that the American manufacturer is not engaged in producing the major part of these imports.

The result of that duty is already reflected in a paragraph in the pending bill, paragraph 905a, in which, in addition to the duties imposed in paragraphs 901, 902, 903, and 905 it is provided that "there shall be paid on all yarn finer than No. 60, and on all yarns finer than No. 60 contained in threads and cloth," an additional duty of 10 cents per pound.

Now, mark you, they have imposed a duty of 10 cents a pound on all goods above 60, and the vast quantity of such goods are not restricted to these kinds, but the 10 cents a pound applies because some of them may be used in the production of 60. So immediately we are confronted with the fact that all goods produced in America, as well as those imported from abroad that have any goods in which this product enters at all, shall bear that extra duty.

Now, Mr. President, as a last word, I am convinced that my friends in Arizona are in the same condition we are in in South Carolina. They are suffering not for the lack of a tariff or for the want of a tariff but for a proper market condition. Mark my word, you have already tried the emergency tariff and got no relief. You can try this tariff, and the only relief you will get will be the pleasure of producing more cotton for the purpose of furnishing a higher tariff for the manufacturers.

Mr. SMOOT. Mr. President, I ask unanimous consent that when the Senate closes its session to-day it recess until 11 o'clock to-morrow.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. ASHURST. Mr. President, I would not address the Senate now as I have heretofore discussed this subject, but after such a well-informed person as the Senator from South Carolina [Mr. SMITH] has spoken, it is incumbent upon me to say something in reply. While we may not agree with the Senator from South Carolina, we can not ignore him.

The diamond pivot around which my remarks this afternoon will revolve is a sentence found on page 10940 of the proceedings in the Senate Monday, July 10 last, in a speech by the Senator from Arkansas [Mr. ROBINSON], a Senator whose strength and courage are recognized by all. Speaking of the tariff bill he said:

> If the policy that is to be written into our tariff laws is a policy of protection, I do not find myself justified as a representative of the people of the State of Arkansas in voting to discriminate against the products of that State.

Mr. President, no language that could be employed could more aptly describe the duty of Senators.

It is necessary to clear away some underbrush that is obscuring our way in order to understand the terms in the nomenclature of this cotton about which we are now talking.

The long-staple cotton grown in the Southwest is called American-Egyptian cotton, it is called Pima cotton, and it is also called Sakellarides cotton. So when I say Pima cotton I mean American-Egyptian or Sakellarides cotton.

In 1920 there were produced in the United States in the irrigated valleys of the Southwest 103,000 bales of American-Egyptian or Pima cotton.

The imports of Sakellarides cotton from Alexandria, Egypt, into the United States in the year closing August 1, 1920, was approximately 340,000 bales. The average import of this cotton for the four previous years was 120,000 bales.

It is conservatively estimated that the demand of the American manufacturers for this type of cotton, which is used principally in manufacturing cord-tire fabrics, airplane and balloon cloth, mercerized and fine cotton goods, such as dimities, lawns, voiles, fine shirtings, handkerchiefs, and threads, will average about 250,000 bales annually.

The cotton producers of the Southwest are asking for at least a sufficient duty to equalize the difference in labor and transportation costs between the wages paid the peasant laborer of Egypt of from 24 to 36 cents per day and the daily wage paid agricultural labor in the Southwest of from $2 to $3 per day. The transportation cost from Alexandria, Egypt, to New England manufacturing points is $10 less per bale than the lowest rate from Phoenix, Ariz., in the center of the American-Egyptian district, to the same manufacturing points. The difference in labor cost is most vital, as approximately 60 per cent of the cost of producing this specialized long-staple cotton is for labor.

In considering the need for protection for this developing American industry, encouraged by five administrations and assisted by appropriations from every Congress since 1904, four factors should be considered:

First. Is the production within the United States of long-staple cotton of superior quality in sections proven ideal for its growth an essential national industry?

Second. Will the failure to protect long-staple cotton by reasonable tariff, sufficient to equalize the difference between the cost of the present labor of Egypt and the American agricultural labor and the difference in transportation costs, destroy the production of American-Egyptian cotton in the United States?

Third. Is it not probable that with the protection asked for we can produce in the United States within a few years, in regions proven thoroughly suited to its growth, all the long-staple cotton of this type needed by American manufacturers?

Fourth. If this industry, developed with the assistance of the Department of Agriculture, is allowed to perish through lack of the reasonable tariff protection asked for, will not our American manufacturers, needing this class of cotton, eventually pay

such a price for it as foreign nations controlling production of it may dictate?

I confine my remarks directly to these four points. First, is the production of this type of cotton an essential national industry?

I have heretofore spoken of the valuable work carried on by the Government since 1902 in developing the Pima cotton. This work covered scientific studies in Egypt, the establishment in 1906 of plant-breeding gardens in Arizona, the establishment of thorough Government standards now recognized throughout the world, an organized system of Government inspection of standardized selected seed, and a study of the most practical uses of this cotton by American manufacturers, and, finally, owing to its extreme strength, combined with lightness, its successful use after the most exacting and careful tests by the Government for our Air Service both in airplane wings and balloon cloth.

While Pima cotton has proved satisfactory in these tests, they are now working to improve methods of cooperation, specifically in marketing, and through more careful land selection, improved methods of cultivation, cleaner picking, and better ginning and baling to still further improve the standard quality of this cotton.

It is interesting to note that the Government in developing this long-staple industry in the Southwest was but reviving an ancient industry, practiced by the prehistoric peoples in the southwestern valleys.

Owing to the encouragement of the Government, aided by the conditions created during the war, and the greatly increased demand by cord-tire manufacturers the production of Pima cotton in the Southwest has grown from 3,331 bales in 1916 to a production in 1921 of 103,000 bales. The wisdom of the Government in encouraging this new southwestern industry has been shown by the fact that during this same period the inroads of the boll weevil have reduced the production of the famous sea-island cotton, almost identical with Pima in length of fiber, from 117,559 bales in 1916 to a production in 1920 of but 1,725.

Owing to the difficulty experienced during the war by the American manufacturers of cotton fabrics in obtaining Egyptian cotton, the use of American-Egyptian cotton, especially by the tire manufacturers, largely increased, and there was also a steadily increasing use by fine spinners when assured they could obtain this exceptionally long and uniformly running cotton in quantities; and an opportunity was given to prove the exceptional value of this cotton not only in airplane and balloon cloth but in other fine fabrics.

At the outbreak of the war the farmers of the Salt River Valley in Arizona were nearly ready to abandon the production of this long-staple cotton, because the low price received, below actual cost of production, was entirely out of line with its real value. The prices brought about by the war, however, encouraged the farmers to continue production, with the result that a really valuable national industry was established. In other words, the American-Egyptian long-staple industry was practically saved by the submarine.

Reference has been made to the various uses of this cotton; the bulk of it goes into what is known as cord-tire fabrics, made from No. 22 counts of yarn. Another use is in fine ginghams, made from No. 30 to No. 50 yarns; fine shirtings, made from Pima cotton of No. 60 to No. 80 yarns; while finer goods, such as voiles, dimities, stockings, mercerized goods, and fine fabrics mixed with silk, are made from No. 110 to No. 130 yarns.

A particular factor, to which attention should be given, is that Pima cotton is particularly well adapted to the various manufacturing processes, such as mercerizing, dyeing, and bleaching.

For use in all these fabrics American-Egyptian cotton has been found to be practically unexcelled and for use in airplane cloth made of No. 80 yarns it has been found nearly as satisfactory as the best of Irish linen. It is an interesting fact that cord-tire fabric made from uncombed American-Egyptian cotton shows a greater strength than fabric made from combed Sakel, an exceedingly fundamental point to the American tire manufacturer. The elasticity is also unexcelled. In the past a comparatively small proportion of fine cotton fabrics, mercerized or otherwise, has been made in the United States. The production of this class of goods is largely controlled by Great Britain; but there is every reason to believe that with the continuance in America of the production of American-Egyptian cotton our own spinners will largely increase their manufacture of fine goods, thus affording a stabilized demand for American-Egyptian, even should the demand for use in automobile tires decrease.

Egypt produces annually about 700,000 bales of Sakel cotton, sold to the manufacturers of Europe and America, and principally woven into tire fabrics.

The cost of production in 1921 in the Southwest, based on a yield of one-half bale per acre, and a basic wage of $2 per day for agricultural labor, showing a cost to the producer of American-Egyptian Pima long-staple cotton, delivered at New England manufacturing points, of 34.83 cents per pound.

The production cost of Sakel cotton, almost identical with Pima, shipped from Alexandria, Egypt, and laid down at New England points, for this season's production, is estimated at 21.6 cents per pound.

At present Egypt produces annually about 700,000 bales of this type of cotton, America produced 103,000 bales, Peru about 5,000, the Sudan about 10,000, and Nigeria and Uganda in central Africa about 2,000 bales each in 1920. The world's demand for fabric made from fine cotton is increasing. England with a keen sense of trade advantage has definite constructive plans under way through her control of barbarous and semicivilized countries to control the long-staple cotton production of the world; and tiis manifest that if we allow this American industry to perish, our American manufacturers will eventually pay such a price for this essentially needed cotton as the nation or nations which control its production may demand. With remarkable vision England is laying her plans for obtaining her raw materials for the benefit of her manufacturers in those equatorial lands where native labor is unlimited and the price of production is not a factor. In his testimony before the Committee on Finance in December, 1921, Mr. D. B. Heard, of Phoenix, Ariz., said, amongst other things:

> Recently I had the opportunity of conferring in England with the very able manager of the English Cotton Growing Association, who with the cooperation of the Government is spending £150,000 per annum in the development of new fields of cotton production. Mr. Himbery's report to the World Cotton Conference on this remarkable development is attached hereto under the head of "Exhibit I." This organization brought about the production in Nigeria, Uganda, Sudan, and Mesopotamia last year of 80,400 bales of cotton, of which approximately 20,000 were long-staple cotton of the type referred to in this statement, and the estimate of production this year in the same countries is 146,000 bales, with an ultimate production of nearly 3,000,000 bales.

In a statement prepared in 1920 by Mr. Schofield, of the United States Department of Agriculture, on the production cost of American-Egyptian or Pima cotton in the Southwest he shows an annual production cost last season of 52⅞ cents. Sakel cotton from Egypt's crop of 1920 was freely offered during the past summer laid down in New Bedford and other New England points for 26 cents, which explains the reason for the recent paralysis of our American long-staple industry. While production costs in the Southwest have greatly decreased since Mr. Schofield's estimate was made, it is manifest that, even at the present low scale of wages, which is less than what could be justly considered normal, we can not produce our cotton and lay it down in New England manufacturing districts at a less price than 35 cents. With Egypt able to lay this cotton down in New England for 26 cents, it is evident that if the 20 cents per pound tariff asked for is added to the present price of Sakel Egyptian cotton, the American grower will make but a fair profit above his cost of production. Secretary of Agriculture Wallace in his recent report to the Ways and Means Committee recommended a minimum duty of 10 cents per pound on this type of cotton, and the situation now existing, as outlined above, would seem to justify the duty of 20 cents per pound asked for. It is hoped through this tariff legislation to stabilize the price of American-Egyptian cotton at from 40 cents to 45 cents per pound, thus justifying the continuation of the industry.

As the Senator from Utah stated as to the figures which I gave on the floor of the Senate about a year ago, those figures would not be appropriate at this time, because conditions have somewhat changed; but from all of the information we are able to obtain, the difference to-day in the cost of production, where it was 26 cents a pound in 1920 is now 15 cents a pound, and my colleague [Mr. CAMERON] has tendered an amendment proposing to increase the rate brought in by the committee from 7 cents per pound to 15 cents per pound, so as to equalize the difference in the cost of production.

It might interest Senators to know that in the early part of 1920 on a bale of cotton shipped from Alexandria to the New England mills the freight was $10 per bale less than the freight upon a bale of cotton shipped from Phoenix, Ariz., to the same point.

Now, as to the kinds of cloth made from this cotton it is called luxurious or character cloth. I have here some large samples of character cloth made from Arizona-Egyptian, or Sakellarides cotton, manufactured, sold, and guaranteed by the Textile Industrial Institute of Spartanburg, S. C.

Mr. FLETCHER. Mr. President, may I interrupt the Senator?

Mr. ASHURST. I yield.

Mr. FLETCHER. I would like to inquire of the Senator what has been the effect of the imposition of a tariff duty of 7 cents a pound on cotton produced in his State? Did it cause the importations from Egypt to diminish or cease entirely, or what has been the effect?

Mr. ASHURST. Mr. President, I shall try to give the Senator the information because that is a pertinent question. I think I have the figures here from the emergency tariff information, Series No. 27, covering long-staple cotton.

Beginning with the year 1913, the United States received from Egypt in 1913, 124,634 bales; in 1914, 89,726 bales; in 1915, 176,974 bales; in 1916, 185,497 bales; in 1917, 134,891 bales; in 1918 it dropped to 75,865 bales; and in 1919 increased to 95,262 bales. Then came the disastrous year of 1920. Egypt exported to the United States 275,617 bales in 1920, and destroyed the value of the long-staple cotton crop in the Southwest. During the year 1921, 46,423 bales were imported; in other words, in 1921, 46,423 bales were imported and the year before 275,617 bales were imported; so that practically one-sixth was imported in 1921 that came in in the year 1920.

Mr. FLETCHER. The Senator, then, argues that the imposition of the duty under the emergency tariff act caused the decrease in importations?

Mr. ASHURST. Mr. President, the Senator from Florida is entitled to a frank answer, and I am going to deal with him frankly. Senators do not agree; all I can do is to state the ultimate facts. The Senator knows that in 1920 came a general debacle; mills themselves closed; and I will not attribute to the tariff the fact that we imported only one-sixth of the cotton in 1921 which we imported in 1920; I would not say that was wholly due to the tariff; but the 7 cents per pound duty of the emergency law helped us just 7 cents per pound.

Mr. FLETCHER. Just one other question or two along that line. Does the Senator from Arizona feel that the imposition of a duty upon the long-staple cotton would be a revenue-producing tariff?

Mr. ASHURST. Yes.

Mr. FLETCHER. As well as affording indirect protection, it would produce revenue?

Mr. ASHURST. Yes. If I were in charge of a tariff bill or if I were the chairman of the Committee on Ways and Means of the House of Representatives or the chairman of the Committee on Finance of the Senate, the first article I should select on which to impose a duty would be long-staple cotton. I would be entirely unembarrassed in doing so by the fact that long-staple cotton is produced in my State, but I would impose a duty because it is a splendid revenue producer.

Mr. FLETCHER. May I ask the Senator one other question, Mr. President?

Mr. ASHURST. I yield to the Senator.

Mr. FLETCHER. I feel a considerable interest in this question, because Florida produces about one-third of the sea-island or long-staple cotton, as we call it, which is produced in this country. I think South Carolina, Georgia, and Florida produce the sea-island cotton of the country. Of course, there is no real need of importing cotton from Egypt or anywhere else. We in this country can produce all of the cotton and all the kinds of cotton that are needed, and we do, of course, export large quantities. I have the impression—and I will ask the Senator from Arizona whether it conforms to his experience or observation or judgment in the matter—that the importation of Egyptian cotton takes place at the instance of manufacturers but not because they are obliged to have the Egyptian cotton. Long-staple cotton is an expensive cotton to produce; it is a 12-months' crop really. Its producers have to pay very high wages to gather it; it is more expensive to gin and prepare for market than is the short-staple cotton; it costs all the way from 30 to 50 cents a pound to produce it, and in some instances, perhaps, more; but when the long-staple cotton producer offers his cotton to the manufacturer, the manufacturer will say, "I will give you 20 cents a pound for that cotton." "Well, but," the producer says, "it is worth 40 cents." And it is worth 40 cents. But, just to illustrate, the manufacturer will say, "But that is the market price now; I will pay you 20 cents a pound; and if you do not want to take that, I will import some Egyptian cotton in order to supply my demand." Is it not a fact that the importation of Egyptian cotton is used as a club over the producer of long-staple cotton in this country to beat down the price of the producer?

Mr. ASHURST. I will try first to answer the first part of the Senator's question.

The boll weevil has exterminated the sea-island cotton.

Mr. FLETCHER. That is true to a considerable extent.

Mr. ASHURST. If it were not for Arizona and California, in 1920 we would have had but 1,700 bales of long-staple cotton; those two States—Arizona and California—came to the rescue of this country.

When our cavalrymen of the clouds in the World War, like eagles with victory in their beaks and the American herald in their talons, were soaring it was the fabric from Arizona-Egyptian or Pima cotton that made the aviators feel secure. With airplane wings made of this cotton he knew he had a steed with lungs of steel and wings of finest fabric.

Mr. FLETCHER and Mr. STANLEY addressed the Chair.

The PRESIDING OFFICER. Does the Senator from Arizona yield; and if so, to whom?

Mr. ASHURST. I yield first to the Senator from Florida.

Mr. FLETCHER. The Senator is correct about the ravages of the boll weevil, but we hope in some way or other to manage to produce a certain amount of long-staple cotton from time to time, at any rate, and I think there has been an increase in the acreage in Florida this year as compared to last year. My observations, however, had not so much reference to Florida as to the whole production, including that of Arizona as well, of long-staple cotton. My question was whether or not the manufacturers did not use the Egyptian cotton as a club to beat down the price of long-staple cotton in this country, because it came in free, and they could always say, "You will either take our price for your product or we will bring in cotton from Egypt."

Mr. ASHURST. Exactly. Here is a manufacturer in South Carolina or North Carolina, and here is a manufacturer in New England. The fact that one lives in New England and the other in the South makes no difference; they are going to get their raw material as cheaply as they may. I do not feel any resentment against the spinner of South Carolina or of North Carolina or of Massachusetts because he buys in Egypt; he wants cheap raw material, and he is opposed to a tariff on his raw material. If he can send to Egypt and get the cotton at 26 cents a pound, I do not blame him. That is a part of human nature.

Mr. FLETCHER. Mr. President, may I ask the Senator another question there, namely, whether this Egyptian cotton really competes with the sea-island cotton? In other words, the long-staple sea-island cotton is used very largely in making mercerized silk. They make the cotton cloth, and give it a caustic bath which gives it the silky texture and appearance, and then it is used for making automobile tires, and so forth. Whether this Egyptian cotton really competes or not, my contention is that the threat of importing the Egyptian cotton is used as a club to beat down the price.

Mr. ASHURST. I will say in reply to the Senator that it is comparable. I could say, but it would have a tinge of immodesty, that it is superior to the Egyptian cotton and superior to the sea-island cotton. I will not say that, although I have proof that indicates that; but let me call to the attention of the Senator what is made out of the Egyptian cotton, and he will perceive at once that they are only the most luxurious cloths. I will read them:

Sateen, plyvoile, semivoile, dimity, transparent organdy, cotton mull, sheer nainsook, French lawn batiste, chiffon mull, poplin, warp print, fine shirting poplin, fancy piqué vesting—

Arizona cotton makes those cloths that the opulent people use and need, yet Senators hesitate about putting a duty on that which they will pay and never miss the price.

Fancy striped voile, sateen brocade, thread-stripe organdy—

Mr. FLETCHER. Is that made out of the Egyptian cotton?

Mr. ASHURST. No; that is made out of the Arizona cotton. What I am enumerating are fabrics made from the Arizona or California cotton, which, as I repeat, is comparable to your sea-island cotton and comparable to the Egyptian cotton. Listen:

Fancy leno voile, Jacquard, clip spot lawn, fancy swivel voile.

Mr. President, being such a poor French scholar, indeed having such a paucity of French, I shall not read the other names of these luxurious cloths made from this cotton.

Mr. FLETCHER. The Egyptian cotton competes with it, does it not?

Mr. ASHURST. The Egyptian cotton competes with it; yes.

Mr. OVERMAN. Mr. President, are not all these cloths made out of our cotton—the sea-island long-staple cotton?

Mr. ASHURST. This [indicating] has been handed to me with the label on it. The gentlemen engaged in producing cotton in Arizona came into my office last summer, some of them wearing clothes made out of the Pima cotton; they handed to me these specimens of this luxurious cloth, and they are men of truthfulness and high character. One of them was a strong Democrat; another was the editor of a leading Republican

paper; and they said that these luxurious cloths were made out of Pima cotton grown in the Salt River Valley.

Mr. FLETCHER. Mr. President, the question in my mind was whether the Egyptian cotton really could be used to produce the same results.

Mr. ASHURST. Of course, the ingenuity of our own American manufacturers is such that they are able at times to produce some sensational cloth that might not be produced in England or elsewhere.

Mr. OVERMAN. Mr. President, does the Senator know where the goods are manufactured that are made from this particular cotton, of which only about 130,000 bales are produced in this country?

Mr. ASHURST. This is taken from Arizona.

Mr. OVERMAN. I understand, but where are the mills located that produce it?

Mr. ASHURST. It says here:

Character cloth: Trade-mark registered March 9, 1920—

I am only reading what it says—

manufactured, sold, and guaranteed by Textile Industrial Institute, makers of character cloth, Spartanburg, S. C.

Just as the Senator, a great lawyer, presents testimony as it is brought in to him and as the witnesses state their case, I offer these samples.

Mr. President, here is some cotton which has been "stapled"; and I see Senators sitting about here who know all about cotton, Senators who were raised in the cotton States, their careers having been made and well made in cotton States. I labor, as you perceive, under some degree of embarrassment, because this is a new industry in my State. It is a new industry in the State of my affectionate friend the Senator from California [Mr. JOHNSON]. It has grown up suddenly.

Here is 1⅛-inch cotton. This amendment would not cover that.

Mr. SMOOT. The amendment would cover one and a half; it covers one and three-eighths and above.

Mr. ASHURST. Here are the staples: One and a half, one and nine-sixteenths, one and five-eighths, one and eleven-sixteenths.

Mr. STANLEY. Mr. President——

Mr. ASHURST. I yield.

Mr. STANLEY. Do the growers of long-staple cotton work more or less than 12 hours a day in Arizona?

Mr. ASHURST. The growing of long-staple cotton is a difficult task. I do not know as much as the Senator does about it, but I know enough to know that the growing of upland or short-staple cotton entails a considerable amount of care, prudence, and work, but the growing of long-staple cotton is even a more technical, difficult business.

Mr. STANLEY. Mr. President, that was not what I asked. I simply inquired whether the growers of this long-staple cotton work eight hours a day, as industrial labor usually does in mills and mines?

Mr. ASHURST. I will discuss that——

Mr. STANLEY. In my country the farmers work 12 hours a day on an average. The point I am making—I will be perfectly frank with the Senator—is that we produce cotton, some short-staple cotton, tobacco, corn, wheat, oats, and a thousand and one other things, and our farmers work 12 hours a day.

Mr. ASHURST. You are fortunate—only 12 hours a day.

Mr. STANLEY. I was going to say, since the Senator was speaking of working 12 hours a day in Egypt, that farm labor works 12 hours a day in my country at the lowest, and from sun to sun as a rule.

Mr. ASHURST. Let me tell the Senator—indeed, I can not tell the Senator from Kentucky anything historically, because while the other side may be proud of HENRY CABOT LODGE as a historian, we have equal pride in the Senator from Kentucky and others here. As to history, since the Senator has brought that up, let me tell him that when Cambyses went into Egypt in 525 B. C. he there found the Egyptian, the physically most perfect man the world ever saw.

Mr. SIMMONS. Mr. President, the Senator must remember that the cotton which the Egyptian produces is the finest in the world and sells for more than any other produced anywhere else in the world, and that is the cotton with which we have to compete.

Mr. ASHURST. The Senator's familiarity with cotton is great. He asserts that the Egyptian cotton is the finest in the world.

Mr. SIMMONS. The point I am making is that we compete with the price at which the cotton is sold and not with the wage which the laborer who makes it receives. The point of competition is the price, and the price of the cotton that the Egyptian makes and sells in all the markets of the world is tremendously higher than the price of any cotton produced anywhere else. You are producing long-staple cotton now out in your State with a protection of 7 cents a pound, and yet this Egyptian cotton is selling right here in the American market to-day for 10 or 15 cents a pound more than your cotton is selling for.

Mr. ASHURST. The Senator dogmatically asserts that.

Mr. SIMMONS. I am not asserting it dogmatically.

Mr. ASHURST. Well, the Senator asserts that. He says that is the fact. Now, why does the Egyptian cotton sell higher?

Mr. SIMMONS. It is my understanding that that is a fact.

Mr. ASHURST. A university professor in Cologne says that the Pima cotton is the best in the world. I will read the statement. It only came out this morning and I have not had a chance to read all of it.

Mr. SIMMONS. Suppose it were admitted that it was the best in the world. It still does not sell as high as the Egyptian cotton, and I think I can tell the Senator one of the reasons.

Mr. ASHURST. I wish the Senator would.

Mr. SIMMONS. One of the reasons is this, that it is not a question of the length of the staple at all. Of course, you want a long staple, but the length of the staple of the Egyptian cotton is not the thing that gives it the great advantage over other long-staple cotton. If we produced here a cotton of exactly the same length of staple it would still not sell for as high as the Egyptian cotton, because the Egyptian cotton for some reason or other known to Providence and not to us is considered by all manufacturers superior to any other cotton of the same length staple produced anywhere else in the world.

It is just like the Turkish tobacco. We have tried hard in this country to raise a tobacco that would compete with the Turkish tobacco and which would be of the same value in blending with other tobaccos as the Turkish tobacco. We have used the seed, we have tried to find a climate as near like that of Greece and Macedonia and other sections where it is grown in Europe, but we have never succeeded yet. There is something in that tobacco which must be the result of the climatic conditions there which gives it a flavor, an aroma, that is entirely different from anything that can be produced anywhere else.

It is the same with reference to cotton. I was talking with an expert about it only this morning. He said it was not a matter of the length of the staple, that it was an easy matter to raise cotton in this country of the same length of staple as the Egyptian cotton, but he said there was something in the Egyptian cotton, something of value that was indescribable, but which the manufacturers thoroughly understood, which did not exist in our long-staple cotton. I am merely telling what an expert of great authority told me.

Mr. ASHURST. I am glad to have that contribution.

Mr. SMOOT. Mr. President——

Mr. ASHURST. I yield to the Senator from Utah.

Mr. SMOOT. I just want to state why the Egyptian cotton is worth more.

Mr. ASHURST. I would be glad to have the Senator tell me why.

Mr. SMOOT. The fiber of the Egyptian cotton is finer than the fiber of any other cotton known in the world and they can spin a finer yarn with the Egyptian cotton than with any other cotton in the world.

The luster on the Arizona cotton is just as good as the luster on the Egyptian cotton, but if you put the fibers of the two cottons under a magnifying glass it will tell the story immediately, and the Senator from North Carolina was right when he said that we can not account for it. When you put Egyptian cotton upon the machinery and go into the spinning room and try to draw a thread of 150 or 200 the test will come. That is where you find the advantage of the fineness of the fiber of the Egyptian cotton.

Mr. ASHURST. Mr. President, that may be true——

Mr. SMOOT. I will say to the Senator that shirtings like the samples he has just shown do not require an extra fine thread to make, and the Arizona cotton is just as good as any cotton grown in any part of the world for that purpose.

Mr. SIMMONS. Just as the short staple is just as good for certain other grades of cloth as cotton grown anywhere in the world. But this is true—and the Senator from Utah must admit it—that wherever the very finest grades of goods are to be produced the Egyptian cotton is absolutely essential to their production.

Mr. SMOOT. Wherever there is a thread to be spun above 120 you have to have the Egyptian cotton to do it successfully, just as you have to have Egyptian cotton, or a cotton with a staple of 1⅜ inches or above, to make a thread finer than 60 or 66.

Mr. SIMMONS. That does not imply that the long-staple cotton grown in various sections of the States, and especially in Arizona, is not exceedingly valuable in the manufacture of other cloth.

Mr. SMOOT. It is just as good as any cotton in the world.

Mr. ASHURST. Here is my able friend the senior Senator from North Carolina——

Mr. SIMMONS. I am not trying to embarrass the Senator.

Mr. ASHURST. The ability of the Senator embarrasses me. I know he would not try it willfully. His ability does it; his keenness of argument and suggestion is embarrassing to any Senator, and there is a double team against me. After he gets up and announces that the Arizona cotton is not comparable to the Egyptian cotton; that the Arizona cotton lacks that indefinable essence, and does not quite measure up to the Egyptian cotton, up jumps my friend from Utah, before whose great armory of facts I always bow, and they double-team on me and say, "The Arizona cotton is out of court."

But I have witnesses here, and I will read their statements, so that Senators may see whether the Arizona cotton is inferior to the Egyptian cotton.

Mr. SIMMONS. The Senator misunderstood me altogether. I did not mean that the Arizona cotton was not as good as any cotton in the world for the manufacture of certain classes of goods, but I did say that there is a certain other class of high-grade goods in which that cotton can not be used. If you use it you get an inferior product, and to get the high-grade cloth it is absolutely essential that you use the Egyptian cotton, and in that use there is no comparison between the Egyptian cotton and the Arizona cotton.

Mr. ASHURST. Very well.

Mr. SMOOT. I want to say to the Senator that he certainly has not a technical knowledge of the manufacture of goods, or he would not have laid to my door any attempt whatever to "bawl" him out of court. I simply state facts as they exist as to the difference between the two cottons. I did say that up to the spinning of a thread of 120, the Arizona long staple is as good as any cotton in all the world, and the finish of it is just as good as that of any cotton in all the world. But I say now to the Senator that he can not find a manufacturer in all the world who can take the Arizona long-staple cotton and spin a thread of 240.

Mr. ASHURST. Let me put in my proof now. Here is a document laid on my desk this morning through the kindness of the chairman of the Committee on Finance. I have scarcely had time to peruse it, but on page 24, in a footnote, we find a quotation from the Daily News Record, of New York City, in its issue of February 4, 1922, giving a review of the New Bedford cotton market. What does New England say? I am going to quote other countries; but what does New England say? In this document laid on my desk this morning, and which I have not had an opportunity thoroughly to peruse, I read:

Pima has commanded more than its usual share of interest among the long cottons—

That will bear a repetition—

Pima has commanded more than its usual share of interest among the long cottons. Cotton men declare that there can be no overlooking the fact that the use of Pima for fine goods is meeting with considerable favor with the mills where it has been introduced.

New England, which does not want this cotton to have a tariff, is at least fair enough to give it a good character. I do not expect New England to say it is superior to Egyptian.

But I turn now to Professor Schiertz, a textile expert. Who is this; some Senator speaking out on the hustings? No; a textile expert of the Cologne University, who has the following to say of Arizona long-staple cotton:

I have examined the samples—

Mr. President, am I reading aright? Is there not some strabismus about my sight when I see this, and see it for the first time?

I have examined the samples of Arizona cotton given me by Mr. Paar and I consider this cotton extremely adapted for replacing Egyptian cotton.

Can it be that I have read aright, after my friends here have said that the Egyptian cotton could be used for a purpose for which the Arizona cotton could not be used?

Mr. SIMMONS. Mr. President, I have no question about that.

Mr. SMOOT. That does not deny the statement I made.

Mr. ASHURST. Replace.

Mr. SMOOT. It could replace it in certain goods; in other goods it could not.

Mr. ASHURST. A Senator can not be replaced in his seat unless he is out and the other man is in. He says "replace."

Mr. SMOOT. Not all classes of goods.

Mr. ASHURST. He says "replacing Egyptian cotton."

Mr. SMOOT. The Senator can put whatever construction he wants.

Mr. ASHURST. It is not a matter of construction. It simply says that this Arizona cotton is eligible for replacing Egyptian cotton.

Mr. SIMMONS. I have no question in the world about this fact, that if you raise large quantities of this cotton it will take the place of Egyptian cotton in the production of certain things. Particularly is that true with reference to automobile tires. If we had no long-staple cotton grown in this country it would be necessary for us to go to Egypt to get the Egyptian cotton to make those tires. You can not make them with short-staple cotton. We were using Egyptian cotton to a large extent and chiefly in making automobile tires. Since we have begun to produce long-staple cotton, not only in the Senator's State but in other sections of the South, they are using that long-staple cotton to make tires instead of using the Egyptian cotton. But that does not mean that the Egyptian cotton is not absolutely necessary and that the Arizona cotton will not take its place in connection with the manufacture of the finest articles of cotton cloth.

Mr. SMOOT. I want to say to the Senator that I have no doubt but that approximately 95 per cent of all the goods manufactured from cotton in the United States, or imported into the United States, could be made of Arizona long-staple cotton. There is 5 per cent, however, that could not be made with it. Does that dispute the statement made by the professor that it could replace the Egyptian cotton? Not at all. Of course, it can replace it. Nobody is ever going to deny it. I certainly shall not.

Mr. ASHURST. Mr. President, it is not my habit, and I do not think it is the habit of anybody else in this controversy, to read a fragment of an article and not read it all. I am about to read from the pamphlet issued by the United States Tariff Commission, entitled "The emergency tariff act and long-staple cotton." It is Tariff Information, Series No. 27, page 18. This is Mr. William Paar, a Los Angeles importer, speaking. He told the officials of the Arizona Pima Cotton Growers' Association at a recent conference as follows:

German experts have declared your long-staple variety superior to Egyptian Sakell for the manufacture of certain kinds of fine textiles, such as lisle silk, imitation linens, and cotton goods for underwear.

Mr. Paar further said:

Two of Germany's foremost textile experts have passed upon the quality of Arizona cotton. Professor Johannson, recognized as the foremost cotton expert in all Germany, examined samples of Arizona cotton sent by the Arizona Pima Cotton Growers' Association. "I have never seen a raw material so suitable for the manufacture of high-class textiles, such as lisle silk for hosiery, underwear, and imitation linens," Professor Johannson was quoted as saying.

Then Professor Schiertz, of Cologne University, was quoted. But I have spent too much time on the character of the cotton.

Mr. SIMMONS. Mr. President, before the Senator concludes, will he yield to me?

Mr. ASHURST. I yield.

Mr. SIMMONS. There was a certain part of the Senator's argument about which I feel that I ought to make some observations and ask some questions. The Senator stated a little while ago that the cultivation of the long-staple cotton was exceedingly expensive and exceedingly difficult. Of course, I know nothing about the process of growing the long-staple cotton in Arizona, but I assume the process of growing it is the same as the process of growing long-staple cotton in other parts of the country. Arizona is not the only place, as I said, where it is grown. We grow it where we can in North Carolina, not quite as long a staple as in Arizona, but not so much shorter. I have grown some of it myself. There are sections of my State where a good deal of it is grown.

So far as my observation goes, the process of cultivating it is exactly the same as that of cultivating the short-staple cotton. The only difference is that we do not get quite as large a yield per acre, measured in pounds, from the long-staple as from the short-staple cotton. We get very much more for the long-staple cotton that we grow in my State than we do for the short-staple cotton. I think it will sell for probably one-third more than the short staple. I think sometimes it sells for twice as much as the short-staple cotton. But the cost of producing it is no greater than the cost of producing the short-staple cotton except that there can be produced only a little over one-half as much to the acre of the long-staple cotton.

It may be that it is produced in a different way in the Senator's State, but we simply prepare our land for it just as we do for the ordinary cotton. We plant it with machinery just as we do the short-staple cotton. We plow it in the same way; we hoe it in the same way; we pick it in the same way; and we gin

it in the same way. There is absolutely no difference. Therefore, I think the Senator is wrong when he says the process of cultivation is very difficult.

Mr. ASHURST. Of course, I suppose the same general plan of cultivation would apply.

Mr. SMITH. Mr. President, if the Senator will allow me, it is a matter of common knowledge that the Egyptian Government goes to great pains to develop and produce this Egyptian cotton. I was wondering if in this monograph, which I have not read entirely, attention was called to that fact by which any comparison could be made of the conditions under which Arizona cotton is produced in America and the other cotton is produced in Egypt. I find on page 23 the following statement:

Short-staple uplands is the basic cotton crop of the world, and prices of other cottons necessarily follow a rise or fall in the price of uplands. Such variations from the price of the basic cotton are influenced and accentuated by special factors. Pima and Egyptian cottons tend to come together in periods of low prices and to draw apart on a rising market. The Pima crop, very much smaller than the Egyptian and in a few hands, is less subject to speculation, and being more securely financed and marketed by a few large growers can hold its level better in a distress market. It is largely controlled by the Pima Cotton Growers' Association, and Government funds available through the War Finance Corporation have been used to enable the growers to hold for better prices. The Egyptian Government also assists its growers, not only by advances through the National Bank of Egypt but also by the direct purchase of cotton in periods of depression.

In other words, the Government becomes the purchaser of the cotton at a given price in order that it may not go down, and to sustain the morale of the grower as we did in the emergency when we took the wheat crop in hand.

Mr. OVERMAN. And as we tried to do in the matter of the cotton crop.

Mr. SMITH. Yes; and as they threatened to do, but went in the other direction, in reference to the cotton crop.

The Egyptian prices are affected primarily by conditions in the fine spinning industry of England, its main market, and secondarily by the American demand.

I want to call the Senator's attention to a comparison of the Boston prices of comparable grades of the Egyptian cotton and the Arizona cotton with and without the duty. He will notice, going down to the market quotations of 1922, fully good Sakel, comparable with No. 2 Pima, without the duty, 52¼ cents a pound against 37 cents, a margin of the Sakel over the Pima of 22¼ cents. For the February quotation we have 48 and 36. For the April quotation we have 46 against 32, and for May 48 against 35. This would seem to indicate that amongst other things the price of Egyptian cotton maintains itself firmly over the American cotton even in the American market, indicating that there is really an intrinsic difference in the grades. There is that difference, as every cotton man knows, but when everything is said and done, there is not enough of the Arizona cotton and Egyptian cotton that is available for America to meet the demands even were they interchangeable; that is, one a perfect substitute for the other. My contention is that the price of Egyptian cotton is wholly uninfluenced by the Arizona product, and the price of the Arizona cotton is wholly uninfluenced by the Egyptian product.

Mr. OVERMAN. Mr. President——

The PRESIDENT pro tempore. Does the Senator from Arizona yield to the Senator from North Carolina?

Mr. ASHURST. I yield.

Mr. OVERMAN. What is the amount of the normal crop, in bales, of Arizona and California cotton?

Mr. ASHURST. About 200,000 bales.

Mr. SHORTRIDGE. Mr. President, I merely wish to observe that thousands and hundreds of thousands of acres of land in California are adapted to the cultivation of this particular kind of cotton, and that fact ought to be borne in mind in dealing with the problem.

Mr. CAMERON. Mr. President, I had intended to make an extended argument and a further appeal on this subject, but realizing the fullness with which this has been gone into before the Finance Committee and in the Senate to-day and previously, I do not feel justified in doing so other than to point out a few facts which to my mind show the justness of our claims for protection of one of the greatest and most essential infant industries in the country. In looking around the Chamber during this discussion I note only a very few Senators present, and it seems unnecessary for me to repeat here the merits of my amendment in view of the individual conversations I have had with most of the Senators, to whom I have presented in a personal way our hopes of adequate protection for our greatest agricultural industry. I do desire, however, to read a letter written to the chairman of the Finance Committee which is concise and to the point, and which is illustrative of the fallacy of certain objections to the protection of this industry, as follows:

WASHINGTON, D. C., *February 6, 1922.*

Senator PORTER J. MCCUMBER,
Chairman Finance Committee, United States Senate.

MY DEAR SENATOR: While in Providence, R. I., yesterday there was brought to my attention a statement appearing in the Providence Journal under date of February 3 to the effect that former Senator Henry F. Lippitt, of Rhode Island, had appeared before the Senate Finance Committee in opposition to the proposed duty on long-staple cotton, and in his presentation to the committee referred to certain statements which I had made as president of the Arizona Pima Cotton Growers' Association.

As you are aware, the American-Egyptian or Pima long-staple cotton, running in length from 1 1/16 inches to 1⅜ inches, is produced in the irrigated valleys of Arizona and California, principally in the Salt River Valley near Phoenix, Ariz.

Mr. Lippitt, in the article referred to, is quoted as saying that this cotton "was by no means cotton that could take the place of all of the Egyptian cotton that is imported, as much of that was of a superior quality to the Arizona cotton and would have to be used if New England was to continue to produce threads and fabrics of the highest quality."

From research work which our Cooperative Marketing Association has been carrying on, in cooperation with the United States Department of Agriculture during the past 90 days, and from investigations which I have recently made in the milling district in New England, I am convinced that the American-Egyptian or Pima cotton in the condition in which it is now going into the market is fully equal in quality to the Egyptian cotton, which experts testify is now deteriorating in value, and that practically all the threads and fabrics now made in New England from Sakel or Egyptian cotton can now be made of American-Egyptian or Pima.

Up to six months ago many of the American fine spinners were of the opinion, before they had learned what changes in mechanical methods were necessary to handle Pima cotton successfully, that the use of Pima cotton was principally in coarse yarns largely used for making tire fabrics. But on the advice of experts who have been studying this remarkable Arizona-Egyptian cotton we have been making an organized effort since last September to get the Pima cotton used by those spinners who are making yarns for fine fabrics. At first some of those mills were dissatisfied with the cotton, but as they developed the proper mechanical processes for utilizing it they have found it fully as good as the Egyptian cotton. Certain of the fine fabric mills who a year ago were reluctantly trying out Pima cotton experimentally are now glad to buy it in even running lots of several hundred bales at a time. A convincing evidence that American spinners of fine yarns are to-day finding Pima cotton thoroughly satisfactory is the fact that of the 40,000 bales of Pima cotton sold since last September a very large proportion has been bought by the fine spinners. Only this week in New England I have received abundant demonstration, both from mills and brokers, that Pima cotton for use in fine fabrics is no longer an experiment but a demonstrated success.

In another portion of ex-Senator Lippitt's remarks it is indicated that Governor Campbell, of Arizona, in urging a tariff on Pima cotton predicted that in five years Arizona would produce all the cotton of this type needed by the American manufacturers. In the brief which I presented to the Senate Finance Committee on January 13 last I endeavored to make it very clear that, if given reasonable protection, the cotton producers of the Southwest, which includes those in the irrigated valleys of California as well as Arizona, would be able to produce all the cotton of this type needed by the American manufacturers, and Governor Campbell intended to have his remarks so apply and not solely to Arizona.

I also presented a map supplied by the United States Department of Agriculture showing the definite location of these irrigated sections of the Southwest where it had been demonstrated Pima cotton could be grown, aggregating nearly a million and a half acres. If about 30 per cent of this area were put into the production of Pima cotton annually, providing for a well-balanced agriculture with proper crop diversification and rotation and assuming that the average yield per acre will not exceed what has been obtained in the past, it is very evident that the production in 1920 of 103,000 bales of Pima cotton could be easily doubled.

In the report of Senator Lippitt's remarks he suggests that the growing of this cotton in the Southwest would be an extremely expensive experiment. I am glad to advise you that the growing of Pima cotton is in no sense an experiment in the irrigated Southwest, and the records of the United States Department of Agriculture will demonstrate this clearly.

It has also been gratifying to us to learn that the fine spinners who at one time questioned whether this cotton could be mercerized satisfactorily now find that in mercerized yarns it is fully as good as Sakel or Egyptian cotton, and that when properly spun and woven into fabrics it develops practically the same sheen and finish as fabrics made from Egyptian cotton.

I feel that in this matter there should be understanding, cooperation, and sympathetic interest between the manufacturers of this cotton and we who are producing it in the Southwest, and I am making the foregoing statement in no spirit of controversy but simply in an endeavor to clear up any misunderstanding that may exist on this subject and would be glad to have this letter filed as a supplement to the brief presented on January 13 last.

Faithfully yours, DWIGHT B. HEARD.

I have read this letter, as requested, in order to show that there was no thought in the minds of the spinners or of the manufacturers of New England but that the Egyptian cotton raised in Arizona is equally as good in every respect as the cotton imported from Egypt. There is room in the Southwest for the development of this industry. We have lands enough under irrigation on which to produce all the long-staple or the Pima cotton, whatever it may be termed, to take care of all the needs of the manufacturers in this country. There can be no question about that. It would be but a helping hand, justly deserved, for the Government to assist this industry for a while just as many others have been helped in the past.

I can see no reason why Congress, while framing a tariff bill, should not in justice to a community that has been striving to produce a commodity which has heretofore been sup-

plied by a foreign country, grant the necessary protection to carry on such development and establish a new industry so essential to our well-being—one that is indispensable in time of war.

I might here appropriately add that Mr. Heard has spent months of time at an enormous expense in personally investigating this industry in all parts of the world, and is considered an authority on the subject.

Mr. President, I ask unanimous consent to have printed as an appendix to my remarks the brief presented to the Finance Committee by Mr. Heard on January 13, referred to in the letter which I have just read.

The PRESIDENT pro tempore. Without objection, it is so ordered.

(See Appendix B.)

Mr. CAMERON. I can not see the contention of the Senators opposing this meritorious duty of 16 cents, especially those of the South, for surely such a protection in no way will injure their cotton, which is wholly of a different kind. The market of one will not affect the market of the other.

One other fact I desire to have considered, which to me seems a most binding obligation, and that is during the World War the people of the Southwest were requested and urged to the point of patriotism by the Government to engage in the production and the building up of the industry of long-staple cotton with assurances that they would be protected. On these representations farms were converted into cotton fields, and no expense was spared in cultivating and producing the new product which was so essential during the war. To-day these same farmers are crying for relief, and are justly expecting the fulfillment of this moral obligation, else nothing but bankruptcy and disappointment will be their reward. Through the Agricultural Department these people were told that it was the great American policy to produce our own raw materials; that before long, as a result of this policy by the Government, all the long-staple cotton needed in this country would be produced at home. A picture was presented of a great American industry, finally self-supporting and independent, which would mean full utilization of the barren wastes of the West as a cotton country, the finest in the world; a community of homes, sound finances, and full American livelihood. Now, if this industry is not fully protected, this moral obligation not kept, I ask what will be the result when it is remembered that the people of Arizona were urged by the Government to build up a great new industry, and were later repeatedly advised by the recognized spokesmen of the Republican Party that they could rely on receiving such protection in the new tariff bill as would assure the permanent prosperity of the long-staple cotton industry? It will be recognized that a failure to protect that industry in the pending tariff legislation will be regarded by them as nothing short of a gross betrayal.

There is no one in the Senate who tries to be fairer on questions coming before this body than I; and I feel in standing here to-day and proposing my amendment I have not asked for sufficient protection when I have proposed a duty of 15 cents a pound on long-staple cotton. However, I believe the people of Arizona can get along with such a rate if it is given to them; and I believe it should be given to them; but I do not think they are asking anything that is unjust. So I hope when the Senate votes on the question this afternoon it will see fit to give us this 15 cents for which we ask and let us continue the industry and show the country what we can do in the production of long-staple cotton.

I want in conclusion to ask unanimous consent for the privilege of including in the RECORD as a part of my remarks the statements to which I have referred.

The PRESIDENT pro tempore. In the absence of objection, permission to do so is granted.

The matter referred to is as follows:

APPENDIX A.

ARIZONA LONG-STAPLE COTTON.

DEFINITION.

Any statutory definition of "long-staple" cotton must necessarily be arbitrary; but inasmuch as the "Sakellaridis" variety of Egyptian cotton is the product which sells on a level with the "American Pima" grown in Arizona, and the great bulk of the "Sakellaridis" staple is 1⅛ inches in length, it is recommended that "long-staple" cotton be defined in the tariff act as a staple not less than 1⅛ inches in length, although the Arizona staple has an average length of 1⅛ inches. In other words, unless "long-staple" cotton is described as of a length of 1⅛ inches or more no protection against the competing variety of Egyptian cotton would be found.

HISTORY.

"American Pima" cotton was developed on the Pima Indian Reservation in Arizona during the years 1902–1910 by the scientists of the United States Department of Agriculture, and in 1910 they announced that as a result of their long experiments in plant breeding they had produced a "long-staple" cotton equal in every respect to the best Egyptian cotton. The Department of Agriculture was led to make these experiments because it had been foreseen that the ravages of the boll weevil would in time destroy the sea-island cotton industry, and it had been found impossible to grow sea-island cotton successfully on the mainland of the United States.

Following that announcement, and because of the urgent advice of the Department of Agriculture the farmers of the Salt River Valley of Arizona began growing "Pima" cotton. The development of the industry was gradual but had reached large proportions by the year 1915; and in the year 1920 the growing of "long-staple" cotton had become the chief agricultural industry in Arizona—the Salt River and Yuma Valleys being mainly devoted to its culture.

Meanwhile, however, the "Sakellaridis" cotton of Egypt, which by a strange coincidence had been developed in that country in the same year of 1910, had become the chief Egyptian article of export to the United States so that by the fall of 1920 the "Sakellaridis" cotton had become a destructive competitor, and practically all of the 1920 crop of cotton grown in the Salt River and Yuma Valleys in Arizona and amounting to some 90,000 bales remains unsold.

There are at least 200,000 bales of "Sakellaridis" cotton in American warehouses awaiting factory demands, and in view of this surplus and the incoming crop for this year in Egypt there is no hope of a living market for the Arizona growers unless an adequate protective duty be levied upon the Egyptian article. That small portion of the Arizona crop of last year which has been marketed has brought from 25 to 30 cents a pound at Phoenix and Yuma, approximately one-half the cost of production.

FINANCIAL DISASTER.

The cost of producing the 1920 crop of cotton was 52 cents per pound. Many millions of dollars of the funds of the local banks are tied up in the product; they have borrowed several million dollars from the Federal reserve bank, and appalling disaster awaits the people of these communities unless relief through an adequate tariff be provided.

"Long-staple" cotton is used in the manufacture of fine dress goods, fine hosiery, fine sewing thread (all luxuries), and in automobile tire fabrics. In recent years approximately 80 per cent of Arizona cotton has gone into "cord" tires.

The people of Arizona who are most familiar with trade conditions say that if Arizona cotton is properly protected the market demand and the market price will immediately improve, whereas so long as American manufacturers are assured of cheap cotton from Egypt through the years to come there will be no disposition to offer anything but a hand-to-mouth market.

FAITH IN PROTECTION.

Some 200,000 acres of the most valuable irrigated lands in Arizona were devoted to the growing of "long-staple" cotton in 1920. The acreage the present year is somewhat under 100,000.

Why, it may be asked, did the farmers of Arizona persist in again planting a large acreage of cotton this year when their crop of the previous year still remained unsold? The answers are:

(1) The landowners were led to believe that the Republican policy of protection would be applied to Arizona; (2) it requires two years to place cotton land into profitable production of alfalfa, and the landowners preferred to trust to the fairness and statesmanship of the American Congress; and (3) the semitropic climate and the soil of southern Arizona furnish ideal conditions for the growing of "long-staple" cotton, and these landowners are anxious to continue in this industry.

COMPETING CONDITIONS.

The fellaheen of Egypt work 12 hours a day in growing "Sakellaridis" cotton and receive 40 cents therefor. Farm labor was paid in Arizona at the rate of $5 per day in 1920 and will receive not less than $3 the present year. The cost of production this year in Arizona will be at least 41 cents per pound.

The Egyptian producer is able to lay his cotton down on the American seaboard for a freight rate, Alexandria to Boston, of 60 cents per hundredweight. The Arizona grower pays in freight somewhat above $2 a hundredweight to the same market, the Egyptian thus enjoying a differential of nearly 1½ cents per pound in freights alone. No complaint is made concerning the American freight rate. Not only must the railroads receive a revenue which will permit them to live, but they should not be deprived of the very large revenue which a continuance of the cotton industry in Arizona will give them, and that industry will languish and die if Congress denies its appeal for protection.

In the Salt River Valley and in the Yuma Valley there have been established two American communities of the very highest type.

PROPOSED DUTY.

For the adequate protection of the "long-staple" cotton industry in Arizona and California a duty of 20 cents per pound should be levied on all importations of the "long staple."

The development of American industries through their proper protection until they are well established and the assurances of the very best living conditions have always been cardinal Republican doctrines. To refuse protection to the infant long-staple cotton industry is to abandon these doctrines.

LIMITATION.

The people of Arizona for the present would be satisfied with a protective duty of 20 cents per pound, limited to five years. They are willing to trust to the wisdom of Congress in dealing with the situation at the end of the 5-year period.

ATTITUDE OF MANUFACTURERS.

Although the House bill carries a satisfactory duty on tire fabrics and on textiles and all other fabrics into which long-staple cotton enters, it appears that some of the manufacturers are not satisfied with such protection, but insist on the privilege of buying their raw materials from the fellaheen of Egypt or from Arizona growers at a ruinous price.

THE CONSUMER.

As already pointed out, long-staple cotton goes almost exclusively into the manufacture of articles which are fairly classed as luxuries.

Assuming that a duty of 20 cents per pound would within another year cause the American market for long-staple cotton to advance to 40 cents per pound, it can not be held with truth that this increased price would lay a serious burden on the consumer. Certainly an added 10 cents per pound for the cotton should not add one cent to the cost of a pair of fine hose or to a spool of fine thread, or add very much to the cost of a cord tire.

COMPENSATING DUTY.

The only argument which has been offered against a duty on long-staple cotton has been to the effect that there should be a compensatory duty on all imported articles containing the long staple, and that it is extremely difficult for customs officials to determine from inspection whether a manufactured fabric from abroad contains a staple 1⅛ inches long. This argument presumes the necessity of a compensating duty. But why grant the soundness of such an assumption?

The pending tariff bill provides a duty of 25 per cent ad valorem on tire fabrics and cotton fabrics generally plus an added tax based on the "thread count." If the duty thus provided is not in all conscience a sufficient protection for these manufactured articles, the American people will be slow to believe otherwise.

It is difficult to refrain from describing the demand for an added compensating duty as one of downright impudence.

In any event, whatever the difficulty in administering a law covering a "compensating" duty, the people of Arizona are willing to take their chances on securing adequate protection for their chief industry on the basis of 20 cents a pound, and they can not believe that any manufacturer will suffer seriously through failure of customs officials in any given instance to arrive at a proper classification on the basis of the "compensating" duty.

GOVERNMENT A CREDITOR.

The Federal Government is a heavy creditor of these Arizona communities whose welfare—solvency even—is now largely at stake in the cotton industry. The Salt River Valley Water Users' Association owe to the Government on account of the Roosevelt Dam and irrigation works thereunder a round figure of $9,500,000. There is past due and unpaid on the installment account the sum of $203,000.

The Yuma project owes a total of $4,700,000 in round figures.

REVENUE.

The Government is therefore a creditor of these communities to the extent of more than $14,000,000. In the fiscal year ended June 30, 1920, the importations of long-staple cotton from Egypt amounted in round figures to 242,000,000 pounds, while the Arizona production for the calendar year 1920 was in round figures 50,000,000 pounds.

It is assumed from all the data in hand that in normal times the home market, after absorbing all the long-staple cotton that can be produced in Arizona and California—the available acreage having about reached its maximum—would take each year 100,000,000 of Sakellaridis cotton from Egypt. A duty of 20 cents a pound would thus yield a revenue of $20,000,000 annually.

To dwell on the importance of obtaining this added revenue from an article which goes into luxuries, while at the same time assuring prosperity and splendid living conditions to high-class American communities, would be to elaborate the obvious.

THE GROWER A MANUFACTURER.

If it be conceded that a policy of providing free raw materials for American manufacturers has been one of the features of the doctrine of protection, there would be no violation of that principle in giving a tariff protection to the grower of American long-staple cotton. Not only is the very process of growing the cotton a technical work, calling for unusual intelligence in supervision, but in the truest sense the grower is a manufacturer. Removing the raw cotton from its bolls on the standing stalks in the field, the grower takes this raw product to the cotton gin, where under his direction the seeds are removed, the lint is prepared and then baled and returned to him, whereupon he takes his bales to the local market or himself ships them to the eastern seaboard, where the baled product goes through further processes of manufacture—sometimes many processes—before it reaches the ultimate consumer. In other words, the primary raw material in the matter of cotton is never seen by the intermediate and final manufacturers, but goes through the first processes of manufacture while still in the hands of the grower.

Why should the interests engaged in some of the later processes of manufacture receive all the fostering care of the Congress?

MORAL OBLIGATION.

The Government is under a serious moral obligation to these communities. Through its Department of Agriculture the people of Arizona were told, substantially:

"It is the American policy to grow our own supplies. You can grow here all the 'long-staple' cotton needed by the people of the United States, thus at the same time keeping many millions of dollars at home and building up here the best sort of American homes. Go to it."

When it is remembered that the people of Arizona were urged by the Government to develop and build up a great new industry, and were later repeatedly advised by recognized spokesmen for the Republican Party that they could rely on receiving such protection in the new tariff law as would assure the permanent prosperity of the "long-staple" cotton industry, it must be recognized that failure to protect them in the pending tariff legislation would be regarded by them as nothing short of a gross betrayal.

APPENDIX B.

STATEMENT REGARDING PRODUCTION OF AMERICAN-EGYPTIAN OR PIMA LONG-STAPLE COTTON.

(Presented by Dwight B. Heard, Phoenix, Ariz., to subcommittee on cotton of Committee on Ways and Means, House of Representatives, Apr. 25, 1921.)

APRIL 25, 1921.

Hon. WILLIAM R. GREEN,
Chairman Subcommittee on Cotton,
Committee on Ways and Means,
House of Representatives.

SIR: Availing of your suggestion that I present in concise form a statement in behalf of the needs of the producers of American-Egyptian cotton, I present the following:

Statement by Dwight B. Heard, of Phoenix, Ariz., representing the Arizona Egyptian Cotton Growers' Association, the Phoenix (Ariz.) Chamber of Commerce, and the Phoenix Clearing House Association, as to the need of a protective tariff on American-Egyptian or Pima long-staple cotton.

PRELIMINARY STATEMENT.

The American-Egyptian or Pima long-staple cotton industry, which during the past 15 years has developed as an essential national industry, now faces destruction through competition with cotton of similar type produced by the peasant labor of Egypt on a present wage scale of 40 cents per day for a 12-hour day.

This Egyptian long-staple cotton is now being laid down at New England spinning points at 26 cents per pound, almost exactly one-half the estimated production cost of last year's American-Egyptian crop, as per a report recently furnished Congress by Mr. Wallace, Secretary of Agriculture.

In the season of 1919–20, 485,000 bales of Egyptian cotton were imported into the United States, as compared with an average importation of the previous five years of 202,000 bales. It is conservatively estimated that 70 per cent of this importation was Sakellaridis cotton, the type principally used for the manufacture of tire yarns, and which the American-grown Egyptian cotton comes in direct competition with.

The standard of living of the Egyptian peasants who furnish the labor in the cotton fields of Egypt is vastly inferior to an American standard of living. This peasant labor is exceptionally efficient. These Egyptian laborers, at the price of 40 cents per day, work from sunrise to sunset, while in Arizona, where 85 per cent of the American-Egyptian crop is grown, the cost of field labor for a nine-hour day in 1920 was $3. It is estimated that in 1921 this will be reduced to $2, still more than five times as large as the Egyptian wage, in view of the shorter hours in Arizona.

It is conservatively estimated that one-third of the cost of the production of long-staple cotton is involved in the picking. The cost of picking cotton in Egypt in 1920, according to the best information available, was less than $10 per 500-pound bale, while in Arizona the cost of picking the same size bale was $80. This situation presents an intolerable condition which can only be remedied by the reasonable protection asked. Officials of the United States Department of Agriculture have recently estimated that the cost of producing American-Egyptian Pima cotton in Arizona in 1920 on the basis of a yield of a half bale to the acre was 52.6 cents. The attached statements from well-informed Arizona growers show an estimated average cost of production in 1921 of approximately 41 cents. According to the most recent market quotations, Old World Egyptian cotton of the Sakellaridis variety, the type which most nearly corresponds to the American Pima, and which comprises about 70 per cent of the import from Egypt, is being laid down in New Bedford for 26 cents per pound. The duty asked for by American producers to maintain this industry on a living basis is about 20 cents per pound. It is evident that unless the relief asked for through a protective tariff is promptly granted the industry built up through 20 years' cooperation with the United States Department of Agriculture faces destruction.

BRIEF HISTORY OF THE AMERICAN-EGYPTIAN COTTON.

Pima cotton was originated and developed by the Department of Agriculture as a result of plant-breeding work carried on in Arizona since 1902. A strikingly superior individual plant, selected in 1910 at the Government experimental station at Sacaton, on the Pima Indian Reservation in southern Arizona, was the parent of the Pima variety, of which 250,000 acres were grown in 1920 in Arizona and California. It is an interesting coincidence that the plant which gave rise to the Sakellaridis variety, the principal competitor of Pima, was discovered in Egypt in the same year, 1910.

Pima cotton can be successfully grown only on the irrigated lands of southern Arizona and California, where the climatic and soil conditions have proven to be exceptionally favorable for the growth of this type, which is not adapted to conditions in the eastern Cotton Belt.

The Pima cotton has an average length of staple of 1⅛ inches and is maintained in a high state of uniformity by careful seed selection under the supervision of the United States Department of Agriculture. It is used in the manufacture of fine dress goods, hosiery, and sewing thread, but principally in automobile tire fabrics. It is estimated that 80 per cent of the Pima crop in recent years has been used for this last purpose. In all these classes of manufacture the American-grown Egyptian cotton is in direct competition with Sakellaridis cotton imported from Egypt.

DECLINING SEA-ISLAND PRODUCTION MAKES PIMA ESSENTIAL TO NATIONAL DEFENSE.

During the recent war exhaustive Government tests showed that the Pima cotton was a thoroughly satisfactory substitute for sea-island cotton in the manufacture of airplane wings and balloon cloth, and during the last year of the war large quantities of cloth were manufactured from Pima cotton and successfully used in the air work. The first tests of Pima cotton for this purpose were made at the suggestion of the Department of Agriculture, which pointed out that with the rapid advance of the boll weevil the sea-island crop might be suddenly wiped out, and that a substitute must be found if possible in an American-grown cotton.

Since Arizona and California are well isolated from the boll-weevil district and were producing a cotton already of extra long staple and great uniformity, which was known to be capable of substitution for sea island, an extension of Pima cotton growing in that region appeared to be a military necessity, and for that reason was especially encouraged by the Department of Agriculture in the war period. The figures given in the table showing the production of sea-island and American-Egyptian cottons during the last five years make it clear that the Department of Agriculture was thoroughly justified in calling attention to the necessity of a substitute for sea-island cotton, which now has almost disappeared from cultivation. If the war had been prolonged even for another year the Pima cotton would have become the sole reliance for this vital purpose.

Partly as a result of stimulation by the Government during the war the acreage of Pima cotton has been greatly expanded during the last two years, and with the sudden slump in the market in 1920 the growers have been left with fully 90 per cent of their last crop unsold. The danger is very great that unless adequate protection is furnished against the competition of cheaply grown foreign cotton this highly specialized cotton, which recent experience has shown to be essential to the national defense, will disappear.

With the sea-island cotton practically gone, this country would be entirely dependent on foreign sources of supply:

Statement of the production of Pima and sea-island cottons in bales during the past 5 years.

AMERICAN-EGYPTIAN.

Year.	Pima.[1]	Sea Island.[2]
1916	3,331	117,539
1917	15,966	92,619
1918	40,343	52,208
1919	42,374	6,916
1920	91,965	1,725

[1] 500-pound bales. [2] 400-pound bales.

Estimated imports of Sakellaridis Egyptian cotton in equivalent 500-pound bales during the past five years.

	Bales (500 pounds).
1915–16	204,000
1916–17	119,000
1917–18	80,000
1918–19	70,000
1919–20	340,000

COST OF PRODUCTION.

In a very carefully prepared statement recently issued by Mr. C. S. Scofield, of the United States Department of Agriculture, based on a yield of a half bale to the acre in the Salt River Valley of Arizona, where about 85 per cent of the Pima cotton is produced, a production cost is shown for the season of 1920 of 52.6 cents per pound. Owing to reductions which have already occurred in the price of field labor and estimated reductions which are anticipated in the cost of picking and ginning Pima cotton for next season, it is estimated that the cost of production in 1921 on the basis of a half bale to the acre will be at least 42 cents.

It will be observed that if the 20 cents per pound tariff asked for is added to the present delivered price of Egyptian Sakellaridis cotton in New England, the American grower would make only a very small profit above cost of production. It is hoped by this legislation to stabilize the price of American-Egyptian Pima cotton so as to justify continuing the American industry based on a price of approximately 50 cents to the producer.

The attached statements, Exhibits A, B, and C, of estimated cost of production in the Salt River Valley of Arizona for 1921, made by Mr. W. S. Stevens, president of the Arizona American-Egyptian Cotton Growers' Association, Mr. Charles M. Smith, a grower who keeps exceptionally accurate records, and the writer, who has grown this type of cotton for the past five years, are presented for the purpose of giving detailed estimates as to the cost of production for 1921.

On the Salt River Valley reclamation project in Arizona 186,000 acres were farmed in Pima cotton in 1920, on which a crop of 72,000 500-pound bales were produced. Confronted, as they have been during the recent months, with a price for this cotton far below its cost of production, the majority of the producers, through the assistance of the banks, have held on to their cotton, anticipating a relief from the existing situation, and it is estimated that 67,000 bales of this crop still remain in the hands of the producers. This situation illustrates the urgent need for immediate relief.

The emergency tariff bill, as passed by the House of Representatives on April 15, 1921, and now before the Committee on Finance of the Senate, in paragraph 16 contains the following clause as to the protection duty on long-staple cotton:

"Cotton having a staple of 1⅛ inches or more in length, 7 cents per pound."

It is evident that the above is not adequate to protect this industry on the basis of American standards of living. In the report of April 13, 1921, in connection with this emergency tariff bill, on page 20, the Bureau of Markets of the Department of Agriculture definitely recommends a duty of not less than 10 cents per pound, making the following statements:

"(4) Large areas of land in this country are available for the production of extra-staple cotton, but because of the costs of reclamation, irrigation, and the higher standards of living, and the cost of labor the cost of production of such cotton in the United States is high, and our producers need a protective tariff to equalize the cost of production abroad with that in the United States.

"(6) In the table following are presented quotations on the selling price of Sakellaridis Egyptian and American Egyptian cottons. It will be observed that on March 15 the price of fully good Sakellaridis was 35⅞ cents and good fair Sakellaridis 26⅞ cents c. i. f., landed Boston, and that American Egyptian cotton of No. 2 grade was quoted at 26⅞ cents and No. 3 grade at 25⅞ cents, landed Boston. Such prices are far below the estimated cost of production of cotton in Arizona and California. It should be pointed out further from the table that the prices of good fair Sakellaridis and No. 2 Arizona Egyptian have been practically identical since November 13 last. In other words, the price of good fair Sakellaridis seems to fix the price of American Egyptian cotton. * * *

"(9) Producers of long-staple cotton have faced adverse market conditions in the sale of last year's crop and are said to have on hand a large part of last year's production. Accordingly, it is believed that the producer would receive the benefit of whatever protection that might be conferred by the proposed tariff measure."

I am presenting the foregoing statement at the request of the Arizona American-Egyptian Cotton Growers' Association, the Phoenix Chamber of Commerce, and the Clearing House Association of Phoenix, whose letters in this connection are attached herewith. In this statement I have endeavored to present figures and facts as to this industry whose existence is so seriously threatened, and in view of the fact that through some misunderstanding the producers of American-Egyptian cotton had no opportunity to present their case before the Committee on Ways and Means of the House, I trust opportunity may be found before the emergency bill passes the Senate to increase the duty on long-staple cotton from 7 cents to the 20 cents so urgently needed.

Very respectfully,

DWIGHT B. HEARD.

EXHIBIT A.

ARIZONA AMERICAN-EGYPTIAN COTTON GROWERS' ASSOCIATION,
Phoenix, Ariz., April 14, 1921.

MR. DWIGHT B. HEARD,
Phoenix, Ariz.

MY DEAR MR. HEARD: Complying with your request to make up an additional statement of cost for producing cotton in 1921, as I view the situation, I submit as follows:

There is such a wide difference in the ideas of rental values that I have eliminated this altogether, considering a man that is working on payment of one-fourth of his crop as rent. I have eliminated, as far as possible, the question of diversified farming, in that a portion of the crops produced might be used in feeding and caring for the stock of the grower.

I am taking as a basis an exceptionally good man with an exceptionally good team, and giving him all the land that such a man can possibly handle under favorable circumstances, which is 50 acres. I am considering that this man and his one team do all the work of preparing and planting, cultivating, supervising, picking, and deliver the cotton to the gin. In handling this acreage he will have no time whatever to do any hoeing or irrigating. This is provided in moderate charges. We have considered the cost of picking on the pre-war basis, which is really less than it should be, when we consider the fact that shoes are 100 per cent more than four years ago, and that provisions and clothing have not anywhere near been reduced to pre-war basis.

This man and his team are allowed $1,200 for the year. Out of this $1,200 the man's only living expense, or his wage and feed for his team, are all included. This man and his team is far above the average in being thoroughly able to cultivate and handle 50 acres of land, but I am considering the average yield to be the actual average being produced in our valley since Pima cotton has been introduced, which has been one-half bale per acre. Of course, we have exceptional cases where people may average better than one-half bale for several years, but this is offset wherein just as many farmers produce less than one-half bale for the same period of time, because they are liable to the losses incurred from hail storms, black arm, root rot, and other troubles, so that, on the whole, I think that this is a very conservative estimate of the average cost for the year 1921:

A man and team, 1 year		$1,200.00
Irrigation water, at $3.75 per acre		187.50
Planting seed, $1 per acre		50.00
Hoeing, including thinning, at $7 per acre		350.00
Expense of irrigation, $3 per acre		150.00
Implements, $250; depreciation only		50.00
Shop work		25.00
Incidentals, including sacks, tents, etc		100.00
Ginning 25 bales, at $20		500.00
Picking 25 bales, at 3 cents per pound		1,500.00
		4,112.50
Total, less 11¼ tons of seed at $20		225.00
Total cost of 18¾ bales, 6¼ having been paid as rent		3,887.50

Cost per pound, $0.413.

Very truly,

W. S. STEVENS.

—

EXHIBIT B.

APRIL 14, 1921.

MR. DWIGHT B. HEARD,
Phoenix, Ariz.

DEAR MR. HEARD: The following is my estimate of the cost of production of Pima cotton in the Salt River Valley for 1921:

ESTIMATED COST OF PRODUCTION, 80 ACRES COTTON, SEASON 1921.

Based on low-wage scale of $3 per day, including board—cheap horse feed, but no allowance for horses when not actually employed, nor for man when he is not actually in field:

Plowing, at $3.75 per acre	$300
Disking after plowing, at 80 cents per acre	64
Dragging twice, at $2	160
Labor, irrigating before and after plowing	54
Disking before planting, at 80 cents	64
Planting, at 70 cents per acre	56
Cultipacker, at 50 cents per acre	40
Cultivating about 8 times, including furrowing, at 70 cents	448
Chopping, at $1.25 per acre	100
Hoeing twice, at $1.50 per acre	240
Labor, irrigation, four times after planting	60
Planting seed	40
Depreciation in equipment	150
Incidental expenses	250
Irrigation water, 3 acre-feet, at $7.50 per acre	600
Taxes, State and county, at $5 per acre	400
Estimated cost to picking time	3,026
Picking, basis one-half bale per acre, at 3 cents per pound	2,400
Ginning, basis one-half bale per acre, at $20 a bale	800
Overhead, including tents, sacks, wood insurance, hauling cotton to gin, etc., at three-fourths cent per pound seed cotton	600
Total as above	6,826

Actual cost of production (labor only), 34 cents per pound.

[IMPORTANT NOTE.—The above does not include any land rent or interest on land investment; does not allow anything for living expenses while farmer is not in field; nothing for ditch cleaning, keeping up fences, etc. On above basis 45 cents per pound would mean ultra-conservative cost of production, 1921.]

CHAS. M. SMITH.

—

EXHIBIT C.

APRIL 21, 1921.

Estimate of Dwight B. Heard, of Phoenix, Ariz., as to cost of production of American-Egyptian (Pima) cotton, under the Salt River reclamation project, Arizona, for season of 1921, cost per acre, based on production of one-half bale to an acre and present cost of labor and supplies:

Annual payment to United States Government, due on Roosevelt Dam and Salt River Valley projects		$2.00
Taxes on basis average assessed on location $183 per acre and average combined State, county, school, high school, and road district tax of $2.50		4.57
Irrigation water service based on annual use of 3 acre-feet		3.60
Seed for planting, select Government-inspected seed, at 2 cents per pound; 30 pounds per acre		.60
Labor for irrigating once before planting, six times after plowing, at 30 cents per acre		2.10
Plowing, per acre		4.50
Harrowing, twice, at $1		2.00
Dragging, twice, $1		2.00
Planting, 75 cents		.75
Rolling, 75 cents		.75
Seven cultivations, including furrowing out		5.60
Chopping or thinning		1.25
Average summer hoeing, cost per acre		7.50
Expense per acre to picking time		37.22
Picking 1,000 pounds seed cotton, equaling one-half bale of lint, at 3 cents per pound	$30.00	
Ginning one-half bale of cotton, at $20	10.00	
Transport to gin of seed cotton, 5 cents per 100 pounds	.50	

Overhead and incidental expenses per acre, including tents and wood for pickers, depreciation on machinery, shop work, picking sacks, insurances based on 10 cents per pound of seed cotton	$7.00	
		$47.50
		84.72
Deduct value of cotton seed, 750 pounds, to each 1,000 pounds of seed cotton at value of $16 per ton		6.00
Net cost of producing one-half bale of 250 pounds of Pima long staple cotton lint, per acre		78.72
Cost per pound, Pima lint cotton, exclusive of any return on value of land		.3149
Figuring a revenue on the land of but $20 per acre would add 8 cents to production cost of lint cotton and make the actual production cost per pound of Pima cotton lint		.3949

PHOENIX, ARIZ., *April 14, 1921.*

Hon. J. W. FORDNEY,
Chairman Ways and Means Committee,
House of Representatives, Washington, D. C.

DEAR SIR: From the standpoint of safeguarding the financial interests of the Salt River Valley of Arizona, the Phoenix Clearing House Association is vitally interested in the proposal to enact a protective tariff on American-Egyptian Pima long-staple cotton. This is a special type of cotton developed by the United States Department of Agriculture through an experimental stage of 12 years or more, and which has become known to the cotton trade at large as the equal of any cotton in the world. This type of cotton has been extensively used for the manufacture of tire fabric, on account of its superior length of staple and high tensile strength.

Last year in the Salt River Valley 185,000 acres were planted to long-staple cotton, with a resulting yield of more than 72,000 bales. Estimates place the cost of last year's crop at about 60 cents per pound.

No general market has so far developed for the staple, and the few sales made during recent weeks have ranged from 24 cents to 30 cents per pound, basis No. 2.

Salt River Valley is especially adapted to the growing of long-staple cotton. The cultivation of this staple is restricted to a few valleys in the Southwest, where the length of the growing season permits the development of the fiber and general cultural conditions are favorable.

It seems important that some steps be taken to insure the permanence of this new industry in the Southwest, which is just beginning to supply a growing demand for this superior type of cotton.

In order that the industry may survive, the growers of Arizona and California need the benefit of a protective tariff of a sufficient amount to enable them to compete with Egyptian Sakellaridis cotton, produced in Egypt by native labor on a wage scale entirely out of harmony with the American standard of living.

The Phoenix Clearing House Association in special meeting hereby earnestly advocates the adoption of a protective tariff on American-Egyptian Pima long-staple cotton of 20 cents per pound.

Mr. Dwight B. Heard, representing the Arizona American-Egyptian Cotton Growers' Association and the Phoenix Chamber of Commerce, will appear before your committee in behalf of the foregoing proposal. Mr. Heard is fully qualified to speak for the cotton growers of the Southwest, and we bespeak for him your most favorable consideration.

Yours respectfully,

THE PHOENIX CLEARING HOUSE ASSOCIATION,
By B. E. MOORE, *Vice President.*

THE PHOENIX CHAMBER OF COMMERCE,
Phoenix, Ariz., April 14, 1921.

Hon. DWIGHT B. HEARD,
Heard Building, Phoenix, Ariz.

MY DEAR MR. HEARD: We are glad to have you represent the Phoenix Chamber of Commerce, with a membership of 1,100, at any and all meetings held in Washington in connection with the tariff or any other subject vital to this section of the Southwest.

This is to advise you that you have been appointed as the general official representative of this organization at the board of directors' meeting held to-day, April 14.

Yours very truly,

W. W. LAWHON, *President.*
HARRY WELCH, *Secretary.*

ARIZONA AMERICAN-EGYPTIAN COTTON GROWERS' ASSOCIATION,
Phoenix, Ariz., April 14, 1921.

Hon. JOHN W. FORDNEY,
Chairman Ways and Means Committee,
Washington, D. C.

DEAR SIR: We have succeeded in getting the bearer of this message, Hon. Dwight B. Heard, to make the trip to Washington to impress upon your committee the imperative need of quick action to prevent the dumping of Egyptian cotton upon our market.

If we fail to get immediate relief, the cotton producers in Arizona will be absolutely ruined. They have practically all of the 1920 crop on hand waiting and hoping that you will be able to pass an emergency tariff law that will stop further importations of Egyptian cotton and thereby insure a price on their cotton that will, in a measure, equal the cost of production.

It cost approximately 71 cents per pound to produce this crop, which, of course, was far above the cost of previous years. It will cost, on an average, about 40 cents per pound to produce the 1921 crop, and we should be entitled to a reasonable profit over and above this price; and in line with the profits made in other business, think that a price of approximately 60 cents per pound should be realized on our cotton, which is the finest cotton produced in the world.

We earnestly urge you to use every possible effort to get this emergency tariff law amended, to provide that we may have a tariff of not less than 20 cents per pound.

On behalf of the great number of cotton growers, together with their wives and children, who will be absolutely destitute if this measure fails, we urge you to insist on the amendment as suggested.

Thanking you heartily, I am,

Very truly,

ARIZONA AMERICAN-EGYPTIAN COTTON GROWERS' ASSOCIATION,
By W. S. STEVENS, *President.*

The PRESIDENT pro tempore. The question is upon the amendment proposed by the junior Senator from Arizona [Mr. CAMERON] to the amendment of the Committee on Finance. The Secretary will call the roll on the amendment to the amendment.

Mr. CAMERON (when his name was called). I have a general pair with the junior Senator from Georgia [Mr. WATSON]. I transfer that pair to the junior Senator from Colorado [Mr. NICHOLSON] and vote "yea."

Mr. OVERMAN (when his name was called). Noticing the absence of my general pair, the senior Senator from Wyoming [Mr. WARREN], I transfer that pair to the Senator from Missouri [Mr. REED], and vote "nay."

Mr. ROBINSON (when his name was called). I transfer my pair with the Senator from West Virginia [Mr. SUTHERLAND] to the Senator from Rhode Island [Mr. GERRY] and vote "nay."

Mr. WATSON of Indiana (when his name was called). I transfer my general pair with the senior Senator from Mississippi [Mr. WILLIAMS] to the senior Senator from Pennsylvania [Mr. CROW] and vote "nay."

Mr. WILLIS (when his name was called). I am paired for the day with my colleague, the senior Senator from Ohio [Mr. POMERENE]. I transfer that pair to the junior Senator from Oklahoma [Mr. HARRELD] and will vote. I vote "yea."

The roll call was concluded.

Mr. UNDERWOOD. I wish to announce that the Senator from Mississippi [Mr. HARRISON] is paired with the Senator from West Virginia [Mr. ELKINS]. If he were present, the Senator from Mississippi would vote "nay."

Mr. NEW. I transfer my pair with the Senator from Tennessee [Mr. MCKELLAR] to the junior Senator from Iowa [Mr. KAWSON] and vote "yea."

Mr. GLASS. I transfer my general pair with the senior Senator from Vermont [Mr. DILLINGHAM] to the senior Senator from Texas [Mr. CULBERSON] and will vote. I vote "nay."

Mr. JONES of Washington (after having voted in the affirmative). The senior Senator from Virginia [Mr. SWANSON] is necessarily absent, and I promised to pair with him for the afternoon. I find, however, that I can transfer that pair to the junior Senator from Oregon [Mr. STANFIELD]. I do so, and allow my vote to stand.

Mr. WALSH of Montana (after having voted in the negative). I observe that the Senator from New Jersey [Mr. FRELINGHUYSEN], with whom I have a pair, has not voted. I transfer that pair to the Senator from Nebraska [Mr. HITCHCOCK] and allow my vote to stand.

Mr. WATSON of Indiana (after having voted in the negative). I am informed that my pair, the senior Senator from Mississippi [Mr. WILLIAMS], if present would vote as I have voted. Therefore I withdraw the announcement of the transfer of my pair and permit my vote to stand.

Mr. SIMMONS. Mr. President, I wish to inquire whether the Senator from Ohio [Mr. WILLIS] has voted.

The PRESIDENT pro tempore. The Senator from Ohio has voted.

Mr. SIMMONS. The senior Senator from Ohio [Mr. POMERENE] is paired with the junior Senator from Ohio [Mr. WILLIS]. If the senior Senator from Ohio were present he would vote "nay."

Mr. CURTIS. I desire to announce the following pairs:

The Senator from Delaware [Mr. BALL] with the Senator from Florida [Mr. FLETCHER];

The Senator from West Virginia [Mr. ELKINS] with the Senator from Mississippi [Mr. HARRISON]; and

The Senator from North Dakota [Mr. MCCUMBER] with the Senator from Utah [Mr. KING].

The result was announced—yeas 14, nays 41, as follows:

YEAS—14.

Ashurst	Gooding	McKinley	Shortridge
Bursum	Johnson	McNary	Willis
Cameron	Jones, Wash.	New	
Capper	Ladd	Oddie	

NAYS—41.

Borah	Glass	Overman	Sterling
Brandegee	Harris	Pepper	Townsend
Calder	Heflin	Phipps	Trammell
Caraway	Kellogg	Ransdell	Underwood
Colt	Kendrick	Robinson	Wadsworth
Cummins	Keyes	Sheppard	Walsh, Mass.
Curtis	Lenroot	Simmons	Walsh, Mont.
Dial	Lodge	Smith	Watson, Ind.
du Pont	McLean	Smoot	
Ernst	Moses	Spencer	
France	Nelson	Stanley	

NOT VOTING—41.

Ball	Culberson	Elkins	Frelinghuysen
Broussard	Dillingham	Fernald	Gerry
Crow	Edge	Fletcher	Hale

Harreld	McKellar	Pittman	Swanson
Harrison	Myers	Poindexter	Warren
Hitchcock	Newberry	Pomerene	Watson, Ga.
Jones, N. Mex.	Nicholson	Rawson	Weller
King	Norbeck	Reed	Williams
La Follette	Norris	Shields	
McCormick	Owen	Stanfield	
McCumber	Page	Sutherland	

So Mr. CAMERON's amendment to the amendment of the committee was rejected.

Mr. ASHURST. Mr. President, the Senate having declined to adopt the amendment fixing the duty at 15 cents per pound, I now offer the amendment which I send to the desk, providing for a duty of 10 cents per pound.

The PRESIDENT pro tempore. The amendment to the amendment will be stated.

The ASSISTANT SECRETARY. On line 19 it is proposed to strike out "7" and insert "10."

Mr. ASHURST. I ask for the yeas and nays on that amendment.

The yeas and nays were ordered.

Mr. SIMMONS. Mr. President, I wish to put in the RECORD, without reading, a letter which I have received upon this subject from Mr. Frederick H. Andres, who, I understand, is treasurer of the Frederick H. Andres Co. (Inc.), of Boston, Mass. This letter I put in the RECORD because it sustains absolutely the contention that has been made upon the floor by the opponents of the amendment we have just voted upon, which is now presented in a new form, to the effect that there is no real competition between the Egyptian cotton and the Pima cotton grown in Arizona, and that the Egyptian cotton to-day, with a duty of 7 cents upon it, sells in the American market for very much more than the long-staple cotton of Arizona.

The PRESIDENT pro tempore. Without objection, the letter will be printed in the RECORD.

The letter is as follows:

FREDERICK H. ANDRES (INC.),
Boston, Mass., June 29, 1922.

Hon. FURNIFOLD MCL. SIMMONS,
Member Committee on Finance,
United States Senate, Washington, D. C.

DEAR SENATOR: I would like to point out to you the folly of the duty of 7 cents per pound on foreign cotton of 1⅛-inch staple at present in force through the emergency tariff bill and embodied in the permanent tariff bill at present before Congress.

The plea of our Arizona cousins for protection was that their product, which was equal in every respect to that of Egypt, could not compete with Egyptian cotton, owing to the cheaper labor of Egypt. With a duty on this foreign cotton they would be able to get the equivalent of the duty more for their cotton, which would in a measure compensate them for the difference in the cost of production.

That looked all very fine, but what did actually happen?

At no time since this duty on foreign cotton went into effect did Pima cotton sell on a parity with Egyptian Sakellarides, which is the 1⅛-inch variety. To-day the much-advertised Pima cotton goes begging at 34 cents, while we are actually selling Egyptian Sakellarides of equal grade and staple at 45 cents, including the duty of 7 cents.

This difference has varied according to supply and demand, but at no time did these cottons sell at the same price since the duty was imposed. Previous to the tariff they did sell fairly close together and for some time Pima was higher than Egyptian Sakellarides. As I pointed out in my arguments of February 2 and February 9 addressed to your committee, copies of which I sent you, Pima cotton must rest on its own bottom, and its selling price has absolutely nothing to do with the price of Egyptian. It is entirely controlled by supply and demand.

No duty on foreign cotton will help our cousins in Arizona.

The only difference that such a duty makes is to saddle the long-suffering public with a higher cost of material. What the Government collects in revenue out of the duty will not pay them for the extra work entailed. But the public pays not only the 7 cents per pound, but four or five fold that 7 cents. How much do you figure 7 cents per pound on cotton would figure in a pair of ladies' mercerized cotton hose? I would say no more than 1 cent per pair, or, say, 12 cents per dozen. The jobber will offer these goods to the retailer at, say, 12 cents per dozen more than the Pima product, but do you think the retailer will sell them at the same price as the Pima goods, or even 1 cent per pair more? No; he will add 5 cents at least to the price, or five times the difference it costs him.

Another point which we might make is that 100/2 mercerized English yarn is sold here for $2.10, against the domestic price of $2.30 per pound. One of the reasons for this difference is the 7 cents per pound which the American manufacturers are obliged to pay for the Egyptian cotton which enters into this yarn, just as if the handicap of American high-labor costs compared with British were not sufficient to saddle our industry with. Then, again, take the American tire manufacturers. They are buying Egyptian cotton and shipping it to their Canadian plants, thereby saving 7 cents per pound duty, but also depriving American labor of the labor employed by American capital.

Foreign labor is getting the benefit of this absurd legislation, while the American public pays the higher cost of the goods in order that Mexican labor employed by the Arizona growers might thrive.

Boiled down to hard facts, the duty on foreign cotton—

1. Has not helped the Arizona planter.
2. Has not forced the American manufacturer to use Pima instead of Egyptian Sakel.
3. Has not increased the net revenue of this country.
4. Has allowed foreign manufacturers to compete more effectively with American manufacturers in this country, as well as abroad, in cotton manufactures containing long staple.
5. Has resulted in American capital employing Canadian labor to manufacture goods into which this long-staple cotton enters, to the detriment of American labor.
6. Has resulted in enhancing the price of finished goods to the consumer.
7. The ultimate result would be a gradual paralysis of the fine-goods industry in this country, to the detriment of American labor and the American public.

So you see that nobody gains by this legislation. On the contrary, the losers are our long-suffering public, who pay a lot and kick a little.

Yours very truly,

F. H. ANDRES.

The PRESIDENT pro tempore. The question is on the amendment offered by the Senator from Arizona [Mr. ASHURST] to the amendment of the committee.

Mr. SIMMONS. Mr. President, on that amendment I wish only to make one observation.

As a result of the 7-cent duty on long-staple cotton proposed in the Senate amendment every rate upon cotton goods has been jacked up, wherever Egyptian cotton is used in the manufacture of the article, to the full extent of the 7 cents per pound. There will be very little cotton cloth imported into this country in which Egyptian cotton is the chief component element of value, because we do not import more than a small amount of cotton cloths, and they are of the finer grades. The amount of duty that will be paid at the customhouse, therefore, by reason of this duty, will not be large. It will be, however, a great deal more than the amount of money that will go into the pockets of the Arizona cotton growers and the California cotton growers; but that is not the trouble. Every product of cotton in this country which is at all comparable with that quality that is imported from abroad will be advanced in price as the result of this duty to the full extent of the duty.

Mr. STANLEY. Mr. President, I am very much interested in the very significant statement which the Senator from North Carolina is making. It is one, to my mind at least, of tremendous import. As I understand the Senator, when they start to fix the price upon cotton yarn and threads and cloth in the various stages of manufacture they will start on the basis of a 7-cent import duty, and that import duty will be carried on all cotton fabrics, whether made of Egyptian cotton or the long-staple cotton from Arizona and the Imperial Valley of California, or made of some other cotton.

Mr. SIMMONS. That is absolutely true, in my opinion, as to all cotton goods produced in this country that are at all comparable with the kind that we import.

Mr. SMOOT. Wherever long-staple cotton is used.

Mr. SIMMONS. Whether long-staple cotton is used at all or not.

Mr. SMOOT. Oh, no.

Mr. SIMMONS. Certainly so, if it is comparable. I am not talking about the duty now; I am talking about the advance in price by the American producer. Of course, on every pound that is imported we shall have to pay, by way of a compensatory duty, under your bill a duty on that to the extent of the duty you impose on the raw material; but every pound of cotton goods that is produced in this country that is at all comparable to the goods that come in and are subject to this duty will be advanced in price by the American producer to the full extent of this duty, not necessarily, but because he has the power to do it and because the conditions permit it, and because that is the way in which these compensatory duties operate.

Mr. SMOOT. The Senator will admit, however, that the bill does not provide for a compensatory duty upon the great bulk of the goods in this bill.

Mr. SIMMONS. I did not say that at all. It provides only for a compensatory duty upon those goods that are imported of which Egyptian cotton is the component element of chief value. That is the only article of import upon which the duty will be laid. That will be a heavy burden upon the American consumer. It will add the amount of this duty to every pound of goods imported from abroad that has this Egyptian cotton to that extent in it; but the point I am making is that the American producer of cotton cloth with Egyptian cotton in it will, of course, add it, because he has paid it, and the American producer, whether he has imported and used Egyptian cotton or not in the goods he produces, will make that an excuse for advancing his price to the full extent of the duty. It is perfectly clear that we will have to pay this duty, not only upon the article imported but we will have to pay it upon every pound of cotton goods produced in this country in which Egyptian cotton is used. That, I say, would be a very heavy burden, because it would apply not only to the imported article but to the article produced in this country containing Egyptian cotton.

If it stopped there, it would be bad enough, surely; but the point I am making is that it will not stop there, but that every comparable article of cotton cloth produced in the United States, whether it has Egyptian cotton in it or not, will be advanced to the extent of this duty, and no man can tell or estimate the

gigantic sum that will be added to the cost of the cotton goods consumed in America by reason of this 7 per cent duty. The bill jacks up all duties to the extent of the 7 cents a pound.

I know this, Mr. President—that while the Arizona cotton producers will be able to collect 7 cents a pound upon the 100,000 bales of this cotton that they produce, amounting to several hundred thousand dollars, the amount of money that will go into their pockets by reason of this increased price of their cotton, assuming that they get the full benefit of the duty in the advanced price, will be a mere bagatelle compared with the amount of money that the people of this country will have to pay out on account of the duty without getting anything in value for it, without a single compensatory consideration, except the fact that the Arizona cotton producer will have been helped to the extent of what will be even in the aggregate a comparatively insignificant amount. The amount the people of the United States will have to pay out, I say, will run into tens of millions, and if it stops at $10,000,000 I shall be greatly pleased and surprised.

Mr. President, this is a mere illustration of the character of this bill. We shall presently talk about a ship subsidy. This bill is reeking with subsidies, is just as much filled with gratuities as the ship subsidy bill will be. I have given an illustration of the character of subsidies in this bill, a subsidy to the growers of 100,000 bales of cotton in this country, paid for by the people through tens of millions of dollars added to the cost of the clothes they wear upon their backs and the cotton goods and materials they use in their homes.

The only difference between the ship subsidy proposition and this subsidy proposition and the scores and hundreds of subsidy propositions which permeate this tariff bill from beginning to the end, is that in the case of the ship subsidy the Government collects the money from the people and pays it over to the operators of the ships. In this particular case, however, the Government authorizes and empowers the manufacturers of cotton goods in this country to collect the subsidy out of the people, compelling them to pay over a very small part of it to the cotton farmers of Arizona and authorizing the manufacturers to put the balance of it in their own pockets.

Mr. SMITH. Mr. President, before the vote is taken permit me to say, in strengthening by statistics the position the Senator from North Carolina takes, that I have here a table furnished me by the Tariff Commission showing that over 50 per cent of the cotton goods brought into this country, perhaps 65 to 70 per cent, are composed of yarns above 60 in count. Perhaps 35 to 40 per cent are composed of yarns from 90 on up to 120. Therefore if we put a duty of 10 cents a pound additional on the Arizona cotton, that, of course, would be reflected in the following paragraphs in the bill, providing for a compensatory duty on all goods in which yarns of a like count shall enter, which means that as to approximately 55,000,000 square yards of goods imported this duty will be reflected directly as a compensatory duty. So that, brought down to its last analysis, it means that a duty laid on a few thousand bales of cotton in Arizona, the benefit of which to the producers is very questionable, will be reflected in a compensatory duty to the amount of millions of dollars to the consumers of cloth made out of like counts of thread. In other words, we will be penalizing the American people who use cloth the major part of which is produced abroad out of thread of this nature sent into this country, and the importers and the consumers of those goods will be forced to pay a compensatory duty on all the cloth made out of the Arizona cotton, on cloth that has thread of a like count, or where there is a possibility of the cloth being made out of thread of a like count.

So that if it were the policy of the Government to encourage the production of this character of cotton, it would be infinitely cheaper and better for the American people to pay the cotton growers a bonus per bale, or a bonus per pound, double and treble what it is proposed to put as a duty on the cotton; pay it direct to them, and let the benefit go where we intend that it shall go, rather than to mulct the American people on all the cloth made out of yarns into which this could enter.

Why not be sensible? If we want to benefit the Arizona cotton growers let them appeal for a direct bonus to encourage their production, and then it will not go to any manufacturer, it will not come indirectly, but it will go to them directly on every pound they produce of a given staple. They would be the direct beneficiaries of it, and the American people would not be loaded with this burden on the vast importation of foreign goods.

So, if they come here to appeal for help, and we are going to help them, let us help them directly, but not indirectly burden the whole American people in order that they may perhaps incidentally benefit; and it is very doubtful as to whether they would get anything at all or not.

Mr. SHORTRIDGE. Mr. President, the Senator from North Carolina [Mr. SIMMONS] says that the rate of duty which is claimed on this particular article is an illustration of the whole nature and character of this tariff bill. I could well believe that it is so. It is indeed, in my humble judgment, a very fair and just illustration of the principle which runs through, vitalizes, and gives economic value to this tariff bill.

Mr. SIMMONS. What I meant to say—and I wish the Senator to have my statement in the strongest language—was that it was the parcelling out by the Republican Party of subsidies.

Mr. SHORTRIDGE. And a penalizing of the American people.

Mr. SIMMONS. Yes.

Mr. SMOOT. Mr. President——

The PRESIDENT pro tempore. Does the Senator from California yield to the Senator from Utah?

Mr. SHORTRIDGE. Certainly.

Mr. SMOOT. Then, if all the rates in this bill are subsidies, the Underwood law must contain subsidies. Where are you going to draw the line? The only question is as to the amount.

Mr. SIMMONS. I did not say they were all subsidies. I said that this was an illustration of scores of items in this bill of similar character, which are merely subsidies.

Mr. SMOOT. If the Senator will read his speech, he will find that he said that if the ship-subsidy provision is a subsidy, so is this bill a subsidy.

Mr. SIMMONS. I said there were scores of items which were subsidies.

Mr. SMOOT. The Senator did not say scores of items.

Mr. SIMMONS. I said this was an illustration of the kind of item which was a subsidy. The Senator knows I said that.

Mr. SHORTRIDGE. I agree with the Senator to this extent, that it is an illustration of the principles which permeate and run through and which I claim give economic strength and virtue to this proposed tariff law.

Of course, a theory is one thing; a fact is another. Theoretically, every tariff duty imposed, according to some schools, adds to the price of the article to the consumer here in America. But in practical operation the facts discredit and refute the Democratic theory. We apply our doctrine of protection to many other items. We apply it to the American producer of rice, the Alabama miner of amorphous graphite, the Southern, Middle, or Far Western States producer of sugar. In the mining States we apply it, for example, to quicksilver. In the manufacturing States we apply it to the various articles of manufacture. According to Democratic theory, each of these applications of the protective principle tends to benefit only the particular industry. Calling it a "subsidy," calling it "penalizing," terming it an "imposition upon the American people," adds nothing whatever to argument nor does it affect the ultimate concrete fact. Industries are interdependent; they do not stand alone. In encouraging and building up and maintaining one industry not only those engaged in that industry are benefited but many other industries are encouraged and sustained and America prospers. Even as in old times, the London aristocrat wanted his clothes made in Rome, and later his articles of adornment made in Paris, and as now the dudes of America want their clothes made in London, so we find that now, according to this statement, there are those who want foreign-raised cotton merely because it bears the term "Egyptian." Such is the force of habit or custom or words. It may be that "a rose by any other name would smell as sweet," but I doubt very much whether we would enjoy the flower as much if it bore another name. So to call this proposed duty on long-staple cotton a "subsidy," or to say that we "penalize" or that we are "oppressing" one part of our people in order to aid another is to indulge in mere verbiage. Thus to characterize this or any other item in this bill adds nothing to the argument.

If we apply the theory advanced here by the disciples of Cobden or the disciples of Calhoun in his later day—forgetting his powerful arguments in his perhaps stronger youth—one by one the industries of America would be put out of existence. I trouble the Senate to justify that statement, I think, by merely suggesting what would happen if the free-trade notion or principle were carried to its legitimate conclusion in framing tariff laws.

I care not what my learned friends may say, I know that there are industries in California which can not compete with oriental industries. Our State is made up of men and women who have come from practically every State in the Union, from

northland and southland. Looking at the distinguished Senator from North Carolina [Mr. SIMMONS] my mind recurs to the fact that some of the most eminent and successful men in the political world, in the commercial world, in the educational world of California came from his great State of North Carolina.

Similarly we have attracted to California the finest type of citizenship in America. Our soil, our climate, the status of our civilization are such that our people can not, in the field or the factory, compete with oriental labor, the Japanese coolie labor, the Chinese coolie labor, the Far East coolie or cheap, miserably paid labor. That is not a theory with us. It is a tragic or pathetic fact.

The same thing holds good, I venture to say, with respect to Louisiana. Those coming immediately from that State, Senators of character, of learning, rising quite above political affiliations, indifferent to political terms of partisanship tell you and tell me that they can not prosper there in the cultivation of rice or sugar in competition with foreign producers.

If I may refer again to my own State, I simply know, and the facts warrant my statement, that we can not there operate our quicksilver mines in competition with the Spanish or the Austrian. I therefore make the broad statement that one by one by a certain kind of legislation we can put out of business the industries of America. I would include not only the producers of foodstuffs but the multitudinous phases of manufacture. If that be so—it perhaps may be doubted, but if it be true—why should we hesitate to give protection to Arizona or to California in respect to this particular industry, why as to sugar, why as to rice, why as to graphite, why as to quicksilver, why as to many of our manufactured articles in this country?

The answer, I imagine, which the free trader will make is that by virtue of superior skill, by virtue of labor-saving machinery, by virtue of organized capital, each and all of these various American industries can survive and our system of wages and standard of life and living be maintained without protection. But I beg to remind Senators that the father and the mother, with their little brood of children to feed and clothe, with the schools and churches and our type and standard of living in California, can not compete with the foreigner—assuredly not with oriental labor. What, then, is to happen? One of two things must happen. Either they must go out of that particular line of work and business or the cost of production, the scale of wages, in that industry must be reduced; otherwise the foreign producer can import and the foreign product will take the place of the home product. Is that result to be desired? Is that the result the free trader is aiming at?

Mr. SIMMONS. Of course, I sympathize with the people of California and the farmers out there if they are in the distressed condition in which the Senator represents them to be. In the last 10 days we have devoted quite a number of days to discussing duties upon farm products and other products of California. I can not very well understand the statement the Senator is making about the difficulties which they are having to make a living out there in farming and fruit growing and nut raising, and all that sort of thing, in view of statements I have heard about the value of lands in California. I do not know whether it is true or not, but I have been told that the farm lands, the fruit-growing lands, the nut-growing lands of California have a market value far in excess of the market value of farm lands anywhere else in the United States. I have heard some stories about some lands that were worth $1,000 or $1,500 an acre. I do not know exactly how to reconcile the statement of the Senator with reference to the difficulties the farmers and growers of the other products out there are having to get along, with the unusual value of lands said to exist there.

Mr. SHORTRIDGE. One answer might be that we have thus far been fairly well protected by the principle for which we are now contending.

Mr. SIMMONS. Since 1913 we have had the Underwood law, and during that period of time they have been pretty prosperous out in California. I would be very glad if the Senator would tell the Senate to what extent farm lands have advanced in value in California during that period of time.

Mr. SHORTRIDGE. Since 1914 manifestly we have had a protection brought about by other than legislative action. The war brought about a hectic, feverish type of prosperity all over the land, and just as such temporary prosperity will vanish in a day, brought about by unnatural causes, I maintain that substantial and permanent prosperity will be insured by an application of protective principles, principles which work in a sense in the same way; that is to say, which enable the American producer, whether he be in the Senator's State or mine, to have the benefit of the greatest consuming market in the world, namely, the market of 105,000,000 of American citizens within our continental borders.

Mr. SIMMONS. I have heard a good deal about the war being a practical embargo, but I had understood the Senator was complaining largely of oriental competition. The war did not seriously interfere with transportation and commerce between the Pacific coast and the Orient, did it?

Mr. SHORTRIDGE. Yes; it did. As an illustration, the war shut off the trade of Germany with China and during that time a certain American industry built up an enormous trade in China. Now, that the war is over America has lost that trade almost entirely and Germany has recovered it, and to a very appreciable degree——

Mr. SIMMONS. The Senator is speaking about export trade now, is he not?

Mr. SHORTRIDGE. Certainly I am; and as to import trade there was material interference in transportation across the Pacific Ocean by virtue of the war. It is true that early the German fleet was swept from the Pacific Ocean, but owing to the great national and international economic upheaval the imports from the Orient were diminished, and this did affect the condition of affairs.

But I am not complaining or am not troubling the Senate with the conditions prevailing there growing out of the late war. What I am maintaining and what I am willing to join issue with the Senator on is this: The learned Senator contends that this is a sample of many items in the bill; that it is designed to benefit only one class of our people. I say that at first blush that is so, even as to put a tariff on any particular article is at first blush designed to help those engaged in that industry. But if the free-trade principles which I am opposing are applied, then one by one we can put out the industries of America, as the world is now constituted.

If I lived in the Fiji Islands or in a South Sea island where we raised nothing but coconuts or pineapples or bananas, I might be a free trader in respect to importing into that island all manufactured articles. But we do not live in the Fiji Islands or a South Sea island. We live in America. I maintain that what develops an industry in North Carolina or Kentucky is beneficial to me and is beneficial to California. I am not afraid of the protection doctrine, and I add that if the Senators from North Carolina should come forward and claim a tariff duty upon some particular industry limited to their State and could show me that because of the price of labor there or other conditions they could not compete with Burma or with Egypt or other foreign land, I would favor tariff protection for their industry, and I think they would earnestly ask it. If the issue, therefore, is that every tariff duty imposed is a penalizing of the American people, I am willing, speaking for my poor self, to join issue and to discuss that before the American people.

Finally, so far as I am concerned on this particular item, both of the Senators from Arizona have presented the facts and advanced convincing arguments in favor of the rate of duty asked. I have not indulged in many words with respect to California, but the soil and the climate of California are adapted to the raising of this particular kind of cotton. I do not understand Senators when they say that this kind of cotton is not in direct competition with the Egyptian long-staple cotton. It appears from the record that 12,000 bales or more of our cotton were used in a late year in the manufacture of automobile tires, and that a very considerably larger number of bales of Egyptian cotton were similarly used. Manifestly there was competition there. I am not advised as to what particular automobile tires used the American cotton or which used the Egyptian, but both kinds were bought and used by automobile tire manufacturers, and in that particular field it would appear that there was something in the nature of competition.

As to the proposed amendment, the Senate having expressed itself unmistakably as against the 15-cent rate, I hope Senators will feel disposed to vote for the amendment now proposed by the senior Senator from Arizona, with the rate at 10 cents per pound.

Mr. STANLEY. Mr. President, I hesitate to say any more upon this subject at this late hour when the Senate is anxious to vote, especially when I realize that a few Senators will listen attentively to what I say and, like St. Patrick's fishes, when I get through they will have their own way. The pending amendment, however, is so peculiarly atrocious that I can not refrain from expressing my disapprobation.

Mr. ASHURST. I did not catch the word the Senator used, being engrossed in the examination of my manuscript.

Mr. STANLEY. This is such a peculiarly indefensible and atrocious proposition that I can not refrain from expressing my utter abhorrence of it. If my remarks affect nobody except myself, I will at least have relieved my own conscience and my own soul by saying what I think about it.

This character of cotton is raised in a kind of governmental agricultural infirmary, deliberately redeemed from the wilderness at an enormous cost. This peculiar type of cotton is produced in the Salt River Valley of Arizona and the Imperial Valley of California. Those two valleys are reclaimed land, land redeemed from the sand hills and the waste of a barren wilderness by an expenditure of millions upon millions of dollars. The great Roosevelt Dam and a like structure erected in the Imperial Valley saved this arid land for the uses of the American people, and yet, so far as this product is concerned, the American people would be a dollar a pound better off in the purchase of an essential commodity if not one stone had been laid upon another in the erection of those dams and not one acre of that land had ever been reclaimed. It is proposed, first, to take millions, hundreds of millions, of the people's money from the Public Treasury to irrigate and reclaim land from the sand wastes and then tax the American people ten times as much as the farmers in the two valleys referred to were paid to leave communities where they were tax producers and gather them under a Government dam to become tax eaters. The proposition is so preposterous and absurd that it seems to me amazing that any man of thought or conscience should have to rise in this place to attack or expose it.

Mr. ASHURST. Mr. President——

The VICE PRESIDENT. Does the Senator from Kentucky yield to the Senator from Arizona?

Mr. STANLEY. Certainly.

Mr. ASHURST. I paid the Senator a while ago what I thought was a just compliment to his learning as a historian, and I should regret to be obliged to recall that compliment; but if he continues in that vein I shall be obliged to do so. The Senator says we have appropriated millions of dollars to build these irrigation projects. Mr. President, not a dollar have we appropriated. The money came from the sales of lands in the various States. Those lands were dedicated by the States to the Federal Government. The arid States are not asking for an appropriation and have never asked for one; they are simply paying back that which we loaned the Federal Government.

Mr. STANLEY. That is a very fine difference, Mr. President; it is the difference between tweedledum and tweedledee. Whether the lands belonged to the Government or to the States, they were public lands and were sold, and it was the Government's money when it converted its own lands into money. The Senator may argue that because it did not take the appropriations for the reclamation projects in the Salt River and Imperial Valleys out of this pile of Government money but took it out of that pile the Government is not a loser; but I leave that argument to answer itself. Be that as it may, here are dams constructed at public expense; here are the energy and the assets of this country used to add to the area of arable lands in the United States. Why do we reclaim arid lands? In order that two blades of grass may be made to grow where but one grew before; in order to make bread and cotton and wool and other prime necessities of life more plentiful; in order to make them easier to obtain and to lessen the cost by increasing the supply.

The result of this proposition is that just in proportion as we redeem arable lands so we shall enhance the price of everything that is raised upon those lands. If this thing were continued to a sufficient extent, all we would have to do would be to redeem enough land to pauperize the United States.

Mr. SHORTRIDGE. Mr. President——

The VICE PRESIDENT. Does the Senator from Kentucky yield to the Senator from California?

Mr. STANLEY. Certainly.

Mr. SHORTRIDGE. Does the Senator claim that the policy of reclaiming the arid lands of the West has been a mistaken policy?

Mr. STANLEY. The reclamation of arid lands for the production of crops which will add to the wealth of the country is a most meritorious policy; to reclaim them in order to hothouse an industrial parasite is a mistake. The Senator from California is so modest he amazes me. A mistake? It is a blunder, almost a crime, to take the money of the people or to take the money of a State and reclaim arid land and then tax the other people of the United States who are raising products upon lands which they themselves redeemed from the wilderness and from the savages to enable those living on the reclaimed land to prosper. Thousands and tens of thousands of hardy pioneers went West; they faced the perils, the solitude, and the hardships of the pioneer's life; they redeemed their land; they owe their success only to their energy and to God; and yet it is proposed to make the men who are producing the wealth of this country upon the land which they redeemed pay a thousand per cent for essential articles of life in order to give a bonus to one county in Arizona and a little shirt-tail full of cotton producers in Imperial Valley who are living upon Government reclaimed land.

The Government has not added to the agricultural wealth of this country; it has created behind these dams an agricultural infirmary, and for every 15 cents it is proposed to pay these cotton planters we are taking at least $2 out of the pockets of the American people.

When the duty on 150,000 bales of Egyptian cotton, and the compensatory duty on all imported goods into which Egyptian cotton enters are considered, for the little five or six hundred thousand dollar bonus given the cotton grower—$10,000,000, says the chairman of the committee—are taken from the pockets of the American people.

Mr. ASHURST. Mr. President, will the Senator yield to me at that point?

Mr. STANLEY. Certainly.

Mr. ASHURST. Mr. President, my friend, with his coruscating rhetoric that is admired all over the United States, says that the Salt River Valley is so inconsiderable and small—that is the purport of his remarks—that it amounts to nothing. Mr. President, I wonder what the merchants and manufacturers of Kentucky will think of that when I tell them through this RECORD that in 1920 the Salt River Valley bought, used, and paid for 32 carloads of goods, wares, and merchandise from Kentucky?

Eight thousand carloads of goods, wares, and merchandise were sent in 1920 from the various States into the Salt River Valley. I am not speaking now of less than carload lots, and I am not speaking of carload lots that went into the Yuma project. I tell you, sir, from Kentucky, and you, sirs, from Maine and from Massachusets, New Hampshire, New York, Ohio, and Michigan that you forget that you send 240,000 carloads of goods, wares, and merchandise to these reclamation projects. We are not beggars asking a largess from the Federal Treasury.

Mr. CARAWAY. Mr. President, will the Senator yield——

Mr. STANLEY. Certainly.

Mr. CARAWAY. I am curious to know why the Senator from Arizona did not include "pocket" importations. He said he included nothing but carload lots, but, coming from Kentucky, I thought possibly that some of it went in less than carload lots. [Laughter.]

Mr. ASHURST. Will the Senator from Kentucky allow me to say a word in reply to the suggestion of the Senator from Arkansas?

Mr. WATSON of Indiana. Mr. President, for the enlightenment of this side of the Chamber, will the Senator from Arizona please state what was in those cars?

Mr. STANLEY. Mr. President, I claim my constitutional privilege from Kentucky. We are not required to say what we sold these prosperous people when they are getting about a dollar a pound for cotton while the poor planter in Mississippi gets but 10 cents a pound, duty and all. They are able to buy Kentucky products; but common politicians and ordinary farmers need not come around.

Mr. CARAWAY. May I suggest that, inasmuch as Arizona is somewhat removed from the seaboard, they have to patronize Kentucky, for they can not reach the Shipping Board?

Mr. STANLEY. If I had realized that, I would not have said what I did.

Mr. ASHURST. Mr. President, since something has been said about pockets by that very keen blade, the junior Senator from Arkansas [Mr. CARAWAY], who has entered this debate, I will say that the saddlebags of the "Arkansas traveler" in 1920 brought into the Salt River project alone 26 carloads of goods, wares, and merchandise, for which we paid not in promises but in gold. There are 30 reclamation projects in our country; multiply 30 by 8,000 and you have the number of carload lots of goods, wares, and merchandise that the irrigation projects purchased and paid for.

Are the fires in your furnaces out? Does the smoke no longer come from your factory chimneys? Are you thinking about foreign trade? I say build up the reclamation projects of the South and West and you will cease harrowing your brain about foreign trade. The western and southern people, if you will give them a chance to reclaim their lands, will buy not merely 240,000 carloads annually of your goods and wares but 1,000,000 carloads.

Mr. STANLEY. Mr. President, all I know is what is contained in this little book issued by the Tariff Commission. In speaking of this matter it says:

> The production of American-Egyptian cotton is confined almost entirely to the one county of Maricopa, in the Salt River Valley, Ariz., where the soil and climatic conditions closely approximate those of Egypt and where the necessary moisture must be supplied by irrigation. Pima is the only cotton grown in the Salt River Valley. It is grown only to a slight extent elsewhere; possibly 500 bales are produced annually in the Imperial Valley in California.

This report, from which the Senator from Arizona quoted as the supreme authority against the statements of both the Senator from Utah and the Senator from South Carolina, further says that—

> It is largely controlled by the Pima Cotton Growers' Association, and Government funds available through the War Finance Corporation have been used to enable the growers to hold for better prices. The Egyptian Government also assists its growers—

And so on.

This report says:

> Such variations from the price of the basic cotton are influenced and accentuated by special factors. Pima and Egyptian cottons tend to come together in periods of low prices and to draw apart on a rising market. The Pima crop, very much smaller than the Egyptian and in a few hands, is less subject to speculation, and being more securely financed and marketed by a few large growers can hold its level better in a distress market.

Mr. ASHURST. Mr. President, will the Senator yield to me at that point?

Mr. STANLEY. Certainly.

Mr. ASHURST. They set an example as to what we hope our southern brethren will do. Years ago we said to our southern brethren in the cotton fields, "When you raise a crop of cotton, say to the spinner, 'There it is. Unless you meet that price, you can not have it.'"

That is what I have been urging for years. I have begged, privately and publicly, my friend from South Carolina [Mr. SMITH] to start such a movement in the South; and then, instead of woe and desolation, instead of abject misery and abject poverty spreading itself through the South, the South will be the commander of the world's greatest staple, cotton, and can make its own price.

In Arizona it is not controlled by a trust. Our men—the rich man and the poor man, the Democrat and the Republican—who grow cotton simply believe they have the right to fix their price, and they wish the southern cotton grower would do the same thing. Then he would have a right to feel that he was getting his due portion of justice in the land of his birth.

Mr. HEFLIN. In other words, if the Senator will permit me, he feels that the cotton producers have the right to count the cost of production and add a reasonable profit thereto, and then to organize and stand together until they get that price.

Mr. ASHURST. Absolutely. That is what I hope to see the southern cotton planter do. The southern cotton planter must keep books. He must know what it costs to raise his cotton, and he must not sell below the cost of production. You do not need a Senator to tell you that if you sell cotton for less than it costs you to raise it you will inevitably be bankrupt. The largest individual grower that I know produced 150 bales in 1920. It is true that one company—the Goodyear Co., I believe—some years ago planned a great expansion and did raise some five or six thousand bales, but they have given up that activity in large measure. With due deference to the documents from which the Senator quoted, the cotton of Arizona cotton growers is not controlled by a trust, but he with one bale or he with two bales knows what it costs him to raise that cotton, and he does not intend in the future that Wall Street gamblers—as my friend from the State of Alabama [Mr. HEFLIN] so eloquently says—shall by a wild, reckless foray of deflation deflate him again. We have a few statesmen down there on the soil; we have a few men working in the sun who are comparable to statesmen here. They were deflated once in 1920, but are not going to be deflated again if we can help it, either as to cotton or as to cattle or as to sheep or as to wool.

Mr. HEFLIN. You will have to get a lot of these "helgibites" off of the Federal Reserve Board then.

Mr. ASHURST. We will put them out of office, no matter what their politics may be, if they give any special privilege to the manufacturing interests above the farming interests.

Mr. STANLEY. Mr. President, the Senator has well said that men ought to be put out of business, men ought to be put out of public life, men ought to be pilloried in the court of public opinion who give special favors to the manufacturing interests over the farming interests, and to that brave statement I say "Amen"; but is there in law or morals or justice any reason for pillorying the man who gives a special favor to the manufacturing interests over the farming interests, and crowning the man who secures, through a bloc or otherwise, a special advantage to the farming interests over the industrial interests?

I represent not an industrial center but an agricultural community, more strictly agricultural than that from which the Senator from Arizona comes, and yet my tongue shall cleave to the roof of my mouth and my hand shall lose its cunning before I will stand as a Senator on this floor and do for the farmer the thing which I damn as dishonest if done for anybody else.

Mr. ASHURST. Mr. President, will the Senator yield?

Mr. STANLEY. Certainly.

Mr. ASHURST. No exception can be taken to that statement. No one here has asked any special privilege for the farmer. Certainly I have not asked anything special for the farmer. I have only asked, and that is all anyone has asked, that the farmer shall be treated just as are the other interests in this country. But, Mr. President, I will go further. I will be bold. I will say that if I were giving out special privileges, they would be given to the farmer for this reason:

The multitudes of the earth can be subsisted only from the soil. You may wear, as I do, this suit now, which I wore last year, and I can retrench there, but you must have three wholesome meals each day; and if the white-collared people in the city want their three wholesome meals each day, if they wish those food supplies they can only get them because some one goes down upon the brown earth, cultivates it, and waters it with his sweat. That is the only way in which the soil is going to be cultivated. So if I were passing out special privileges—the Senator and I stand on the same platform there; we are opposed to them—they would be given to the farmer. I say, however, that we are not passing out special privileges; and while I am on this subject, I said when I began this cotton debate that the diamond pivot around which my speech would revolve was some words uttered by the able and courageous senior Senator from Arkansas [Mr. ROBINSON] last Monday when he said:

> If the policy that is to be written into our tariff laws is a policy of protection I do not find myself justified, as a representative of the people of the State of Arkansas, in voting to discriminate against the products of that State.

To my mind that is statesmanship. No man ought to claim special privileges for his State, but I trust no Senator will be found here who would plunge a dagger into the bosom of his own State. If there is to be found a dagger in the bosom of the cotton growers of Arizona it will not be my hand that thrust it, and if the cotton growers of Arizona are to be bankrupt it can not justly be laid at my door that I helped to bring it about, or stood by, like Saul at the stoning of Stephen, while their ruin was accomplished.

It was Thomas Jefferson who risked his life to smuggle out rice for our agriculturists. He organized the first agricultural bloc. It was Walker, Secretary of the Treasury, who produced the greatest tariff bill, who was the father of an agricultural bloc.

Mr. President, we are pilloried and condemned here in the Senate, we are treated with derision, because we have presumed to speak for agriculture. Had we spoken for the Federal reserve banks, had we spoken for the Morgans and the Ryans and the Rockefellers instead of the farmer we never would have been criticised.

Mr. STANLEY. Mr. President, the Senator from Arizona is shooting at a man of straw, and he is very much excited over something that has never occurred. I will say to the Senator from Arizona that when he was in his hippins I was organizing cooperative organizations of farmers. When he was a schoolboy, some 20 years ago, I assisted in writing the charter and by-laws of the first cooperative association ever organized in Kentucky for the sale of tobacco. That plan, the plan of the Planters' Protective Association, is the model on which Mr. Shapiro has secured a national reputation, and the same plan under which 95 per cent of the burley growers of Kentucky are now selling their tobacco.

Nearly 20 years ago, month in and month out, I hammered and demanded in the face of a hostile majority an investigation of the American Tobacco Co. Alone, unaided by anybody, I impeached that company on seven different counts, and within two years of that time Chief Justice White handed down a decision dissolving the American Tobacco Co., and he never quoted a charge that I had not made, and he never failed to sustain a charge that I had made.

I gave 18 months of my life, working 16 hours a day until I was physically exhausted, to bring the great Steel Trust to time,

over the opposition of the President of the United States, over the opposition of the Attorney General of the United States, and I lived to see the Attorney General incorporate about 30 pages of my report into an indictment of the United States Steel Corporation, when that corporation was closer to the President than any other corporation in the world, and when it was worth a man's head to do it, and when it was not the popular thing to be at the head of a farmers' bloc. I took my political head in my hand and defied the organized wealth of America when it was crushing the life out of the agricultural interests of Kentucky, and I did not wait until it was the easiest way and the softest way to favor to howl about my love for the farmer every time I wanted to incorporate an iniquity into a tariff bill.

Be that as it may, Mr. President, let us get down to hardpan.

Mr. SMOOT. Let us get back to long-staple cotton.

Mr. STANLEY. Let us get back to long-staple cotton, and get through with it. My objection to this tariff is simply this:

One county in Arizona, redeemed by Federal aid—a little spot of land in the Imperial Valley, redeemed by Federal instrumentalities—is growing long-staple cotton, and the tax which this bill imposes is equivalent to $2 a pound upon that cotton. Instead of having these people raise cotton we had better have them raise palms and roses, and erect fountains, and put silken tents over their heads, and provide trained servants to fan the flies off of them, and let them live in idleness and luxury, and keep their hands off the delicate instrumentalities of the Government, and prevent the incorporation into this bill of a clause that will be reflected in compensatory duties from one end to the other, and will lay a heavy burden upon every man with a decent cotton shirt upon his back, and every woman in the United States who buys a gingham dress. I will not be frightened by farmers' talk, or anybody else's talk. The women in gingham dresses, the men in cotton shirts, the users of automobile tires, and all like things in the production of which cotton is a prime necessity, all the consumers, have some rights in this country, and for them I shall speak.

The VICE PRESIDENT. The yeas and nays having been ordered, the Secretary will call the roll.

The reading clerk proceeded to call the roll.

Mr. UNDERWOOD (when Mr. HARRISON's name was called). I wish to announce that the Senator from Mississippi [Mr. HARRISON] is paired with the Senator from West Virginia [Mr. ELKINS], and that if he were present he would vote "nay."

Mr. JONES of Washington (when his name was called). Making the same announcement as before with reference to my pair and its transfer, I vote "yea."

Mr. OVERMAN (when Mr. KING's name was called). I was requested to announce that the junior Senator from Utah [Mr. KING] is unavoidably detained on public business. He is paired with the senior Senator from North Dakota [Mr. MCCUMBER].

Mr. MCCUMBER (when his name was called). I have a general pair with the junior Senator from Utah [Mr. KING], but I am informed that on this vote he would vote the same way I intend to vote. I will therefore vote. I vote "nay."

Mr. ROBINSON (when his name was called). I transfer my pair with the Senator from West Virginia [Mr. SUTHERLAND] to the Senator from Rhode Island [Mr. GERRY] and vote "nay."

Mr. WALSH of Montana (when his name was called). I transfer my pair with the Senator from New Jersey [Mr. FRELINGHUYSEN] to the senior Senator from Nebraska [Mr. HITCHCOCK] and vote "nay."

Mr. WATSON of Indiana (when his name was called). I transfer my general pair with the senior Senator from Mississippi [Mr. WILLIAMS] to the junior Senator from Washington [Mr. POINDEXTER] and vote "yea."

Mr. WILLIS (when his name was called). I am paired today with my colleague, the senior Senator from Ohio [Mr. POMERENE], who is absent. I find, however, that I can transfer that pair to the junior Senator from Oklahoma [Mr. HARRELD]. I transfer my pair to that Senator and vote "yea."

The roll call having been concluded,

Mr. CURTIS. I desire to announce the following pairs:

The Senator from Delaware [Mr. BALL] with the Senator from Florida [Mr. FLETCHER];

The Senator from West Virginia [Mr. ELKINS] with the Senator from Mississippi [Mr. HARRISON];

The Senator from Maine [Mr. FERNALD] with the Senator from New Mexico [Mr. JONES];

The Senator from Vermont [Mr. DILLINGHAM] with the Senator from Virginia [Mr. GLASS];

The Senator from New Jersey [Mr. EDGE] with the Senator from Oklahoma [Mr. OWEN]; and

The Senator from Maine [Mr. HALE] with the Senator from Tennessee [Mr. SHIELDS].

Mr. NEW. Making the same announcement as on the previous vote with reference to my pair and its transfer, I vote "yea."

Mr. CAMERON. Making the same announcement as on the previous vote, I vote "yea."

Mr. COLT (after having voted in the negative). Has the junior Senator from Florida [Mr. TRAMMELL] voted?

The VICE PRESIDENT. He has not.

Mr. COLT. I transfer my pair with that Senator to the junior Senator from Vermont [Mr. PAGE], and allow my vote to stand.

Mr. SIMMONS. I wish to announce the unavoidable absence of the senior Senator from Ohio [Mr. POMERENE]. He is paired with the junior Senator from Ohio, and if he were present he would vote "nay."

The result was announced—yeas 19, nays 33, as follows:

YEAS—19.

Ashurst	Johnson	McNary	Shortridge
Bursum	Jones, Wash.	New	Townsend
Cameron	Kendrick	Oddie	Watson, Ind.
Capper	Ladd	Phipps	Willis
Gooding	McKinley	Sheppard	

NAYS—33.

Brandegee	Kellogg	Newberry	Sterling
Calder	Keyes	Overman	Underwood
Caraway	Lenroot	Pepper	Wadsworth
Colt	Lodge	Robinson	Walsh, Mass.
Curtis	McCormick	Simmons	Walsh, Mont.
Dial	McCumber	Smith	Warren
France	McLean	Smoot	
Harris	Moses	Spencer	
Heflin	Nelson	Stanley	

NOT VOTING—44.

Ball	Fernald	La Follette	Ransdell
Borah	Fletcher	McKellar	Rawson
Broussard	Frelinghuysen	Myers	Reed
Crow	Gerry	Nicholson	Shields
Culberson	Glass	Norbeck	Stanfield
Cummins	Hale	Norris	Sutherland
Dillingham	Harreld	Owen	Swanson
du Pont	Harrison	Page	Trammell
Edge	Hitchcock	Pittman	Watson, Ga.
Elkins	Jones, N. Mex.	Poindexter	Weller
Ernst	King	Pomerene	Williams

So Mr. ASHURST's amendment to the committee amendment was rejected.

Mr. CAMERON. I give notice that I shall ask for a separate vote on this cotton schedule in the Senate. I hope in the meantime some of the Senators will look into this question more thoroughly; and I believe if they will do so they will vote with us.

The VICE PRESIDENT. The question now recurs on the committee amendment.

Mr. SMITH. I ask for the yeas and nays on the committee amendment.

The yeas and nays were ordered, and the reading clerk proceeded to call the roll.

Mr. CAMERON (when his name was called). Making the same announcement as before, I vote "yea."

Mr. UNDERWOOD (when Mr. HARRISON's name was called). I make the same announcement with reference to the pair of the junior Senator from Mississippi [Mr. HARRISON] as on the previous vote.

Mr. JONES of Washington (when his name was called). Making the same announcement as before with reference to my pair and its transfer, I vote "yea."

Mr. OVERMAN (when Mr. KING's name was called). The junior Senator from Utah [Mr. KING] is detained on important public business. He is paired with the Senator from North Dakota [Mr. MCCUMBER]. If present, he would vote "nay."

Mr. MCCUMBER (when his name was called). I transfer my general pair with the junior Senator from Utah [Mr. KING] to the junior Senator from Maryland [Mr. WELLER] and vote "yea."

Mr. NEW (when his name was called). Making the same announcement as to the transfer of my pair as on the previous vote, I vote "yea."

Mr. SIMMONS (when Mr. POMERENE's name was called). I wish to announce that the senior Senator from Ohio [Mr. POMERENE] is unavoidably absent. He is paired with the junior Senator from that State [Mr. WILLIS]. If present the senior Senator from Ohio would vote "nay."

Mr. ROBINSON (when his name was called). Announcing the same pair and transfer as on the previous vote, I vote "nay."

Mr. WALSH of Montana (when his name was called). Making the same announcement as before, I vote "nay."

Mr. WATSON of Indiana (when his name was called). Making the same announcement as before, I vote "yea."

Mr. WILLIS (when his name was called). Making the same announcement as on the previous roll call relative to the transfer of my pair with my colleague, the senior Senator from Ohio [Mr. POMERENE], I vote "yea."

The roll call was concluded.

Mr. HALE. I transfer my pair with the senior Senator from Tennessee [Mr. SHIELDS] to the senior Senator from Pennsylvania [Mr. CROW] and vote "yea."

Mr. CURTIS. I desire to announce the following pairs:

The Senator from Delaware [Mr. BALL] with the Senator from Florida [Mr. FLETCHER];

The Senator from West Virginia [Mr. ELKINS] with the Senator from Mississippi [Mr. HARRISON];

The Senator from Maine [Mr. FERNALD] with the Senator from New Mexico [Mr. JONES];

The Senator from Vermont [Mr. DILLINGHAM] with the Senator from Virginia [Mr. GLASS]; and

The Senator from New Jersey [Mr. EDGE] with the Senator from Oklahoma [Mr. OWEN].

Mr. STANLEY (after having voted in the negative). I transfer my general pair with the junior Senator from Kentucky [Mr. ERNST] to the senior Senator from Texas [Mr. CULBERSON] and allow my vote to stand.

Mr. COLT (after having voted in the affirmative). I am informed that if present my pair, the Senator from Florida [Mr. TRAMMELL] would vote as I have voted, and I therefore allow my vote to stand.

Mr. McKINLEY (after having voted in the affirmative). I transfer my pair with the Senator from Arkansas [Mr. CARAWAY] to the Senator from Delaware [Mr. DU PONT] and allow my vote to stand.

The result was announced—yeas 41, nays 11, as follows:

YEAS—41.

Ashurst	Harris	McKinley	Shortridge
Brandegee	Heflin	McNary	Smoot
Bursum	Johnson	Moses	Spencer
Calder	Jones, Wash.	Nelson	Sterling
Cameron	Kellogg	New	Townsend
Capper	Kendrick	Newberry	Warren
Colt	Keyes	Oddie	Watson, Ind.
Curtis	Ladd	Pepper	Willis
France	Lenroot	Phipps	
Gooding	Lodge	Ransdell	
Hale	McCumber	Sheppard	

NAYS—11.

Borah	Overman	Smith	Walsh, Mass.
Cummins	Robinson	Stanley	Walsh, Mont.
Dial	Simmons	Underwood	

NOT VOTING—44.

Ball	Fletcher	McKellar	Rawson
Broussard	Frelinghuysen	McLean	Reed
Caraway	Gerry	Myers	Shields
Crow	Glass	Nicholson	Stanfield
Culberson	Harreld	Norbeck	Sutherland
Dillingham	Harrison	Norris	Swanson
du Pont	Hitchcock	Owen	Trammell
Edge	Jones, N. Mex.	Page	Wadsworth
Elkins	King	Pittman	Watson, Ga.
Ernst	La Follette	Poindexter	Weller
Fernald	McCormick	Pomerene	Williams

So the committee amendment was agreed to.

Mr. WARREN obtained the floor.

Mr. SMOOT. Mr. President, will the Senator yield to me?

Mr. WARREN. I yield to the Senator from Utah for the purpose for which he rose.

Mr. SMOOT. I have a number of amendments to the cotton schedule which have been approved by the committee. I offer them at this time and ask that they be printed.

The VICE PRESIDENT. The amendments will be printed and lie on the table.

Mr. ROBINSON. Mr. President, may I ask the Senator from Utah if the amendments which the committee now reports constitute a general revision of the rates in the cotton schedule?

Mr. SMOOT. I will not say a general revision, but as far as yarns and cloths are concerned and as far as gloves and hosiery are concerned it is a revision.

Mr. ROBINSON. May I ask the Senator from Utah a further question as to whether the rates now proposed are reductions of the rates originally reported by the Finance Committee?

Mr. SMOOT. They are all reductions.

Mr. ROBINSON. Can the Senator state in percentages approximately the amounts of the reductions that are made, or is it possible to do that?

Mr. SMOOT. Does the Senator mean the average in the whole schedule?

Mr. ROBINSON. No; I mean the average or approximate percentage reductions that the rates now proposed constitute of the original Finance Committee rates.

Mr. SMOOT. Taking it as a whole, on the yarn and cloth schedules only there is about a 4 per cent reduction, just a fraction less than 4 per cent of reduction. In some items no change; in others a large reduction. In the hosiery and glove schedules, and particularly the cheaper lines of cotton gloves, there is a very large reduction, I will say to the Senator.

Mr. ROBINSON. Can the Senator approximate the reduction in percentage?

Mr. SMOOT. I would say on the cheaper cotton gloves it is about one-half. I could not say exactly offhand because, as the Senator realizes, where we have a spread of prices all the way from 50 cents to $2.50 per dozen and an ad valorem rate applying to them all, it is very difficult to say offhand, but I would say it was about 50 per cent.

Mr. ROBINSON. Is it possible for the Senator from Utah to state the theory upon which the proposed rates now submitted are based and the theory upon which the reductions are made?

Mr. WARREN. Well, Mr. President——

Mr. SMOOT. The Senator from Wyoming has the floor.

Mr. ROBINSON. I realize that is a very large question. I shall renew it to-morrow.

Mr. SMOOT. I will say to the Senator when we get to the discussion of the amendments I am perfectly willing to answer any question that I can answer.

Mr. SIMMONS. Mr. President, I wish the Senator from Wyoming would allow me to have one minute.

Mr. WARREN. I would like to clear the way for what I desire to present to the Senate and then I shall be glad to yield.

The VICE PRESIDENT. The Senator from Wyoming has the floor.

Mr. WARREN. I wish to ask unanimous consent that the tariff bill may be temporarily laid aside as I wish to address myself to another subject. I ask unanimous consent for that purpose.

The VICE PRESIDENT. Is there objection? The Chair hears none, and it is so ordered.

Mr. WARREN. I now yield to the Senator from North Carolina.

Mr. SIMMONS. I would like to have the Senator from Utah state if the committee will make similar reductions in the woolen schedule and the silk schedule?

Mr. SMOOT. I have not offered any amendment nor has the Senator from North Dakota on the wool schedule, but I will say to the Senator that it is impossible to make the reductions in the rates in the wool schedule that have been made in the cotton schedule. I think I can convince the Senator from North Carolina that that is the case.

Mr. SIMMONS. Will the committee revise the schedule?

Mr. WARREN. Mr. President, I suggest that these are matters that ought to come up on their merits and not at this particular time.

Mr. SIMMONS. I am simply asking questions. I am not discussing it.

Mr. SMOOT. I will say to the Senator offhand that it could not be more than 5 per cent on the woolen schedule on the cloths. On the yarns there can not be any change at all. Whatever changes there are in the wool schedule, I will say to the Senator, will be very slight.

Mr. SIMMONS. Does the Senator think they will further rewrite the schedule?

Mr. SMOOT. On the cloth—I mean 5 per cent ad valorem and not 5 per cent of the rate.

Mr. SIMMONS. Will the committee make like reductions in the silk schedule?

Mr. SMOOT. I can not say what the committee will do. I can only say what they have done.

Mr. SIMMONS. Does the Senator think they will further rewrite the schedule?

Mr. SMOOT. So far as silk is concerned, I am sure they will, because the committee have already agreed to one important amendment.

APPROPRIATIONS FOR FISCAL YEAR 1923.

Mr. WARREN. Mr. President, as a matter of law and practice, the Committees on Appropriations of the Senate and House are directed, every Congress, to assemble and furnish to the Congress in compact form all the figures pertaining to appropriations.

At the close of each session the committees are expected to place before the Congress and in the RECORD figures showing the amount of appropriations for the current year and also amounts provided for the ensuing year.

I am about to present, and shall ask leave to print in the RECORD, tables carefully prepared by the clerks of the Committees on Appropriations showing the condition of the appro-

priation bills at the close of the present session. These tables show all the appropriations made during this session for the fiscal year of 1923 and also those made during the preceding session, giving the comparison with former Congresses as to estimates and appropriations.

Figures and facts regarding appropriations are not picturesque subjects. In fact, the attention of Congress and the public is challenged by many more attractive subjects; but, after all, no legislative duty surpasses in importance or responsibility the duty of appropriating revenues derived from taxes collected from the people to meet Government expenditures.

The people have a right to know with what wisdom and care the funds of the Government have been apportioned for expenditure.

In connection with my remarks I want to indorse and commend the Budget law, the retiring Budget Director, Gen. Charles G. Dawes, and the former Chief of Finance of the War Department, Gen. Herbert M. Lord, who now becomes Budget Director. These able gentlemen have under the law presented their conclusions to President Harding, who in turn has reviewed, revised, and transmitted them to Congress for our conscientious consideration.

The Budget law was approved by the President June 10, 1921. Prior to that date the flood of money calls under the prevailing system of estimates assumed such proportions that it seemed advisable for the chairman of your committee to call the matter to the attention of President Harding, so that the Chief Executive might have before him for consideration the fact that in only 14 days of the commencement of the first session of Congress under his administration deficiency estimates alone amounting to $216,000,000 had been submitted to us, with more in prospect, about $137,000,000 of which concerned items for the fiscal year 1922, which at the time had not yet begun.

The advisability of teamwork between the Executive, the departments, and Congress became so apparent that it was suggested to the President as a means of bringing about the desired results in economy.

The President acted immediately, sending written notice to each member of his Cabinet that he did "not know of any more dangerous tendency in the administration of governmental departments" than the tendency to exceed the limits of appropriations fixed by Congress; and he said "I am very sure that we can never fix ourselves firmly on a basis of economy until the departments are conducted within the provisions made by Congress."

Thereafter, in due course, came the work of the newly erected Budget Bureau in the way of alternative estimates, which were accepted and adopted by committees of both House and Senate.

The new Budget system changed the names and the grouping of subjects formerly comprehended in the regular annual appropriation bills, which in turn made it necessary for the Senate to change its rules, as the House had previously done, so that all of the appropriation bills would come to the regular Senate Appropriations Committee.

And so the Senate, in March, 1922, adopted the new rule which has so well and with such satisfactory results served the purpose of teamwork.

Seldom, if ever, has the discharge of the duty of appropriating funds been attended with greater difficulties and embarrassments than during the past few years since the war.

In times of war all restraint is removed and extravagance reigns and costs are uncounted; but in the years following economy and reform are the watchwords, and the exhausting labor of again securing a safe and sane basis is a matter of necessity if the public and the Government are to exist.

Although economy was the outstanding feature in handling the appropriation bills for the present fiscal year—and this a cut-to-the-bone economy—the speed with which they were completed and the absence of an admitted evil in past appropriation bills, the inclusion of extraneous legislation, were also marked features.

The first Budget under the Budget law was submitted by President Harding December 5, 1921, for the fiscal year 1922-23. When the fiscal year opened July 1, 1922, every Government activity had been provided for some months in advance, so that department heads and bureau chiefs knew to the penny the limits of their expenditures.

Every appropriation bill, including all of the regular supply measures, three deficiency measures, and the several extra appropriation bills, such as the Russian relief, seed grain for crop-failure areas, the building of veterans' hospitals, and the providing of $500,000 for war-fraud investigations for the Department of Justice, were finished by June 30 last, despite the crush of most important general legislation, including the long-time, long-distance, hard-fought tariff bill, the soldiers' compensation bill, and innumerable other measures.

This record contrasts sharply with that during the Wilson administration, when the important Army and Navy appropriation bills failed to get through in time. Once during former President Wilson's last term failure of appropriation bills made it necessary for Mr. Wilson to call an extra session of Congress, although it was known that he was opposed to that course and would not have done so except for such failure.

At that time Congress was compelled to pass, before the beginning of the fiscal year, July 1, continuing resolutions to keep some of the Government departments running.

At the outset of President Harding's administration a special session was called to face the task of passing the Army and Navy appropriation bills which had failed, the Army bill through a pocket veto by President Wilson.

The Army appropriation bill this year was passed by the House in a few days, even though a hard fight was waged over the size of the Army personnel; and when the bill came to the Senate it was put through in the record time of one day. A similar record was achieved by the present House and Senate on the Navy bill this year—a bill which generally has taken several weeks in the Senate being passed in as many days.

Factors in the efficiency and speed in the passage of this year's appropriation bills were the Budget system and the reorganization by the House and Senate of their Appropriations Committees. The Budget Bureau and the committees cooperated in holding expenditures to an absolute minimum of necessity without abridging the Government's legitimate work.

The reduction of departmental estimates by the Budget Bureau was followed in a great number of instances by further reductions by the Senate and House committees—reductions which almost invariably were sustained by the respective Houses.

Although the Appropriations Committees were enlarged, they worked with greater speed and gave promise, after the first shaking down of the new committee system, of even greater speed in handling next year's appropriating measures.

Although the new Senate rule operates to keep out extraneous legislation, several of the 1923 appropriation bills carry constructive legislation, notably laws concerning the District of Columbia tax revision commission, the $7,500,000 appropriation for Wilson Dam at Muscle Shoals, etc.; but such legislation was so managed that it did not retard the passage of the supply measure. These items were, of course, inserted by unanimous consent.

At this point I want to congratulate most sincerely the Appropriations Committees of the House and Senate on the friendly relations and teamwork which have prevailed during the past year. Especially does the chairman of the Senate Committee on Appropriations desire to thank the members of his committee for their cooperation, and even more especially to thank the additional members selected from other former appropriating committees for the zeal and interest they have manifested in working with the parent committee. The able chairman of the House Committee on Appropriations has been always ready to cooperate, and the vigilant clerks of the Appropriations Committees of both bodies—always ready, night and day—have kept their work current.

In considering these regular annual supply bills the House Committee on Appropriations took more than 13,000 pages of testimony during the session, and the Senate Committee on Appropriations, after taking advantage of its study of this great mass of testimony taken by the House, took over 2,500 additional pages.

In presenting the several tables making comparisons of appropriations and estimates, all appropriations and estimates for each fiscal year have been segregated under their respective departments or establishments. This method insures a fair comparison. The same method has been applied also in handling the permanent and indefinite appropriations. This assembles all like data in one place and is considered an improvement over old methods.

The appropriations as shown in Table I for the fiscal year 1923 are $319,280,984.10 less than for the fiscal year 1922.

This result, which I am sure will be gratifying to the taxpayers of our country, was achieved by a careful and painstaking effort on the part of all concerned.

The regular annual appropriation bills as passed the Senate show an apparent increase of $195,049,426.35 over the amount as passed the House. After deducting from this sum $50,000,000 added to the post office act for construction of rural post roads; $53,480,120 added to the War Department act, made necessary in the main by increasing the size of the personnel and enlisted strength of the Army; and $44,080,507.10 added to

the naval act, chiefly on account of increased pay, increase of the Navy, and for aviation purposes, there is left only $47,488,799.25 added by the Senate to the proposals of the House. Much of this amount added to the bills as passed the Senate was made necessary by estimates for items brought forward at later dates and after the bills had passed the House, and there was little controversy concerning their merits.

As shown in Table IV, Congress has reduced the Budget estimates for 1923 in the sum of $172,523,046.86, and the amount submitted for 1922 in the sum of $139,649,245.41. Much of this reduction has been brought about by the fact that the estimates are arranged so far in advance that conditions necessarily change by the time actual consideration is had.

In the necessary transfer and changes to conform to the Budget law the Budget officers acted as the first line of defense and Congress as the second line of defense. And so in this first year under the new law probably more and deeper cuts in the estimates were made by Congress than should be necessary.

It may be interesting to students of national finance to note that the ordinary receipts of the Government for the past year exceed the ordinary expenses for the same period by $313,801,651.10.

It is also an interesting fact that the reduction of the public debt during the same period—one year—amounted to $1,014,068,844.23.

Mr. President, the tables I present speak for themselves, and I commend them to the attention of Congress and the American people.

I ask unanimous consent that the tables may be printed in the RECORD in 8-point type.

There being no objection, the tables were ordered to be printed in the RECORD in 8-point type, as follows:

TABLE I.—*Comparison of appropriations, fiscal years 1922 and 1923.*

[Amounts carried for each of these fiscal years in the regular annual appropriation acts, deficiency appropriation acts, special acts, and amounts estimated under permanent and indefinite appropriations.]

Department or establishment.	Appropriations, fiscal year 1922.	Appropriations, fiscal year 1923.	Decrease (−) or increase (+) 1923 compared with 1922.
Legislative (Congress):			
Regular annual	$18,247,247.06	$12,788,324.95	[1] −$5,458,922.11
Permanent and indefinite	800.00	800.00	
Total	18,248,047.06	12,789,124.95	−5,458,922.11
Executive office and independent offices:			
Regular annual—			
Shipping Board	73,959,000.00	[2] 100,459,000.00	+26,500,000.00
Veterans' Bureau [3]	408,166,732.00	418,063,843.45	+9,897,111.45

Less Post Office (payable from postal revenues)	579,976,851.00	565,064,786.50	−14,912,064.50
Total, exclusive of Post Office	3,486,339,515.74	3,181,970,596.14	−304,368,919.60

[1] This decrease is due largely to the transfer of appropriations for printing and binding to the various departmental bills for 1923. Departmental appropriations for printing and binding for the fiscal year 1922 are carried under "Legislative."

[2] $50,000,000 of this sum is for the payment of construction and other claims.

[3] The appropriations for the Veterans' Bureau include for hospital construction $18,600,000 for 1922 and $12,000,000 for 1923.

[4] This sum includes $1,500,000 for the purchase of land in the District of Columbia on which is situated temporary Government office buildings.

[5] This sum includes $5,000,000 for treaty payment to Colombia and $1,000,000 for Government building and exhibits at the exposition at Rio de Janeiro.

[6] This sum includes an increase of $27,815,661 for rivers and harbors over amount appropriated for 1922 and $7,500,000 for Muscle Shoals development for which no appropriation was made for 1922.

[7] This sum includes $2,000,000 and $1,500,000, respectively, for seed-grain loans to farmers of the drought-stricken areas of the Northwest for the crops of 1921 and 1922.

[8] These amounts were appropriated in the Federal highway act of Nov. 9, 1921. For 1923 the Secretary of Agriculture is authorized to apportion the sum of $50,000,000 among the several States and to approve projects under such apportionments. The Post Office appropriation act which authorized the foregoing $50,000,000 also authorized the sum of $71,500,000 for the fiscal year 1924 and $81,500,000 for the fiscal year 1925.

[9] This sum includes $1,240,000 to carry out the provisions of the act relating to the welfare and hygiene of maternity and infancy.

[10] Appropriations for this purpose are changed from a permanent basis for 1922 to an annual basis for 1923 and are included in the regular annual act.

[11] The appropriation for 1922 for additional compensation was an indefinite amount and was estimated in the Budget at $35,000,000. Recent figures of expenditures show the actual cost for 1922 will be approximately $41,800,000. The specific appropriation of $38,735,173 for 1923 is therefore $3,064,827 under the estimated expenditures for 1922.

TABLE II.—*Comparison of estimates and appropriations, fiscal year 1923.*

[Amounts carried for fiscal year 1923 in regular annual appropriation acts, deficiency appropriation acts, special acts, and amounts estimated under permanent and indefinite appropriations.]

Department or establishment.	Budget estimates submitted Dec. 5, 1921.	Supplemental Budget estimates submitted Dec. 5, 1921, to June 30, 1922.	Total Budget estimates, fiscal year 1923.	Appropriations, 1923, regular annual and permanent and indefinite.	Increase (+) or decrease (−) appropriations compared with estimates.

[1] Estimates for the legislative include printing and binding allotments for the various departments as submitted under the Government Printing Office. In preparing appropriation bills these sums were distributed to the various departmental bills. This reduction, therefore, is due in the main to this transfer.

[2] This sum includes $1,500,000 for the purchase of land for temporary office buildings and was not estimated in the Budget.

[3] This net increase is due to the appropriation of $15,180,401 for rivers and harbors in excess of the estimates submitted by the Budget, and the appropriation of $7,500,000 for Muscle Shoals development not included in the Budget.

[4] The Navy estimates were prepared and submitted to Congress prior to the conclusion of the Conference on Limitation of Armament.

[5] This net increase is due to the appropriation of $360,000 for congressional seed distribution and $100,000 for eradication of citrus canker not included in the Budget. The sum of $800,000 for printing and binding was estimated under legislative (see note 1).

[6] This sum was appropriated for forest roads and trails in the Federal highway act of November 9, 1921, and was not estimated in the Budget.

[7] This sum was not estimated in the Budget.

TABLE III.—*Comparison of Budget estimates and appropriations, supplemental and deficiency, fiscal year 1922 and prior fiscal years.*

(Amounts considered and appropriated in deficiency appropriation acts approved August 24, 1921, December 15, 1921, March 20, 1922, and July 1, 1922.)

Supplemental and deficiency Budget estimates submitted to Congress from July 20, 1921, to June 30, 1922, for the fiscal year 1922 and prior fiscal years	$472,410,129.96
Supplemental and deficiency appropriations for the fiscal year 1922 and prior fiscal years carried in the deficiency acts enumerated above	332,760,884.55
Reduction in estimates for the fiscal year 1922 and prior fiscal years	139,649,245.41

TABLE IV.—*Recapitulation of comparisons of Budget estimates and appropriations.*

Net reduction in Budget estimates for the fiscal year 1923 as per Table II	$172,523,046.86
Reduction in Budget estimates for the fiscal year 1922 and prior fiscal years as per Table III	139,649,245.41
Total net reduction	312,172,292.27

Mr. OVERMAN. Mr. President, I am preparing from the official record a statement which will tell a very different story from the story which has been told here to-day by the chairman of the Committee on Appropriations, the Senator from Wyoming [Mr. WARREN]. The Senator from Wyoming has made a comparison between the expenditures of the Government for 1922 and 1923 which shows some reductions, but I am having a statement prepared showing the expenditures for 1915, three years before the World War, as compared with the expenditures of this year, three years after the war, which will demonstrate that the present administration is costing millions of dollars more than did the administration of 1915.

Mr. WARREN. I desire to say a few words in reply to my colleague on the Committee on Appropriations, the Senator from North Carolina [Mr. OVERMAN]. The able Senator from North Carolina has referred to the expenditures for 1915. I have here, and I send to the desk, a table showing the grand total of the expenditures for the past six years, which I ask may be printed in 8-point type as a part of my remarks.

The VICE PRESIDENT. Without objection, it is so ordered.

The table referred to is as follows:

Grand total of appropriations, fiscal year 1918	$18, 901, 966, 814. 09
Grand total of appropriations, fiscal year 1919	27, 072, 094, 720. 07
Grand total of appropriations, fiscal year 1920	7, 337, 597, 282. 05
Grand total of appropriations, fiscal year 1921	4, 780, 829, 510. 03
Grand total of appropriations, fiscal year 1922	4, 066, 316, 366. 74
Grand total of appropriations, fiscal year 1923	3, 747, 035, 382. 64

Mr. ROBINSON. Mr. President, I note that, according to Table III, which the Senator from Wyoming [Mr. WARREN] has just presented, and for the study of which, therefore, very little opportunity has been afforded, supplemental estimates were submitted by the Budget Bureau for the fiscal year 1922 and for prior years, amounting to approximately $472,500,000. I am curious to know if the Senator from Wyoming can state how it happened that such large deficiency estimates arose and how there was such a wide divergence between the original estimates and the supplemental or emergency estimates.

Mr. WARREN. There are two reasons for that—one, the Shipping Board and other hang-over items of the war, involving property of the United States at home and in foreign countries; and two, what was more troublesome for the time being, the change in the source of the estimates from the heads of the departments to the Budget Bureau. The estimates coming through the Budget Bureau from the heads of the departments, the Budget Bureau would hesitate in making est mates on which Congress should base its appropriations until they had taken more time. Consequently, that action enlarged the amount of the supplemental estimates that were submitted.

Mr. ROBINSON. Whatever the cause, it is perfectly apparent that there was a very wide divergence between the original estimates and the supplementary estimates to take care of deficiencies.

I note by the same table that Congress in the consideration of those deficiency estimates appropriated very much less, almost $140,000,000 less, than the amount estimated for. That would seem to discredit very emphatically the value of the Budget estimates. If Congress, upon an examination of its work when it submitted supplementary estimates, found it necessary to reduce them by one-third, or in the total amount of $139,649,245.41, it would on its face indicate that the work of the Budget Bureau was not very accurate in the opinion of Congress.

Mr. WARREN. The amount of which the Senator spoke, $472,500,000, was estimated for before the Budget system was organized under the law.

Mr. ROBINSON. That was prior to the work of the Budget Bureau?

Mr. WARREN. It was prior to that. The next, Table IV——

Mr. ROBINSON. I have not yet come to that.

Mr. WARREN. The Senator will notice that the amounts are smaller according to that table.

Mr. ROBINSON. I note that there was a divergence between the estimates and the actual appropriations of $172,533,046.86 for the fiscal year of 1923. which would apply to the work of the Budget Bureau. How does the Senator account for such a wide divergence between the estimates and the amount appropriated?

Mr. WARREN. As I stated before, there are two causes; the hangover from the war, and there always have been and always will be, so long as the Senator and I are here, deficiencies because of laws passed during the year after the regular estimates that call for unexpected funds, emergencies, and so forth.

Mr. ROBINSON. May it not also be true that the Congress in making the appropriations actually appropriates a less amount than the necessities already disclosed require, and therefore knowingly creates deficits? Is there anything in that suggestion, in the opinion of the Senator?

Mr. WARREN. That is true in one sense, but I hardly want to charge my colleagues in the House and Senate with that.

Mr. ROBINSON. I am not making any charge; I am simply stating the practice which the Senator and I, after 20 years or more experience in Congress, know has frequently, if it has not generally, prevailed; that Congress oftentimes in making appropriations has reduced amounts below the sum estimated for, with the knowledge of the fact, or with a reasonable ground to expect, that deficiency appropriations would subsequently be required.

Mr. WARREN. But with the expectation of asking the different institutions, departments, and so forth, to live under those appropriations if it is possible. If they have not done that, of course——

Mr. ROBINSON. My suggestion goes further than that; and I think the Senator from Massachusetts will agree with me that the custom has existed for a very long time—and it does not seem to have been dispensed with yet, according to these figures—of taking estimates and paring them beyond all reason, so that deficiency appropriations become not only probable but imperative, and deficiency appropriations in large amounts. The point I make is, from the figures presented in the Senator's statement, that the appropriations as disclosed and as indicating a material reduction in the expenditures below the amount expended last year may not be accurate, because additional deficiencies undoubtedly will be required to be appropriated, and they may amount to very large sums. I do not think the Senator would be prepared to say that the deficiencies can be anticipated.

Mr. WARREN. That is true; but do not overlook the fact that included as deficiencies are the supplemental appropriations, things that come up that were not thought of, things that were not previously legislated for. For instance, what are you going to do with this maternity business that comes up, when a bill passes which requires the appropriation of millions, as well as all other unexpected calls that arise?

Mr. ROBINSON. And then, too, emergencies arise.

Mr. WARREN. Certainly.

Mr. ROBINSON. For instance, we appropriate considerable sums for various purposes, but the relation of those sums growing out of supplemental and emergency appropriations to the total amount is comparatively small. The point I am making is that we legislate constantly, knowing that we are creating deficiencies and that these figures, while they have undoubtedly some value, can not be relied upon as disclosing the amount of money actually expended or liabilities actually incurred by the Government during this fiscal year, or anything approximating it.

Mr. WARREN. Let me say to my distinguished friend that when he has examined thoroughly, as I know he will, these several tables and statements, he will find that an entirely new form of separating the figures will disclose these items more plainly, and furthermore will show that we are on the road to closing that matter down to a very small minimum.

Mr. ROBINSON. If the Senator has found from his experience that that is true, I am greatly gratified at the information, because I am convinced that there is much ground for it.

Mr. WARREN. We are moving in that direction.

RAVAGES OF THE BOLL WEEVIL.

Mr. SMITH. Mr. President, I submit a resolution and ask unanimous consent for its immediate consideration. I have conferred with Senators on the other side in regard to it, and I do not think there is any objection to its consideration and passage.

In this connection, I should like to have printed in the RECORD a cablegram that was sent to one of the Washington papers to-day on identically the same subject, calling attention to the fearful prospect as to a famine in the cotton production of the world.

The VICE PRESIDENT. Without objection, the cablegram will be printed in the RECORD.

The matter referred to is as follows:

BRITISH COTTON EXPERTS SKEPTICAL OVER REPORTS—SAID TO BE FRIGHTENED OVER CROP DANGER FROM RAVAGES OF BOLL WEEVIL.

(By Hiram K. Moderwell.)

[By cable to the Star and Chicago Daily News. Copyright, 1922.]

LONDON, July 12.—British business men are thoroughly frightened over the danger that the American cotton crop will be below world needs because of the ravages of the boll weevil, which is reported here to have ruined one-third of last year's crop. Experts here are frankly skeptical as to the latest rather optimistic report by the American Government Bureau of Crop Statistics, which estimates 11,000,000 bales as the crop this year, as against 8,000,000 last year.

It is asserted by experts here that this hope is entirely unjustified. So unreliable have been the American cotton statistics in the past that many interested persons here believe them to have been faked to influence the markets. John Todd, an eminent statistician, denies this, but criticizes American statistical methods.

British textile manufacturing, which is one of Great Britain's three great export industries, depends largely upon the American crop. A 9,000,000-bale crop, which the British fear will be the maximum this year, would be disastrous to the British trade. It is feared that the American cotton growers refuse to take the risk of planting cotton because of the ravages of the boll weevil and are adopting other crops.

For the hundreds of thousands of persons employed in the textile trade the most important spot in the universe is a certain laboratory in Washington where chemists are searching for adequate poison against the boll weevil, but as yet unsuccessfully. A terrible and long-expected report has been received here—that the weevil has appeared in northern Egypt, despite extraordinary measures to debar him. This tiny worm, which is a native of Brazil and was discovered 15 years ago, is now sweeping over the world destroying like Atilla. A movement is on here to subsidize the cotton planters in uninfected British colonies.

Mr. SMITH. I send the resolution to the desk and ask unanimous consent for its immediate consideration.

The VICE PRESIDENT. The resolution will be read for the information of the Senate.

The resolution (S. Res. 320) was read, as follows:

Whereas the boll weevil has covered practically the entire cotton belt; and

Whereas its ravages have a decided effect in the ultimate production of the cotton crop: Therefore be it

Resolved, That the Secretary of Agriculture is authorized and directed, through the Crop Reporting Bureau, to ascertain from State agricultural commissioners and county agents, together with the forces now employed by the bureau, the total area now infested by the weevil, and the estimated damage to the crop caused by the weevil, such area and estimated damage to be given by States, as is now done in giving the condition of the growing crop, and to publish the same in the next monthly (August) report.

Mr. JONES of Washington. Mr. President, has not the Secretary of Agriculture authority now to obtain the information?

Mr. SMITH. No; he has no authority under the law to make a separate report. It will cost nothing more, and under this authority he can make it. He has no authority under the law except just to give the aggregate condition.

Mr. ROBINSON. Mr. President, I express the hope that the resolution may pass. It undoubtedly will present some difficulties so far as procuring complete and accurate information is concerned; but the information called for is very important, and I hope the resolution may pass.

The VICE PRESIDENT. Is there objection to the immediate consideration of the resolution?

The resolution was considered by unanimous consent and agreed to.

LYNCHING IN WAYNE COUNTY, GA.

Mr. CALDER. Mr. President, I ask unanimous consent to have printed in the RECORD a short article from the New York Times concerning the lynching of two negro boys in Georgia.

The VICE PRESIDENT. Is there objection? The Chair hears none, and it is so ordered.

The matter referred to is as follows:

[From the New York Times of Monday, July 10, 1922.]

SAYS THEY AIDED LYNCHERS—GEORGIA MINISTER ACCUSES OFFICIALS IN CHARGE OF TWO PRISONERS.

(Special to the New York Times.)

ATLANTA, GA., July 9.—That the lynching of two negroes in Wayne County, after they had been reprieved for 30 days by Governor Hardwick, will not go unpunished seems assured by recent developments at the executive offices. Governor Hardwick has offered the highest reward in his power for the arrest of the lynchers, has denounced the crime, and has announced that mob rule will not be allowed in this State so long as he is governor.

The Rev. P. T. Holloway has practically charged in a sermon that officials of the county connived at the lynching, and had practically invited it. "The morning after the unlawful executions," he said, "I heard two men talking about a lynching, and one of them was an officer who took charge of the victims purposely to take them to Savannah. The general public wants to know why they should have been taken away from Jesup, and especially why they should have been taken away in a Ford car when there were fast passenger trains going straight through to Savannah making no stop. We demand to know how a mob of men 70 miles away could find out when these prisoners were taken from the county jail, and where they got their information of the route taken. The general public would like to know why the officers who had these prisoners in charge stopped at Lanes Bridge 30 minutes and told the guard that if anybody came along to tell them they were going to Savannah and would probably have car trouble.

"The public wants to know why two men, whose names I could call, went to a citizen's house on Thursday and said: 'Let's get these two negroes and lynch them. The sheriff said it would be all right; that he would offer no resistance.'"

EXECUTIVE SESSION.

Mr. LODGE. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to, and the Senate proceeded to the consideration of executive business. After five minutes spent in executive session the doors were reopened.

NATIONAL HOME FOR JEWISH PEOPLE.

Mr. LODGE. I report back favorably from the Committee on Foreign Relations, with an amendment striking out the preamble, the joint resolution (H. J. Res. 322) favoring the establishment in Palestine of a national home for the Jewish people. This joint resolution is identical with the one which I introduced and which was reported from the Committee on Foreign Relations, passed by the Senate, and sent to the House. I ask unanimous consent for the present consideration of the joint resolution.

There being no objection, the joint resolution was considered as in Committee of the Whole, and it was read, as follows:

Resolved, etc., That the United States of America favors the establishment in Palestine of a national home for the Jewish people, it being clearly understood that nothing shall be done which may prejudice the civil and religious rights of Christian and all other non-Jewish communities in Palestine, and that the holy places and religious buildings and sites in Palestine shall be adequately protected.

The joint resolution was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

The VICE PRESIDENT. The committee reports to strike out the preamble. Without objection, the preamble will be stricken out.

RECESS.

Mr. LODGE. I move that the Senate take a recess, the recess being, under the unanimous-consent agreement, until to-morrow at 11 o'clock a. m.

The motion was agreed to; and (at 5 o'clock and 40 minutes p. m.) the Senate, under the order previously made, took a recess until to-morrow, Thursday, July 13, 1922, at 11 o'clock a. m.

CONFIRMATIONS.

Executive nominations confirmed by the Senate July 12 (legislative day of April 20), 1922.

ASSISTANT DIRECTOR OF FOREIGN AND DOMESTIC COMMERCE.

Thomas R. Taylor to be assistant director, Bureau of Foreign and Domestic Commerce.

COLLECTOR OF CUSTOMS.

Fred A. Bradley to be collector of customs at Buffalo, N. Y.

POSTMASTERS.

CALIFORNIA.

Dwight R. Jackson, Glendale.
Etta L. Miller, Stratford.

SOUTH CAROLINA.

Joseph G. Holland, Edgefield.

SENATE.

THURSDAY, *July 13, 1922.*

(Legislative day of Thursday, April 20, 1922.)

The Senate met at 11 o'clock a. m., on the expiration of the recess.

THE PETROLEUM INDUSTRY IN WYOMING AND MONTANA (S. DOC. NO. 233).

The VICE PRESIDENT laid before the Senate a communication from the chairman of the Federal Trade Commission, transmitting, pursuant to law, a report of the commission on conditions in the petroleum trade in Wyoming and Montana, which was referred to the Committee on the Judiciary, ordered to be printed, and to be printed in the RECORD, as follows:

FEDERAL TRADE COMMISSION,
Washington, July 13, 1922.

To the PRESIDENT OF THE SENATE AND THE SPEAKER OF THE HOUSE OF REPRESENTATIVES.

SIRS: I have the honor to transmit herewith a report of the Federal Trade Commission on conditions in the petroleum trade in Wyoming and Montana.

This report is submitted to Congress pursuant to the provisions of section 6, paragraph (f), of the Federal Trade Commission act approved September 26, 1914.

Yours very truly,

NELSON B. GASKILL,
Chairman.

FEDERAL TRADE COMMISSION,
Washington, July 13, 1922.

To the PRESIDENT OF THE UNITED STATES SENATE AND
THE SPEAKER OF THE HOUSE OF REPRESENTATIVES,
Washington, D. C.

DEAR SIRS: The Federal Trade Commission submits to Congress the following report on conditions in the petroleum trade in Wyoming and Montana. This report was prepared by the commission in order to bring to the attention of Congress a situation, developed in the usual course of administrative procedure, which appears to call for legislative action.

Early in 1921 the prices of crude petroleum were radically reduced in all of the oil fields east of the Rocky Mountains. The prices of gasoline declined somewhat tardily and unequally in different sections of the country, but as a rule they were not decreased in the same proportion as crude prices. This situation gave rise to complaints on the part of consumers, particularly in the State of Montana. The conditions in Montana and adjoining States were called to the attention of the Federal Trade Commission by the Montana Railway Commission. The Federal Trade Commission made an inquiry into the Montana situation and the principal facts disclosed thereby were as follows:

1. The prices of gasoline in Montana and adjoining States were considerably higher in 1921 than in States nearer the mid-continent oil field. There were at many points wide margins between the wholesale and retail prices of gasoline amounting in some cases to from 5 to 10 cents per gallon. These large margins were in all cases obtained by the smaller retailers selling petroleum products within the State. The large marketing companies selling petroleum products in interstate commerce, on the other hand, maintain a uniform margin of 2 cents per gallon between their wholesale and retail prices.

2. Although during 1921 the prices of high-grade crude petroleum were much lower in Montana and Wyoming than in any other States, the f. o. b. refinery prices of gasoline and kerosene of the Midwest Refining Co. (which produces more than 90 per cent of these products refined in the Rocky Mountain territory) were much higher than at mid-continent refineries.

3. The prices of the large marketing companies selling petroleum products in interstate commerce were usually identical at towns taking the same freight rates. For these companies also the prices at competing points were generally the same, and price changes were made by the different concerns at practically the same time. No evidence was secured, however, indicating a conspiracy between these companies to fix prices. As stated in a former report, discussing the whole country:

"Price initiative to-day seems to be left generally to the Standard companies, and competition is apparently more directed to developing facilities for getting business than in seeking to obtain it by underselling."

4. The bulk of the gasoline sold by the marketing companies engaged in interstate commerce in Montana is purchased from the Midwest Refining Co. f. o. b. refineries. The Midwest Co. bases its sales prices upon prices at Tulsa, Okla., and charges higher f. o. b. refinery prices for gasoline sold in Montana and adjoining States than for that sold in territory nearer Tulsa.

5. The petroleum industry of Montana and of the entire Rocky Mountain region is dominated by Standard Oil interests. This monopoly was perfected in 1920 and 1921, when the Standard Oil Co. (Indiana) obtained control of the Midwest Refining Co. The acquisition of this company gave the Standard interests practically complete control of the producing, transporting (pipe lines), refining, and marketing branches of the petroleum business of that entire section. The more important Standard companies engaged in the various branches of the petroleum industry in that region includes: The Ohio Oil Co., the Carter Oil Co., the Midwest Refining Co. and its subsidiaries and affiliated companies, the Kasoming Oil Co., the Illinois Pipe Line Co., the Utah Oil Refining Co., the United Oil Co., and the Continental Oil Co. In addition to these companies the Sinclair interests market in the Rocky Mountain territory and have recently organized a producing company to develop the Teapot Dome in Wyoming. In 1921 the Standard Oil Co. (Indiana) purchased one-half interest in the Sinclair Pipe Line Co., and in conjunction with Sinclair interests organized the Sinclair Crude Oil Producing Co., in which the Standard Oil Co. (Indiana) holds one-half interest. The Sinclair Crude Oil Purchasing Co., which, up to the present time, has only operated in the mid-continent oil field, purchases and stores crude petroleum, and according to the 1921 annual report of H. F. Sinclair, chairman of the board of directors, made April 27, 1922, this company had at that time 18,000,000 barrels of crude petroleum in storage. A large proportion of this crude was purchased when the price was low. According to current reports this latter company is now planning to purchase and store Wyoming crude, which it is planned will be shipped through the proposed new pipe lines of the Sinclair Pipe Line Co., which when built are to connect with its own lines and with those of the Prairie Pipe Line Co. (another Standard concern) in the vicinity of Kansas City, Mo. Prior to the acquisition of the Midwest Refining Co. by the Standard Oil Co. (Indiana), the Ohio Oil Co. (Standard) was the largest producer in that section. The Illinois Pipe Line Co. owned the greatest pipe-line mileage, the Midwest Refining Co. was the most important refiner, and the Continental Oil Co. was the chief marketer. These companies are now all members of the Standard group.

6. At the present time the Midwest Refining Co. and the Ohio Oil Co., the principal purchasers of crude petroleum, fix the price paid to the consumer at about 60 cents per barrel less than the price of similar quality mid-continent crude, while, as already stated, in the sale of its gasoline f. o. b. refinery the Midwest charges a higher price for shipments into Montana and a lower price for sales destined for territories where it must meet competition from the mid-continent field. In other words, in the purchase of crude and in sale of gasoline Standard interests take advantage of the cost of rail transportation to and from that section. The producer of crude petroleum and the consumer of gasoline are both at the mercy of the Standard interests. The crude petroleum supply and demand conditions were such in Wyoming during 1921 that had there been free competition the refinery prices of gasoline and other products apparently would have been as low as or lower than those in the mid-continent field.

7. While the inquiry proved that prices of gasoline were higher in Montana than in many other States, and that prices were much higher at some points within the State than at others, the Federal Trade Commission can not effectually remedy this situation. As already pointed out, the fundamental cause of the unsatisfactory situation in Montana is due to the monopolistic control of the petroleum industry of that region by the Standard Oil Cos. This monopoly is made possible by the terms of the Standard Oil dissolution decree. Under that decree the different units of the Standard Oil group are, for legal purposes, supposed to be strangers to each other; but there is, as is generally known, an interlocking stock ownership in the different organizations which has perpetuated the very monopolistic control which the court sought to terminate. To-day the whole country is divided into 11 gasoline-marketing territories, in each of which a Standard company is the dominating factor, and in which there is no real competition between the various Standard units, while in Wyoming the contemplated entrance of Standard-Sinclair interests promises to increase the monopolistic control of that industry.

The commission is of the opinion that this situation can not be effectually remedied by existing laws and that adequate relief can only be secured through additional legislation. With a view of remedying the situation in Montana and throughout the United States, the commission therefore reiterates a recommendation previously made to Congress, namely, "Abolition, by legislation, of common-stock ownership in corporations which have been members of a combination dissolved under the Sherman law." The foregoing proposition is stated in a concise and general form, in order to show more clearly the fundamental idea, but in actually framing legislation it would be necessary, of course, to express this idea with great care in order to prevent evasion of the intended prohibition. A suggested draft is appended to this report. The merit of this remedy is that it appears to offer the only prompt and effective means hitherto suggested of terminating monopolistic control in cases like that presented by the Standard Oil group.

Respectfully,

NELSON B. GASKILL, *Chairman.*
VICTOR MURDOCK.
HUSTON THOMPSON.

A bill to prevent evasions of the antitrust laws.

Be it enacted, etc., That from and after one year from the date of the approval of this act the ownership or control, direct or indirect, by any person, partnership, association, or corporation of any shares of stock or other property interest in more than one association or corporation engaged in commerce among the States or with foreign nations which has been a member of a combination dissolved pursuant to a judicial proceeding under an act entitled "An act to protect trade and commerce against unlawful restraints and monopolies, approved July 2, 1890," or which has acquired the possession or control of any of the works, plants, or other operating property or patents or brands of such a combination or any constituent element thereof is hereby prohibited.

SEC. 2. Any person or any representative of any person, partnership, or corporation violating, or causing to be violated, the provisions of section 1 of this act shall be fined in a sum not to exceed $5,000 and imprisoned not more than two years.

SEC. 3. Authority to enforce compliance with section 1 of this act by the persons, partnerships, associations, or corporations subject thereto is hereby vested in the Federal Trade Commission, to be exercised in the manner prescribed by section 11 of an act entitled "An act to supplement existing laws against unlawful restraints and monopolies, and for other purposes," approved October 15, 1914.

PROHIBITION ENFORCEMENT.

Mr. STERLING. Mr. President, I have here a letter inclosing a statement made by the board of bishops of the Methodist Episcopal Church, which I ask may be read by the Secretary at the desk, first reading the letter.

The VICE PRESIDENT. Without objection, the letter will be read as requested.

The reading clerk read as follows:

COMMITTEE ON CONSERVATION AND ADVANCE
OF THE COUNCIL OF BOARDS OF BENEVOLENCE,
METHODIST EPISCOPAL CHURCH,
Chicago, July 11, 1922.

Hon. THOMAS STERLING,
Washington, D. C.

DEAR SENATOR STERLING: I am inclosing you a statement by the board of bishops of the Methodist Episcopal Church which I wish you could have read in Congress and reproduced in the CONGRESSIONAL RECORD.

Very sincerely yours,

J. T. B. SMITH.
Department of Publicity.

Mr. STERLING. I am glad to comply with the request contained in the letter, and as the statement is not very long, consisting of only two pages, I ask unanimous consent that it may be read.

The VICE PRESIDENT. The Chair hears no objection, and the Secretary will read as requested.

The reading clerk read as follows:

COMMITTEE ON CONSERVATION AND ADVANCE
OF THE METHODIST EPISCOPAL CHURCH,
Chicago, Ill.

The following statement was unanimously adopted at a meeting of the board of bishops of the Methodist Episcopal Church:

BISHOPS SAY DRY LAW GREATEST UNITED STATES REFORM—LAW MUST BE ENFORCED.

The bishops of the Methodist Episcopal Church have noted the present discussion of the Volstead Act and the eighteenth amendment to our Constitution. Such discussion was to be expected. Ingenuity would be exhausted to discover or invent reasons for the repeal of the laws. Allowing that all the results anticipated have not been realized that fact lies not against the law but against those who have failed in its enforcement and against those who have encouraged the betrayal of administrative trust. When all has been said the accomplishment in the writing of these particular laws makes the greatest chapter in America's story of moral reform. It has attracted the attention of the world. It has given to our industrial life an advantage recognized by economists everywhere.

The relation of the drink traffic to crime has long been familiar. We need to see that the disrespectful treatment of prohibitory laws is not a mere academic impropriety. The great objectives of civilization can not be gained where lawlessness goes unpunished and unrebuked. Mob violence is to-day a menace which demands most careful thought and wisest treatment. The ability to suppress or prevent

disorder which jeopardizes the right of property and life is one of the ultimate tests of civilization.

Obedience to law is not an elective to be rendered or refused on the basis of individual or group choice. This we believe. But it is inconsistent to inveigh against the spirit of lawlessness on other fields if in our attitude toward the prohibitory enactment we encourage contempt of law. Those who make public opinion must be held accountable for the total result when inconsiderate criticism of laws induces insult to laws. The press of this country must be made to see its responsibility inescapable if its persistent caricature of so-called temperance laws lead the immature to believe that law itself belongs really and only in the comic supplement.

Where present legislation seems inadequate let it be perfected. Where the law is ineffectual find the cause and as quickly as may be remedy it. Let us insist upon it that those who are sworn to uphold the Constitution deal with occasion not as propagandists of personal judgment but as defenders of the law.

Let us choose for office those only who have by word or act established their right of recognition as the friends of prohibitory reform, and saying this we would record appreciation of the help given to this cause by the President of the United States and by the Chief Justice, and we would pay tribute to those in the House of Representatives and in the Senate of the United States and to those in other places of public trust who have taken and held their place on the side of national morality.

For the sake of the Nation and the world, in the interest of industrial prosperity as of peace and order, for the promotion of all the ends of education and religion, we accept for ourselves and urge upon all our people the solemn obligation to guard sacredly the results already gained and to complete the work upon which so many lovers of mankind have wrought, anticipating with confidence the day when, despite the cupidity of some and the treasonable intrigue of others, the life of the Nation shall be lifted to the level of its laws.

BOARD OF BISHOPS OF THE METHODIST EPISCOPAL CHURCH,
BISHOP L. B. WILSON, *Secretary*.

PETITIONS.

Mr. WILLIS presented petitions of the Smith-Kasson Co., and sundry citizens of Cincinnati, Ohio, praying for inclusion in the pending tariff bill of only a moderate rate of duty on light-weight gloves, which were referred to the Committee on Finance.

REPORTS OF COMMITTEES.

Mr. LADD, from the Committee on Public Lands and Surveys, to which was referred the bill (H. R. 2866) authorizing the Secretary of the Interior to sell and patent to parties named herein certain lands in Louisiana, reported it without amendment and submitted a report (No. 815) thereon.

Mr. CAPPER, from the Committee on Claims, to which were referred the following bills, reported them each without amendment and submitted reports thereon:

A bill (S. 3754) for the relief of Louis Leavitt (Rept. No. 816); and

A bill (S. 3780) authorizing a credit in certain accounts of the Treasurer of the United States (Rept. No. 817).

Mr. McNARY, from the Committee on Agriculture and Forestry, to which was referred the joint resolution (S. J. Res. 219) creating a joint commission to investigate the subject of crop insurance, reported it without amendment.

BILLS INTRODUCED.

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. CURTIS:

A bill (S. 3817) for the relief of William H. Gage (with accompanying papers); to the Committee on Military Affairs.

A bill (S. 3818) granting a pension to Samanda Sweazy (with accompanying papers);

A bill (S. 3819) granting an increase of pension to Margaret Hamilton (with accompanying papers);

A bill (S. 3820) granting a pension to Aggie Isince (with accompanying papers);

A bill (S. 3821) granting a pension to Anna Taggart (with accompanying papers); and

A bill (S. 3822) granting a pension to Sarah Cowman (with accompanying papers); to the Committee on Pensions.

By Mr. TRAMMELL:

A bill (S. 3823) for the relief of M. E. Gillett & Son; to the Committee on Claims.

By Mr. BURSUM:

A bill (S. 3824) for the relief of John F. Walker; to the Committee on Military Affairs.

PUBLICATION OF EXTRANEOUS MATTER IN RECORD.

Mr. DIAL. Mr. President, the practice has grown up in the Senate of putting a great deal of extraneous matter in the RECORD. I have hesitated to object, but I want to serve notice that from now on I propose to object to a good deal of this matter going into the RECORD. We are about to make a yellow journal out of it.

Yesterday afternoon the Senator from New York [Mr. CALDER] had inserted in the RECORD an article from some northern paper about a lynching in Georgia. At that time neither of the Georgia Senators were present and I thought to object, but the article not having reference to my State I did not. I do not approve of lynching either in the North or in the South, in the East or in the West, but I do not think that any section of the country has much advantage over any other section when we come to consider the lawless acts of the people of the United States. There is too much lawlessness going on. The law ought to be enforced, and ought to be enforced rigidly, by the courts of the country. I think the courts have been too lenient along that line.

Some time ago a Senator had inserted in the RECORD in my absence an article from some newspaper somewhat misrepresenting me. I knew nothing about it until a few days afterwards. While it did not directly reflect, yet it tended to depreciate a proposition which I advocated. It does seem to me that fair play, honesty, and courtesy would suggest that if a Senator proposes to insert in the RECORD an article from any newspaper reflecting upon some Senator or that Senator's section of the country, he should be ethical enough to give notice beforehand to that Senator.

I merely want to say this in order that no one need take any particular offense, because I am going to object to any of this matter going into the RECORD and try to have here a publication representing the sentiment of the Senate and representing the best sentiments of the United States, and not have published in it what any muckraker may say of some particular section of the country.

THE TARIFF.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes.

The VICE PRESIDENT. The Secretary will report the pending amendment.

The READING CLERK. The next amendment of the Committee on Finance is in paragraph 901, page 121, line 4, where the committee proposes to strike out "one-fifth" and insert "one-fourth," so as to make the proviso read:

Provided, That none of the foregoing, of numbers not exceeding No. 100, shall pay less duty than 5 per cent ad valorem and, in addition thereto, for each number, one-fourth of 1 per cent ad valorem, etc.

Mr. SIMMONS. Mr. President, I make the point of no quorum.

The VICE PRESIDENT. The Secretary will call the roll.

The reading clerk called the roll, and the following Senators answered to their names:

Ashurst	Ernst	Lodge	Ransdell
Ball	Gooding	McCormick	Sheppard
Borah	Hale	McKinley	Simmons
Bursum	Harris	McLean	Smith
Calder	Harrison	McNary	Smoot
Cameron	Reflin	Moses	Spencer
Capper	Johnson	Nelson	Sterling
Caraway	Jones, N. Mex.	New	Trammell
Culberson	Jones, Wash.	Newberry	Walsh, Mass.
Cummins	Kendrick	Norris	Walsh, Mont.
Curtis	Keyes	Oddie	Watson, Ind.
Dial	Ladd	Overman	Willis
du Pont	Lenroot	Pepper	

Mr. HARRISON. I wish to announce that the Senator from Nevada [Mr. PITTMAN] is detained on account of illness in his family. I ask that this announcement may stand for the day.

Mr. HARRIS. My colleague [Mr. WATSON of Georgia] is absent on account of illness. I ask that this announcement may stand for the day.

The VICE PRESIDENT. Fifty-one Senators have answered to their names. A quorum is present.

Mr. SMOOT. Mr. President, I had intended at the beginning of the consideration of Schedule 9, which is known as the cotton schedule, to address the Senate at length, explaining in detail every paragraph in the schedule and every proposed amendment to the rates therein which has been reported by the Senate committee to the bill as it came from the other House, and make a comparison between the rates now proposed and the rates of the existing Underwood tariff law, as well as the rates provided on similar articles in the Payne-Aldrich law. I think, however, the time has arrived, Mr. President, when every Senator is desirous to conclude the work of the session, and I therefore am not going to take any more of the time of the Senate than is absolutely necessary in order to explain the reason for the rates provided for in the schedule and in the amendments which have been offered by the committee, and to state their real object. I have therefore decided, Mr. President, whenever a paragraph is reached that I shall make a brief statement explanatory of the changes in the particular paragraph.

I should like also to express the hope at this time that we may have as many Senators as possible present in the Chamber, in order that they may get what I will term a bird's-eye view

of the rates proposed and the reason for their imposition. With a large attendance of Senators I think we should have less discussion of the bill, and we might get through with the debate a great deal sooner than we shall by a continuation of the present practice of Senators coming into the Chamber and asking questions which have already, perhaps, been answered more than once.

Mr. President, paragraph 901, which is the paragraph we are now considering, divides cotton yarns into such as are not bleached, dyed, colored, combed, or piled and such as are bleached, dyed, colored, combed, or piled, each with its progressive rate of duty.

In passing I wish to say to the Senate that this bill to-day proposes progressive rates of duty, all based upon the numbers of yarns, and as the condition is advanced from the yarn itself into the manufactured cloth there is one straight progressive duty; so that any change which may be made in any rate proposed by the committee will necessarily require changes all along the line. So it is very necessary that we begin with paragraph 901 and establish the rates in that paragraph, for those rates have been carried through every paragraph in the schedule.

Mr. LENROOT. Mr. President, will the Senator yield?

Mr. SMOOT. I yield.

Mr. LENROOT. I should like to ask the Senator whether he is prepared, in view of this new scheme of rates, to give to the Senate comparisons as he goes along with the Underwood law and the Payne-Aldrich law?

Mr. SMOOT. I will say I have them in detail, and, while the Senator is here and there are a number of other Senators in the Chamber——

Mr. LENROOT. The Senator from Wisconsin is going to stay here during this discussion.

Mr. SMOOT. I did not mean to intimate that the Senator was not, but while other Senators are here, I want to say a word in relation to the comparisons of the equivalent ad valorem rates which have been made and prepared by certain members of the Tariff Commission between the rates proposed by the committee and the rates in the Payne-Aldrich law. I will say to the Senator that the rates proposed by the committee are less than the rates in the Payne-Aldrich law all the way through. Furthermore, certain comparisons which have been made and which have come under the observation of members of the committee are very unfair, for the reason that the prices of cotton goods in 1913 have been taken and the equivalent ad valorem duty arrived at on the basis of those prices under the rates of the Payne-Aldrich bill, and when it comes to calculating the equivalent ad valorem duty under the provisions of this bill the prices of cotton goods of to-day are not taken but the prices of cotton goods in 1913.

That is unfair. When we come to the comparison of those equivalent ad valorem rates, I want to call attention to why they are unfair, and I will show in every case where I think it is necessary how "deceptive"—I do not want to use the word "deceptive," but I do not know of any other word to use—they are.

Mr. LODGE. Misleading.

Mr. SMOOT. Yes.

Mr. LENROOT. There is one other question I should like to ask the Senator. In making those comparisons is he going to compare not only the specific rates but apply the ad valorem minimum or maximum, as the case may be?

Mr. SMOOT. In every case, and then I will also before we get through with the cloth paragraphs show the average equivalent ad valorem of all of the cloths that were imported into the United States under the Payne-Aldrich law and of all similar cloths imported under the existing law.

I will frankly admit, as I want the Senate to know, that under the provisions of paragraph 905a as at first reported to the Senate, known as the cumulative duties provision, the rates on the finer grade of goods—that is, goods which are woven by the swivel, dobby, or jacquard processes—were raised considerably above the Payne-Aldrich rates, but an amendment will be offered to the effect that in no case shall any rate in the cotton schedule exceed 45 per cent.

Mr. LENROOT. I should like to ask one other question. Have the proposed amendments been printed?

Mr. SMOOT. They have; and the Senator can get them by sending a page to the table.

Mr. LENROOT. I knew they were in typewritten form, but I did not know whether they were printed or not. So that all of those which affect the cotton schedule have been printed?

Mr. SMOOT. They have.

Mr. SMITH. Does the Senator mean to say that in every paragraph in the schedule the rate which shall be effective shall in no case exceed 45 per cent?

Mr. SMOOT. Yes; I say that.

Mr. SMITH. I shall listen with interest to the Senator's explanation of the different paragraphs as he goes on, glancing at the amendments he proposes, to see just how he will adjust that.

Mr. SMOOT. It is adjusted by providing that no rate shall be greater than 45 per cent.

Right in this connection I want to say this: It is rather difficult to compare in some instances the equivalent ad valorem rates of the Payne-Aldrich law and the present bill, because of the fact that the basis of imposing the duty has been changed; but the only place that I can find where there is a duty that is higher in the proposed amendments to this schedule offered by the committee, if adopted, is where there was a change of a bracket as to the values provided in the Payne-Aldrich law. That happens in every tariff bill that is ever written. In other words, if the goods cost half a cent more per yard than the highest value named in a bracket, they fall under a higher rate, and as the first increase in the advanced-price bracket, whether the value be half a cent or a cent per yard more, necessarily fall in the higher-rate bracket. When the equivalent ad valorem is worked out it is shown to be higher than the existing law, simply because we have adopted a different method of imposing the duty; but the practice, as everybody knows, is that wherever such brackets are provided the goods are made so as to fall just under the value of the higher bracket rather than just over the lower bracket. That is understood by everybody; and therefore what few rates there are that will be shown to carry a little higher equivalent ad valorem than that provided in the Payne-Aldrich law—and there are only a few of them—come about for the reason that I have just stated.

The first class refers to yarns in the gray, singles and carded. The second class refers to those advanced in manufacture beyond the first class. The rates are levied, as in preceding acts, on the number of the yarn—that is, the number of 840-yard hanks that weigh 1 pound—with the result that the duty increases progressively with the yarn number. The higher the number the finer the yarn and the greater the length per pound, and the higher the percentage of labor costs; so that a duty increasing progressively with the yarn number is the most equitable tax that it is possible to impose. Therefore the committee has fixed rates of duty dependent upon yarn count, increasing in uniform ratio as the number of the cotton yarn increases, but interrupted at the point of 40 for specific rates. The change in the rate of progression on both the basic and advanced yarns at No. 40 is made because that number marks the normal ring-spinning limit of yarns made from short-staple upland cotton not over 1⅛ inches in length.

Above No. 120 there is rarely any domestic yarn made for sale. It is so infinitesimal in amount and used in luxury goods that a rate of 45 per cent is not excessive. The stoppage of the advance in duties at this point should stimulate the production of articles which require extra high-count yarns not produced in this country.

Under present price conditions it is probable that the maximum ad valorem rates will apply to practically all imported yarns. These rates progress on cotton yarn, carded single and in the gray, from 5¼ per cent ad valorem in steps of one-fourth of 1 per cent ad valorem for each number until the No. 100 is reached, where the rate is maintained at 30 per cent ad valorem on all yarns finer than No. 100; and in the case of cotton yarns, plied, colored, or combed, from 10½ per cent, advancing at the rate of one-fourth of 1 per cent ad valorem per number until No. 100 is reached, where the rate is maintained at 35 per cent ad valorem.

Mr. CUMMINS. Mr. President, will the Senator answer a question, purely for information?

Mr. SMOOT. Certainly.

Mr. CUMMINS. There are no compensatory duties in the cotton schedule, are there?

Mr. SMOOT. There are compensatory duties on yarns and on cloths made from long-staple cotton; yes.

Mr. CUMMINS. That was made necessary by the amendment which the Senate adopted yesterday of 7 cents a pound on long-staple cotton?

Mr. SMOOT. Absolutely; and I will say to the Senator that taking it on all classes of goods the yarn number of which is over 60, because it is difficult and in some cases unprofitable to spin a yarn over 60's with short-staple cotton, such duty amounts to about 10 cents a pound—a pound, not a yard—on the finished cloth.

Mr. CUMMINS. But the great volume of the cotton product of the country comes from short-staple cotton, does it not?

Mr. SMOOT. Oh, yes; the great volume; and in dollars and cents as well as in yardage.

Mr. CUMMINS. So large a proportion that the other becomes almost negligible. If so, then we dismiss compensatory duties with regard to the great volume of the production.

Mr. SMOOT. Yes. I may say to the Senator that wherever long-staple cotton is used it is for the purpose of spinning a fine thread, and I can show the Senator samples of cloths that are classed mostly as luxuries, outside of tire fabrics, that to make them requires the strength and fineness of fiber of the long-staple cotton.

Mr. SMITH. Mr. President, if the Senator will allow me, under the compensatory duties that must necessarily apply as growing out of the action of the Senate yesterday, practically 80 per cent of the cloths and yarns imported would bear this additional duty by virtue of the action of the Senate yesterday.

Mr. SMOOT. More than that of the importations, I will say to the Senator.

Mr. SMITH. Well, I will use that as a basis.

Mr. SMOOT. It is more than that.

Mr. SMITH. You must remember, however, that there is a tremendous volume of cotton produced in the Gulf and South Atlantic States that would come under the classification of this 1⅛ staple; perhaps a million or more bales under the improved cultivation resulting in this fiber. Therefore you would have in your domestic production a compensatory duty that might include almost the entire cotton production of this country, because if it is composed wholly or in part of this you will pay this additional duty.

Mr. CUMMINS. Mr. President, I am asking whether the bill does contain compensatory duties upon any very large part of the cotton product of the country.

Mr. SMOOT. It contains it on the importations; and the Senator has forgotten, I suppose, the amendment that is offered on page 125, line 19, to insert after the period a new sentence, to read as follows:

In no case shall the duty or duties imposed upon cotton cloth in paragraphs 903 or 905–a exceed 45 per cent ad valorem.

So there is a limit there. It makes no difference about the count, and it applies to those two paragraphs.

Mr. SMITH. Without going any further into the details, even where you provide that the duty shall not exceed 45 per cent, there are paragraphs here where advantage could be taken of that in such a way as to put even that duty and the range of the duties underneath there out of all proportion to the necessity for that duty. This applies to cotton cloths; but on cotton yarns, the higher count that we import into this country, the range is still unlimited, and the duty that we imposed yesterday by virtue of the long-staple cotton will put a large per cent of the cloths manufactured in this country from domestic cotton as well as those imported up to the 45 per cent where the condition does not justify it.

Mr. CUMMINS. That may be true. I do not know.

Mr. SMOOT. I do not want the Senator from Iowa to think that the Senator from Utah agrees with that statement.

Mr. CUMMINS. No; I understand that the Senator from Utah dissents from that conclusion, but I come back to the information that I really want. We have it admitted, and everybody knows, that a very large proportion, an overwhelming proportion, of the cotton product of the United States—I am speaking now of the finished product—is not made of long-staple cotton. It is made of the ordinary grades of upland cotton. Now, my question is this: Does the manufacturer, whether of yarn or of cloth, in the United States pay as much for his cotton as his rival in Great Britain or Germany or France?

Mr. SMOOT. The Senator means for ordinary cotton?

Mr. CUMMINS. For ordinary cotton.

Mr. SMOOT. He pays the Liverpool price.

Mr. CUMMINS. Is that admitted everywhere—that the people of this country must pay the Liverpool price for cotton that is produced and sold in the United States?

Mr. SMOOT. I think I have heard the Senator from South Carolina [Mr. SMITH] say it many, many times upon this floor.

Mr. CUMMINS. Why is that?

Mr. SMOOT. Because Liverpool regulates the price of the cotton of the world.

Mr. CUMMINS. But it would seem to me that the cotton that is produced in the United States, baled, transported to the seashore, and then carried across the ocean, ought to cost a little more than cotton that is delivered at the approximate point of manufacture in the United States. Then the answer is that the cotton that is used by the home manufacturer costs the same as the cotton used abroad?

Mr. SMOOT. If he buys it at the same time.

Mr. CUMMINS. Is there any other material which enters into the finished product that costs more in the United States than it costs abroad?

Mr. SMOOT. Yes; nearly every other item of cost. There would be some cotton goods with silk threads, for instance, but I suppose——

Mr. CUMMINS. I am speaking of pure cotton goods. There is no material that is used by the American manufacturer that costs any more than that material used abroad.

Mr. SMOOT. Oh, yes; there is. I might say with safety every other item of cost of manufacture, such as dyes, repairs to machinery, buildings, and labor costs more.

Mr. CUMMINS. I am speaking of material, not labor. I am trying to get down to the question of labor, if I can, by eliminating as many of the other elements as can be properly eliminated.

Mr. SMITH. If the Senator will allow me, the Senator from Utah must admit that the raw material necessarily is cheaper on the market in this country than it is abroad, on account of the additional freight which must be paid in sending it abroad, because we sell in this country on the price fixed in Liverpool, f. o. b. here. I have a table of the transportation charges, which I will put in the RECORD. I put one table along that line in the RECORD yesterday. There is the freight and the insurance and whatever damage there may be. That is counted out in what is known as the c. i. f. and 6 contract. There is practically no foreign manufacturer of cotton competing with America who gets his cotton as cheaply as the American purchaser gets his raw material.

Mr. SMOOT. The manufacturer in England gets long-staple cotton cheaper than the American manufacturer, and always has and as cheap ordinary upland cotton as cheap as the eastern manufacturer, but as cheap as the cotton manufacturer of the South.

Mr. CUMMINS. There seems to be a difference of opinion. I am seeking information. The Senator from Utah has just answered that the American manufacturer must pay just as much for his raw cotton as the English manufacturer or the German manufacturer or the French manufacturer.

Mr. SMITH. Any paper you may pick up this morning quotes the price current on the Liverpool exchange, and it runs from 2½ to 3 cents a pound above the American price for the like cotton. That is to take care of the freight. Of course, it is expressed in pounds sterling, but it is very easily reducible to our money.

Mr. CUMMINS. Does the Senator from Utah agree with the Senator from South Carolina on that point?

Mr. SMITH. I just submit the tables taken from the current reports.

Mr. SMOOT. If Germany buys cotton from Liverpool, Germany buys that cotton from Liverpool at the price quoted in Liverpool and pays the freight on that cotton. There is no doubt of that. When the eastern manufacturer buys cotton at the Liverpool price he pays the freight from the point in the South whence the cotton is shipped to his mill, but he pays the Liverpool price.

Mr. SMITH. Mr. President, there can be no controversy whatever. I have been in the cotton business all my life, and under our flat rate the cotton of the American mills, including both the New England and the southern mills, sells at a price less the freight from here to Liverpool. In other words, the southern manufacturer can get his cotton for from 2 to 3 cents cheaper than the Liverpool man can get his. He can get the wagon cotton without paying any freight whatever. The foreigner pays all incidental expenses. It is monstrous to say that the foreigner gets his cotton delivered at his mill door at the same price the American pays. What becomes of all that added oceanic freight and insurance, the stevedorage, and the compression? A large proportion of the cotton of the American spinner is not even compressed, and in order to conserve space on the vessel and in the cars they have concentration points for export, compress the cotton, and then ship it abroad. That cost ranges anywhere from 2 to 3 cents a pound. During the war the difference between what it cost the American mills and the English mills to get cotton went as high as 6 and 7 cents a pound. I will submit the figures in tabulated form, so that the Senator can have no doubt. It will be information from authoritative and official sources.

Mr. SMOOT. There is no doubt that the southern mills have every advantage in the world over the eastern mills and the mills in the foreign countries in the purchase of American cotton. In respect of the lower-grade cotton goods, perhaps we could get along without any or little protective duty. The southern mills have the cotton right at their door. It is delivered to them there. It is quite different where the freight

rates are paid from here to England, or from the South to New England.

Mr. McLEAN. In the Tariff Commission Survey, page 105, it is said that the cost of freight on Egyptian cotton imported into this country——

Mr. CUMMINS. I am not talking about Egyptian cotton.

Mr. McLEAN. I know that, but it would be more, if anything, than the freight to England.

Mr. SMOOT. Oh, yes; twice as much.

Mr. McLEAN. I think the comparison will show that the freight on our cotton to England would not exceed half a cent a pound.

Mr. SMOOT. It is just about that.

Mr. McLEAN. Including the marine insurance, fumigation, and all expenses, the freight would be a cent and a half a pound from Egypt.

Mr. SMOOT. I will say to the Senator from Iowa that I was speaking of the eastern mills, not the cotton mills where the cotton is delivered at the door, and the local rail freight from Texas to an eastern mill is almost as high, if not higher—I think it is higher—than it is to Liverpool.

Mr. McLEAN. It is higher.

Mr. CUMMINS. Shipped from where?

Mr. SMOOT. From New Orleans.

Mr. CUMMINS. That seems very strange to me.

Mr. MOSES. The rate is absolutely higher.

Mr. CUMMINS. I will accept that as a doubtful proposition. There may be a maladjustment of freight rates with regard to that, but it seems very strange to me that cotton can not be shipped from Savannah, Ga., to New York or New England more cheaply than it can be shipped from Savannah, Ga., to Liverpool. But let us assume that the material, so far as raw cotton is concerned, costs the American manufacturer the same as it costs the foreign manufacturer.

Mr. MOSES. Mr. President, even that assumption is not fair. I can say to the Senator that it costs more to ship a bale of cotton from Birmingham, Ala., to Manchester, N. H., than to ship it from Birmingham, Ala., to Manchester, England.

Mr. CUMMINS. There seems to be a very great difference of opinion upon that point. I do not know just how to settle it.

Mr. MOSES. That is absolutely correct.

Mr. SMOOT. I know that when I used to buy cotton in Texas, I had to pay $1.60 a hundred to get it from Texas up to Provo, Utah, and I could have shipped the cotton clear to Liverpool for about one-half the rate.

Mr. CUMMINS. Then, it seems to me that, instead of curing that obvious injustice by a duty on the manufactured product, we ought to cure it by readjusting the rates of transportation.

Mr. SMOOT. There is no duty given to make up for any difference in the cost of cotton in any part of the world. But I want to say to the Senator that Egyptian cotton costs the American manufacturer more, and that is the cotton which goes into all finer goods.

Mr. CUMMINS. I understood the Senator from Utah to say that the great bulk of the cotton goods is not affected by the duty we put upon the long-staple cotton.

Mr. SMOOT. There is no doubt about that as to American-made goods.

Mr. CUMMINS. Therefore we are not bothered with Egyptian cotton, so far as that is concerned. There should be no compensatory duty for those manufacturers who do not use the long-staple cotton, and that will cover a very large proportion of the product. The home manufacturer I have no doubt pays higher wages for his repairs, for whatever work is done, either in repair or in the actual manufacture. We are dealing in this paragraph with gray yarn. Nothing has been done to that particular product except to spin it, after scouring it. How much more does it cost to spin the yarn in the gray in this country than it does in England? That is what I want to know.

Mr. SMOOT. I will say to the Senator that that all depends on the size of the yarn. If you take the lower counts of yarn, you can spin it in this country as cheaply as you can in England, but the investment is greater.

Mr. CUMMINS. Will the Senator explain to me the process? Whether it is spun into coarse yarn or into fine yarn, is it largely a mechanical process; is it done largely by machinery?

Mr. SMOOT. Yes; but not all machinery can produce the finer styles of cloth, and not all workmen can perform the work required.

Mr. CUMMINS. Why does it cost proportionately any more to spin fine yarn in the United States than in Great Britain?

Mr. SMOOT. In the first place, I perhaps could explain to the Senator in this way: A No. 1 yarn means that, taking 1 pound of cotton, you have to draw the cotton out into a thread 840 yards long. To make No. 100 cotton, that has to be drawn one hundred times longer, and whenever you get above 60, the loss is greater, and it takes a much longer time. Between a No. 1 and a No. 100, the mule has to go in and out one hundred times as many times, and it all requires a highest type of labor to do the handwork required. The difference has been so much, I will say to the Senator, that we have never undertaken to make in this country certain lines of goods.

Mr. CUMMINS. I understand it costs a great deal more to spin fine yarns—No. 100, for instance, if they ever get up to that number. I do not know whether they do or not——

Mr. SMOOT. Yes; they do.

Mr. CUMMINS. Than a No. 1; but it costs proportionately just as much more to do it in a foreign country as it does to do it in this country. Is not that true?

Mr. SMOOT. It costs proportionately more on the rate of wage which may be paid in both countries. If you got $1 here, and the difference between the costs of conversion in this country and abroad is 10 per cent, of course the difference is 10 cents; but if that identical thing costs a hundred times $1 the difference is $10.

Mr. CUMMINS. I think the Senator's mathematics are absolutely perfect, so far as that is concerned; but it increases in the same proportion abroad and at home. The duty, I quite agree, ought to be higher upon the finer grades of yarn than upon the lower grades.

Mr. SMOOT. I think the answer to the Senator is this, that about all of our importations are of the finer goods, with a higher rate.

Mr. CUMMINS. Then why do you put any duties upon the lower grades?

Mr. SMOOT. Mr. President, I think there ought to be a duty for many reasons, and they apply more to cloth than yarns, for, with the modern machinery being adopted in Europe, Europe can make goods cheaper than we can in this country.

Mr. CUMMINS. We sell a great many cotton goods abroad, do we not, of the lower grades?

Mr. SMOOT. Yes; the special lines which go to China and which go to Canada, because she is our neighbor and can buy her goods as she needs them, and Cuba, the Philippines, Porto Rico, all with a lower tariff to America than the balance of the world. We export but few fine goods. The goods we export are generally special lines and plain fabrics, which count of yarn is generally under 40.

Mr. CUMMINS. One final question is whether the schedule is made up on the theory that the committee is covering the difference in the cost of production of the various kinds of goods in this country and abroad. Is that the basis upon which it has been done?

Mr. SMOOT. Just as nearly as we can get it, I will say to the Senator. Of course, the Senator will understand that our overhead cost of building a mill in the United States, beginning with the first stone that is laid in the foundation and up until it is finished, including every piece of machinery that goes into it, represents the capital that is invested in the industry at a higher price than in European countries. That has a great deal to do with the cost of production. We pay taxes upon that increased cost and the overhead is a great deal higher, and all of that has to be taken into consideration in arriving at the difference in production cost in this country and in the foreign land.

Mr. CUMMINS. My question was simply whether the committee adopted that basis and attempted to adjust the schedule upon the difference in the cost of production at home and abroad.

Mr. SMOOT. Yes. I want to say to the Senator that we took into consideration the importations, and we have taken into consideration what the price is in this country and in the foreign country. We adopted the principle—it seems to me the only one that could be adopted—in order to protect the line of goods that must be protected in this country and have an absolutely fair and just progressive rate according to counts in the yarn or cloth.

Mr. CUMMINS. We do not import any low-grade cotton yarns?

Mr. SMOOT. Very little in comparison to our production. I will say to the Senator that if America were producing only the class of goods that is produced in the Southern States today, with the advantage they have, I think we could get along without protection, or at least very little protection. We have two classes of cotton goods made in this country, and the line of demarcation is getting more marked every year. The Southern States are taking the making of most of the plain cotton goods away from the Eastern States manufacturer. They are being made there entirely, I was going to say, but I will not go that far. I do not know just what the percentage is, but

it is very small. I am speaking now of the cheaper grades of goods. Thus they have forced the eastern manufacture to create a market for the finer goods. It is remarkable what they have accomplished in the last 10 years along this line and educating the workmen to make fine, fancy styles cotton goods. In fact, I have samples here that, it seems to me, are nothing more or less than competitive with silk goods. They are luxuries of the highest type. They must receive protection. I will say to the Senator that even on that class of goods we put into the bill a provision that in no case shall any of them receive a protective rate of over 45 per cent.

Mr. CUMMINS. It seems to me, however, that the Senator from Utah has practically said now that the schedule contains duties upon some cotton goods that are not necessary and that ought not to be put in it.

Mr. SMOOT. I could not say anything else in referring to a certain line of cotton goods.

Mr. LENROOT. I would like to ask the Senator from Utah why it is that upon these low counts of cotton cloth such rates have been provided as the committee proposes, in view of the admission the Senator makes?

Mr. SMOOT. There is only one reason why that I know of outside of the increased investment. There are years when the styles change, that the most fashionable goods are made of a low-numbered cotton, but the finish and the weave is just as expensive as some of the very finest of goods with the exception that there is not the number of picks in the square inch, but the time required to make them is as great. They can not be made like the ordinary cotton goods that run on automatic looms. One loom is all an operator can tend, and the finish of the goods is a large part of the cost.

Mr. LENROOT. I would like to ask the Senator if he thinks a tariff bill should be built upon the exceptional case rather than the ordinary case?

Mr. SMOOT. I think it is the only way to do it in order to make progressive provision, step by step, in every manufacture of cotton. We either have to eliminate all protection and say that hereafter we will not have the class of goods referred to made in the United States, or else we have to build the rates as we have them here.

Mr. LENROOT. Now, one other question. The Senator states, and I agree with the Senator, that upon the higher counts a fairly higher rate of duty is necessary, but in the bill and the amendments which are now proposed the rate starts in at 8 cents a pound on a 40-count thread, speaking now of the paragraph under consideration, and that 8 cents is carried through to every count, and, in addition to that, when we have the higher count there is added enough to cover the difference in the cost of production of the higher count in this country and that same count abroad, and, in addition to that, the committee have put on 8 cents a pound, which the Senator admits is not necessary. How can that be defended?

Mr. SMOOT. Of course, it would be necessary in certain styles of cloth. It will not be necessary as to the ordinary cotton cloth, but there are goods that need all the protection provided in the schedule. For instance, take a mercerized yarn when the styles call for a No. 9 thread made out of Egyptian cotton, and necessarily so, because you could not otherwise get the finish. It is to take care of that class of goods as well as the ones I have before mentioned.

Mr. LENROOT. And at the same time, in so far as this rate is carried to the consumer in order to take care of 1 per cent, you have added 8 cents a pound upon 99 per cent of the consumption. I say in so far as the rates are carried to the consumer that is true. It is true, is it not, in so far as they are carried to the consumer?

Mr. SMOOT. If the rates were carried on to the consumer that would be true, but the competition here in these goods is so close, I will say to the Senator, that I do not think it is carried on to the consumer.

Mr. McLEAN. There are very few importations.

Mr. SMOOT. The importations are negligible.

Mr. LENROOT. If the importations are negligible, then what reason is there for a duty on the lower count at all?

Mr. SMOOT. The only reason I can give is the class of goods involved.

Mr. LENROOT. But the Senator said none is coming in of any consequence.

Mr. SMOOT. I mean of the ordinary common cloth.

Mr. LENROOT. I am speaking now of the yarn.

Mr. SMOOT. If we did not have the rate on the yarn, then of course yarns would be shipped in here and made into cloth.

Mr. LENROOT. Would the yarns be shipped in? Taking counts lower than 40, there is none being shipped in now under the present rate of duty.

Mr. SMOOT. Not of the ordinary yarn. They would not be shipped in.

Mr. LENROOT. No; certainly not; and yet it is proposed, taking No. 40, to impose a duty of 8 cents a pound upon that yarn with a minimum ad valorem as well.

I want to ask the Senator another question, because I did not quite understand. To what extent and where are the compensatory duties carried into this schedule by reason of the action of the Senate yesterday?

Mr. SMOOT. The Senator will find them in paragraph 905b.

Mr. LENROOT. Is that the only place where the compensatory duties are carried into the schedule?

Mr. SMOOT. I will say to the Senator there is another compensatory duty of 4 per cent.

Mr. LENROOT. I mean by reason of the Egyptian cotton.

Mr. SMOOT. That is the only place, and it is limited. It will be paragraph 905b when the amendment I have offered is agreed to.

Mr. SMITH. If the Senator will look at page 125, at the last paragraph, he will see that the duty imposed yesterday on the long-staple cotton will cover practically every form of yarn and cloth imported into the country above a certain count of yarn.

Mr. SMOOT. Provided it is long-staple cotton.

Mr. LENROOT. I want to ask the Senator to what extent yarns above the count of 60 are made of Egyptian cotton?

Mr. SMOOT. Practically all of them.

Mr. LENROOT. That is what I wanted to know.

Mr. SMOOT. It is very difficult, I will say to the Senator, to take the ordinary upland cotton and spin a thread above 60. It can be done, but whenever undertaken the losses are more than you could make by using the long-staple cotton.

Mr. CUMMINS. What is the production of long-staple cotton as compared with upland cotton?

Mr. SMOOT. Very small; in this country. I think not more than 5 per cent.

Mr. SIMMONS. Last year there were 8,000,000 bales produced, while ordinarily there are between 12,000,000 and 14,000,000 bales. The normal crop is somewhere around 13,000,000 or 14,000,000 bales. My impression is that all the long-staple cotton, not including that raised in California and Arizona, would not equal 200,000 bales.

Mr. SMITH. I think the percentage covered by this duty on 1⅛-inch staple would be very small.

Mr. SIMMONS. That would not amount to 200,000 bales.

Mr. CUMMINS. Then not more than 3 per cent of the output of the final product can be of this material?

Mr. SIMMONS. No.

Mr. CUMMINS. Then 97 per cent——

Mr. SMOOT. Oh, no. The Senator is speaking of goods manufactured in this country and not importations.

Mr. CUMMINS. What are the importations of the Egyptian or long-staple cotton?

Mr. SMOOT. I mean in the form of cloth.

Mr. CUMMINS. How much is produced in Egypt of the kind now called long staple?

Mr. SMOOT. Between 700,000 and 800,000 bales.

Mr. CUMMINS. And we produce 14,000,000 or 15,000,000 bales?

Mr. SIMMONS. In the normal years we produce between 14,000,000 and 15,000,000 bales.

Mr. SMOOT. That is of ordinary cotton.

Mr. CUMMINS. Then it is perfectly plain that the compensatory duties ought to begin where the long-staple cotton begins and not until then.

Mr. SMOOT. That is all we do. I have some samples here of the cotton used, if the Senator wants to look at them.

Mr. LENROOT. Mr. President, I want to ask the Senator another question.

Mr. SMOOT. I want to make a correction, if the Senator will wait just a moment.

Mr. LENROOT. Certainly.

Mr. SMOOT. I made a statement to the effect, Mr. President, that importations of cotton yarn under 40's amounted to but little. My attention, however, has been called to the fact that there were under the Payne-Aldrich law considerable quantities imported. I merely wish to make that correction for the RECORD.

Mr. OVERMAN. I did not hear what the Senator said. Did the Senator refer to importation of yarns under 40's?

Mr. SMOOT. Yes. I made a correction of my statement as to importations of cotton yarns under 40's.

Mr. OVERMAN. What is the amount of the importations?

Mr. SMOOT. I do not have before me the exact amount.

Mr. LENROOT. It is small.

Mr. SMOOT. Of the total production it is small.

Mr. LENROOT. I want to ask the Senator a question. Speaking of the compensatory duties, I should like to inquire what paragraph 905a means? Do I understand that if cloth comes in containing 10 per cent of yarns higher than No. 60 the entire cloth will take a compensatory duty of 10 cents a pound additional, which would be equal to a compensatory duty of about a dollar a pound upon Egyptian cotton? Is that correct?

Mr. SMOOT. The Senator may figure it in that way, but——

Mr. LENROOT. That is true, is it not?

Mr. SMOOT. But cloth will never be made in that way.

Mr. LENROOT. Why not?

Mr. SMOOT. I will tell the Senator why the committee provided the 10 per cent limitation. If there were not a 10 per cent limitation, then the manufacturers could put one or two threads of Egyptian cotton in the selvage and in that way claim the duty. Something similar to that has happened, as the Senator knows, under Schedule K, where if there was a thread of yarn——

Mr. LENROOT. I am not complaining of the 10 per cent, except that it is too low and not too high.

Mr. SMOOT. I want to say to the Senator that the 10 per cent——

Mr. LENROOT. Or 10 cents?

Mr. SMOOT. No; it is 10 per cent.

Mr. LENROOT. It is 10 cents per pound if finer yarns than No. 60 constitute more than 10 per cent of the cloth.

Mr. SMOOT. Yes; and I am speaking now of cases where finer yarns than 60's constitute more than 10 per cent of the cloth. I can not conceive that a manufacturer could ever mix 10 per cent of yarns finer than 60's with all of the other cotton and make a good piece of cloth. It may be possible to do that, but I hardly think it is possible.

Mr. LENROOT. If that be true, then how was the 10 per cent arrived at?

Mr. SMOOT. We were not going to provide that the use of long-staple cotton in the selvage, we will say, which does not affect the cloth at all, should necessitate the extra duty upon the whole cloth. The selvage, as the Senator knows, is only about one-thirtieth of the width of the goods. So we put it high enough in the bill to prevent such a thing occurring.

Mr. LENROOT. Why should that not be taken care of by an ad valorem instead of, as in the illustration which I gave, imposing a duty of $1 a pound compensatory where the rates upon the cotton itself is 7 cents a pound? I do not see why that could not be taken care of by an ad valorem duty rather than this alleged compensatory duty, which may be seven times or eight times the actual amount of compensation that would be proper.

Mr. SMOOT. Let me read the second clause of paragraph 905a:

> In addition to the duties imposed in paragraphs 901, 902, 903, and 905, there shall be paid on all yarns finer than No. 60, and on all yarns finer than No. 60 contained in threads and cloth, if constituting more than 10 per cent in weight of such threads or cloth, 10 cents per pound; all laps, sliver, and roving, and on all yarns coarser than No. 60, and on all yarns coarser—

We are going to amend that so as to read "not finer"—

> than No. 60 contained in threads and cloth, if containing cotton of 1⅛-inch staple or longer, 10 cents per pound.

Mr. President, of course I will say to the Senate that it was assumed that no long-staple cotton would be used in threads unless they were No. 60, and the provision here was limited to threads No. 60.

Mr. LENROOT. I understand that; but if it is desired to adjust the compensation it is necessary to arrive at the percentage of the finer thread in the cloth, and why should there not be imposed a compensatory duty upon the proportion of the finer cloth instead of upon all of the cloth?

Mr. SMOOT. If a thread is finer than 60 it has got to be of long-staple cotton.

Mr. LENROOT. But under this provision the customs officers must determine the question. For instance, if a cloth comes in, 10 per cent of the weight of which cloth has a yarn finer than 60, the compensatory duty would be 1 cent a pound, would it not, upon the whole cloth?

Mr. McLEAN. Yes; but the foreign manufacturer would not make any of that kind of cloth. He is not going to multiply his duty by 10.

Mr. LENROOT. I am speaking of the principle that is adopted in imposing the compensatory duty. Why is there not imposed a compensatory duty upon the content of finer thread rather than upon the total weight of the cloth?

Mr. SMOOT. That would be impossible, I will say to the Senator.

Mr. LENROOT. The fact has to be determined.

Mr. SMOOT. Yes; it has to be determined; but it is not necessary to determine that there is just 10 per cent. If the provision were not in here the selvage could be used as I have indicated.

Mr. LENROOT. It is necessary to determine whether there is more than 10 per cent or less than 10 per cent.

Mr. SMOOT. The answer is that the cloth can not be made in that way. If the yarn is over 60's, it is long-staple cotton.

Mr. LENROOT. Well, suppose it is 50 per cent?

Mr. SMOOT. The manufacturers could go to work and have a cloth made of ordinary cotton, and, perhaps, spin the 60 yarn; then have a selvage put in of the long-staple cotton, and then, without the limitation here, they could claim the whole duty.

Mr. LENROOT. Let me ask the Senator this: Does cloth which has 50 per cent of finer thread come in?

Mr. SMOOT. What does the Senator mean by "finer thread?"

Mr. LENROOT. Thread higher than No. 60.

Mr. SMOOT. I do not think it does. We assume such threads are made of long-staple cotton.

Mr. LENROOT. Does the Senator mean that no cloth comes in with a part of the thread higher than 60 and a part lower than 60?

Mr. SMOOT. Not a piece of such cloth comes in that I know of. Such a thing could happen, but I do not know how it could be made to pay.

Mr. LENROOT. Is it not very common? I do not pretend, however, to be an expert.

Mr. SMOOT. I will say to the Senator that it would involve more expense to the manufacturer of the cloth than he would get out of the duty under this provision. All the provision is for. I will say to the Senator, is as I have already stated.

Mr. President, a comparison between the rates provided by the Senate bill and the rate of the act of 1909 is difficult, inasmuch as the method of levying duties is not the same. The Payne-Aldrich bill fixes progressive rates of duty dependent upon the number in groups different from the Senate bill and the equivalent ad valorem rates shown in the "Statistics of Imports and Duties, 1908 to 1918, Inclusive," are of groups of 10 numbers rather than according to the rate of each number of yarn.

In the following comparison of rates the equivalent ad valorem of the specific rates under the act of 1909, as shown in "Statistics of Imports and Duties, 1908 to 1918, Inclusive," on pages 197 to 199 and 214 to 217, has been used as the equivalent ad valorem of the specific rate of the average number of each group. In other words, Mr. President, if there are, say, 10's and up to 20's, the only way by which any kind of a calculation can be arrived at is to take the average of the two, which would be 15. As I have already explained to the Senate, that is the reason why some of the equivalent ad valorem rates of the bill on their face are a little higher than the Payne-Aldrich rates.

Mr. President, I will not take the time to read to the Senate this comparison of cotton yarns, single grays and carded, but ask that they may be printed in the RECORD without reading.

The PRESIDING OFFICER (Mr. STERLING in the chair). Without objection, it is so ordered.

The comparison referred to is as follows:

Comparison of cotton yarns—singles, gray, and carded.

Number.	Specific rates per pound.		Senate minimum ad valorem.	1913	1909 equivalent ad valorem imports, 1913.
	Senate.	Act of 1909.			
	Cents.	*Cents.*	*Per cent.*	*Per cent.*	*Per cent.*
8	1¾	2½	7	5	16.09
25	5	4¼	11¼	10	16.05
35	7	7	13½	10	20.13
45	9¼	9	16¼	15	25.47
55	11½	11	18½	17½	(1)
65	14½	13	21½	20	20.94
75	16½	15	23½	20	(1)
85	19½	17	26½	22½	(1)

155	28	31	30	25	31.72
165	28	33	30	25	(1)
175	28	35	30	25	43.32

Comparison of yarns—bleached, dyed, colored, combed, or plied.

Number.	Specific rates per pound.		Senate minimum ad valorem.	1913		1909
	Senate.	Act of 1909.		Plied, carded, and gray.	Bleached, colored, or combed.	Equivalent ad valorem imports, 1913.
	Cents.	*Cents.*	*Per cent.*	*Per cent.*	*Per cent.*	*Per cent.*
15	4½	6	13¾	7½	10	22.26
35	10½	8¾	18¾	10	12½	24.80
45	14	11½	21½	15	17½	29.02
55	18	13¾	23¾	17½	20	29.91
65	22	16½	26½	20	22½	30.50
75	26	18¾	28¾	20	22½	34.39
85	30	25½	31½	22½	25	30.45
95	34	28¾	33¾	22½	25	38.22
105	38	31½	35	25	27½	47.88
115	42	34½	35	25	27½	43.05
125	44	37½	35	25	27½	41.33
135	44	40½	35	25	27½	40.63
145	44	43½	35	25	27½	37.95
155	44	46½	35	25	27½	38.15
165	44	49½	35	25	27½	35.04
175	44	52½	35	25	27½	34.57
185	44	55½	35	25	27½	28.59
195	44	58½	35	25	27½	30.18

Mr. SMOOT. Mr. President, the Reynolds report, page 147, gives the cost of foreign yarns and the price of the competing domestic yarns. Taking these prices as the basis and adding to the foreign cost 2 cents a pound for landing charges and 15 per cent for gross profits, the differential required to equalize competing conditions of price, and the committee rate is as follows. I ask that the table may be printed in the RECORD without reading.

The PRESIDING OFFICER. Without objection, it is so ordered.

The table referred to is as follows:

Number.	Rate required to equalize.	Committee rate.
39-2 ply, gassed combed	17 per cent	19¾ per cent.
48-2 ply, gassed combed	28 per cent	22 per cent.
58-2 ply, gassed carded	25.3 cents per pound.	19.2 cents per pound.
78-2 ply, gassed carded	39.7 cents per pound.	27.2 cents per pound.
98-2 ply, gassed combed	57 per cent	34½ per cent.

Mr. LENROOT. Will the Senator, in that connection, give the imports, and let us see whether the imports justify the figures given?

Mr. SMOOT. If the Senator will just wait, I will put those in the RECORD.

Mr. LENROOT. I should like to have them in the same connection, because they go right together.

Mr. SMOOT. After a brief statement, I will put them in the RECORD.

The compensatory duties on cotton yarns provided for in paragraph 905b and last proviso of paragraph 901, have not been considered in computing rates of duty shown by any of the tables herewith submitted. They could not be considered; it would not be fair to do so; but I will say to the Senate that I have them worked out here, and as to any particular case that any Senator wants to know, I will submit them.

Mr. SMITH. Mr. President, will the Senator yield?

The PRESIDING OFFICER. Does the Senator from Utah yield to the Senator from South Carolina?

Mr. SMOOT. I yield.

Mr. SMITH. Mr. President, I should be glad if the Senator would occupy some position where those of us who are interested in what he is saying might hear him, for when he turns his back it is impossible to hear him.

Mr. SMOOT. I apologize to the Senator. It must be evident that the same difference between foreign and domestic costs will be maintained; as the compensatory duty does no more than absorb the duty paid by the domestic manufacturer on raw material.

Does the Senator want me to read the table which follows, or shall I put it in the RECORD without reading?

Mr. LENROOT. I should like to have the figures as to importations.

Mr. SMOOT. I have some figures here, and if the Senator desires I will read them to the Senate.

Mr. LENROOT. I should like to have them read.

Mr. SMOOT. The imports and exports and the United States production of yarns are as follows——

Mr. LENROOT. Has the Senator the figures by counts? That is what I want.

Mr. SMOOT. No; I have got them as a whole.

Mr. LENROOT. I should like to have the figures by counts.

Mr. SMOOT. I will ask that the matter to which I have referred may be printed in the RECORD without reading.

Mr. LENROOT. Has the Senator no information as to the imports by counts? I mean the recent importations.

Mr. SMITH. Mr. President, I have a table here furnished by the Tariff Commission showing the importations of different counts of yarn.

Mr. SMOOT. I ask that the table to which I have referred may go into the RECORD without reading.

The PRESIDING OFFICER. Without objection, it is so ordered.

The table referred to is, as follows:

Imports, exports, and United States production.

	Fiscal year 1910.	Calendar year 1914.	Calendar year 1921.
Imports	[1] 8,809,174 [$4,289,058	[1] 6,582,588 $3,948,872	[1] 3,398,275 $4,479,091
Exports	$463,404	$909,934	[1] 14,294,176 [$5,679,075
			Calendar year 1919.
United States production		[1] 497,987,000	[1] 625,071,000
For sale only		$127,364,000	$469,479,000

[1] Pounds.

Mr. LENROOT. Are the figures of the Senator from South Carolina recent ones?

Mr. SMITH. Yes; they give the imports of different counts of yarn. I will give the figures. There were 330,177 pounds under 40's imported, 3,068,098 over 40's, and 1,763,673 pounds over 60's.

Mr. LENROOT. For what period?

Mr. SMITH. The figures are furnished as of April, 1921. I have had them worked out in percentages. Yarns under 40's amounted to 10 per cent——

Mr. LENROOT. Ten per cent of what?

Mr. SMITH. Of the entire importations. Over 40's to 90 per cent, and over 60's to 50 per cent.

Mr. LENROOT. That is the information I wanted.

Mr. SMOOT. The Senator says that 90 per cent were above 40's and 50 per cent above 60's. The Senator must be wrong as to that.

Mr. SMITH. No; 90 per cent are above 40's, but 50 per cent are above 60's.

Mr. SMOOT. I misunderstood the Senator. That is about correct.

Mr. LENROOT. Now, has the Senator the domestic production of the same counts from the Tariff Commission?

Mr. SMITH. The expert says that 93 per cent of the domestic production is 40's and under.

Mr. SMOOT. That is the statement that I made the other day. I stated that I was quite sure that it was 93 per cent, and I thought it was 95 per cent.

Mr. SIMMONS. Mr. President, will the Senator from Utah let me put in the RECORD at this point an official statement with reference to the cotton production of this country?

Mr. SMOOT. Will not the Senator wait until I get through? I shall be through with this paragraph in a few minutes.

Mr. SIMMONS. I was just going to do it because the Senator from Iowa [Mr. CUMMINS] wanted some information a little while ago.

Mr. SMOOT. I have just handed that information to the Senator from Iowa, and I thought he had read it; but the Senator can do it if he wants to.

Mr. SIMMONS. It will take only a minute.

Mr. SMOOT. Very well; go on.

Mr. SIMMONS. The Senator from Iowa [Mr. CUMMINS] was discussing a little while ago the question of the proportion of long-staple and short-staple cotton produced in this country. I have here the official statement. This is for the year 1921. There were produced in this country in that year 13,366,000 bales of 500 pounds each. Of that amount 205,000 bales were of the long-staple variety, produced in this country. There is a note to this by the Tariff Commission which says:

The amount included having a staple of 1⅛ inches or over is not known, but probably did not exceed 100,000 bales.

That is to say, of the 205,000 bales of what is commonly spoken of as long-staple cotton, not more than 100,000 bales were of the length of 1⅛ inches and over, as fixed in the bill.

That is the situation with reference to the long-staple and the short-staple cotton. With reference to the so-called American-Egyptian cotton, it appears that in 1919 we produced 40,000 bales of that cotton; in 1920, 92,000 bales, in round numbers, of that cotton; in 1921, 37,000 bales of the Arizona and California type of cotton.

With reference to the imports from Egypt, starting with 1913 and ending with July 31, 1921, the average number of bales of cotton imported from Egypt to this country in those years was 213,275 bales; but in 1921 we imported from Egypt only 87,000 bales. Of these importations of 213,275 bales, the expert tells me that only about one-half was of the long-staple variety. I suppose that very nearly all the importations last year, however, were of the long-staple variety—not all of them, but a larger proportion than one-half.

Mr. CUMMINS. Mr. President, has the Senator there the statistics which will show the entire production of Egyptian cotton?

Mr. SMOOT. In the world?

Mr. CUMMINS. Yes.

Mr. SIMMONS. I have not, but I can say this to the Senator——

Mr. SMITH. Mr. President, I have those figures here. There are about 1,125,000 bales, computed in running bales of 500 pounds each. The Egyptians put up their cotton in a standard package of about 760 pounds. Reduced to American bales, in 1913, their maximum year of production, they produced 958,883 bales, but it decreased rapidly. In 1921 the total Egyptian production was 379,842 bales, and it fluctuated along; but the production of that year, 1921, was the lowest production since 1913.

Mr. CUMMINS. Mr. President, the Senator from North Carolina says that about 50 per cent of the Egyptian production would come within the terms of the duty which we imposed yesterday.

Mr. SMITH. That is a very liberal count, I should think, because my information is to the effect that a very great amount of the Egyptian cotton would not come to 1⅛ inches. I will have it looked up. I think 50 per cent would be very liberal.

Mr. SIMMONS. There are certain sections of Egypt where they do not raise the long-staple cotton.

Mr. SMITH. Oh, yes; they do not raise it.

Mr. SIMMONS. About one-half, I am told.

Mr. SMOOT. We do not import that.

Mr. SIMMONS. We have imported some of that, but I do not think we are doing it now.

Mr. SMOOT. Oh, no; not now.

Mr. SIMMONS. But of the total Egyptian output something like one-half is short staple.

Mr. SMITH. Of the total Egyptian crop of 1921 we imported into America just about 12 per cent. England imported for her use 56 per cent of the Egyptian crop.

Mr. SMOOT. Mr. President, a few years ago the sea-island cotton came into this market very freely. The boll weevil has virtually destroyed the sea-island cotton. It cuts no figure now in the cotton production of the world.

Mr. President, I think I have covered all that there is in paragraph 901, with the exception of cotton waste.

The exports of cotton yarns are mainly of the coarser counts, as I have already stated. The duty on cotton waste, manufactured or otherwise advanced in value, under the committee amendment is 10 per cent ad valorem. Under the act of 1913 it is 5 per cent. Under the act of 1909 it was 20 per cent. The imports are small. In the fiscal year 1910 there were only 128,530 pounds, valued at $5,264. The domestic production for 1919 was 64,467,000 pounds.

Mr. LENROOT. Mr. President, I should like to ask the Senator a question there. While it is a small matter, what justification is there for any increase over the present duty, when there are no imports, upon a subject like cotton waste? With the domestic production as the Senator states it is, what justification can there be for doubling the present rate?

Mr. SMOOT. Mr. President, I do not know that it is absolutely necessary to do it. The committee decided to cut the Payne-Aldrich rate in two, and I think the amount of waste that comes in here will come in anyhow, and if there is anything gained it will be simply a gain to the Treasury of the United States as a revenue measure. It is not any protection at all.

The duty on cotton card laps, sliver, and roving under the committee amendment is 10 per cent; under the act of 1913 it is 5 per cent, and under the act of 1909 it is 35 per cent.

Mr. President, at this time I shall not say anything further about the rates in paragraph 901. There is one other amendment in that paragraph about which, when it is reached, I shall make a short statement and state just why the committee has agreed to it.

The PRESIDING OFFICER (Mr. STERLING in the chair). The question is on the amendment of the committee, which will be stated.

The ASSISTANT SECRETARY. On page 121, line 4, the committee proposes to strike out "one-fifth" and in lieu thereof to insert "one-fourth," so that it will read:

Provided, That none of the foregoing, of numbers not exceeding No. 100, shall pay less duty than 5 per cent ad valorem and, in addition thereto, for each number, one-fourth of 1 per cent ad valorem.

Mr. LENROOT. Mr. President, I should like to ask the Senator from Utah as to what the proviso applies to, in his judgment:

That none of the foregoing, of numbers not exceeding No. 100—

And so forth.

Mr. SMOOT. I will say to the Senator that that applies to nearly all the yarns that are imported at the present time, and to them only.

Mr. LENROOT. Yes; but how is that reconciled with the very first part of the paragraph, that numbers not exceeding 40 shall pay one-fifth of 1 cent per number per pound?

Mr. SMOOT. This says "of numbers not exceeding No. 100." Of course, those are lower rates—a great deal lower—than 30 per cent ad valorem.

Mr. LENROOT. No; but the paragraph starts in by providing a specific duty of one-fifth of 1 cent per number per pound on numbers from 40 down. That is true; is it not?

Mr. SMOOT. It says:

None of the foregoing, of numbers not exceeding No. 100—

It is from 100 down.

Mr. LENROOT. That will include all numbers below 40; will it not?

Mr. SMOOT. I thought the Senator was referring to another part of the paragraph. It begins:

Cotton yarn, including warps, in any form, not bleached, dyed, colored, combed, or plied, of numbers not exceeding No. 40, one-fifth of 1 cent per number per pound.

Mr. LENROOT. How does the proviso affect that rate? That is what I want to know.

Mr. SMITH. It is cumulative. It is in addition thereto.

Mr. SMOOT. It says that the minimum rate, whatever it may be, will apply here, and in addition thereto, for each number, one-fourth of 1 per cent ad valorem. The minimum rate will apply in every case. I can not tell the Senator just what it would be, but there is a minimum rate of 5 per cent ad valorem.

Mr. LENROOT. Plus one-fourth of 1 per cent ad valorem for each number.

Mr. SMOOT. Yes.

Mr. LENROOT. Which would be, on No. 40, 10 per cent; would it not?

Mr. SMOOT. Ten per cent.

Mr. LENROOT. Which would make on the No. 40 count not less than 15 per cent ad valorem.

Mr. SMOOT. Not less than 15 per cent ad valorem.

Mr. LENROOT. How can the Senator justify any such rate with the imports and exports that we have?

Mr. SMOOT. I have tried to tell the Senator what kind of yarns would be imported under that provision; and unless we have those rates for that class of yarns that I speak of, the yarns would come in here instead of the cloth made of those yarns.

Mr. LENROOT. But the Senator said that was a very exceptional case. Now, with 99 per cent of the production, he proposes to load this bill with a rate which he himself admits is not necessary from the standpoint of protection and which is three times the present rate, so far as the low-count yarns are concerned. I think the present rate on the low-count yarns is 5 per cent ad valorem.

Mr. SMOOT. It is 5 per cent.

Mr. SMITH. The present rate is 5 per cent.

Mr. LENROOT. That is what I thought.

Mr. SMITH. Under this bill it is 10 per cent, with the additions to which the Senator has called attention.

Mr. LENROOT. That can not be justified on these low-count yarns. I am unwilling, and I should think the committee would be unwilling, to impose rates in the bill of this kind, where the committee itself can not defend the rate. Of course, there is no opportunity, until we get to the stage of individual amendments, to correct it and get the rate down to where I think it ought to be, from a Republican standpoint, but we can at least vote down

this committee amendment, which proposes to increase the rate from one-fifth to one-fourth.

Mr. SMITH. Mr. President, if the Senator will allow me, it might be interesting just here to call his attention to the fact that our imports of cotton yarns for 1914 were 6,853,235 pounds. Our production was about 625,071,000 pounds. Those figures were on yarn for sale only. That should be multiplied, the experts tell me, by four. So we would have something like 2,000,000,000 pounds, as opposed to 3,000,000 pounds. In other words, the amount we import is practically negligible, and about 93 or 94 per cent is produced in this country. The figures as to the exports also are illuminating. Our exports were larger than our imports. We exported 14,294,000 pounds, as against about 6,000,000 pounds, showing that not only did we supply ourselves but we had a surplus which more than overbalanced the amount imported into this country. Yet we double the rate and add these additional duties on the counts, of which we have a practical monopoly.

Mr. LENROOT. The committee repeatedly refers to the Tariff Commission, and quotes it as authority for the action taken by the committee; but the committee can find no authority in the report of the Tariff Commission for the increases it here proposes to make. The Senator from South Carolina stated, as I understood him, that the imports were less than 5 per cent of the total consumption. The Tariff Commission say that the imports are less than one-half of 1 per cent of the total consumption in this country.

Mr. SMOOT. They are.

Mr. LENROOT. The Tariff Commission further says of this paragraph as a whole that the tariff plays a very minor part in this trade, and that imports are supplemental rather than competitive, and as the domestic industry develops the average count imported steadily tends upward.

Then, with reference to the imports of all the yarns in that paragraph—because they are not separated—it says that in 1920 the total imports were 9,992,073 pounds, valued at $23,000,000; in 1921, for the nine-month period, the imports were 2,236,000 pounds, valued at $3,120,000, when during the same period our exports of yarns were 24,099,000 pounds, valued at $20,014,000. Our exports were eight times our imports.

Mr. UNDERWOOD. Mr. President, if the Senator will allow me to make a suggestion, is not the real question before the Senate not the question of raising the rates in the present law but why the Finance Committee did not cut the rates in the pending bill?

Mr. LENROOT. I think that is the question, and I want to say at this point—and the Senator from Alabama will remember—that when the present law was passed, he and I were both Members of the House. I took the position then that some of the rates upon these lower counts in fact, all of the rates on the lower counts, were too high in the Underwood law, that they were in fact prohibitive. The results have shown I was right. I am not criticizing, but that is the fact.

Mr. UNDERWOOD. I understand the Senator's attitude. I am glad to have the Senator make the statement, because I think the light should be thrown on these questions. I recall the incident, and I will say to the Senator candidly that when the bill was before me for consideration in the committee I realized that the American manufacturer was competing in the world's markets in these lower counts of yarns and cloth, and that he practically had no competition here. I was making a drastic cut from existing law, and the only thing I had in view was that we had better go slowly and be on the safe side, rather than be so radical that we might bring about a reaction. Although it has been nearly 10 years ago, I think I remember correctly the conversation which occurred between the Senator and myself in the House of Representatives, and I think that what I said to him at that time was in entire accord with what I say to him now. I did not dispute the assertion that the rates were higher than probably were needed, but I said that, as it was a great, radical cut, we had better cut safely the first time. Therefore this rate having been tried for 10 years, and it having been demonstrated that these rates are practically prohibitive now—because any rate that excludes all except one-half of 1 per cent is prohibitive—it seems to me the committee should have come before the Senate and told us why they did not cut the present rate, rather than come in with an enormous increase in the present rate.

Mr. SMOOT. Mr. President, I want to ask the Senator from South Carolina where he gets his authority for the statement that No. 40 yarns under the present law pay 5 per cent? He said that the rate on the No. 40 yarn to-day is 5 per cent.

Mr. SMITH. Oh, no.

Mr. SMOOT. I understood the Senator from Wisconsin to ask what the present rate was on these No. 40 yarns.

Mr. LENROOT. I said on the lowest count yarns it was 5 per cent. It runs from 5 per cent up.

Mr. SMOOT. Under the existing law No. 40 count yarns bear 15 per cent.

Mr. LENROOT. No. 39 bears 10 per cent.

Mr. SMOOT. But the rate on No. 40 is 15 per cent, under the existing law.

Mr. LENROOT. And that rate is prohibitive on those lower count yarns. The Senator from Utah has himself admitted this morning that the United States can compete with the world in those low count yarns, and is doing it. Yet the committee comes in here with an increase. Is it any wonder that the country believes that this bill is full of unjustifiable rates, when the committee itself brings in a rate of this kind, which the committee can not defend, and which the figures will not justify?

Mr. SMOOT. The committee can defend the rates on certain classes of yarns, as I have already said.

Mr. LENROOT. I am very sure the Senator would not take the position that if some particular character of a commodity constituted an infinitesimal proportion of the total production, he would build a tariff bill based upon that little fraction. Of course he would not. Yet that is the only justification the Senator makes for this rate.

Mr. President, this committee increase certainly should be voted down, in my judgment, and when the time comes when individual amendments may be offered, I hope the rates on the counts below 40 may be further decreased, and that the decrease will affect the cotton cloth as well.

I admit that upon the higher count yarn a higher duty is necessary than some of the duties in the present law, but I do say, from the examination I have made of this schedule, that I do not believe there are more than two paragraphs where there can be found any justification for increasing the rates as proposed by the House; yet the committee has increased rates in nearly every paragraph.

Mr. SMOOT. Of course, the Senator knows that the House rates were based on the American valuation.

Mr. LENROOT. I understand they were based upon the American valuation, and the House rates based upon the American valuation were perfectly outrageous.

Mr. SMOOT. That was the difference between the Senate and the House.

Mr. LENROOT. I understand that, but what I am stating now is based on the foreign valuation. The House rates, as a general rule, are protective on the foreign valuation, but with the increases proposed by the committee they have not justified this increase, and I undertake to say that when we come to cotton cloths, with the same low count, they will be met with the same difficulties they have been met with here, that they can not justify them except to say that occasionally there may be some form of cotton cloth that would require this high duty. But no member of the committee will admit or say that they should build a schedule based upon the exceptional rather than the ordinary.

Mr. President, a few weeks ago I had a conversation with a very large cotton manufacturer. I shall not undertake to give his name. He stated to me that he was not in sympathy with the demands his associates were making for rates in this bill; that he knew they were not necessary; and he is a Republican and a protectionist.

It is just such things as these which will give our friends across the aisle the opportunity between now and November to attack this bill and attack the Republican Party, and justly so, when rates are proposed which can not be justified, and are not justified by the committee itself.

I hope that this increase, which is the only one we will have an opportunity of voting upon now, will be voted down.

Mr. SMITH. Mr. President, if the Senator will allow me, I would like to answer the question the Senator from Utah asked me a moment ago, as to where I got the authority for saying that under the Underwood tariff law the rate on the No. 40 yarn was 5 per cent.

As worked out under the Underwood tariff, the application of these ad valorem percentages is as follows: Up to No. 9 basic yarn, the rate was 5 per cent; from 10 to 19, 7½ per cent; from 20 to 39, 10 per cent; from 40 to 49, 15 per cent; from 50 to 59, 17½ per cent; and the increase up to where they went over 99, to 25 per cent. It was upon the lower count of yarn that I made the statement that the duty under the Underwood law was 5 per cent. On the highest count we have here from 5 to 35 per cent. The Underwood law, as the Senator from Wisconsin has pointed out, acted almost as a prohibitive duty, and yet now we have an increase proposed on the same character of goods.

Mr. SMOOT. Mr. President, I put in the RECORD just what the present rates are on yarn. I rather think, in view of the statement made by the Senator, that I had better call attention to them now as compared with the existing law. In fact, the manufacturers of certain yarns in the United States say they would a thousand times prefer the Underwood law than to have the rates provided for in the pending bill. But that we are not discussing. All of them would not feel that way, of course.

On No. 8 the Senate committee rate is 7 per cent and the existing law 5 per cent; up to 25, the Senate committee rate is 11¼ per cent as against 10 per cent; 26 to 35, 13¾ per cent as against 10 per cent; 36 to 45, 16½ per cent as against 15 per cent; 46 and above, 18¾ per cent as against 17½ per cent; 65 and above, 21¼ per cent as against 20 per cent; 75 and above, 23¾ per cent as against 20 per cent; 85 and above, 26¼ per cent as against, 22½ per cent; and all above 105 is 30 per cent in the pending bill, and all above 105 is 25 per cent under the Underwood law. That is the situation with reference to the yarn schedule.

Mr. LENROOT. May I ask the Senator at what price of cotton that is figured on? Is it figured on the imports, or what is the basis of the percentage?

Mr. SMOOT. Does the Senator mean the values?

Mr. LENROOT. Yes.

Mr. SMOOT. I think those values were taken on to-day's prices, but on the rates under the 1909 and 1913 laws.

Mr. LENROOT. On to-day's prices?

Mr. SMOOT. Yes. The cloth is not that way, but I shall call attention to that when we reach it.

Mr. HEFLIN. Mr. President, in order that the record may be kept straight I desire to correct the impression that seems to prevail amongst some Senators on the other side of the aisle that the cotton spinners of the South can produce only coarse goods. I have on my desk some very fine cotton goods—women's wearing apparel—manufactured by the Russell Manufacturing Co., at Alexandria City, Ala. These goods are made from the raw cotton into the finished product. The time was when we did not manufacture anything except very coarse goods, but we are now manufacturing some very fine goods, fine as well as coarse, cheap as well as high-priced goods.

Mr. President, I want to see the manufacturer of cotton goods, whether he manufactures coarse goods or fine goods, enjoy prosperity. I want to see every legitimate concern in our country prosper. While we are talking about the finished product or the manufactured cloth I want to put in the RECORD at this time a portion of an editorial from the Wall Street Journal entitled "In the day of adversity." Cotton and the business of the cotton producer are discussed in this editorial. Among other things the editorial said:

Cotton is a fundamental of civilization and furnishes the world with one of its greatest industries. That there should be a well-grounded fear of a shortage in the raw material does not speak well for our methods of handling the crop. It is true that the weevil is the menace of to-day, but it need not have been. Cotton, the Maud Muller of agriculture, can look back upon the past and say "It might have been."

Back of all that cotton represents—the world's clothing, millions of capital invested, and wages paid—is the planter. Should he fall down, the whole industry would topple. And yet there is no other producer in America so little considered as he, and none has been forced to toil for so small a return that often can not be distinguished from a loss. Because of this the cotton planter has not been able to use the best methods of cultivation. By improved cultivation methods and scientific plant breeding, the weevil could have been controlled, and the yield of cotton per acre increased.

Mr. President, the high price of fertilizer to-day is a great handicap to the farmers of the South. The cost of fertilizers must be reduced. Mr. Henry Ford, through his chief engineer, says that he would make it for half the present price if he got the Muscle Shoals, and we could then produce more cotton per acre and there would not be the danger which confronts us to-day of a cotton famine.

The editorial continues—

But this could not be done without a proper remuneration to the producer. In consequence, the world now faces the danger of a shortage, and possibly a famine, in the cotton supply.

Is not this indeed a very serious situation?

Mr. President, a cotton spinner of the South told me a few days ago that we are face to face with a cotton famine, and yet I bring the deplorable news to this Congress and to the people of the country that the cotton producers of the United States are being forced to sell their cotton below the cost of production. Thousands of farmers have been driven from the farms by deflation and have gone to industrial centers under conditions created by deflation. They say that they can not make a living on the farm. They can not make a living producing cotton at the prices that have obtained for months and that now obtain. The ravages of the boll weevil and the high price of fertilizers add to the burden and difficulties of the cotton producers of the South, and to-day the United States, blessed under the providence of God with a monopoly in the production of short-staple white cotton, is face to face with a cotton famine because the producer was sandbagged and robbed by deflation in 1920 and 1921. Some were driven from the production of cotton altogether and others forced by the low price to curtail the yield. The spinners of the country are admitting that they are face to face with a cotton shortage which amounts to a cotton famine.

There is no better authority—

The editorial continues—

on cotton to-day than Sir Charles W. Macara, of Manchester.

He is the head of the cotton-spinning industry of England.

In a letter to Harvie Jordan, of the American Cotton Association, he says, in part:

"One would think it would be the first concern of anyone engaged in business to see that his raw material was placed beyond the possibility of doubt. But those who spin cotton seem to have little anxiety as to the supplies upon which their existence depends. A fatal inertia exists, and I see nothing but some great upheaval that is likely to bring people to their senses. The state of things existing in the cotton fields of America must give rise to the gravest anxiety in the mind of anyone who has the welfare of his trade and his fellowmen at heart."

After referring to the conditions existing in our Civil War days, and once later when Lancashire had to curtail production one-third and spread wages over 12 months, Sir Charles further says:

"We shall have to get the spinners of the world to view the cotton industry on comprehensive lines. * * * The planter must be regarded as of same importance as others who touch cotton, and his rewards will have to be considered just as much as spinner, manufacturer, finisher, middleman, merchant, or shipper. All are indispensable to the production of the finished article and all must be sufficiently compensated.

"If America is obliged to go out of business as a cotton producer, where will the world get its future supplies?"

These are but short extracts from his statement, but they are serious and weighty words, and should be considered now.

Mr. President, these solemn suggestions, coming as they do from the head of the spinner's association of England, are worthy of the utmost consideration by those in authority in our country. Think of it! One of our best customers dependent upon us for her cotton supply—I mean England—expressing fear through the head of her great association of spinners that America may be driven out of the cotton-producing business.

Mr. President, is not that a woeful situation? Here we are, a Republic less than 150 years old, the richest Government in all the world, with nearly half of the gold supply of the earth, with people out of work numbering between 6,000,000 and 7,000,000; the farming classes of the whole country, not only the cotton producer, hard pressed to make a living. Ours is a country which can produce the short-staple white cotton that can not be produced anywhere else in the world, and that fact alone, it seems, would guarantee to these people a prosperous industry. But the situation is so manipulated, the currency and credit system so handled, that the farmer to-day in the cotton-growing States can not get the money to hold the cotton that he produced last year until the price will cover the cost of production.

Mr. President, if that situation existed regarding the bankers there would be such a storm of protest and such concerted action that the Government would have to halt everything until it righted the situation and gave relief. If the manufacturers of America faced such an awful condition there would be such an effort made upon their part, powerful and potential, that favorable results would come. But the farming industry—and agriculture is the corner stone upon which all other industries rest—faces ruin to-day in the United States.

While we are discussing manufactured articles, the stuff made out of the raw material, I want to call the attention of the Congress and of the country to the fact that the man who produces the wherewith to clothe the world is having a hard struggle to live. He is eking out a miserable existence under the conditions which exist to-day.

Mr. President, it is admitted by many of the cotton spinners of the United States that we are facing a cotton famine; the head of the greatest cotton spinning country in the world outside of our own, Great Britain, admits that we are face to face with a cotton famine; the Government reports show that the cotton supply is short and is liable to be exhausted before the next crop comes in; and yet, in the face of that condition, the man who raises cotton is forced to put it on the market, whether the price is adequate or not. If one goes into a store and wishes to buy any article which is made out of cotton, the storekeeper will quote the price which he proposes to demand for it, and if the prospective purchaser says anything about that being an exorbitant price, the storekeeper will tell him that it cost so much; that the freight on it was so much; that he is in business; that his business must be made a paying business; and he must have that price which will yield him a certain profit in order to carry on a successful business; and the customer may

take the article or let it alone; but when the farmer goes into the market place he is told that the prices quoted and fixed on the exchange in New York are such-and-such figures. He says, "Well, I can not come out at that," meaning that he can not make a profit if he is forced to take that price. So he says, "Cotton is selling at 21 and 22 cents a pound; it costs me 28 or 29 cents a pound to produce it, and I must hold it until I can get at least the cost of production." Then the buyer asks, "How are you going to hold it?" "Why," he says, "I will go down to the bank; I will present my cotton warehouse receipt, and I will say, 'I want to borrow a little money on that,' and I will hold my cotton until the price does advance to a point where the crop will yield me a profit." Then the buyer reminds him of what happened in the spring of 1920 when the deflation drive was ordered by a resolution which was passed through this body, couched in language calculated to conceal its real intent and purpose. "Why," he will say, "do you not know that transactions of that kind were dispensed with then? Do you not know that the farmer has been pressed to the wall and denied currency and credit with which to carry on his business? Have you not learned that yet?" You are forced to sell your cotton at the price offered.

Oh, Mr. President, such conditions can not continue. Yet some people wonder why there are Bolsheviks in this country. Mr. President, we can not have a happy, contented people when governmental instrumentalities are so used as to deprive a large part of the population of the necessities of life and of a share in the prosperity enjoyed to-day by a favored few who are blessed and benefited by those in control of the money supply of the country. It never was intended by the founders of this Republic that that condition should prevail, but it does prevail to-day.

It is a sad spectacle to see a man who is able-bodied and who has sense enough to work and who wants to work asking for work in this Republic of the west and be told that there is no work for him. How can we expect that man to be a happy, contented, and enthusiastic American citizen?

Mr. President, the money lords of the United States who control the Money Trust undertake to teach the people that periods of depression must come; that it is natural for them to come every 5 or 10 years. I wish to assert again on this floor that that doctrine is false; it is not true. It is just as possible for this Government with its genius and resources to have in circulation a medium of exchange and a measure of value sufficient to meet all the needs of all the people all the time as it is for the sources that supply the ocean with a water supply sufficient at all times to fulfill the purposes for which it was created. There is not any reason for the claim that there must be periods of depression, but the money lords say to us, "This is a matter very hard to understand; it is a very complicated subject; do not worry your brain with it. Leave it to us."

We were told by them for a long time that about every five years these periods of business depression would come. I assert, however, that these periods of depression came because they are ordered. Those profiting by them plan them. They carry on a propaganda intended to bring them about, and when they come they make their millions. They shear the people then as the shepherd shears his sheep. He says, "It is time to shear those sheep out there in the pasture." So the sheep are brought in and they are sheared. In somewhat similar manner the money lords of the United States so manipulate the currency and the credits of the country that when they find the people enjoying a degree of prosperity, they look out and ask, "Are they ready for the shearing process?" They are answered, "Yes." "All right," they reply, "then shear them; touch the button; put the screws to them; bring them in, deflate, curtail credits, contract the currency; go on with your shearing process." And they make their millions during that shearing period. There never was a time when Wall Street made so much money in the same period as it made out of the South and West in the years 1920 and 1921 under the deflation policy carried out in this country, and that is exactly the way it was carried on.

I recall the time, and you, Mr. President (Mr. STERLING in the chair), likewise do, when I was upon the stump, as you yourself and others were, urging people to buy Liberty bonds; telling them they owed it to the country to buy them; that they would never be pressed for payment; that they could pay upon the installment plan; that the bond was as good as gold; and that it would always be worth 100 cents on the dollar. Hundreds of thousands of people were induced to buy the bonds who were not able to buy them. The people stinted themselves in order to respond to that patriotic demand of their country. Then what happened? When the deflation drive commenced the money lords went with a drag net through the South and West and dragged these bonds into Wall Street, and the Wall Street sharks stood there as this murderous process went on, saying, like the old sexton in the cemetery, "I gather them in; I gather them in." What did they do? They bought those bonds at $80 on the hundred. They have them now. At what price are the bonds now? Are they below par? Certainly not; they are back above par. The bond is the finest investment and gilt-edged security now in the world.

How different, however, it was in 1920 and 1921, when the farmer needed money in order to carry on his business or suffer tremendous losses. When the farmer went down to the bank and said, "I want to borrow some money on my cotton," the banker replied, "I can not let you have it; the Federal Reserve Board has sent word down the line to collect debts; to call loans; to liquidate debts which were contracted when money was plentiful, and force payment now when money is made scarce, credits are deflated, and currency contracted." The farmer asked, "Can you not let me have money on my cotton?" The banker replied, "I wish I could, but I can not." Then he asked, "Can you not let me have money on my grain?" The banker replied, "No." He further asked, "Can you not let me have it on my cattle; that is, my breeding herd from which I am to produce meat in order to feed the people of the United States in the future?" The banker replied, "I can not let you have it on that, either." The farmer then said, "I know what I will do. I bought a thousand dollar Liberty bond during the war, I will bring that down here and they will have to loan money on a Government bond. The farmer went back and brought his Liberty bond and laid it down. The banker folded his arms and looked at him and said, "We are very sorry, but we have been instructed not to lend money on bonds, and we can not accommodate you."

Then the man who had stood out in the audience, frequently with tears running down his face under the touching appeal of men and women who were begging people to buy bonds in order to help save the boys who were on the battle front in France, and who had been told that the bonds would always be as good as gold, walked out of the bank with his Government bond in his hand, having been refused a loan on it of the coin of the realm. He went back home. Then he saw his produce driven to the market and sold under the hammer at low and destructive prices, and the debt which he had incurred when money was plentiful was still hanging over him. Having been forced to sell all that he had to repay what little he could, a debt was still hanging over him that it will take four more years to liquidate. And yet some talk about having a prosperous and happy people!

Mr. President, I would that every Member of this Congress would get a book written by Col. George W. Armstrong, of Fort Worth, Tex. He is a very wealthy man. He is a big cattleman and a big cotton producer. He has written a book on deflation in this country; it is called "The Crime of '20." I would that every Senator in this body would read it, read the story as he has written it, and then see what sort of an impression they have about the conduct of deflation in the United States.

Not long ago I had a letter from the president of the Bankers' Reform League of London, asking me to send him a dozen copies of my speech on deflation, saying that he had read a copy of it sent to him by Col. George W. Armstrong, the author of this book—The Crime of '20. This man in London said to me in his letter:

> Is it not strange that the United States, one of the big allied countries, and England should deflate following the war, and our people made to suffer more than anybody else, except those of Russia, when there was no occasion for it?

The deflation process was applied, Mr. President, and our people have paid the penalty, and from one end of the South to-day to the other and around through the West there is distress among the farmers and business men. These patriotic men, with their happy families—happy and prosperous up to the late spring of 1920—were stricken down as though some pestilence or plague had been sent upon them to curse them, and they are suffering under the conditions that exist; and to-day there is a propaganda going on through the Federal reserve banks—some of them. Officials appointed by Governor Harding to lucrative positions, men drawing $18,000, $25,000, $30,000, and $50,000 per year, are working on people who are dependent upon them for currency and credit accommodations to indorse Governor Harding for reappointment.

Oh, Mr. President, what a terrible and a dangerous coercive power for our Government to permit these banks to use. The men who have been mistreated, the men who have been outraged, the men who have been made to suffer practical financial ruin, are called upon and made to believe that this man is going to be reappointed, and signatures are being obtained to request

the reappointment of this man from men who detest and distrust him.

Mr. President, would it not be glorious if President Harding should now display some of the traits that Old Hickory Jackson displayed when the money lords of his day went into politics and undertook to direct the whole course of the business and politics of the country? Would it not be a happy thing if he should rise up and say, "I will clean out this nest," and begin now by removing the head of the Federal Reserve Board?

We see editorials, high-sounding, full of pleasing platitudes, many of them, on the duty of the American patriot.

Mr. President, I yield to no man in devotion to that flag, and to no man in the matter of having whole-hearted devotion for my country; but I am telling the Senate and seeking to tell the President and the country that you can not have whole-hearted allegiance from a people when they believe that the instrumentalities of the Government are being used to bring about their undoing and produce suffering amongst them and their families.

We are discussing the tariff, and there never has been such a monstrous piece of legislation submitted by any party in all the tides of time. I want to remind the Senate and the country again that the livest issue now before the people—the livest issue always before the people, if the people but knew it—is the relation of the currency and the credit of the country to the business of the country. How is it being handled? You can write your tariff bill, you can grant your ship subsidies, you can do other things, but as long as you permit a few men to dam up the money supply and prevent it from circulating out among the people and answering the business needs of the people, you will produce prosperity only among a favored few, and you will produce impoverishment among the masses, the many.

We have seen that. You have it now. I have received letters from all over the United States; there is not a State in the Union from which I have not received letters indorsing the fight that I have made, from men who are thinking seriously upon this question and who are wondering whither we are drifting. The other day I received a letter from a young man out in Oregon, a captain who saw service in the great World War and was recommended for one of the honor medals for heroic service. He wrote me a letter, and a portion of the letter read like this:

> Sometimes I do not know just what the common man is to do. It seems that there are a few people who have control of these instrumentalities that you speak of.

Then he commended me for the fight I was making, and said he hoped I would continue to make this fight, and to let the CONGRESSIONAL RECORD at least show what was going on or taking place at the Capitol.

Mr. President, I have spoken longer than I intended to speak to-day; but I wanted to say a few words about the cotton producer, how he has suffered since the late spring of 1920, how he is suffering now, how the debts have accumulated over his head, and how long it will take to remove them. I have spoken of the farmers and the cattlemen of the West. I reminded the Senate here on Saturday that a cattleman in my State, a man who had 500 head of the finest cattle in the country, could not borrow any money on them, and he said to me: "You know, a few years ago we had a fine prospect with our cattle in Alabama, and Alabama is one of the best cattle sections in the whole country. We can not get the money we need."

One other thought, Mr. President, and then I will not detain the Senate longer to-day.

There never has been a time when the bond gambler of Wall Street could not get every dollar he wanted. There never has been an hour when the stock-exchange speculator could not get every dollar that he wanted. There never has been a day when the grain speculators of Chicago and the cotton speculators of New York could not get all the money they wanted to beat down the prices of these products in the hands of the producer, and then get money to hold them until the price went back up, and they made the money that ought to have gone to the cotton producer and the grain grower and the cattleman of the West and the South; but they, by the aid of the Government, got the money that they needed to beat down the price and produce this condition. Did the consumer get any benefit from that? Not a bit. What happened? Why, after they beat down the price, and the product was forced out of the hands of the producer, they held it, and then turned their speculation on the other side and ran the price up and up until they made a killing in the market, as they call it. Then what happened to the consumer? He paid even a higher price than he would have paid if the farmer had been permitted to hold it for a fair figure and a reasonable profit.

So, Mr. President, I want the men and women of this country, when they come to vote this fall, to think of the vital issue, the all-important issue, the issue as to who shall be at the head of this great banking system, the greatest ever constructed in all the history of the world. I have spoken upon that subject in this Chamber some thirty or forty times, and shall probably speak of it that many more times if I live unless conditions improve. But, Mr. President, I challenge any Member of this body and any man or woman in the country to show one thing that I have ever said against the Federal reserve banking system. I have talked about how it has been maladministered; I have talked about how the Federal Reserve Board governor and some of its members have been discredited, and deserved to be, but I have never said anything against the system. I have said that they perverted it from the ends of its institution, but I have never criticized the system, and yet the Federal Reserve Board's publicity bureau—which is a mysterious, hidden thing somewhere—frequently sends out articles from this Capital saying that "Senator HEFLIN, an enemy of the system, made an attack upon it to-day."

I have never said one word against the system—not one. I helped to create the system. So did some of you; but I have confined my remarks and criticisms to the deflation policy conducted by the governor of the Federal Reserve Board and those on the board with him when they used to hold secret sessions, and would not permit John Skelton Williams to be present, though he was a member of the board, Comptroller of the Currency, entitled to be present and to know what was going on. Meetings were held and orders were made without his knowledge or consent, and without any notice from them that the meetings would be held, and then they say that I have attacked the system! I have attacked the crooked conduct of those who have maladministered the system.

Mr. President, I have had a few men come to me and tell me that I ought to let up on them; that I might hurt myself politically.

Mr. President, would any man fit to serve in this body be moved by such a motive? Take the case of the soldier on the firing line in France, holding a particular point, pouring terror into the ranks of the enemy, the enemy of his country, of right, and of civilization. If somebody went up to him and told him to move on and let the enemy come through, that he was liable to get hurt or seriously wounded in the conflict, what would you think of him if he were to give up the fight and let the enemy pass without a struggle? You would brand him as a coward. You would place upon his brow the scarlet letter of disloyalty to his country. You would stamp him all over with the mark of a pusillanimous coward, and that is what ought to be done.

Mr. President, they do a lot of that sort of business here. Men who have been in public life a long time at this Capitol realize how these things are sought to be worked out, how insidious influences are brought to bear, how they sneak around in various ways. They try to frighten some men off the trail. They try to flatter others to get them off the trail.

They try various plans and methods; but what is the duty of a man worthy to be a member of this body who lifts his hand to God and swears that he will defend the Constitution against all enemies, both foreign and domestic? What is he to do but fight when he sees the enemy approach? It makes no difference whether he is a small crook, in the common walks of life, or a big crook, in a high place, with tremendous power in his hands.

I realize that I have attacked a big power. I have seen editorials written in every town where there is a Federal reserve bank, attacking me. I knew who inspired them. They were throwing off on the efforts I was making, the purpose of it being to intimidate me and coerce me into silence. Some of those editorials have been reproduced in one or two papers in my own State. For what purpose? To injure me, or to frighten me into silence, and cause me to desert the fight that I am making in the interest of honest banking in the United States.

I come back again to the question. Whose country is this? Why did we ever organize the banking system? Did we organize it in order to make the banker rich? No. We want him to prosper; we want him to do well. We organized the banking system and gave sanction to its birth by the Congress of the country for the purpose of having it serve the business needs of all the people—of the men and women of the whole country. That is what we organized it for. We never intended that the day should come when a few men would get control of the currents through which go the money and the credit to answer the needs of the people, and that a few people would become so powerful financially, so powerful by reason of their posi-

tion, that they could absolutely control the lifeblood of the business of the country.

Mr. President, money and credit constitute the life-giving force of the business of the country. If you interfere with their circulation, you interfere with the business of the country. If you withdraw circulation of these life-giving forces to any great extent, you impair, weaken, and, it may be, paralyze the body of business. When you paralyze the body, business ceases, stagnation comes, bankruptcies follow, and ruin is spread all around.

I am fighting against such conditions. Should I be helped in this fight, or be criticized by newspapers whose editorials are inspired by some banking official appointed to his position by the governor of the Federal Reserve Board? What are you going to do about that, Senators? I am anxiously waiting to see.

If the name of the present governor of the Federal Reserve Board is sent up to this body you will hear some remarks upon the subject from me, at least, and then the people of the South and West will have an opportunity to know who they are who will put the stamp of their approval upon his deadly, murderous deflation policy. They will have an opportunity to see that, and the President will have an opportunity to show to the country whether or not he approves that policy.

It has been charged that these influences kept Governor Harding in. It has been charged that these influences are powerful enough to force his reappointment. I do not believe that the President will reappoint him. I want to state again in public I have reason to believe that the President will not appoint him. If his name does come here the Senate and the country will know, and this RECORD will contain for all time to come my reasons for saying that to-day.

One word more. The price of cotton is up around 22 cents now. This is July. Only a handful of farmers have any cotton. Last fall, when they had to sell, the price was down to 15 or 16 cents—away below the cost of production. Now, since it has gone out of the hands of the producer, it has climbed up around 22 cents—still 6 or 8 cents below the cost of production.

The farmers of the country are suffering. The cotton producers of the country are almost impoverished. The cattlemen of the West and the grain growers of the West are practically in the same boat, and I am pleading for a loosening up of the money supply. Let this money go where the business needs of the people are calling it. That is what it was created for. Let it go and you will see prosperity come. But you will not have that prosperity until those conditions are changed, and there is nothing in the world that the President could do to-day that would do more to restore hope and confidence in the average business man and banker and the farmers of the whole country than to decline to reappoint the present governor of the Federal Reserve Board.

MOB VIOLENCE.

Mr. HARRIS. Mr. President, the Senator from South Carolina [Mr. DIAL] referred to a news article from Atlanta in the New York Times which the junior Senator from New York [Mr. CALDER] had placed in the RECORD during my absence from the Chamber late yesterday afternoon. The junior Senator from New York and I have a general pair. I have the very greatest respect for and the kindliest feelings toward him; we are and have been and were even before my election to the Senate the best of friends. I regret very much that the Senator should provoke a discussion on this matter and it seems to me the time has come when there should be a stop to the making of the negro question a political one. The people of the North have their problems, and the South sympathizes with them. We know they are doing their utmost to solve them in a just manner and we make no criticism. We have our problems in the South much more difficult and we are doing our best to solve them in a just manner, and it seems to me we should have the sympathy and cooperation of those in other sections which are not burdened with the race problem.

In this article which the Senator placed in the RECORD, purely for political purposes, this statement is made:

> That the lynching of two negroes in Wayne County, after they had been reprieved for 30 days by Governor Hardwick, will not go unpunished seems assured by recent developments at the executive offices. Governor Hardwick has offered the highest reward in his power for the arrest of the lynchers, has denounced the crime, and has announced that mob rule will not be allowed in this State so long as he is governor.

Mr. President, you, sir (Mr. TRAMMELL in the chair), remember that Governor Hardwick's predecessor, Governor Dorsey, made a national reputation for trying to stop lynching in our State just as Governor Hardwick is doing, and, so far as I know, every governor since the Civil War has done. The southern people do not approve of lynching; they are opposed to it, and would like to prevent it. If we could prevent one crime, that of rape, there would be fewer lynchings in the South than any other section of our country. If the real friends of the negro in the North would devote their efforts to trying to prevent this crime instead of denouncing lynching for this crime, they would help us in the South to reduce the number of lynchings, which we are trying hard to do.

The Senator from New York sought to advertise my State as a lawless one in placing that article in the RECORD. So I glanced at three pages of the New York Herald this morning to see if there was lawlessness in his State and section. I knew there was more lawlessness in New York City, the Senator's home, in a week than there is in the whole State of Georgia in a year. In that city, the greatest city in this country, there are certain places where it is dangerous to go even in the broad, open daylight. That is not true of my section.

It is quite plain the Senator's reference to negroes was for political reasons. I noticed in the New York Herald of to-day that a 5-year-old Italian had been killed by five men. The Senator from New York forgot all about that, and he is trying to advertise my State as being a lawless State. The Jews of New York are voters and good citizens, some of them leading men of our country, and the Senator ought to look after the Jews as well as the negroes. Here is another statement in the Herald:

> Charles M. Powell, of Camden, killed "Honest John" Brunen, owner of the mighty Doris Carnival Show.

He was not a Jew. That is the next article in the paper. There is so much about crimes in this paper I am not going to put them all in the RECORD. The accounts of court trials and of lawlessness in just one day's happenings around New York, the Senator's home, would fill a large part of the RECORD. I was about to overlook another reference in the Herald where the Governor of New York denied clemency to a man convicted of slaying a Japanese compatriot. I have never known of a Japanese being killed in my State, but I am not blaming the people of New York or the governor, who, I am sure, is doing his full duty most conscientiously.

Here is another article in the Herald about a Jew who was killed. It refers to the Governor of New York, saying that too many young men are murderers now. The governor is trying to stop it. I honor him for it, and I know he has the cooperation of the good people of that great State. This man was found guilty of the murder of Dr. Winifred Kotlov, a Jewish theologian, in Queens County, right next door to the home of the Senator from New York.

Another article in the Herald tells of the slaying of a 12-year-old girl. If there is anything horrible in this world, it is the slaying of an innocent 12-year-old girl for the purpose for which this was done. There are other horrible crimes referred to in this paper, but I am not going to take the time of the Senate to place them in the RECORD, and I have no desire to try to advertise the people of New York and that section as lawless people when I know they are less so in that great city than any other large city in the world, but it is well known that there is more crime in New York and other large cities than there is in the agricultural States of the South and West, and that the negro question should, it seems to me, be allowed to rest with the South to solve. The late Theodore Roosevelt, after his return from a visit to Africa, said that no race had ever made such progress as the negroes who were brought from the jungles of Africa to America and the South. Many negroes have gone from the South to the North in the past few years; some of them have gotten good treatment and some of them have not. The manager of a large mill in the North told me that he discharged the negroes in his plant first, when they had to reduce the labor after the war, because he said they were the poorest and least efficient laborers they had; they gave preference to foreigners who could not even speak the English language. There has been more suffering among the negroes who went to the North in the past few years than there has been among the negroes who remained in the South. We are doing the very best we can by them, and we are going to continue to do so, in spite of those who for political or other purposes make our task more difficult. Any negro in the South can at any time get the money to go North, and he would not be molested; but he is told by negroes who go back South from the North that he gets more consideration and better treatment in the South than anywhere else. As a rule, men from the North who go South to live have less patience with the negroes; they expect too much of them, while those of us accustomed to them know their shortcomings and do not expect too much of them.

I have not since I have been a Member of the Senate, and shall not as long as I am in the Senate, ever utter one word to bring about strained relations between the North and the South or the East and the West. This is one great country and our people fought together before and twice since the Civil War to save this country, and it will be so as long as the world lasts. It is the greatest country in the world, and I wish our friends in the North would let us settle this question alone, just as they have in not interfering with the race problem of the Pacific Coast States. We are doing our very best to solve it in the right way, and if the junior Senator from New York [Mr. CALDER] or any other citizens of the North will go South and remain long enough to study our difficult problem they will sympathize with us rather than condemn our treatment of the negro.

Mr. SHIELDS. I would like to ask the Senator if he received a copy of a resolution passed by the council of the city of Chicago a day or two ago in regard to the proposed anti-lynching b'll?

Mr. HARRIS. Mr. President, I have received a great many, but since the Senator has referred to that, in the same edition of the New York Herald this morning, among other things I did not read, is this headline:

Truce was a trick in Herrin massacre—White flag bearer tells of men shot down after surrender—Cripple is tortured—One-legged superintendent, unable to run, was beaten by the mob—Forced to doff hats.

And so on.

Mr. President, I sympathize with the good people of the North, East, or West when they have their troubles like these, and they do not approve of lawlessness and crime, including lynchings, in their section any more than the good people of the South approve such crimes in the South.

Mr. President, there are serious problems confronting this Government at this time in which we should all be united.

There is so much bad in the best of us
And so much good in the worst of us,
It hardly behooves any of us
To say anything about the rest of us.

Mr. SHIELDS. Mr. President, I was struck with the resolution com ng from the city council of Chicago. While it did not mention the South or the negro, yet the language of the several paragraphs of it unmistakably show that it was entirely leveled at the Southern States. It spoke of 11 lynchings having occurred in certain sections within the last six months.

Yet there was the greatest and the most monstrous lynching that ever occurred in the United States, a massacre which was perpetrated almost in the shadow of the city hall where this resolution was passed, at Herrin, Ill., where many men were killed, there being varying accounts of the number, some saying 29, others fixing the number even as high as 40. But certainly 16 were killed, whose names were unknown, and who were buried as unknown. They were lynched by 5,000 people after they had surrendered and raised the white flag, lynched not because they had committed any crime but because they were trying to make an honest living. The city council of Chicago was right there within hearing. Yet with that knowledge the various officers of Williamson County, where the killings occurred, said, "Let the matter blow over and say noth'ng about it," and no attempt has been made to punish the guilty men. The sheriff of the county refused to have anything to do with it. It is to the credit of the attorney general of the State that in the last day or two he has offered a reward of a thousand dollars for any information leading to the detection and conviction of the criminals in that case. But the city council utterly ignored certainly 16 deaths by mob violence within "hollering" distance, as we say down in Tennessee, but spoke of 11 that occurred down South.

ADDRESS BY SENATOR POMERENE.

Mr. HARRISON. Mr. President, the senior Senator from Ohio [Mr. POMERENE] on the 12th day of May delivered a very able address to the Democratic women voters of Ohio. It is a most interesting address and should be read by every woman, not only of Ohio but of the entire country. I desire to have the address incorporated in the RECORD in 8-point type.

There being no objection, the address was ordered to be printed in the RECORD in 8-point type, as follows:

ADDRESS OF SENATOR ATLEE POMERENE AT A MEETING OF OHIO DEMOCRATIC WOMEN VOTERS, SOUTHERN HOTEL, COLUMBUS, OHIO, MAY 12, 1922.

Senator POMERENE spoke as follows:

"Madam Chairman, ladies, and gentlemen, there was a time when there was a difference of opinion in the United States whether or not women should have the right to vote. That is purely an academic question now. I do not look upon the right of suffrage as a privilege. I look upon it as an obligation. It is just as much your duty and my duty to take an interest—intelligent as well as active—in the affairs of state as it is for the good wives and mothers to take such an interest in their household affairs, or for men and women to take such an interest in their business affairs. The Government of the United States is the household of Uncle Sam's people, and every man and woman must take a real interest in Uncle Sam's housekeeping; otherwise they will fall short of doing their full duty.

THE BIG QUESTION.

"The vast majority of all parties are good people, men and women. If we get the wrong kind of men or women on our ticket, it is as a rule because the good men and women have not taken the interest in political affairs they ought to take. There can be no question about that. Our Government is just as good as its people, and no better. Our Government serves the people to the extent they take an active and intelligent interest in it. It is for this reason every God-fearing man and woman ought to take a very real interest in our Government. And let me say to you, my friends, the vicious men and women, almost without exception, will be found active during campaigns and at the polls on election day. The question for us to determine for ourselves is, 'Are we going to shirk our duty, or are we going to do it with the same intensity of purpose they do what they conceive to be their duty?'

TWO KINDS OF SIN.

"There are two kinds of sin. One is the sin of commission. One is the sin of omission. When men and women go to the polls and knowingly vote for the wrong candidates they are guilty of the sin of commission. When men and women fail to take an active and an intelligent interest in the affairs of government, and do not go to the polls, they are guilty of the sin of omission. In my judgment they are equally culpable with those guilty of the sin of commission. I want to appeal to the good men and women of Ohio to take such an interest in the affairs of our Government as they never have before in their lives.

"I have heard a suggestion that because two years ago the State of Ohio, being under something of a delusion, cast a majority of 400,000 votes for the Republican ticket, our cause is hopeless. Why, we can not find 400,000 people in the State of Ohio who will admit they voted the Republican ticket in 1920. I submit to you that more Republicans will vote the Democratic ticket in 1922 than there were Democrats who voted the Republican ticket in 1920.

REPUBLICAN LEADERS MAKING ISSUES.

"You ask me what the campaign issues are. I haven't time to tell you all of them. You will know them all in due time, and I assure you they are going to be discussed in a way every voter in Ohio will understand. The Republican leaders in Washington are making campaign issues for us just as rapidly as they can. The more laws they write into the statute books the more issues we are going to have.

OUTSTANDING DEMOCRATIC ACHIEVEMENTS.

"I was glad to hear this splendid message read, which you have instructed your chairman to send to Woodrow Wilson. It will be heartening to him in his sick room. I am proud of Democracy's record. During the eight years of Woodrow Wilson's administration more was done for the American people than was done during the 16 years of Republican rule under McKinley, Roosevelt, and Taft. The Republican leaders found fault with us, and with what we did—except some of the war legislation, properly so called—but they have not dared to repeal a single one of the major civil measures approved by the Woodrow Wilson administration. And they will not dare to repeal a single one.

FEDERAL RESERVE ACT.

"When the Democrats in Congress were about to vote for the Federal reserve act the Republicans, with few exceptions, voted against it. Yet everybody recognizes to-day that except for our Federal reserve system we would have had the worst panic in our history at the outset of the World War. The Federal reserve act made it possible not only to prevent a panic but to finance the most costly war in the world's history and to loan our allies $10,000,000,000. To-day it is recognized as the greatest financial legislative achievement in the civilized world. Republican leaders talked for a generation about revising our financial system. The Democrats revised it in less than a year after they came into power.

FEDERAL FARM LOAN ACT.

"We provided a system of Federal farm loans, and though this system has been in existence but a short time, already more than $400,000,000 have been loaned to farmers on long time and

at short rates of interest. Of this sum $40,000,000 have been loaned in the fourth district—Ohio, Indiana, Kentucky, and Tennessee. Republican lawmakers have given the farmers nothing to compare with it.

FEDERAL TRADE COMMISSION.

"We created a Federal Trade Commission to bring about a better understanding between buyers and sellers and to work out plans to lessen, in so far as possible, the evil effects of unfair competition. This is a most important commission. Much of its work is of a more or less technical nature. There is every reason to believe the Federal Trade Commission will continue to be a potent factor for good in the business world.

TARIFF COMMISSION ACT.

"We created a nonpartisan, nonpolitical Tariff Commission during Wilson's first term. The Republican leaders talked about it for years, introduced a bill providing for it in Taft's administration, but could not muster the votes to pass it in the Senate, though they had a majority. I was one of two Democratic Senators who voted for it, having gone on record in favor of such a commission prior to my election to the Senate in 1910. That the Republican leaders now in control at Washington are not yet ready to approve taking politics out of the tariff is shown by the bill they are now attempting to force through Congress. It is partisan and political, unscientific, and contrary to the spirit of the Tariff Commission idea. But the Tariff Commission created by the Wilson administration is here to stay, and eventually we shall have a tariff based on justice and right rather than upon special favors for the few.

GOOD ROADS LAW.

"We gave the country in 1916 the most scientific and the most generous good roads law in the history of our country. It provided for aid by the Federal Government to the States in excess of $72,500,000 on a 50–50 basis; that is, each State was required to give an amount equal to the amount received from the Federal Government. Ohio received Federal aid in excess of $2,500,000 under this law. It gave the good roads movement a nation-wide boost, and its beneficial results will be in evidence more and more year after year. Thanks to this Democratic achievement it is no longer a question whether we are to have a permanent good roads movement along systematic lines. The only question now is how much shall we spend from year to year for construction and maintenance of good roads. The law of 1916 has been amended and extended and appropriations handsomely increased. Ohio is one of the chief beneficiaries.

EXPORT TRADE LAW.

"Recognizing the fact that we can not live unto ourselves alone as a nation any more than we can live unto ourselves alone as individuals, we enacted the export trade law for the development of our foreign trade. The law already has justified the expectations of its friends. It has proved a boon to all those who do an export trade business. It is bound to play a most important part in our business relations with the entire civilized world by enlarging present markets and developing new markets abroad. It gives to wide-awake American business men who have initiative and push the golden opportunity to build up foreign trade they looked for in vain under Republican rule.

"The basic reason for the export trade law grew out of this fact: German buyers organized large cartels; French and other buyers large combinations to make their purchases of food and other agricultural products, copper and other commodities. American dealers in farm and other commodities, it was believed, were not permitted under the Sherman antitrust law to combine in making sales to the foreign trade. The result was American sellers always were competing with one another while foreign buyers were combining so that in each country there was substantially one buyer. The foreigners, therefore, could compel bidders to compete with one another, but American sellers were limited to very few purchases. As a result, Americans suffered in their foreign trade.

"The export trade law permits these sellers to form associations solely for the export trade, thereby enabling them to deal on an equal footing with the foreign buyers, and to get better prices for the American products.

DEMOCRATS COURT COMPARISON.

"There are many other legislative achievements of the Wilson administration and they all will be explained to the voters as the campaign progresses. We court a comparison of Democratic and Republican achievements. In fact, we are going to insist on such a comparison.

THE BUDGET SYSTEM.

"The Republican leaders and spellbinders claim credit for the Budget system, and they deserve some credit for it, but it is a matter of public record that it was urged by President Wilson, indorsed by Democrats and Republicans generally, and a bill creating it in the latter part of his administration was vetoed by him because the Republican leaders sought to deprive the Executive of the power to remove the controlling officer, the Budget Director, in case of misfeasance or nonfeasance in office, and vest that authority in the Congress. That would have been a violation of the constitutional authority of the President. Except for that it would have been both passed and signed while Woodrow Wilson was President. The Budget law was enacted early in the present administration, and the Republican leaders left the removal power vested in the President—just as President Wilson insisted it had to be under the Constitution.

THE NEW REVENUE LAW.

"Now, we have had lately, they tell us, some revenue legislation and some tariff legislation, and on day before yesterday Senator MCCUMBER on the floor of the Senate vigorously attacked the Democrats, charging they were filibustering against the pending tariff bill. The Democrats lost the Congress in the 1918 elections, and in December of that year when Chairman FORDNEY, of the Ways and Means Committee, returned to Washington, he said he would call the Republican members of the committee together to prepare revenue legislation and tariff legislation, so they would be ready to act at once when Congress convened in special session.

"Well, President Wilson called the Republican Congress together May 20, 1919, and we have been in almost continuous session from that date until the present time—three years. Think of it! And the tariff bill not yet enacted into law. We have a new revenue law, but we did not get it until last November—30 months after the Republicans gained control of Congress. The Republican leaders and spellbinders and editors had much to say during the campaign of 1920 about relieving the taxpayers of the burdens of heavy taxation, but they certainly have been taking their time to grant such relief. They have furnished us with a perfect illustration of masterly inactivity. As 'wigglers and wobblers' they have set a new record.

HELPING THOSE WHO HAVE.

"And just what did the Republican Congress undertake to do by the revenue measure? They sought to relieve all high incomes in excess of $68,000—there were a few more than 11,000 such taxpayers—from all revenue taxes in excess of 32 per cent. You will agree with me that the rank and file, the bone and sinew of our American people, are those who have incomes ranging from less than $1,000 up to $68,000, and yet little relief was granted to these more than 5,000,000 taxpayers upon whose activities we depend for our industrial, our commercial, our farming, our mining, and our manufacturing life. That is the kind of relief given by this Republican revenue measure. The Democrats in the Senate, with the aid of a few Republicans, insisted that the graduated rates should continue up to 50 per cent over and above $300,000 incomes. And that view finally prevailed, over the protest of the so-called old guard.

HISTORY OF PENDING TARIFF BILL.

"Now, let me call your attention briefly to the history of the tariff legislation. Chairman Fordney, of the House Ways and Means Committee, had made the promise already referred to. The elections of 1920 came on. The times seemed to be out of joint. The Republicans won in the House by more than two to one. They won a majority of 24 in the Senate. They had had absolute control of all the committees and up until March 4, 1921, they enacted no tariff legislation whatever. Even that pious protection fraud, the so-called emergency tariff law, was not enacted until May, 1921. But to go back. Hearings on the pending tariff bill began January 6, 1921. They ended in February, 1921, and the Ways and Means Committee began the original draft of the bill. In June, 1921, the committee reported its bill to the House. On July 21, 1921, the House passed the bill, after having written into it over 200 amendments. The bill was messaged to the Senate on July 22, 1921, and referred to the Committee on Finance. Hearings were begun July 25, 1921, and continued to and including August 31, 1921. Then the tariff bill was laid aside temporarily and attention given to the internal revenue bill. Hearings on the tariff bill were resumed November 3, 1921, and completed January 9, 1922. Upon completion of the hearings the committee began the preparation of the bill and continued its labors until April 11, 1922, when the bill was reported to the Senate.

DEMOCRATS DENIED USUAL COURTESY.

"Right here let me explain the attitude assumed by the Republican members of the Finance Committee toward the Democratic members. When the committee went into executive ses-

sion the Republican members did not invite the Democrats to sit with them while they were framing the law. I am not finding fault with that. It has been the custom when a tariff measure is under consideration for the majority party members to sit and prepare their bill, agree as to its premises, and as they agree to refer them to the minority members. During the sitting of the Ways and Means Committee of the House under Chairman UNDERWOOD, and later during the sitting of the Senate Committee on Finance under Chairman SIMMONS, when the Underwood-Simmons bill was under consideration, as soon as an item was agreed upon, straightway the Democratic Members notified the Republican minority members so they could have it for consideration.

"No such courtesy was extended Democratic minority members on either committee by Republican majority members in the consideration of the pending tariff bill. In fact, the Democratic minority of the Senate Finance Committee was given a copy of the bill, as agreed upon by the Republican majority, not to exceed two days before the bill was reported, April 11. The bill was on the calendar nine days before Chairman McCUMBER, of the Finance Committee, called it up for consideration and made a speech in support of it. That was on April 20, 1922. If you are interested in reading a swan song do not fail to read this speech by Senator McCUMBER. I may say in passing, the Republican members of the Senate Finance Committee added over 2,000 amendments to the bill as it passed the House.

HOLLOW FILIBUSTER CHARGE.

"Now, then! After the Republican Members of Congress had worked on the pending bill from January 6, 1921, until April 11, 1922—except from September till November, when the revenue bill was under consideration—a full year, Chairman McCUMBER charged the Democrats with filibustering. May 10, 1922, just 20 days after he called the tariff bill up in the Senate and made his initial speech upon it. I could not resist the temptation to call his attention and the attention of the Senate to the history of this tariff legislation as I have recited it to you. If any Republican challenges the correctness of my statement of facts let him or her speak.

"Now, with this legislation affecting as it does every man, woman, and child, with more than 2,200 amendments to consider in connection with the bill proper, and with all its vast importance to economic conditions, I have insisted that while I would oppose filibustering I felt it the duty of every Senator to discuss this bill thoroughly in order that the public may be enlightened as to its provisions. And I still so insist.

REPUBLICAN LEADERS DISAGREE.

"We have made some progress with it. We have pointed out some of its inconsistencies. I want to call your attention to a few. If I were to ask the hundred and more ladies assembled here this afternoon whose business it is to enact legislation the unanimous answer would be that it is the business of the Congress of the United States. Right. But under this tariff bill the House has adopted what was called the American valuation plan. Chairman FORDNEY says that plan must go into the bill or we stay in Washington until the snow flies. But here, again, our Republican leaders are at sea, without chart or compass. The Republican members of the Senate Finance Committee, 10 of them, by a vote of 7 to 3, repudiated the American valuation plan, and approved the foreign valuation plan, which we have had continuously from the beginning of our tariff history. Senator SMOOT, of the Finance Committee, made a speech on the floor of the Senate, April 24, 1922, showing the American valuation plan, as indorsed by Chairman FORDNEY, to be wholly impracticable.

WOULD PROTECT PROFITEERS.

"Bear in mind, in your consideration of the pending tariff bill, the protective theory is that we want a tariff that covers the difference in cost between what is the cost in this country and what it is in foreign countries. The Republican leaders want to change that now. They want our new tariff to cover the difference between the competitive cost in our country and in foreign countries plus a high profit. This is the first time in the history of the Republican Party its leaders ever had the brazen effrontery to suggest the protection of the profiteers, and I am ready to go to the country on that issue with them, confident that the rank and file of their own party will decline to follow their leadership. There are none so blind as those who will not see.

REPUBLICAN LEADERS AT FAULT.

"I do not want to be misunderstood. I have no quarrel with the rank and file of the Republican Party. The average Republican, like the average Democrat, wants only what is just and right. The trouble with our Republican friends is they are being misled by their leaders. My quarrel is with those leaders.

"What do they do? They provide in the pending tariff bill that if there is any difference between the competitive conditions detrimental to the interests of our country the President shall have power—

"First. To change from the foreign-valuation plan to the American-valuation plan.

"Second. To change from specific duty to ad valorem duty.

"Third. To change from ad valorem duty to specific duty.

"Fourth. To add to or subtract from rates contained in the bill 50 per cent of such rates; in other words, to raise them 50 per cent or lower them 50 per cent.

"It is the first time in our history such discretion has been lodged in the President of the United States. It is too much power to place in the hands of any man. It is fundamentally wrong for the reason it delegates legislative power to the executive branch of our Government.

"Now, I do not want to be unfair—I think it would be unconstitutional to do it—but if our shifty Republican leaders would lodge all their legislative power with the President, they would have this consolation: It would shift responsibility from this Republican Congress, and for that the American people would be duly thankful.

$3 WHEAT AND 40-CENT COTTON.

"I do not know very much about ladies' pocketbooks, but I know that men's pocketbooks are not as full as they were during our Democratic administration. Republican leaders and spokesmen told us if they were returned to power in 1920 we would have prosperous times. They were quite sure about that. They were going to give the farmer $3 a bushel for his wheat. They were going to give the cotton planter 40 cents a pound for his cotton. The voters took them at their word. The Democratic administration, under which producers as well as consumers had waxed fat, was kicked out of power, and the Republican Party was put in power. Wheat went down, down, down, until it sold for little more than $1 a bushel. Cotton went down, down, down, until it sold for 12 cents and 15 cents a pound. And the farmers in the wheat-growing belt and the planters in the cotton-growing belt are still holding the bag. What a rude awakening they have had!

WOMEN AND THE PENDING TARIFF.

"Our contention is that if the pending tariff bill is enacted into law it will add to the price of everything you have to buy—for your wearing apparel, the family's wearing apparel, and for your household. Why, ladies and gentlemen, the sponsors for this bill admit it will advance prices!

"Yesterday, within an hour before I boarded the train for Columbus, I went to one of the experts employed by the Democratic members of the Finance Committee to get a few figures I thought would be of interest to the women of Ohio, and I was given the following statement comparing the rates as fixed in the Underwood-Simmons law, which has been in effect since 1913, and the proposed rates in the pending bill:

"Cotton fabrics: Average rate under Underwood-Simmons law, 22.6 per cent; under pending bill, 40 per cent. This includes all fabrics, such as ginghams, calicos, organdies, and similar materials, used exclusively for women for house wear, making dresses, and so forth, for children.

"Laces: Average rate under Underwood-Simmons law, 60 per cent; under pending bill, 90 per cent. At the present time women are able to buy in the 5-cent and 10-cent stores many kinds of cotton laces used as trimmings for garments. It is believed if the proposed rate, 90 per cent, becomes effective this will no longer be possible.

"Cotton hosiery: Average rate under Underwood-Simmons law, 37 per cent; under pending bill, 68 per cent. If the latter rate becomes effective it will no longer be possible to buy children's cotton hose for 25 cents.

"Cotton corsets: Average rate under the Underwood-Simmons law, 30 per cent; under the pending bill, 64 per cent. As corsets for women's wear are again coming into style, it will be seen what will happen to the price of ladies' corsets if the proposed rate becomes effective.

"Silks: Average rate under the Underwood-Simmons law, 60 per cent; under the pending bill, 90 per cent. On silk pongee, used extensively by women for dresses and shirt waists, proposed rates average as high as 230 per cent. Under such rates it will be absolutely impossible for women to obtain this popular fabric. On Japanese habutai silk, commonly referred to as China silk or wash silk, the proposed rates are practically double the rates in the Underwood-Simmons law. This habutai is a fabric very popular with the women in the making of undergarments.

"Wool fabrics: Average rate under the Underwood-Simmons law, 35 per cent; under the pending bill, 74 per cent. Imported woolen fabrics, commonly used by women for street dresses and tailored suits, are selling in the United States under the present law for more than domestic woolens. The proposed rate is designed to exclude the importation of a good class of woolen cloth.

"Leather gloves: Average rate under the Underwood-Simmons law, 14 per cent; under pending law, 37½ per cent. Under the proposed rate it will be impossible to import ladies' kid gloves. On a 16-button kid glove the proposed rate amounts to 83 cents per pair. Under the Underwood-Simmons law the duty on the same glove is 41 cents a pair. If the proposed change is made, it will force women to buy cotton gloves.

"Cotton gloves: The duty on cotton gloves has been advanced from 35 per cent under the Underwood-Simmons law to over 100 per cent in the pending bill. For example, on a 16-inch button glove costing $4 per dozen the duty under the Underwood-Simmons law would be $1.40 per dozen, while under the pending bill the rate is $3 per dozen for gloves up to 11 inches long and 10 cents extra for every inch over 11 inches. Sixteen-button gloves measure 23 inches, or 12 inches longer than the ordinary 11-inch glove, making the duty on this glove under the pending bill $4.20, or 105 per cent.

"The duty on all articles of household utility are very much increased under the pending bill.

Table cutlery has been increased from 30 per cent under the Underwood-Simmons law to the equivalent ad valorem rate of 130 per cent maximum.

"Hardware has been increased from 20 per cent under the Underwood-Simmons law to 40 per cent under the pending bill.

"Toys for children have been increased from 35 per cent to 70 per cent; parasols, 35 per cent to 50 per cent.

"Buttons have been increased from an average rate of 35 per cent under the Underwood-Simmons law to an average rate of 96 per cent under the pending bill.

WOMEN BUYERS, TAKE NOTICE.

"It is estimated that under the stimulus of the high rates proposed in the pending bill the women of the United States will be forced to pay approximately $1,000,000,000 more for clothing than they pay now under the Underwood-Simmons law. This includes all articles of women's wearing apparel from lace to hair nets.

"The pending tariff bill is one of our issues, and I welcome it.

M'KINLEY'S ADVICE APPLICABLE NOW.

"Now, let me call your attention briefly to another situation: European countries to-day owe our Government and our nationals, for loans and credits extended $18,000,000,000, almost three-fourths as much as our total national debt. How is Europe going to pay this unprecedented debt? She can not pay it in gold, because she does not have the gold. She can not pay it in her depreciated currency, because we will not take it. There is only one way out, both for Europe and for the United States, and that is by some system of barter and trade, under proper conditions, so Europe can buy from us what she needs, and we can buy from her what we want. In this way, and only in this way, can Europe pay us what she owes us.

"Let me remind you of the time when the McKinley bill was before the Congress in 1890. I remember it as well as if it were yesterday. James G. Blaine, then Secretary of State, said with reference to that bill: 'If the bill passes in the form it now is'—and that was before the reciprocity provisions were added to it—'it will not furnish a market for one pound of pork or for one barrel of flour.' The McKinley bill was changed. I say to you if the pending bill passes in its present form it will not furnish a market for one ounce of pork or for one pound of flour.

"Let me go further—Mrs. Margaret Allman from my home city is here. She knew as I knew the late lamented President McKinley. If there ever was a man who was sincerely a protectionist at heart it was William McKinley. In the last speech he made at Buffalo, just before the assassin's bullet struck him low, he said: 'America can not always expect to sell and never to buy.' And if Republican leaders in Washington are going to build a tariff wall around the United States as high as the pending bill provides, the men and women of America will read in letters of flame across the sky McKinley's warning at Buffalo: 'You can not always expect to sell and never to buy.'

MUST HAVE FOREIGN MARKETS.

"Let me say to you, so you will realize more fully the vital importance of President McKinley's warning:

"In 1870 the agricultural products of our country amounted to $50 per capita; in 1920 they had increased to $112 per capita.

"In 1870 the manufacturing products of our country amounted to $110 per capita; in 1920 they had increased to $563 per capita.

"It follows that our need for a foreign market now is greater than it was in 1870.

"We are a producing rather than a consuming country. Our prosperity is bound up in our producing and selling, and we must give heed to the demands of the farmers of the country, and the manufacturers, and the producers everywhere, for the foreign market as well as the home market. We can not live unto ourselves alone, either as individuals or as a Nation.

"My friends, in conclusion, I want you to enlist in our cause as you never enlisted in anything before in your lives. We are facing a rising sun, not a setting sun. And if there ever was a time we should take pride in the fact we are Democrats that time is right now.

A RECORD OF WHICH TO BE PROUD.

"Major legislative achievements of the Wilson administration when Democrats were in control of all three branches of the Government include:

"(1) Federal reserve act—December 23, 1913.
"(2) Alaskan railroad act—March 12, 1914.
"(3) Federal Trade Commission act—September 26, 1914.
"(4) Federal farm loan act—July 17, 1916.
"(5) Federal Tariff Commission act—September 8, 1916.
"(6) Federal aid road act—July 11, 1916. (Amended and extended February 28, 1919. Ohio's quota under original act more than $2,500,000. Total quota for all States $72,500,000. States must take initiative and each State must match its Federal quota.)
"(7) Clayton Antitrust Act—October 15, 1914.
"(8) Employees' compensation act—September 7, 1916.
"(9) Act to declare purpose of United States toward the Philippines and to provide a more autonomous government for those islands—August 29, 1916.
"(10) Immigration act—February 5, 1917.
"(11) Bill of lading act—January 1, 1917.
"(12) Vocational educational training act—February 23, 1917.
"(13) War finance corporation act—April 5, 1918.
"(14) Export trade law—April 10, 1918.
"(15) Naturalization law—May 9, 1918.
"(16) War risk insurance; soldiers' compensation; soldiers' and sailors' civil rights acts (17 in number)—September 2, 1914; August 6, 1919.
"(17) Thirty peace treaties between the United States and as many different countries were inaugurated and ratified by the Wilson administration while Mr. Bryan was Secretary of State."

THE TARIFF.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes.

The PRESIDING OFFICER (Mr. TRAMMELL in the chair). The question is on the adoption of the amendment of the committee on page 121, in line 4, where the committee proposes to strike out "one-fifth" and insert "one-fourth," so as to read "one-fourth of 1 per cent ad valorem."

Mr. SMOOT. I ask for the yeas and nays.

The yeas and nays were ordered, and the reading clerk proceeded to call the roll.

Mr. HARRISON (when his name was called). I transfer my general pair with the junior Senator from West Virginia [Mr. ELKINS] to the senior Senator from Missouri [Mr. REED] and vote "nay."

Mr. JONES of Washington (when his name was called). The senior Senator from Virginia [Mr. SWANSON] is necessarily absent this afternoon. I promised to pair with him in his absence. I find that I can transfer that pair to the junior Senator from Oregon [Mr. STANFIELD], which I do, and I vote "nay."

Mr. ROBINSON (when his name was called). I transfer my pair with the Senator from West Virginia [Mr. SUTHERLAND] to the Senator from Rhode Island [Mr. GERRY] and vote "nay."

Mr. WALSH of Montana (when his name was called). I transfer my pair with the Senator from New Jersey [Mr. FRELINGHUYSEN] to the Senator from Nebraska [Mr. HITCHCOCK] and vote "nay."

Mr. WATSON of Indiana (when his name was called). Transferring my general pair with the senior Senator from Missis-

sippi [Mr. WILLIAMS] to the junior Senator from Washington [Mr. POINDEXTER], I vote "yea."

The roll call was concluded.

Mr. STERLING. I have a general pair with the Senator from South Carolina [Mr. SMITH], but I am informed that if present he would vote on this question as I shall vote, and I am, therefore, at liberty to vote. I vote "nay."

Mr. NEW. I transfer my pair with the junior Senator from Tennessee [Mr. MCKELLAR] to the junior Senator from Vermont [Mr. PAGE] and vote "nay."

Mr. OVERMAN. I transfer my pair with the Senator from Wyoming [Mr. WARREN] to the Senator from Nevada [Mr. PITTMAN] and vote "nay."

Mr. JONES of New Mexico (after having voted in the negative). I transfer my pair with the Senator from Maine [Mr. FERNALD] to the Senator from Montana [Mr. MYERS] and permit my vote to stand.

The PRESIDING OFFICER (Mr. TRAMMELL). I transfer my pair with the Senator from Rhode Island [Mr. COLT] to the junior Senator from Massachusetts [Mr. WALSH] and vote "nay."

Mr. CURTIS. I wish to announce that the Senator from North Dakota [Mr. MCCUMBER] is absent on official business. He is paired with the junior Senator from Utah [Mr. KING].

I also wish to announce that the Senator from New Jersey [Mr. EDGE] has a general pair with the Senator from Oklahoma [Mr. OWEN] and that the Senator from Vermont [Mr. DILLINGHAM] has a general pair with the Senator from Virginia [Mr. GLASS].

The result was announced—yeas 24, nays 32, as follows:

YEAS—24.

Ball	Gooding	McLean	Ransdell
Calder	Hale	McNary	Shortridge
Curtis	Keyes	Moses	Smoot
du Pont	Ladd	Newberry	Spencer
Ernst	Lodge	Pepper	Wadsworth
France	McKinley	Phipps	Watson, Ind.

NAYS—32.

Ashurst	Harris	Nelson	Simmons
Borah	Harrison	New	Stanley
Capper	Heflin	Norbeck	Sterling
Caraway	Jones, N. Mex.	Overman	Townsend
Culberson	Jones, Wash.	Pomerene	Trammell
Cummins	Kendrick	Robinson	Underwood
Dial	Lenroot	Sheppard	Walsh, Mont.
Fletcher	McCormick	Shields	Willis

NOT VOTING—40.

Brandegee	Frelinghuysen	McKellar	Reed
Broussard	Gerry	Myers	Smith
Bursum	Glass	Nicholson	Stanfield
Cameron	Harreld	Norris	Sutherland
Colt	Hitchcock	Oddie	Swanson
Crow	Johnson	Owen	Walsh, Mass.
Dillingham	Kellogg	Page	Warren
Edge	King	Pittman	Watson, Ga.
Elkins	La Follette	Poindexter	Weller
Fernald	McCumber	Rawson	Williams

So the amendment of the committee was rejected.

The PRESIDING OFFICER. The next amendment will be stated.

The READING CLERK. In paragraph 901, page 121, line 5, the committee proposes to strike out "25" and insert "30," so as to read:

Nor of numbers exceeding 100, less than 30 per cent ad valorem.

Mr. SIMMONS. Mr. President, I had not expected to take any part in the discussion, but on account of the temporary absence of the Senator from South Carolina [Mr. SMITH], who is looking after the matter, I give my attention to it.

The proposed increase from a minimum of 25 per cent, as fixed in the House bill, to 30 per cent ad valorem in my judgment is utterly indefensible. Of course, all the arguments that have been made by the Senator from South Carolina [Mr. SMITH] and the Senator from Wisconsin [Mr. LENROOT] against an increase in the amendment upon which we have just voted apply with equal force to this increase. That amendment proposed an increase upon the House rate on the lower grades of cotton yarns and the pending amendment proposes an increase in the rate upon the higher grades of cotton yarns.

Mr. POMERENE. Mr. President——

The PRESIDING OFFICER. Does the Senator from North Carolina yield to the Senator from Ohio?

Mr. SIMMONS. I yield.

Mr. POMERENE. The Senator, of course, has been very diligent in his attendance upon the hearings. Can he tell me who asked for the increase?

Mr. SIMMONS. My understanding is that the cotton manufacturers generally have not asked for it. I suppose Mr. Lippitt asked for it, but I do not know. I understand he was asking for a great many things with reference to increased rates.

Mr. SMOOT. Mr. President, we can not hear a word the Senator says.

Mr. SIMMONS. The Senator from Ohio asked me who it was that asked for the increase provided in this particular paragraph. I replied that I did not know, that I had not heard of any manufacturer from my section of the country, or generally from any other section of the country, asking for it, but supposed that Mr. Lippitt, who was here representing certain cotton interests, had asked for it. I do not know. The Senator from Utah can answer that question better than I can.

Mr. POMERENE. Is it not true that all the manufacturers of these yarns have been very prosperous in the last few years under the Underwood law?

Mr. SIMMONS. Beyond the dreams of avarice, in many instances. As has been conclusively shown here, they have not now and have not had at any time since the Underwood law was enacted, some eight or nine years ago, any competition worth speaking of in the particular yarns dealt with in this paragraph.

Mr. POMERENE. Mr. President, I have not any detailed or specific information in reference to this subject, but I remember that during the last three or four years it has come to my ears constantly that very large dividends were being paid by these different mills.

Mr. SIMMONS. So large that in some instances one even hesitates to state the amount. However, Mr. President, it is not necessary for me to repeat the statistical information which has been given to the Senate this morning and so forcefully commented upon by both the Senator from South Carolina [Mr. SMITH] and the Senator from Wisconsin [Mr. LENROOT], showing beyond peradventure that the production in this country is enormous; that it is absolutely sufficient to supply the domestic requirements; that the importations are so insignificant that they may be dismissed as being of no consequence whatsoever, while the exportations are, I think it was stated, at least ten times the small amount of the imports. So the Underwood rate has been practically prohibitive; it is too high; it ought to be reduced. The great author of that law, who now sits to my right, has made the statement practically, by implication at least, that instead of discussing here the question of raising the Underwood rates upon this particular product we ought to be discussing the question of reducing those rates, because they have proved, to all intents and purposes, I will say, absolutely prohibitive; and yet, notwithstanding that, it is proposed to increase those rates.

Mr. SMOOT. Mr. President——

The PRESIDING OFFICER. Does the Senator from North Carolina yield to the Senator from Utah?

Mr. SIMMONS. I yield.

Mr. SMOOT. The Senator from North Carolina, I think inadvertently, stated that everything which the Senator from Wisconsin said in relation to the previous amendment would apply to the pending amendment in the same way.

Mr. SIMMONS. Probably that was a little too broad.

Mr. SMOOT. Yes; it is entirely too broad, because, I wish to say to the Senator from Ohio [Mr. POMERENE], that the existing rate upon yarns over 100 counts is 27½ per cent, while this rate is 30 per cent.

Mr. POMERENE. Over what?

Mr. SMOOT. Over 100 counts. The existing law imposes a duty of 27½ per cent. I do not think that 3 per cent of all the yarns produced in the country run over a hundred counts.

Mr. UNDERWOOD. Will the Senator from North Carolina yield to me?

Mr. SIMMONS. I yield to the Senator from Alabama.

Mr. UNDERWOOD. I wish to confirm what the Senator from North Carolina has just said in reference to my statement. As to the statement of the Senator from Utah that the existing rate on these yarns is 27½ per cent and the Committee on Finance proposed to increase it only to 30 per cent, that is no justification for the increased rate.

Mr. SMOOT. I did not say it was a justification for the increase.

Mr. UNDERWOOD. Anyone who knows anything about this matter and will give consideration to the actual trial of the present rates must realize that there can be no justification for the increase. The Senator must understand that the previous rate was more than double that of the existing law; but nine years ago the Ways and Means Committee cut the rate, and nine years' trial has proven that 27½ per cent tax on this class of yarn is prohibitive. There can not be any question about that. It is practically prohibitive. How any committee that has in view at all the idea of allowing a little revenue to creep into the Treasury can consider the question of raising what is practically a prohibitive rate I can not comprehend.

for when it is stated that less than 1 per cent of the product of the American industry is imported it is admitted that the rate is prohibitive.

Mr. SMOOT. But that does not apply to this particular line of materials.

Mr. UNDERWOOD. It does if there is less than 1 per cent of these yarns imported.

Mr. SMOOT. But of this kind of yarns, as compared with the amount produced in this country, there is a greater percentage of imports. I think more than one-half of the consumption in the United States of certain kinds of the yarn falling under this paragraph is imported into the United States.

Mr. UNDERWOOD. Some particular thread of some particular make that is not produced in the United States may be brought in, but the test is the average, for if the domestic manufacturers can make these 100-count yarns, the run of the mill yarn, and they can not be imported, the fact that some fancy yarn of some particular make happens to creep over the border because an American manufacturer is not making it is no justification for an increase of rates all along the line.

Mr. SMOOT. I will take occasion, I will say to the Senator, to ascertain the amount of importations of this class of yarns and put the figures into the RECORD.

Mr. POMERENE. I should be very glad to be informed on that subject; but let me ask the Senator from Utah now, since he is on the floor, the question which I put to the Senator from North Carolina [Mr. SIMMONS]. Generally speaking, it would seem from the course the discussion has taken here that the manufacturers are more than satisfied with the present conditions; that the manufacturers are not asking for these increases. Who was it who asked for these increases?

Mr. SMOOT. The Senator from Ohio is entirely wrong. I will say to him that the representatives of the manufacturers say that they would rather take the Underwood tariff law, so far as yarns are concerned, than the pending bill, if we will give them long-staple cotton free, as the Underwood law does.

Mr. POMERENE. As I understand—and I have not taken the time thus far to make the comparison—the Underwood rates are lower than are the rates provided in the pending bill.

Mr. SMOOT. Some of them are and some of them are not, I will say to the Senator from Ohio.

Mr. UNDERWOOD. Most of them are.

Mr. SIMMONS. Mr. President, they all are, so far as unbleached yarns are concerned. I am not talking about bleached yarns now. The Senator from Utah [Mr. SMOOT] a minute ago referred to the 27½ per cent rate of the Underwood law. That rate applies to bleached yarns. I am discussing the amendment that applies to unbleached yarns now. I am discussing the amendment on line 5, page 121.

Mr. SMOOT. I am aware of that.

Mr. SIMMONS. And that does not apply to bleached yarns.

Mr. SMOOT. That is 25 per cent in the Underwood law.

Mr. SIMMONS. And the Committee on Finance proposes to raise it to 30 per cent. That is what I was discussing, and that is all I was discussing. I was saying that the importations, it had been shown, were very small. That is not quite as accurate a statement when made with reference to the finer counts above 100 as it is when made with reference to the coarser counts which we were discussing this morning at the time the statistics to which I referred were given to the Senate, but I find that of the finer counts of unbleached yarns the importations are only about 12,000 pounds. That is their extent.

Mr. WALSH of Montana. Mr. President——

Mr. SIMMONS. While that is a larger proportion than the importations of the coarser yarns, it still is not a considerable amount.

Mr. POMERENE. Mr. President, may I ask in that connection just one question?

Mr. WALSH of Montana. I merely desired to say that I understood the Senator from Utah was going to answer the question addressed to him by the Senator from Ohio with respect to the particular amendment which is now before us. The question was, Who asked that the rate on yarns be increased from 25 per cent to 30 per cent?

Mr. SIMMONS. I will be very glad to have the Senator from Utah answer that question.

Mr. SMOOT. I did not hear the question.

Mr. SIMMONS. The Senator from Ohio persists that he have an answer to the question which he asked at the time he interrupted me. I referred him to the Senator from Utah, because I could not answer the question.

Mr. POMERENE. Early in the colloquy I put that question to the Senator from North Carolina [Mr. SIMMONS].

Mr. SIMMONS. And I did not answer it.

Mr. POMERENE. The Senator from North Carolina did not know that anybody had asked for the increased rates unless it was former Senator Lippitt. I put the question to the Senator from Utah then, and, as I understood, he expected to answer it later.

Mr. SMOOT. I think the only one that I know anything about who was particularly interested in this section was Mr. Cramer, the representative of the yarn manufacturers in the United States.

Mr. POMERENE. I think it is unfortunate that the Finance Committee did not hear some representatives of the consumer class on the subject.

Mr. SMOOT. The Finance Committee did have such representatives before it. Every Senator who wanted to come before the committee had an opportunity of appearing there. I deny the charge which has been made upon this floor so often that nobody but manufacturers appeared before the committee. That is not true.

Mr. POMERENE. Then very little attention was paid to the others.

Mr. SMOOT. I want to say that a great many more importers came before the committee than manufacturers.

Mr. POMERENE. I am not referring now to importers.

Mr. SMOOT. They are the ones who are most deeply interested in it.

Mr. POMERENE. There are many people out in Ohio who are consumers and understand as much about this subject as do the members of the Finance Committee, people who have studied it, and who are protesting against this proposed legislation.

Mr. SMOOT. Of course, at the special solicitation of the propaganda of the importers of New York.

Mr. POMERENE. Unless the Senator is endowed with special knowledge which enables him to look into the hearts of the people to whom I refer, I deny that emphatically.

Mr. SMOOT. I want to say to the Senator that I can show him hundreds and thousands of such protests by retail merchants in the United States which are alike, word for word, and many of the protests are printed in identical language, although signed by various protestants.

Mr. POMERENE. There is not any doubt about that; but the statement comes to me from merchants out in Ohio who are just as patriotic as is the distinguished Senator from Utah, and who know just as much about this subject, perhaps.

Mr. SMOOT. Perhaps more.

Mr. POMERENE. Probably so; I think they do.

Mr. SMOOT. And they may be even more patriotic; I have not said a word as to that. That, however, does not make a particle of difference as to the rate.

The PRESIDING OFFICER. The Senator from North Carolina has the floor.

Mr. SIMMONS. Mr. President, I do not know whether the importers had anything to do with the making of this bill or not. I am rather inclined to think that they did not have anything to do with it. If I understand the Senator from Utah, he contends that the importers were demanding lower rates, while in this case the rate is higher than that of the present law. Therefore it is not to be presumed that the importers asked for it, but it is to be presumed that somebody who expected to profit by this duty asked for it. The question is, Did any cotton-manufacturing interest in this country demand this increase?

Mr. SMOOT. I have told the Senator as to that.

Mr. SIMMONS. I say to the Senator that, so far as the cotton manufacturers of my section of the country are concerned—and I believe they constitute about one-half of the cotton manufacturers of this country—I do not believe that they have desired this increase, or that they have asked for this increase; on the contrary, it is my impression that the cotton manufacturers of my State think that the rates in the Underwood law are amply protective, so far as they are concerned, and not one of them has asked me to support a higher rate than is provided in the Underwood law.

Mr. SMOOT. There is no manufacturer in the South who makes a thread over 100.

Mr. UNDERWOOD. The Senator is wrong about that.

Mr. SIMMONS. I think the Senator is wrong as to that. We are making very fine goods in the South.

Mr. SMOOT. Will the Senator tell me one single cotton manufacturer in the South who makes a thread over 100?

Mr. SIMMONS. I am told that the Separk Gray Cotton Manufacturing Mills, at Gastonia, in the State of North Carolina, makes 120's; and I want to tell the Senator, whether he knows it or not, that we are beginning to make as fine goods in North Carolina as they make in Massachusetts.

Mr. SMOOT. You are beginning?

Mr. SIMMONS. Yes.

Mr. SMOOT. I want to say to the Senator that you have not gotten even one step along the road—not one step.

Mr. SIMMONS. The Senator speaks more ex cathedra than any other Senator in this Chamber, and I suppose more so than any other Senator who ever appeared in this Chamber, because he thinks he knows all things, and that his knowledge with respect to them is absolutely the final word. I tell the Senator he is mistaken. We are making fine cotton goods in the South. The Senator asked me to name one instance, and I named it. Now, I want to ask the Senator whether any southern manufacturer came up here and asked for these increases in rates?

Mr. SMOOT. Stuart W. Cramer, of Charlotte, N. C. Does the Senator know him?

Mr. SIMMONS. Yes; I know him, and I have a letter from him about it, in which he said that he thought the cotton people of the South were entirely satisfied.

Mr. SMOOT. Let us see what he said to the committee. I will not have to take the word of the Senator about this. Not only that but I want to say to the Senator that he was in my office not two weeks ago complaining about the rates.

Mr. SIMMONS. He has not so complained to me. I will hear what the Senator has to say, however.

Mr. SMOOT. Mr. Cramer appeared before the committee, and this is what he stated he advocated:

Cotton yarns, including warps, in any form, bleached, dyed, colored, combed, or plied, of numbers not exceeding No. 40, four-tenths of 1 cent per number per pound; exceeding No. 40 and not exceeding No. 120, 16 cents per pound, and in addition thereto, fifty-five one hundredths of 1 cent per number per pound for every number in excess of No. 40; exceeding No. 120, 60 cents per pound: *Provided*, That none of the foregoing, of numbers not exceeding No. 100, shall pay less duty than 7 per cent ad valorem and in addition thereto for each number one-fifth of 1 per cent ad valorem; nor of numbers exceeding No. 100, less than 27 per cent ad valorem—

On the American valuation.

Mr. SIMMONS. Is the Senator talking about bleached yarns?

Mr. SMOOT. No; I am not. I am talking about just what we are talking about here.

Mr. SIMMONS. Was not Mr. Cramer talking about the bleached, dyed, and colored yarns?

Mr. SMOOT. Yes.

Mr. SIMMONS. And he was demanding what—27½ per cent?

Mr. SMOOT. He was demanding this:

Nor of numbers exceeding No. 100, less than 27 per cent ad valorem—

on American valuation.

Mr. SIMMONS. How much was he demanding?

Mr. SMOOT. Twenty-seven per cent on American valuation.

Mr. SIMMONS. And you give him 35 per cent.

Mr. SMOOT. We are not giving him 35 per cent.

Mr. SIMMONS. You did on bleached yarn.

Mr. SMOOT. But that is on the American valuation.

Mr. SIMMONS. Twenty-seven per cent is the House rate, and 27½ per cent was the Underwood rate.

Mr. SMOOT. If the Senator wants me to do so, I can go through some more of the testimony here from the South.

Mr. SIMMONS. I did not hear the Senator read anything that showed that he was asking that upon the American valuation when he was appearing before your committee, and he knew your committee was not going to impose the American valuation.

Mr. SMOOT. There is another thing that the Senator is wrong in again.

Mr. WALSH of Montana. Mr. President, I have before me here a summary of Mr. Cramer's testimony, and it appears that he was talking about the second paragraph of paragraph 901, and not the first paragraph at all. The first paragraph deals with the unbleached and undyed yarn.

Mr. SMOOT. The Senator from North Carolina stated that no one from the South appeared here and asked for advanced duties, and this is an advanced duty.

Mr. WALSH of Montana. The Senator from Ohio [Mr. POMERENE]—and I reenforced the inquiry—wanted to know from the Senator from Utah who it was asked for the increase now under consideration, an increase of 25 to 30 per cent on the unbleached yarns containing numbers exceeding 100, and the answer was that Mr. Cramer did. Mr. Cramer's summary is before me, and he was dealing entirely with the paragraph at which we have not yet arrived.

Mr. SMOOT. If the Senator knew anything about the workings of a tariff bill on cotton cloths, he would know that there is a differential between bleached and unbleached.

Mr. WALSH of Montana. Exactly.

Mr. SMOOT. And if he is asking for it on bleached, he will have to have it on unbleached.

Mr. WALSH of Montana. Yes; but he was not asking for it on unbleached.

Mr. SMOOT. But the Senator knows that if we gave it on bleached we would have to give it on unbleached.

Mr. WALSH of Montana. Exactly; but he was not asking for it on the unbleached.

Mr. SMOOT. But he asked for an increase.

Mr. WALSH of Montana. On the bleached.

Mr. SMOOT. Yes. That is exactly what I stated.

Mr. WALSH of Montana. But we have not come to that yet. The question that we address to the Senator now——

Mr. SMOOT. Oh, no; the Senator said, "No rates in this bill."

Mr. WALSH of Montana. Let me ask the Senator a question. Who asked for the increase on which we are now called upon to vote—namely, the increase on unbleached and undyed yarns of numbers exceeding 100 from 25 to 30 per cent?

Mr. SMOOT. Mr. President, if the Senator will just wait until I go through this pamphlet entitled "Revised Charts and Suggestions for Rates from Consolidated Tariff Committee on Cotton Yarns and Countable Cotton Cloths," signed by Stuart W. Cramer, I think I can answer him.

Mr. WALSH of Montana. I have before me a summary of what the Senator has.

Mr. SMOOT. Well, that is the testimony.

Mr. WALSH of Montana. Mr. Cramer was the only man who appeared, except an importer, and apparently he did not talk about this paragraph at all.

Mr. OVERMAN. Mr. Cramer is the president of the National Council of American Cotton Manufacturers.

Mr. SIMMONS. I want to say that in my judgment, from the information I have from Mr. Cramer, he is entirely satisfied with the Underwood rates.

Mr. SMOOT. The Senator also said that he did not know whether Mr. Cramer was asking for rates based on the American valuation or not.

Mr. SIMMONS. I do not know.

Mr. SMOOT. Mr. Cramer says that these rates are based on American valuation. That is what he says in his brief that he filed before the committee.

Mr. SIMMONS. I will ask the Senator if there is any very great difference between the American and the foreign valuation of these goods? Is not the fact that they are not imported here to any considerable extent sufficient evidence that the American and the foreign valuations of this particular article are very nearly if not practically the same?

Mr. SMOOT. Mr. President, on the Senator's own theory it is going to cost the amount of the duty more, and therefore there will be a duty upon that duty. That is what the Senator has contended right along.

Mr. SIMMONS. Of course, that is absolutely true; but outside of the duty there is but very little difference between the American valuation and the foreign valuation, and the Senator does not mean to tell the Senate that in adopting the American valuation plan he would add a duty to it and then put another duty on that duty. I assume that the American valuation plan is not as absurd as that.

Mr. SMOOT. That is exactly what the American valuation plan means.

Mr. SIMMONS. Then it is more absurd than I thought it was.

Mr. SMOOT. If the Senator had listened to what I said about it, he would know that I objected to it. I do not believe in it. I criticized it upon the floor of the Senate and did everything in my power to have the Finance Committee eliminate it from the House bill.

Mr. SIMMONS. I congratulate the Senator for his work in that particular. I know the Senator did, and I know the Senator has no more respect for that method of valuation than I have; but I say in reference to this particular article that there is not any substantial difference between the American valuation and the foreign valuation, except that in case you are going to add the duty that makes a difference.

Mr. SMOOT. There is also in this kind of yarn a difference. I stated to the Senator from Wisconsin [Mr. LENROOT] that in low counts I did not think there was very much difference, but when you get up to 100 thread and above there is a difference, and there is no question about it. There is not a manufacturer who ever manufactured an ounce of it but knows that there is.

Mr. SIMMONS. Mr. President, I was diverted by the inquiry made by the Senator from Ohio, which I passed on to the Senator from Utah. I undertand that the Senator from Utah answered that question by saying that Mr. Cramer, of

North Carolina, asked for these increases. We do not have any information that anybody else asked for them except Mr. Cramer, of North Carolina, and I say that I think Mr. Cramer does not want the increase that we are discussing now. That increase applies to unbleached yarns, numbering above 100. The House rate is 25 per cent and the Senate minimum rate is fixed at 30 per cent.

Now, Mr. President, I want to call attention to one significant fact with reference to this matter, and it runs all through this bill. I am told that it applies to practically every schedule. We have a lot of specific duties here upon cotton yarns, starting with the coarse grades and going up until they reach, I believe, yarns above 100. Then the specific rates start at one-fifth of 1 per cent, and they go on up until they reach 28 cents a pound. Those are the specific rates. Then we have this proviso, and I say you will find a similar proviso in nearly all of the paragraphs dealing with these specific articles:

Provided, That none of the foregoing, of numbers not exceeding No. 100, shall pay less duty than 5 per cent ad valorem and, in addition thereto, for each number, one-fourth of 1 per cent ad valorem; nor of numbers exceeding No. 100, less than 30 per cent ad valorem.

That is the Senate amendment—30 per cent. That means that if the specific rate is less than 30 per cent, the specific rate shall become inoperative and the 30 per cent rate shall apply. That is what it means. Is not that true?

Mr. SMOOT. I will say to the Senator that the minimum rate applies in every case to-day, and I think Mr. Clark, sitting by the Senator, will say so.

Mr. SIMMONS. I think Mr. Clark, sitting by me, will not say so. There is where we differ.

Mr. SMOOT. He can tell the Senator whether he will or will not.

Mr. LENROOT. The Senator means the minimum ad valorem rate will apply.

Mr. SIMMONS. That is what I intended, of course.

Mr. SMOOT. That is just what I stated.

Mr. LENROOT. In no case will the specific rate obtain then, because the minimum ad valorem rate will be higher than the specific rate.

Mr. SIMMONS. Now I want to state—and I state it upon the authority of experts, not only of the expert at my right but of other experts upon whom I absolutely rely—that in three-fourths of the cases this minimum ad valorem rate will apply, and not the specific rate.

Mr. SMOOT. It will apply, I think, in more than three-fourths of the cases.

Mr. SIMMONS. And therefore the meaning of that is that by reason of imposing this 30 per cent ad valorem minimum rate you really increase the specific rate.

Mr. SMOOT. That is the minimum rate; and at the prices of yarns to-day there is no question that in every case the minimum rate will apply.

Mr. SIMMONS. The specific rate becomes inoperative, and the minimum rate applies. Therefore the specific rate is misleading.

Mr. SMOOT. It is not misleading. The price may decline, and no doubt it will. I have the figures as to the price of yarns at the peak in 1920, and of yarns as they are quoted in the market to-day, and the differences in the prices are really remarkable.

Mr. SIMMONS. I do not know what is going to happen to-morrow, and I do not know how long the condition of to-morrow will continue. I have no way of determining a thing except by the conditions of to-day, and what I am saying is that, taking the conditions of to-day, this minimum ad valorem rate attached to the end of this paragraph will become operative and the specific rates will be inoperative as to importations coming here now or which will come here, until there is a change in the market conditions.

Mr. SMOOT. On all yarns above 100.

Mr. SIMMONS. This is a case of increasing the Underwood rates, which I think have been satisfactory to the great bulk, at least, of the manufacturers of this country, which have kept out foreign imports to a very large extent. I want to say in this connection that in my judgment it is not in the interest of the development and the growth and expansion of the cotton-mill industry in this country, nor is it in the interest of efficiency in production in this industry, that we should entirely eliminate foreign competition. I think that some reasonable amount of foreign importations is helpful in practically any and all industries, and I do not subscribe to the policy of exclusion under any conditions whatsoever.

The kind of goods which are coming here in this particular industry are to a very large extent a character of goods not produced in this country. Many of the fine yarns that will be covered by this section of this paragraph are such as we do not produce in this country, I imagine. When we do not produce a thing in this country, when there is no competition between this country and the foreign producer, why should we seek to burden that product with a duty to be paid by the consumer? It accomplishes no good purpose, unless, of course, the purpose is to raise revenue, and I have not understood that gentlemen were levying the duties under the cotton schedule for revenue purposes. They are levying them for protection purposes.

As a duty for protection purposes, I see no justification for it, first, because there are practically no importations, or the importations are very small, not to say negligible. I would not go that far, but they are very, very small. Secondly, because most of the things which come in of this higher grade, either of yarns or of fabrics, are things we do not produce, or do not produce in sufficient quantities to supply the American demand.

I do not wish to prolong the discussion, and I am perfectly willing that we may have a vote upon this amendment.

Mr. SMOOT. Mr. President, I want to say just a word about this. When we produce nearly all of the yarns in this country, the Senator does not think there ought to be any duty. When we do not produce them in this country, he does not think there should be any duty on them. Therefore, he thinks that all yarns should come in free.

That is not the theory on which this bill is framed. This bill is a protective bill. This is a duty only upon fine yarns, those exceeding 100. It is a 30 per cent duty. The House gave 25 per cent on the American valuation, which would be more than the 30 per cent on the foreign valuation. The rate in existing law is 25 per cent. I think I put in the RECORD this morning figures showing the amount of importations and the amount produced in this country, touching all of the different grades in this paragraph.

I do not want to prolong the discussion as to who appeared before the committee, and as to no person from the South asking for increased rates. No good could come from that.

We have tried to make this a balanced bill, beginning with the lowest count yarn and continuing until we reach the highest count yarn made into cloth, and I think if the amendments which have been offered are agreed to, the bill will be a balanced bill. Therefore, I hope this amendment will be agreed to. It is upon luxuries mostly, or yarns which go into luxuries. As the Senator from North Carolina [Mr. SIMMONS] said, I do not want to prolong the discussion, and I am perfectly willing to have a vote.

Mr. UNDERWOOD. Mr. President, I want to say something about this schedule before the debate closes. Although I have it not in charge, I do not want the schedule to be voted on finally without saying a word in reference to it.

To begin with, nine years ago, when the Ways and Means Committee of the House of Representatives were considering rewriting the Payne-Aldrich law, and came to the cotton schedule, they came to the highest rates that had ever been written in a cotton schedule up to that time. They were so high that they shocked the sense of honesty in the American people's minds. They repudiated it at the polls. There was nobody at that time who could justify the rate of taxation then imposed on the American people in this schedule.

Of course, when a new committee started to revise the rates, they were going out into the region of the unknown, because you can never tell with mathematical accuracy the point of competition in world trade until you have tried it, and, as I have said many times, the Ways and Means Committee of the House of Representatives, in originally writing the present law, determined to seriously cut the existing rate of taxation, and they cut it more than half. But they also determined that if they erred they would err on the conservative side.

We have no commission to destroy American industry, and when you are making rates which affect competition, you must give men and business an opportunity to adjust themselves to the new conditions. Therefore, the rates which were written in this cotton schedule were not radical cuts; they were conservative cuts.

The result of nine years' trial has demonstrated beyond peradventure of a doubt that it was an overconservative estimate. In fact, the rates on most of the yarns should be cut more than they were in the existing law, if you are not going to build a protective wall around the United States in reference to these cotton yarns which will practically drive out competition.

In the face of nine years' trial and in face of the fact that the great mass of the men engaged in this industry themselves have not pleaded or asked for higher rates, the Finance Committee comes before the Senate and recommends an increase of rates, and in most cases raises them to a point as high as they were 10 years ago in the Payne-Aldrich law when the

American people spewed them out from their mouths as a thing that should be spat upon for lack of honesty. The Senator justified his rates in this bill because Mr. Cramer asked for them.

Mr. SMOOT. Oh, no.

Mr. UNDERWOOD. I am talking about the justification the Senator has given on the floor. If he has other justifications I have not heard them.

Mr. SMOOT. We did not give what Mr. Cramer asked. Mr. Cramer wanted more than we gave.

Mr. UNDERWOOD. I understand, and I am coming to that. The Senator justifies his rate because Mr. Cramer, the head of a cotton manufacturers' association in the United States, filed a brief asking for higher rates.

The Senator must know, as I know, that there never has been a time since the system of protection was invented that the representative heads of the great associations which wanted protection did not uniformly file petitions away out of all reason as to what they wanted. They always go on the basis that if they ask for exactly what they want somebody will say they ought to have less. So, to be on the safe side they have their head men file petitions for something they never expect to get. That does not relate only to the cotton industry. With few exceptions, it is the universal principle on which the protected manufacturer approaches the tariff-making committee, and everybody knows that to be the case.

When the Senator from North Carolina stated that there was no demand on the part of the American manufacturer for a change of these rates, he was right. This question of Mr. Cramer asking for something, filing a petition, means nothing. The Senator from Utah knows, as well as I do, that when these classes of people want something they do not content themselves with filing briefs. They write articles for the newspapers, they come to Senators' offices, they have Senators' constituents write to them and say what they want and why they want it. There has been an absolute dearth of that kind of propaganda in reference to this cotton schedule from beginning to end, because those men know perfectly well that they do not need any higher rates than are given in the present law, and I know perfectly well that the present law gives them higher rates than they are entitled to.

That is the real condition which confronts the American people, and when the Senator is asked why the Committee on Finance brought in these higher rates it is a very pertinent proposition. He has not justified himself or his committee in saying that Mr. Cramer filed a brief. He can not justify that before the American people. As a matter of fact, no one in charge of tax legislation can justify the levying of a tax on the theory that the man who is going to get the benefit of the tax wanted it.

Mr. SMOOT. Mr. President, I hope the Senator will not charge me with saying that that is the reason why we put the rates in. The only reason why I referred to Mr. Cramer was because the Senator from North Carolina [Mr. SIMMONS] asked if any man from the South had requested an increased rate. I did not mention Mr. Cramer's name.

Mr. UNDERWOOD. I understand, but I have sat here and listened, and I speak of it so far as I have heard. I do not say the Senator made that statement to justify the rate. He made it because he was challenged to do so, and in answering the challenge Mr. Cramer's brief was the only thing he could put his hands on. He was challenged to justify his committee in putting a prohibitive rate on this class of cotton goods.

Now, the real fact in the case is that the higher grades of goods that are made in the United States are mostly made in the New England States, but there are some of the larger cotton mills of the South which are beginning to make high-class cotton goods. But in the production of yarns, taking the industry in the United States as a whole, as has been said here on the floor, and the Senator from Utah himself said it, there is only 7 per cent of the entire production that is above No. 40. Ninety-three per cent of the production of yarn is below No. 40.

Mr. POMERENE. Below No. 40?

Mr. UNDERWOOD. Yes. Ninety-three per cent of the production of yarns in the United States is of yarns that grade at or below No. 40 yarn. There is a very small proportion of the 7 per cent above 120 yarns. So, to say that these increases affect the great cotton industry of the United States is to challenge substantial facts which nobody can deny. Of course, we all recognize and we all know that the American cotton industry has never made the highest grades of yarns, and probably on account of climatic conditions, as well as generation of trained labor abroad, in the very high-grade cotton yarns we can never equal the British production.

I know, Mr. President, what the committee are trying to do. It is not cotton cloth or cotton yarns that are made here for which they are trying to increase this rate. They know that just as well as I do. They are camouflaging the whole situation to take care of a particular item. They are blowing a smoke cloud before the American people and allowing them to think there is some reason why this increased tax should be put on them, but they are looking at one thing alone, and that is the lace industry of America. That is the yarn which the Senator from Utah has in mind, as I told him awhile ago. He wants to put a tax on all this class of yarns and make it prohibitive in order to tax a very few, less than 12,000 in singles and, I think, 600,000 in doubles of importations, a very infinitesimal proportion of the production of the total yarns in America. He is doing it, because he has not named the man. I do not know who the man is, I have not seen him, I do not know from where the impulse comes, but I do know that back in the woods somewhere, either publicly before the committee or privately, somebody is interested in making yarns for the lace industry of the country and this tax is being based on that theory.

Mr. SMOOT. That is news to me.

Mr. UNDERWOOD. Can the Senator tell me any other class of yarns that is coming in that is material, except those yarns used in the lace industry? If he can, I should like to know it.

Now, of course, miracles do happen. It is said that a streak of lightning once jumped down from a clear sky when there was not a cloud around, and, of course, it may be that intuitively the Committee on Finance know that somebody wanted to make these yarns in the lace industry, and so they put up the rates all along the line.

That may have happened, just like the streak of lightning which it is said in the ancient fable jumped out of a clear sky when there was no cloud visible. But, of course, we do not believe that. We ordinary, common people do not believe that. We think, when there is an item in the bill, it is to take care of just one set of men, to let them get rich, and that those men must have pleaded for the item. They may not have done so. I can not prove that they did. They may never have come before the committee, but that is all there is in the reason why this rate was increased, and I know it. I know that is the only reason why the committee raised the rate. I do not know who the man is that is going to get the money out of it. He may never have come within a thousand miles of the committee, but the American people are going to think that somebody came and asked for this extraordinary increase where it is not necessary at all.

Mr. President, this schedule is just like other schedules in the bill. There are some high-grade cotton yarns and cotton goods that are competitive. They are mostly competitive as contained in this schedule, because the American mills do not make any other or, if they have just entered into the manufacture of that class of goods, they make so few that they can not yet supply the American public. But as to 90 per cent of the productive capacity of the American mills, the cotton schedule which the committee have brought before the Senate is prohibitive. It is not put here to raise revenue. It is not put here to protect the American manufacturer or the American industry or the American laborer. It is put here to build a prohibitive wall behind which men may water their stock, issue fictitious bonds, and then ask protection for the profits they make, which include the interest on the watered bonds and watered stocks.

Mr. POMERENE. In other words, Mr. President, the Senator means that the purpose is to have a complete embargo?

Mr. UNDERWOOD. Absolutely; to make money for men by process of law and not by process of honest labor. That is what the bill means. The Senator from Wisconsin [Mr. LENROOT] was right when he said this morning that there is no justification for a single increase in the schedule. The only question the committee should be required to answer is why they have not reduced existing rates instead of raising them. The Senator from Wisconsin also said to the members of the Finance Committee that "the American people have your number," and they have. They want to know why, and they are going to know why, and unless the United States Senate in its honesty repudiates the schedule substantially in whole, it will stand as a scent in the nostrils of the American people when the Republican Party goes before the people to ask for a justification of its conduct at the polls.

The PRESIDING OFFICER. The question is on the adoption of the committee amendment on page 121, line 5, where the

committee proposes to strike out "25" and insert "30," so as to read:

Nor of numbers exceeding No. 100, less than 30 per cent ad valorem.

Mr. UNDERWOOD. I ask for the yeas and nays.

The yeas and nays were ordered, and the reading clerk proceeded to call the roll.

Mr. JONES of Washington (when his name was called). Making the same announcement with reference to my pair and its transfer, I vote "nay."

Mr. NEW (when his name was called). Making the same announcement as on the previous vote concerning the transfer of my pair, I vote "yea."

Mr. OVERMAN (when his name was called). Making the same announcement as on the previous vote, I vote "nay."

Mr. ROBINSON (when his name was called). Transferring my pair with the Senator from West Virginia [Mr. SUTHERLAND] to the Senator from Massachusetts [Mr. WALSH], I vote "nay."

Mr. STERLING (when his name was called). I understand that the Senator from South Carolina [Mr. SMITH], with whom I am paired, would, if present, vote as I shall vote on this question. I am, therefore, at liberty to vote. I vote "nay."

Mr. TRAMMELL (when his name was called). I transfer my pair with the senior Senator from Rhode Island [Mr. COLT] to the senior Senator from Texas [Mr. CULBERSON] and vote "nay."

Mr. WALSH of Montana (when his name was called). Transferring my pair with the Senator from New Jersey [Mr. FRELINGHUYSEN] to the Senator from Nebraska [Mr. HITCHCOCK], I vote "nay."

Mr. WATSON of Indiana (when his name was called). Making the same announcement as before, I vote "yea."

The roll call was concluded.

Mr. HALE. I transfer my pair with the senior Senator from Tennessee [Mr. SHIELDS] to the junior Senator from Maryland [Mr. WELLER] and vote "yea."

Mr. JONES of New Mexico. Making the same announcement as before regarding my pair and its transfer, I vote "nay."

Mr. HARRISON. Making the same announcement as before, I vote "nay."

Mr. HARRIS. I wish to announce that my colleague [Mr. WATSON of Georgia] is absent on account of illness.

Mr. WALSH of Massachusetts. On this question I am paired with the senior Senator from West Virginia [Mr. SUTHERLAND]. I transfer that pair to the senior Senator from South Carolina [Mr. SMITH] and vote "nay."

Mr. BALL. I transfer my pair with the senior Senator from Florida [Mr. FLETCHER] to the junior Senator from Colorado [Mr. NICHOLSON] and vote "yea."

Mr. DIAL. I desire to announce that my colleague [Mr. SMITH] is detained on official business. He is paired on this vote with the Senator from West Virginia [Mr. SUTHEBLAND]. If my colleague were present, he would vote "nay."

Mr. CURTIS. I wish to announce the following general pairs:

The Senator from North Dakota [Mr. MCCUMBER] with the junior Senator from Utah [Mr. KING];

The Senator from Vermont [Mr. DILLINGHAM] with the Senator from Virginia [Mr. GLASS]; and

The Senator from New Jersey [Mr. EDGE] with the Senator from Oklahoma [Mr. OWEN].

The result was announced—yeas 28, nays 28, as follows:

YEAS—28.

Ball	Gooding	McKinley	Pepper
Bursum	Hale	McLean	Phipps
Calder	Johnson	McNary	Shortridge
Cummins	Kendrick	Moses	Smoot
Curtis	Keyes	New	Spencer
du Pont	Ladd	Newberry	Wadsworth
Ernst	Lodge	Oddie	Watson, Ind.

NAYS—28.

Borah	Heflin	Overman	Sterling
Capper	Jones, N. Mex.	Pomerene	Townsend
Caraway	Jones, Wash.	Ransdell	Trammell
Dial	Kellogg	Robinson	Underwood
Gerry	Lenroot	Sheppard	Walsh, Mass.
Harris	McCormick	Simmons	Walsh, Mont.
Harrison	Nelson	Stanley	Willis

NOT VOTING—40.

Ashurst	Fernald	McKellar	Reed
Brandegee	Fletcher	Myers	Shields
Broussard	France	Nicholson	Smith
Cameron	Frelinghuysen	Norbeck	Stanfield
Colt	Glass	Norris	Sutherland
Crow	Harreld	Owen	Swanson
Culberson	Hitchcock	Page	Warren
Dillingham	King	Pittman	Watson, Ga.
Edge	La Follette	Poindexter	Weller
Elkins	McCumber	Rawson	Williams

So the amendment of the committee was rejected.

The PRESIDING OFFICER (Mr. WILLIS in the chair). The Secretary will state the next committee amendment.

The next amendment of the Committee on Finance was, on page 121, line 8, after the word "colored," to insert the word "combed."

The amendment was agreed to.

The next amendment of the Committee on Finance was, on page 121, line 9, before the words "of 1 cent," to strike out "one-fourth" and to insert "three-tenths," so as to read:

Cotton yarn, including warps, in any form, bleached, dyed, colored, combed, or plied, of numbers not exceeding No. 40, three-tenths of 1 cent per number per pound.

Mr. LENROOT. Mr. President, all that has been said with reference to the amendment in the first part of paragraph 901, covering low-count yarns, applies to this amendment; and if the Senate will be consistent it will disagree to this amendment as it did to the other amendment.

The PRESIDING OFFICER. The question is on the committee amendment.

Mr. LENROOT. I ask for the yeas and nays on the amendment, Mr. President.

The yeas and nays were ordered, and the Assistant Secretary proceeded to call the roll.

Mr. BALL (when his name was called). Making the same announcement as before in reference to my pair and its transfer, I vote "yea."

Mr. HALE (when his name was called). Making the same announcement as on the previous vote relative to my pair and its transfer, I vote "yea."

Mr. HARRISON (when his name was called). Making the same announcement as before as to my pair and its transfer, I vote "nay."

Mr. JONES of Washington (when his name was called). Making the same announcement as to my pair and its transfer as on the previous vote, I vote "nay."

Mr. NEW (when his name was called). Making the same announcement as upon the previous vote as to the transfer of my pair, I vote "yea."

Mr. OVERMAN (when his name was called). Making the same announcement of the transfer of my pair as on the former vote, I vote "nay."

Mr. ROBINSON (when his name was called). Transferring my pair with the Senator from West Virginia [Mr. SUTHERLAND] to the Senator from Arizona [Mr. ASHURST], I vote "nay."

Mr. STERLING (when his name was called). Making the same announcement as on the last vote regarding my pair and its transfer, I vote "nay."

Mr. TRAMMELL (when his name was called). Making the same announcement as on the last vote regarding my pair and its transfer, I vote "nay."

Mr. WALSH of Montana (when his name was called). Transferring my pair as announced on the previous vote, I vote "nay."

Mr. WATSON of Indiana (when his name was called). Transferring my pair as before, I vote "yea."

The roll call was concluded.

Mr. DIAL. I desire to announce that my colleague, the senior Senator from South Carolina [Mr. SMITH], is detained from the Chamber on official business. If he were present, he would vote "nay." He is paired with the senior Senator from Vermont [Mr. DILLINGHAM].

Mr. JONES of New Mexico. Making the same announcement as before regarding my pair and its transfer, I vote "nay."

Mr. GLASS. I transfer my general pair with the senior Senator from Vermont [Mr. DILLINGHAM] to the Senator from South Carolina [Mr. SMITH], and vote "nay."

Mr. ERNST (after having voted in the affirmative). I have a general pair with the senior Senator from Kentucky [Mr. STANLEY]. I transfer that pair to the senior Senator from Pennsylvania [Mr. CROW], and will permit my vote to stand.

Mr. CURTIS. I am requested to announce the following pairs:

The Senator from Arizona [Mr. CAMERON] with the Senator from Georgia [Mr. WATSON];

The Senator from New Jersey [Mr. EDGE] with the Senator from Oklahoma [Mr. OWEN]; and

The Senator from North Dakota [Mr. MCCUMBER] with the junior Senator from Utah [Mr. KING].

The result was announced—yeas 26, nays 29, as follows:

YEAS—26.

Ball	Hale	McNary	Smoot
Bursum	Johnson	Moses	Spencer
Calder	Keyes	New	Townsend
Curtis	Ladd	Newberry	Wadsworth
du Pont	Lodge	Oddie	Watson, Ind.
Ernst	McKinley	Pepper	
Gooding	McLean	Phipps	

NAYS—29.

Borah	Harrison	Nelson	Trammell
Capper	Heflin	Overman	Underwood
Caraway	Jones, N. Mex.	Pomerene	Walsh, Mass.
Cummins	Jones, Wash.	Ransdell	Walsh, Mont.
Dial	Kellogg	Robinson	Willis
Gerry	Kendrick	Sheppard	
Glass	Lenroot	Simmons	
Harris	McCormick	Sterling	

NOT VOTING—41.

Ashurst	Fletcher	Norbeck	Stanfield
Brandegee	France	Norris	Stanley
Broussard	Frelinghuysen	Owen	Sutherland
Cameron	Harreld	Page	Swanson
Colt	Hitchcock	Pittman	Warren
Crow	King	Poindexter	Watson, Ga.
Culberson	La Follette	Rawson	Weller
Dillingham	McCumber	Reed	Williams
Edge	McKellar	Shields	
Elkins	Myers	Shortridge	
Fernald	Nicholson	Smith	

So the committee amendment was rejected.

The PRESIDING OFFICER. The Secretary will state the next amendment.

The ASSISTANT SECRETARY. The next amendment will be found on line 11, page 121, where it is proposed to strike out "10" and insert "12," so that, if amended, it will read:

Exceeding No. 40 and not exceeding No. 120, 12 cents per pound, and, in addition thereto—

And so forth.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment.

Mr. LENROOT. Mr. President, I should like to ask the Senator from Utah, in view of the fact that the Senate has rejected the other committee amendment, whether he is now in favor of this amendment of 12 cents a pound?

Mr. SMOOT. I will say to the Senator frankly that if the Senate wants to conform its action on this amendment with that already taken it had better vote against all of the other amendments in this paragraph with the exception of the last one.

Mr. LENROOT. Exactly.

Mr. SMOOT. I will say why I think the last one ought to be agreed to.

Mr. LENROOT. Very well; but, to be consistent, these should be rejected.

Mr. SMOOT. Yes; to make the bill balance as it ought to be balanced according to the number of threads and the whole system of the bill. The Senate has already expressed itself on the unbleached yarns, and to make the bill consistent it ought to express itself in the same way on the rest of the amendments in this paragraph.

Mr. LENROOT. I hope that may be done without the necessity of taking the time for a yea-and-nay vote, and yet if it is to be resisted I shall be compelled to call for a yea-and-nay vote.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment.

The amendment was rejected.

The ASSISTANT SECRETARY. On line 11, at the end of the line, it is proposed to strike out "three-tenths" and to insert in lieu thereof "four-tenths," so as to read:

And, in addition thereto, four-tenths of 1 cent per number per pound for every number in excess of No. 40.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the committee.

The amendment was rejected.

Mr. SMOOT. Mr. President, just for the RECORD, the Senator from North Carolina [Mr. SIMMONS] stated that no person from the South had come here and asked for increased rates of duty. I want the Senate to know what Mr. Stuart W. Cramer, president of the National Council of American Cotton Manufacturers, who lives at Charlotte, N. C., and represents all of the cotton manufacturers of the United States, asked the committee to do in this paragraph:

Not exceeding No. 10, 4 cents a pound—straight, mind you. That means a compensatory duty of three-tenths of a cent for No. 1 and 3 cents for No. 10. In other words, I should have said, the Senate rate is three-tenths of a cent on No. 1, and Mr. Cramer asked the committee for 3 cents, or nine times what the committee recommended.

On No. 40 he asked for 4 cents, plus forty one-hundredths of a cent for each number above No. 10. The committee, on No. 40, reported 12 cents. Mr. Cramer asked for 16 cents a pound.

On No 120, Mr. Cramer asked for 60 cents, and the committee reported 44 cents.

I simply want that to go in the RECORD in answer to what the Senator from North Carolina said; and I say again that there is not any question but that in view of the action the Senate has already taken, these committee amendments ought to be rejected or else the bill will be unbalanced.

Mr. HARRISON. Mr. President, the Senator has suggested that certain matters should go into the RECORD. Is it not appropriate that it should go into the RECORD that none of the members of the Finance Committee, on the last two votes, voted to retain the rates recommended by the committee; they voted to change them and make them lower?

Mr. SMOOT. I do not understand what the Senator says.

Mr. HARRISON. The Senator can read it to-morrow morning.

Mr. SMOOT. If the Senator does not want any answer, I will wait until to-morrow morning.

The PRESIDING OFFICER. The Secretary will state the next amendment of the committee.

The ASSISTANT SECRETARY. On line 13, the committee proposes to strike out "34" and in lieu thereof to insert "44," so as to read:

Exceeding No. 120, 44 cents per pound.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment.

The amendment was rejected.

The ASSISTANT SECRETARY. On line 15, at the end of the line, it is proposed to strike out "7" and insert "10," so as to read:

Provided, That none of the foregoing, of numbers not exceeding No. 100, shall pay less duty than 10 per cent ad valorem and, in addition thereto—

And so forth.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the committee.

The amendment was rejected.

The ASSISTANT SECRETARY. On line 17, it is proposed to strike out "one-fifth" and in lieu thereof to insert "one-fourth," so as to read:

And, in addition thereto, for each number, one-fourth of 1 per cent ad valorem.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the committee.

The amendment was rejected.

The ASSISTANT SECRETARY. On line 18, it is proposed to strike out "27" and to insert "35," so as to read:

Nor of numbers exceeding No. 100, less than 35 per cent ad valorem.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the committee.

The amendment was rejected.

The ASSISTANT SECRETARY. On line 19 it is proposed to strike out the words "ad valorem" and to insert the same words with a colon and the following proviso:

Provided further, That when any of the foregoing yarns are printed, dyed, or colored with vat dyes there shall be paid a duty of 5 per cent ad valorem in addition to the above duties.

Mr. SMOOT. Mr. President, the committee desires to strike out "5" and insert "4."

The PRESIDING OFFICER. The committee has a right to modify its proposed amendment.

Mr. POMERENE. Mr. President, will the Senator yield for a question?

Mr. SMOOT. Yes.

Mr. POMERENE. What is the purpose of this amendment?

Mr. SMOOT. I was just going to tell the Senator.

Mr. President, this is a compensatory duty. The Senator knows that in this bill a duty of 7 cents a pound and 60 per cent ad valorem has been imposed upon dyes for vat dyeing, and under existing law there is an entire embargo on their importation into the United States. The only way they can be gotten in at all is to have permission to get them in here.

Mr. POMERENE. That embargo is to last until such time as this bill becomes a law.

Mr. SMOOT. Oh, the embargo in this bill provides for an extension of one year, and then gives the President power——

Mr. POMERENE. I thought the Senator was referring to the present law.

Mr. SMOOT. Oh, yes; but it is extended.

Mr. POMERENE. I understand that; but it simply continues until this bill goes into effect, and this continues the embargo for another year.

Mr. SMOOT. That is true; but the rates of duty that the committee provided upon dyes were such that they can only be sustained because of the fact that the industry is sometimes called a key industry, and it is absolutely necessary that it should be maintained in the United States.

Mr. POMERENE. The Senator means the dye industry?

Mr. SMOOT. The dye industry.

Mr. President, in 1909 there were a few of us who wanted to establish a dye industry in the United States. We wanted to

give a fair rate of duty upon dyes made in the United States, a fairly protective duty, a duty that we thought at that time would have established the industry in the United States, and in my opinion no doubt would have established it in the United States; but it was not to be. The users of the dye in this country objected. All that we did was to allow the intermediates to come into the United States free, and the only industry in the United States consisted of taking those intermediates and mixing them into dyes. We tried to place a duty upon the intermediates, which are the basis of all dyes, but no; that must not be done.

I want to be fair to all, and I must admit that the Senate of the United States agreed with that thought, and we put a duty of 10 per cent on the intermediates, and a compensatory duty of that amount over and above the protective duty to establish a dye industry in the United States; and if our policy had been carried out we would not have had, when the war came on, the trouble in which the United States Government found itself. That industry would have been established in the United States, and at a lower rate than is provided in this bill; but as long as we have given the rate provided for in this bill upon the vat dyes, we have to give a compensatory duty upon the yarns and the cloth which is dyed with that particular class of dyes. They are the only dyes that certain goods can be dyed with that will stand up under the washing and the acids that may be used in cleaning the cloths and will also stand sunshine; and nothing that is known yet, unless it be an absolute acid that would eat them up, can affect the color at all.

Mr. POMERENE. That is a very interesting statement; but, tell me, how are the woolen and the cotton and the silk and the paint industries going to get away from the same difficulty under the embargo provisions of this bill?

Mr. SMOOT. They have not the trouble in the other industries with the vat dyes, the vat dying of wool.

Mr. POMERENE. They do have with some of the dyes.

Mr. SMOOT. No; not with those. They are not used. For instance, with wool, the alizarins are used entirely. Formerly the aniline dyes were used, but they would not stand the washing, nor would they stand the sunlight, in years past; but they have been completely displaced by alizarin dyes, which do stand the washing and sunlight.

Mr. POMERENE. Mr. President, I can give a concrete case. When we were down in Haiti and the Dominican Republic——

Mr. MOSES. Will the Senator permit me to interrupt a moment to ask a question of the Senator from Utah?

Mr. POMERENE. I am going to make a statement of just a sentence or two, and then I will yield. When we were in Haiti and the Dominican Republic we found all of our marines down there in these faded uniforms.

Mr. SMOOT. That should not be, and I can not understand it.

Mr. POMERENE. It was, nevertheless.

Mr. SMOOT. If it is so, the Government has been imposed upon.

Mr. POMERENE. It is true. I saw them, and I know.

Mr. SMOOT. I do not doubt but what it is true, but I was going to say to the Senator that the Government has been imposed upon, and whoever passed the goods did not do his duty.

Mr. POMERENE. In the RECORD there are two letters, which I introduced, from the former consul general, Eaton W. Harris, showing that that very fact is being used against the sale of our American cloths now, in the South and elsewhere.

Mr. SMOOT. An alizarin dye is just as fast as any dye that was ever made in all the world, if it is put on properly. There never has been a dye known that was any faster and stood up better against sunshine and washing than alizarin dye.

Mr. POMERENE. I have in mind also an American who engaged in the dye industry right after some of the dye acts were passed during the war, or thereabouts—I have forgotten the dates—and he talked to me very enthusiastically within a year after he had gone into the business, said that their stock had doubled in value, and so forth. About a year after that I asked him about it, and he said, "Well, we got along splendidly until hot weather began and people began to perspire under the arms."

Mr. MOSES. Mr. President, I would like to ask the Senator from Utah, in charge of the bill, if it is not agreed that the remaining dye sections of the bill—that is, the embargo sections—are to be taken up to-morrow?

Mr. SMOOT. They are to be taken up to-morrow.

Mr. MOSES. I have in mind to offer some remarks which bear upon the portion of the bill now under consideration. I do not want to take the time of the Senate twice on the same matter, and what I have to say I will save until to-morrow, even though what I say may be rendered ex post facto by the vote of the Senate this afternoon.

Mr. SMOOT. No matter whether we vote out the embargo or whether we retain the embargo, this provision will have to be in the bill, because of the duties which are imposed in the dye schedule, 7 cents a pound and 60 per cent ad valorem.

Mr. MOSES. That being the case, I can well reserve what I have to say until the embargo matter comes up to-morrow.

Mr. SMOOT. Four cents a pound simply compensates the American manufacturer of yarns which must of necessity be dyed with that dye.

Mr. LENROOT. Just for information, I would like to know what forms of dyes there are other than vat dyes.

Mr. SMOOT. All aniline dyes, all colors, blacks and blues, colors of all kinds. Vat dye is a very disagreeable form of dye. It is very costly. No dyer likes to use it.

Mr. LENROOT. What I meant to ask is whether all dyes are used in vats?

Mr. SMOOT. No; they are not all used in vats. The vat the Senator is thinking of I suppose is the old vat in which they used to dye when they used to dye with indigo blue. All that is done away with. Alizarin dyes took the place of indigo blue. No one wants to dye with indigo, because of the fact that that is a vat dye. Wherever they use it they have to use it as a vat dye, and it is so designated. A shirting colored other than by the vat dye process will not stand the sunshine or washing. If your colored shirt begins to fade, you may know that the color was not dyed in a vat dye; or if it was, it was dyed by somebody who did not know how to dye.

All the 4-cent duty means is that we have figured the additional rates given in the dye schedule; that is, they are increased to 7 cents a pound and 60 per cent ad valorem, and we figure just how many pounds it takes of each of the vat dyes to dye 100 pounds of yarn, and then we have divided that so as to determine the rates that will be necessary upon the cloth to cover that additional rate on dye.

Mr. POMERENE. Mr. President, the Senator has stated that this is a sort of a compensatory duty. Is there anything in the present law similar to this particular duty?

Mr. SMOOT. No; there is not.

Mr. POMERENE. How was that situation met under the Underwood law?

Mr. SMOOT. The situation has changed in this way: Under the existing law those dyes come in at a very much lower rate. This bill provides, as I said, 7 cents a pound and 60 per cent ad valorem, and under existing law the rate is 35 per cent, as I remember. It is less than half the proposed rate. No doubt the Senator from New Hampshire and others will discuss the rates provided in the bill on these dye items. I will admit to the Senator that under existing conditions the present rate on those dyes is not sufficient, if we are going to maintain the industry in the United States. As far as I am concerned, I voted for the high rate of 7 cents a pound and 60 per cent ad valorem because I wanted them protected without any embargo whatever. I want the embargo defeated, and I shall vote against it.

Mr. POMERENE. Will that duty operate as an embargo?

Mr. SMOOT. No; in many cases it will not. In fact, I will say that in the majority of cases it will not.

The VICE PRESIDENT. The question is on agreeing to the amendment as modified.

Mr. LODGE. Mr. President, I am not prepared to go into the details of this particular proviso, but it is a compensatory duty, as the Senator from Utah [Mr. SMOOT] has already pointed out, and very important to the industry.

The Senate has seen fit to reject the committee amendment. I am afraid that may have a very serious effect upon the industry, but certainly there ought to be no question whatever about giving compensation in some form, even with these reduced rates, to the cotton industry, because the rates on dyes, whatever form may be finally adopted, are extremely heavy.

The State of Massachusetts, according to the last figures I have been able to get, has 11,206,855 spindles. The next States are South Carolina, with 4,949,000, and North Carolina, with 4,622,000. Massachusetts alone has more spindles than both those States. It is therefore an industry of immense importance to the people of my State, for many thousands are employed in it. It is one of the great industries of the United States, and I feel that in this bill, in which we have given very large and generous protection to all the agricultural interests, certainly these great textile industries ought to have a fair recognition.

It is impossible to have a protective bill of any kind unless there is protection for all. We can not have protection for one class of industry or production and not have it for others. We must have either free trade for all or protection for all. I have

been endeavoring to give what seems to me suitable protection and to stand by the committee in their efforts to do so.

I now find that it seems to be determined by the Senate to cut this great industry very severely indeed, and I sincerely hope that they will not carry it so far as to deprive us of even a compensatory duty for the heavily dutied dyes used.

I shall find occasion to say something further about the other rates when the bill gets into the Senate.

Mr. WALSH of Montana. Mr. President, I do not see the Senator from Utah [Mr. SMOOT] here, but I wish somebody would tell me what vat dyes are, as distinguished from other dyes, and why there should be a compensatory rate as to vat dyes and no compensatory rate as to dyes that are not vat dyes. I would like to be able to vote intelligently on this amendment.

Mr. LODGE. I am not an expert on the question of dyes, but I think these apply only to yarns.

Mr. WALSH of Montana. Yes; the paragraph deals with yarns.

Mr. LODGE. I think the Senator will find the question of the fine dyes taken up when we come to the rates on cloth. But the Senator from Utah can reply to the question much better than I can, which is, Why should we give compensatory duties for vat dyes and not for other dyes, and at this stage it seemed to me they were not involved?

Mr. SMOOT. They are involved in this amendment.

Mr. WALSH of Montana. The amendment reads:

That when any of the foregoing yarns are printed, dyed, or colored with vat dyes, there shall be paid a duty of 5 per cent ad valorem in addition to the above duties.

Of course, that means that if they are dyed with dyes other than vat dyes they shall not carry that duty. What I want to know is why there should be a compensatory duty in the case of vat dyes and not a compensatory duty in the case of dyes of another character.

Mr. SMOOT. I have just taken 15 minutes of the time of the Senate to explain that.

Mr. WALSH of Montana. I was following the Senator quite closely in what he said, but I had no answer to that inquiry.

Mr. SMOOT. If you will take an aniline dye, all you have to do is to have hot water in your dye washer, and it runs through rollers just as fast as the cloth can be taken through a roller, and it runs around and around until it collects dye enough to make it the color desired. You put in, generally, a string of eight pieces, and during the day you can dye, perhaps, an aniline red four or five strings in one of the machines. But when you come to a vat dye, you have to sour it; it has to lie there for days and days, and you have to get it out, and when you get it out you have to treat it in an entirely different manner. The work with a vat dye compared with the work with an aniline dye is like giving 10 days to 1 in dyeing exactly the same number of yards.

Mr. LODGE. It is a much more elaborate process.

Mr. SMOOT. Very much more; and a dirty process, besides.

Mr. WALSH of Montana. The explanation is not very illuminating or else I am exceedingly dull. However, that is neither here nor there.

Mr. LODGE. That is not the fault of the Senator from Utah.

Mr. WALSH of Montana. No; he is not in any sense responsible for it, either one way or the other. But that is not the question. The aniline dyes go in, no matter what the process. If it is the rolled process, the aniline dyes are used. If it is the vat process, aniline dyes are used. There is no more labor, according to the statement of the senior Senator from Utah, involved in the use of the vat dyes in the process. It has not been disclosed, however, that the compensatory duty, if it is a compensatory duty, so far as dyes are concerned, is not just as much needed in the one process as it is in the other.

Mr. SMOOT. The existing rate on these dyes I have not looked up lately, but I think it is 35 per cent. Under the pending bill it is 7 cents a pound and 60 per cent ad valorem.

Mr. UNDERWOOD. I did not gather from the Senator's explanation about the vat dyes anything to show that there is any very material difference in the cost of making yarns by the vat process in England and in the United States.

Mr. SMOOT. But England does not have to pay a duty on the dyes.

Mr. UNDERWOOD. We may not, either.

Mr. SMOOT. I think we will. I will say to the Senator that if the rate provided for in paragraph 26 of the bill is not agreed to and these rates are not increased above what they are to-day, there will be no necessity for this rate at all, and we shall ask that the vote by which that rate was agreed to be reconsidered and then ask that it be disagreed to.

Mr. WALSH of Montana. Did the Senator say they do not pay any duty on dyes in Great Britain?

Mr. SMOOT. They may pay some duty now, but they have not in the past been paying any duty.

Mr. WALSH of Montana. They have practically an embargo.

Mr. SMOOT. Just as we have an embargo here, but they do not make the vat dyes in England, they have to get them from Germany.

Mr. WALSH of Montana. I was not speaking of that; I was calling attention to the statement of the Senator that they do not pay a duty on dyes in Great Britain.

Mr. SMOOT. There is an embargo, but when they get what they want there they are not compelled to pay any duty. They can not ship any goods into England unless they get permission.

Mr. WALSH of Montana. I was just directing attention to the statement of the Senator from Utah that they do not pay any duty on dyes in Great Britain.

Mr. SIMMONS. Mr. President, I want to ask the Senator from Utah a question. It seems that if vat dyes are used for coloring the yarns mentioned here, instead of some other dyes, 5 per cent ad valorem is added to the duty.

Mr. SMOOT. Four per cent.

Mr. SIMMONS. Five per cent as proposed by the House, and it is proposed by the committee to make it 4 per cent. I would like to ask the Senator what per cent of the entire cost of the cloth or yarn is in the cost of the dye ordinarily used?

Mr. SMOOT. Of the vat dyes?

Mr. SIMMONS. Yes.

Mr. SMOOT. In some cases it is as high as 15 per cent, but generally it is about 12½ per cent of the whole cost of the goods.

Mr. SIMMONS. The Senator thinks, then, that the cost of the vat dye, if it is used, would not be 5 per cent ad valorem of the value of the product, but might be more than 5 per cent?

Mr. SMOOT. I know it is more than 5 per cent, but all we are doing here, I will say to the Senator, is to give a compensatory duty on the increase of the rate of duty that is imposed upon the vat dyes. There is no duty on the vat dyes that Germany makes or in Germany.

Mr. SIMMONS. I was rather inclined to think the Senator had given more than the full value of the dyes.

Mr. SMOOT. I will say to the Senator it is 4.2 in the compensatory duty, taking the average of the cost of all the colors.

Mr. SIMMONS. I was advised that 3 to 4 per cent would cover the value of the dyes.

Mr. SMOOT. Four and two-tenths per cent, and we made it 4 per cent.

The VICE PRESIDENT. The question is on agreeing to the committee amendment as modified.

The amendment was agreed to.

The next amendment of the Committee on Finance was, on page 121, after line 22, to strike out:

Any of the foregoing yarns, if combed, shall pay in addition to the rates of duty provided in the preceding paragraph, if exceeding No. 9 and not exceeding No. 40, 1 cent per pound; if exceeding No. 40, 2 cents per pound.

Mr. SMOOT. Mr. President, may I offer just a word of explanation? I am sure no one will object to the amendment. It provides for an additional duty on combed yarn. If the Senate will notice, we added that in paragraph 901, after the word "colored," so as to make the duty apply to combed just the same as colored, and give them no extra duty.

The VICE PRESIDENT. The question is on agreeing to the committee amendment.

The committee amendment was agreed to.

The next amendment was, on page 122, line 4, before the words "per cent," to strike out the figure "5" and to insert "10," so as to read:

Cotton waste, manufactured or otherwise advanced in value, cotton card laps, sliver, and roving, 10 per cent ad valorem.

Mr. LENROOT. Mr. President, this is a very small matter, but of cotton waste the imports, under the present duty of 5 per cent, in 1920 amounted to 500 pounds, and yet the committee proposes to double the rate. Of course, the committee can not justify it. It must have been on the theory that "we are making increases; so let us increase everything." As I said, cotton waste is not a very important matter, but I would not like the fact to go before the country that the committee had doubled a rate where there are no importations and where it is admitted there is no need for any protective duty.

Mr. SMOOT. Mr. President, will the Senator yield?

Mr. LENROOT. I yield.

Mr. SMOOT. I think the Senator is right. This only refers to cotton waste, but that is not all the duty applies to. Cotton waste does not amount to anything at all. All the importations do not amount to anything, even if we had the present 5 per cent rate; but card laps, sliver, and roving do amount to something, because all they would have to do would be to import the rovings and the sliver and the laps into this country, particularly the first two named, and just put them on a spinning jenny and spin them into yarn and they would have the yarn.

Mr. LENROOT. I spoke of cotton waste. Now let us take the laps, sliver, and roving that the Senator mentioned. What were the importations of laps, sliver and roving under the present 5 per cent duty? The Tariff Information Survey shows no imports in 1921. In 1920, while the domestic production was 4,260,000 pounds, valued at $1,956,000, the imports of all those products amounted to only 100,000 pounds with a value of $31,000. Does the Senator think that makes a showing for increasing any duty or doubling the present rate?

Mr. SMOOT. With the rates of duty that are now existing we have just about the same as the present law and in some cases, I think, much less. When we take into consideration the duty upon long-staple cotton I do not know whether it could come in or not.

Mr. UNDERWOOD. If the Senator will allow me, he said several times that these rates would affect all long-staple cotton. There is a comparatively small portion of the rates here that are affected by long-staple cotton.

Mr. SMOOT. I am not saying how many, and I do not want the Senator to think that I did.

Mr. UNDERWOOD. The rates on these particular things are not affected by long-staple cotton at all. These are waste products.

Mr. SMOOT. So far as that is concerned, sliver and roving and laps could be of long-staple cotton just as well as any other kind.

Mr. UNDERWOOD. It is not a question of cotton. These are waste products.

Mr. SMOOT. Oh, no; card laps and sliver and roving are not waste products.

Mr. UNDERWOOD. Oh, yes; they are.

Mr. SMOOT. Oh, no; not at all.

Mr. LODGE. Roving is not a waste product.

Mr. UNDERWOOD. Cotton waste is a waste product and the others are in that class except that they can be spun and cotton waste can not.

Mr. SMOOT. I want to state to the Senator from Wisconsin what the difference is between the cotton and the sliver and the roving and the laps. That means that the cotton itself has passed through the cards and the loss that comes through the cards and the various processes, such as breakdowns, from the beginning to the last, and there is always a waste involved. I would a thousand times prefer, as a manufacturer, to allow roving and sliver to come in than the cotton itself. When the stage of roving or sliver is arrived at, or when the stage of laps is arrived at, all the waste I have mentioned is eliminated. All they have to do is to have the size of spool that would fit the mule in this country and take the spool with roving upon it and put it upon the mule and begin to sp'n it into yarn.

Mr. LENROOT. Then why does it not come in under the 5 per cent rate?

Mr. SMOOT. I do not know why it does not come in.

Mr. LENROOT. The Senator knows the Tariff Commission made the statement that laps, sliver, and roving ordinarily are not articles of commerce at all owing to the difficulty of handling them; so they do not come in and they are not coming in, and yet it is proposed to double the duty.

Mr. LODGE. Certainly we propose to do that, because we do not want to make it worth while to make imports in that roundabout way. Let them bring it in in the finished form.

Mr. LENROOT. But they are not coming in.

Mr. LODGE. That has nothing to do with it.

Mr. SMOOT. They could not come in since the rates of freight from the foreign countries over here have been as high as they have been since the war. They could not have come in under those circumstances. On these very items the Payne-Aldrich rate is 20 per cent.

Mr. LENROOT. The rates of freight in 1921 were half what they were during the war, and there were not enough of these products came in to be described under the report of imports for 1921.

Mr. SIMMONS. Mr. President, I suggest to the Senator from Wisconsin that the 100,000 pounds to which he referred a little while ago came from the Philippine Islands.

Mr. LENROOT. Yes; every pound of it came from the Philippine Islands.

Mr. SMOOT. I want to call attention to another matter. We have now a duty upon the long-staple cotton. They can make laps and roving and sliver from the long-staple cotton. Remember, too, they have 7 cents a pound on the long-staple cotton.

Mr. LENROOT. In 1921 we had a duty on long-staple cotton of 7 cents a pound, and yet none came in.

Mr. President, I wish to vote for rates that are protective, but I do not propose to vote for such increases as these, which are not justified by any member of the committee and which can not be justified by the quantity of imports that are coming in. Instead of such rates as this being something to the credit of the Republican Party, they will tend to damn the Republican Party if they are put into the bill.

Mr. POMERENE. Mr. President, will the Senator yield for a question?

Mr. LENROOT. Yes; I yield.

Mr. POMERENE. It would seem from the course of this debate that nothing can be gained by way of protection from an increase in this rate?

Mr. LENROOT. Nothing.

Mr. POMERENE. And that nothing can be gained by way of revenue by reason of this increased rate?

Mr. LENROOT. Nothing.

Mr. POMERENE. Then, what is the reason for it and who asked for it?

Mr. LENROOT. I do not know.

The VICE PRESIDENT. The question is on the committee amendment.

Mr. LENROOT. I ask for the yeas and nays.

The yeas and nays were ordered, and the reading clerk proceeded to call the roll.

Mr. HARRISON (when his name was called). Making the same announcement as before in reference to my pair and its transfer, I vote "nay."

Mr. JONES of Washington (when his name was called). Making the same announcement as before with reference to my pair and its transfer, I vote "nay."

Mr. STERLING (when his name was called). Making the same announcement as before relative to my pair and its transfer, I vote "nay."

Mr. WALSH of Montana (when his name was called). Transferring my pair with the Senator from New Jersey [Mr. FRELINGHUYSEN] as on the previous vote, I vote "nay."

Mr. WATSON of Indiana (when his name was called). Making the same announcement as before as to my pair and its transfer, I vote "yea."

The roll call was concluded.

Mr. CAMERON. I have a pair with the junior Senator from Georgia [Mr. WATSON]. I transfer that pair to the senior Senator from Connecticut [Mr. BRANDEGEE] and vote "yea."

Mr. McKINLEY. Making the same announcement as before with reference to my pair and its transfer, I vote "yea."

Mr. HALE. Making the same announcement as before with reference to my pair and its transfer, I vote "yea."

Mr. TRAMMELL. Transferring my pair with the Senator from Rhode Island [Mr. COLT] to the Senator from Texas [Mr. CULBERSON], I vote "nay."

Mr. JONES of New Mexico. Making the same announcement as on the previous vote in reference to my pair and its transfer, I vote "nay."

Mr. ROBINSON. Transferring my pair with the Senator from West Virginia [Mr. SUTHERLAND] to the senior Senator from Arizona [Mr. ASHURST], I vote "nay."

Mr. NEW. Repeating the announcement which I made on the previous ballots to-day in reference to the transfer of my pair, I vote "yea."

Mr. CURTIS. I am requested to announce the following pairs:

The Senator from Delaware [Mr. BALL] with the Senator from Florida [Mr. FLETCHER];

The Senator from Vermont [Mr. DILLINGHAM] with the Senator from Virginia [Mr. GLASS];

The Senator from New Jersey [Mr. EDGE] with the Senator from Oklahoma [Mr. OWEN]; and

The Senator from North Dakota [Mr. McCUMBER] with the Senator from Utah [Mr. KING].

The result was announced—yeas 25, nays 28, as follows:

YEAS—25.

Bursum	Curtis	Hale	Keyes
Calder	Ernst	Johnson	Ladd
Cameron	Gooding	Kendrick	Lodge

McKinley	New	Smoot	Willis
McLean	Newberry	Spencer	
McNary	Oddie	Warren	
Moses	Phipps	Watson, Ind.	

NAYS—28.

Borah	Harrison	Overman	Stanley
Capper	Heflin	Pomerene	Sterling
Caraway	Jones, N. Mex.	Ransdell	Trammell
Cummins	Jones, Wash.	Robinson	Underwood
Dial	Kellogg	Sheppard	Wadsworth
Gerry	Lenroot	Simmons	Walsh, Mass.
Harris	McCormick	Smith	Walsh, Mont.

NOT VOTING—43.

Ashurst	Fernald	Myers	Reed
Ball	Fletcher	Nelson	Shields
Brandegee	France	Nicholson	Shortridge
Broussard	Frelinghuysen	Norbeck	Stanfield
Colt	Glass	Norris	Sutherland
Crow	Harreld	Owen	Swanson
Culberson	Hitchcock	Page	Townsend
Dillingham	King	Pepper	Watson, Ga.
du Pont	La Follette	Pittman	Weller
Edge	McCumber	Poindexter	Williams
Elkins	McKellar	Rawson	

So the committee amendment was rejected.

Mr. SMOOT. Mr. President, I ask unanimous consent that when the Senate concludes its session to-day it recess until to-morrow at 11 o'clock a. m.

The VICE PRESIDENT. Is there objection? The Chair hears none, and it is so ordered. The Secretary will state the next committee amendment.

The next amendment of the Committee on Finance was, on page 122, paragraph 902, line 6, after the word "sewing," to strike out the word "thread" and to insert "thread, one-half of 1 cent per hundred yards," so as to read:

PAR. 902. Cotton sewing thread, one-half of 1 cent per hundred yards.

Mr. SMITH. Mr. President, before the vote is taken on this committee amendment, I desire to submit some observations in regard to the sewing-thread schedule. I do not think that the Senate generally understands the situation.

The production in the United States of cotton sewing thread increased from 26,507,000 pounds, valued at $22,917,000, in 1914, to 58,096,000 pounds, valued at $57,125,000, in 1919. The industry, therefore, more than doubled its output in the course of five years.

Exports of cotton sewing thread are considerably larger than imports. This can not be shown precisely, owing to the fact that in both export and import statistics cotton sewing thread is lumped together with crochet, darning, and embroidery cottons. Inclusive exports in 1921 were valued at $2,055,328, as compared with $1,920,125 for imports. Exports, however, are mainly of sewing thread, and imports of crochet, darning, and embroidery cottons. The American manufacturer of cotton sewing thread is therefore a substantial exporter and has practically no competition from abroad. In the face of these facts, is an increase in duty justified?

The duty on cotton sewing thread in the act of 1913 is 15 per cent ad valorem. In the Senate bill it is proposed to increase it to 25 per cent ad valorem.

It may be noted that the Senate rate amounts to a straight 25 per cent ad valorem. The specific rates will not apply under present or pre-war prices, and the maximum ad valorem, stated as 45 per cent, is just an extra flourish that means nothing, as it can never come into operation.

In 1914 cotton sewing thread was generally put up on 200-yard spools; these were wholesaled at 55 cents a dozen, less 12½ per cent, less 2½ per cent, equal to 3.92 cents net per spool; this 200-yard spool retailed at 5 cents. Starting with August, 1917, cotton sewing thread has been generally put up on 150-yard spools, and in 1922 these are being wholesaled at 60 cents a dozen, less 12½ per cent, less 2½ per cent, or 4.29 cents net per spool; this 150-yard spool now retails at 5 cents. In other words, you are getting about 33⅓ per cent less thread at the same price than you got before this innovation went into effect; that is to say, cotton sewing thread was being sold at wholesale in this country in 1914 at 1.96 cents per 100 yards and in 1922 at 2.86 cents per 100 yards.

A duty of one-half cent per 100 yards, with a minimum of 25 per cent and a maximum of 45 per cent ad valorem, means that sewing thread invoiced at 1.11 cents or less per 100 yards would pay 45 per cent ad valorem; valued at 1.12 to 1.99 cents per 100 yards, it would pay one-half cent per 100 yards; valued at 2 cents or more per 100 yards, it would pay 25 per cent ad valorem.

Mr. SMOOT. Mr. President, of course the Senator knows that the committee is going to move, when it gets a chance, to insert "35" instead of "45" per cent.

Mr. SMITH. Mr. President, in reply to that I will say that a close study of the cost of this thread and the manner in which it is retailed shows that 35 per cent would mean as complete a monopoly as 45 per cent does now, because the specific and the ad valorem duty would result in the straight 25 per cent, for the reason that there is none sold at a price that would justify the 45 per cent.

Mr. SMOOT. I admit, of course, that 25 per cent is the minimum rate, and they will all fall under that rate.

Mr. SMITH. Why, to be sure; that is what it all means; but I want this to go into the RECORD, anyway.

Mr. SMOOT. I wanted, as far as I was concerned, to have a maximum because of the fact that if the price all went to pieces at some time we did not want a higher rate than 35 per cent; but to-day, of course, they will all fall within the 25 per cent.

Mr. SMITH. To be sure; and under the monopoly that exists it is hardly probable that the price will go to pieces.

Since no sewing thread is imported as low as 2 cents per 100 yards, most of it being around 3 cents per 100 yards, it is clear that paragraph 902 imposes a duty of 25 per cent ad valorem straight. Why, then, the superfluous wording?

No. 24 six-cord cotton sewing thread, a typical count, is made of 50's cotton yarn and measures 6,760 yards per pound. The American wholesale price of this variety was therefore 3.92 multiplied by 6,760 and divided by 200, which would be equal to $1.325 in 1914, and 4.29 multiplied by 6,760 and divided by 150, which would equal to $1.934, in 1922. At these prices it would seem that manufacturers ought to be able to make a substantial profit, and the fact that the English thread trust—J. & P. Coats—has built mills in this country shows that the domestic situation is favorable to such profits; and yet it is proposed to increase the rates under which the industry has developed to a point where it exports several times as much as it imports.

This increase in rates of duty, shown to be unnecessary for cotton sewing thread, can not be justified on the ground that the paragraph also includes the special soft-spun yarns, used for handwork, known as crochet, darning, and embroidery cottons. Imports of the latter are mainly "D. M. C. cottons," made by the Dolfuss-Meig Co., of Mulhausen, Alsace, and invariably sell at a higher price than the nearest comparable domestic "cottons."

During the life of the act of 1909 the duty on cotton sewing thread and "cottons" averaged 23.38 per cent ad valorem on an average unit value of 2.65 cents per 100 yards. The minimum rate of 25 per cent ad valorem in the Senate bill is an increase over the unnecessarily high rates of the Payne tariff.

Now the Senator proposes to offer an amendment. I will wait to see just what effect his proposed amendment will have.

Mr. SMOOT. Mr. President, on page 122, line 12, I move to strike out "45" and insert "35."

The VICE PRESIDENT. That point in the bill has not yet been reached.

Mr. SMOOT. That is true. I want that amendment pending, however, because of the fact that the Senator referred to the maximum rate of 45 per cent, and that 45 per cent will be decreased to 35 per cent. I want to say to the Senator that in no case will the specific duties named here apply, but the minimum rate of 25 per cent will apply.

If I followed the Senator from South Carolina correctly, I think the exports he gave in the case of thread were absolutely correct. The comparison of rates is as follows:

The Senate bill, providing for one-half of 1 cent per 100 yards, has also a provision with a minimum of 25 per cent and a maximum of 35 per cent. The 35 per cent was put in there at my request because if the price of thread did decrease as low as it was before the war I would want some maximum rate—not only a minimum rate but a maximum rate—and that is why I thought it ought to be at least 35 per cent.

Mr. SMITH. Mr. President, may I ask the Senator from Utah a question? Under the straight ad valorem of 15 per cent under the tariff act of 1913, this business, according to the Tariff Commission's report and the history of the business, prospered greatly. To-day it is a notorious fact that the manufacture of sewing thread is absolutely in the hands of a monopoly, and they have built factories in this country, though the parent factories are in foreign countries, and under the 15 per cent ad valorem the business grew and prospered, and they are exporting abroad from this country more than they are importing. They not only have done that, but they have reduced the count—that is, the number of yards to the spool—to a point where 33⅓ per cent less thread is sold for 5 cents now than under the previous method of merchandising this article.

Mr. SMOOT. That does not make any difference with this bill.

Mr. SMITH. I know it makes no difference.

Mr. SMOOT. This bill is based upon 100 yards. I do not care whether they only put in 80 yards or not.

Mr. SMITH. But it does do this, and this is the point I make: Under the control of the monopoly they are getting as much for 150 yards as they had previously gotten for 200 yards, and there was no competition to force them back to selling 200 yards for 5 cents. With their notorious prosperity under the 15 per cent rate, what justification is there now for imposing a rate of 25 per cent with a maximum of 35, when the record shows that there perhaps was not a more prosperous business than the sewing-thread business under the 15 per cent rate?

Mr. STERLING. Mr. President——

Mr. SMOOT. Just a moment, Mr. President. I want to say that not only was the thread manufacturer in this country prosperous under the 15 per cent rate during the war but every cotton manufacturer was exceedingly prosperous, as was nearly every other business in the United States, as far as that is concerned. If you take the peak price of cotton goods in April of 1920—that is the month when the peak price was reached—and compare it with the price on May 22, 1922, you will find that in many cases to-day's prices are not one-quarter of what they were in April of 1920.

Mr. SMITH. But the Senator knows that the prices now are even higher than the pre-war prices, and the amount that they sell for a given price is 33⅓ per cent less.

Mr. SMOOT. Oh, yes, Mr. President; and so is cotton higher. Cotton to-day is 22 cents a pound, and at the time the war broke out they were begging to sell it for 9 and 10 cents, and when the war broke out we had a propaganda from one end of this country to the other: "Buy a bale of cotton at 6 cents a pound." It started with the President of the United States.

Mr. SMITH. Yes, Mr. President; and that was because the producers of cotton had no way of controlling their price prior to that terrible break, and were without any resources. Had they had a monopoly of it, and the privilege of fixing the price, as these gentlemen have, they would have had the resources back of them to tide over any depreciation in price; and if they had had the power to fix the price, as these people do, we would not have had the "buy a bale" movement. From the record of this company it is shown that from its inception it has been prosperous, and it has met every change in prices by cutting the quantity, and letting a given spool with 33⅓ per cent less cotton on it sell for the same price as the original 200-yard spool.

Mr. JONES of New Mexico. Mr. President——

Mr. SMOOT. The statement just made by the Senator from South Carolina has no reference whatever to what I had in mind or what I said, and in saying it I do not want it to be understood that I justify the price of cotton after the war broke out, when it was being sold at 6 cents a pound. I am only answering the Senator's statement that this concern was prosperous by calling attention to the fact that not only was this concern prosperous but all of the other concerns were prosperous; but some of the very prosperous concerns during the war, that put back into their property all that they had and borrowed money besides, find themselves in a very unhappy condition to-day. I stood upon the floor of the Senate and called attention to the fact that when the war was over they would find that the brick and mortar and the machinery that they had bought there with those exceedingly high profits, and no doubt paid the income tax and the excess-profits tax upon them, would be a heavy load for them to carry after normal conditions returned, and it has turned out just that way.

Mr. JONES of New Mexico. Mr. President, the Senator from Utah referred to the present high price of cotton. The Senator certainly does not mean that that should affect the amount of duty upon this manufactured thread, does he? Does not the foreigner have to pay the increased price for his materials just the same as the American manufacturer? And, after all, is it not simply a question of the difference in cost of manufacture pure and simple, the foreigner being penalized with transportation rates upon the raw material, and the American manufacturer having that advantage?

Mr. SMOOT. I will say to the Senator from New Mexico that we thrashed that out here this morning, and I do not want to take the time of the Senate now to go all over it. I do not think there is any necessity for doing it.

Mr. JONES of New Mexico. The Senator a while ago referred to the fact, in this connection, that the price of cotton was higher now than it was at some prior time, and the Senator evidently mentioned that in connection with this proposed increase in duty; and I am asking the Senator how he reasons out that that has anything to do with it.

Mr. SMOOT. The Senator did not hear what was said and the reason I gave or he would not make that statement. The Senator from South Carolina said that these people were very prosperous. I referred to what the price was at the peak, in 1920, and what the prices were to-day, and did not say anything in regard to the duty. The Senator then remarked that the prices were less to-day than they were, but that they were not as high as they were before the war. In answer to that I said, "No; and the cotton is higher than it was before the war." The rate of duty was not involved in it at all.

Mr. STERLING. Mr. President, I want to ask the Senator from Utah a question. I have compared this with the duty imposed by the act of 1909, the Payne-Aldrich Act, and it would appear that while the specific duty is the same, the minimum ad valorem is higher in this bill than it was under the Payne-Aldrich Act.

Mr. SMOOT. The rate in the Underwood law was 15 per cent. The Senate committee bill has a minimum of 25 per cent, and that will be the rate that will apply in every case. Under the act of 1909 thread on spools, rolls, or balls was taxed at 6 cents a dozen, where the spools did not exceed 100 yards, with a minimum of 20 yards, and the equivalent ad valorem was 43 per cent.

Mr. STERLING. It also provides:

Provided further, That none of the foregoing shall pay a less rate of duty than 20 per cent ad valorem.

Whereas the minimum is 25 per cent, as now proposed.

Mr. SMOOT. But at that time 6 cents a dozen on 100 yards was a great deal more than 20 per cent. The equivalent ad valorem is 43 per cent.

Mr. STERLING. If the Senator will permit me, it seems to me the specific duty is exactly the same in each case. The act of 1909 provides:

Spool thread of cotton, crochet, darning, and embroidery cotton on spools, reels, or balls, containing on each spool, reel, or ball not exceeding 100 yards of thread, 6 cents per dozen.

That is the equivalent, certainly, of cotton, sewing thread, and so forth, one-half of 1 cent per hundred yards.

Mr. SMOOT. The reason we made the ad valorem duty higher in 1909 was because of the fact that prices were very much less, and the specific duty then, considering the lower price, made the equivalent ad valorem very much higher.

I do not think there is anything further I have to say in regard to this question.

Mr. LENROOT. I would like to ask the Senator if he has any information as to the proportion of the thread imported of No. 60 and over?

Mr. SMOOT. I do not know whether I have that or not. All spool thread is made from the long-staple cotton.

Mr. LENROOT. It will all take the compensatory duty.

Mr. SMOOT. All of it will take the compensatory duty, because of the fact that this thread itself is a very fine thread, and it is spun and twisted into a thread that is used in everyday life.

Mr. LENROOT. I notice that of the imports of thread only about half, under the present law, get the compensatory duty. Can the Senator explain why?

Mr. SMOOT. Then I suppose it is all the other kind, such as embroidery thread, and special kinds of thread which come in.

Mr. LENROOT. Cotton sewing thread, crochet, darning, embroidery, and knitting cotton do not take the compensatory duty?

Mr. SMOOT. In many cases they will not.

Mr. LENROOT. On spools, rolls, or balls. Most of that seems to have taken the duty.

Mr. SMOOT. All the thread used on spools in everyday life takes it, but some of them are the coarser threads, entirely different from that put on the spools. Spool thread is generally for home use.

Mr. LENROOT. The imports in 1921 of these threads figured roughly about half; about half take the compensatory duty and half do not.

Mr. SMOOT. I should say that would be about right. But this thread is made in the United States. American production, of course, takes in all of the finer kinds, even No. 8, the coarser used in the home.

Mr. LENROOT. Why?

Mr. SMOOT. Because that is not one thread. It is at least six ply, and they are twisted together. There are, of course, few threads that are coarser.

Mr. LENROOT. I find from the tables of imports and exports for 1921 that while we imported only about $1,700,000 worth of threads of all classes covered by this paragraph, which

includes the compensatory duty of 7 cents a pound for about one-half of it, at the same time we exported abroad $2,053,000 worth of this thread. In the face of that, I would like to ask the Senator from Utah how the increase in duty could be justified, where we are exporting a great deal more than we are importing under the present tariff law.

Mr. SMOOT. I expected the Senator from New Jersey to be here with a detailed statement as to this particular item. I will say right now that I have not a detailed statement of the cost, and why the committee put the rate at a minimum of 25 per cent.

Mr. LENROOT. It will be remembered that it is not this rate alone that applies, but the compensatory duty which will be provided in paragraph 905b will add 10 cents a pound to every pound of this thread that is made out of long-staple cotton. In view of that fact, it does not seem to me that this increase is justified. The present rate is 15 per cent, and if made out of long-staple cotton, 7 cents a pound is added as a specific duty. It is now proposed to raise it to 25 per cent, plus 10 cents a pound, the compensatory duty, when made out of long-staple cotton.

Mr. SMITH. May I suggest to the Senator from Wisconsin that the expert has worked it out upon the basis of the duty now existing, and the 10 cents a pound will add an additional 5 per cent, which, added to the 25 per cent, will make 30 per cent, just exactly double the present duty.

Mr. LENROOT. On what theory, may I ask the Senator from Utah, is this increase justified, in the face of these figures?

Mr. SMOOT. There were presented before the committee the invoices of this yarn coming from a foreign country. It was not a sworn statement as to cost, but there was a statement made through a committee of the manufacturers themselves as to what it really cost to make it in this country, and pay the 7 cents a pound duty upon the long-staple cotton and upon the basis of a dollar a pound it required this rate to make the differential.

Mr. McLEAN. I think the Senator from Utah is right in his statement that the testimony which was presented to the Finance Committee showed very clearly that this rate on thread was justified. As he has stated, the Senator from New Jersey has prepared himself to present for the committee the reason why we fixed this rate. I want to call the attention of the Senator from Wisconsin to the fact that we have not increased the specific rate.

Mr. LENROOT. The specific rates amount to nothing under present prices.

Mr. McLEAN. That may be so, and for that reason it is probable that the ad valorem is justified. I hope this paragraph may go over until to-morrow. It is a very important item. I know the Senator from New Jersey [Mr. FRELINGHUYSEN] is deeply interested in it, and I think that the rate is just fied. It is not a high rate. This thread is made from high-priced long-staple cotton, and the labor item is an important item. The ad valorem of 45 per cent, I think, is justified.

Mr. LENROOT. The rate contained in the paragraph is 45 per cent.

Mr. SMOOT. It is cut to 35 per cent.

Mr. LENROOT. The Senator stated 45 per cent.

Mr. SMOOT. I have already offered an amendment to cut it.

Mr. LENROOT. I am going to offer an amendment to reduce the rate of 25 per cent to 20 per cent. That would be an increase over the present rate of 33⅓ per cent. I think the committee amendment, however, is pending.

Mr. McLEAN. I ask the Senator from Utah if he has any objection to postponing a vote on this paragraph until to-morrow?

Mr. SMITH. I could not hear the request that was made.

Mr. McLEAN. I asked that the vote on this paragraph be postponed until to-morrow, because I know that other Senators who are not here are deeply interested in it.

Mr. SMOOT. Mr. President, the time has arrived in the consideration of this bill when no item can be put over, and Senators who are interested in schedules and paragraphs must be present when they are reached. I do not know that that notice has been given, but so far as I am concerned, as a member of the committee, I want it distinctly understood that from now on we are going right on with the schedules, and there will be no putting off because somebody is out of the city. But I will say to the Senator that I agree with him; the Senator from New Jersey has not received notice, and he wanted to be present when this schedule was taken up, and for that reason I have no objection to letting this item go over until to-morrow.

Mr. LENROOT. I withdraw my amendment for the present, then.

Mr. SMOOT. I will allow my amendment to be pending.

The PRESIDING OFFICER. The pending amendment is on line 6.

Mr. SMOOT. I thought that amendment had been agreed to, but it has not. So all amendments to that paragraph may go over until to-morrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

The next amendment of the committee was in paragraph 903, page 122, line 19, under the item "cotton cloth," to strike out the word "pound," the comma, and to insert the word "pound."

The amendment was agreed to.

The PRESIDING OFFICER. The Secretary will state the next amendment.

The READING CLERK. On page 122, line 24, the Senator from Utah proposes to strike out "100" and to insert "80."

The amendment was agreed to.

The next amendment of the committee was, on page 122, line 24, to strike out "9" and to insert in lieu thereof "15," so as to read:

Provided, That none of the foregoing, when containing yarns the average number of which does not exceed No. 80, shall pay less duty than 15 per cent ad valorem.

Mr. SMITH. Mr. President, I see no reason why we should increase that duty to 15 per cent.

Mr. SMOOT. Of course, I think it is due the Senate for me to make a statement and give the reason. The Senator says it is an increase. These changes are made so as to provide a scientific, straightforward increase as to number, and in every case there is a decrease in the ad valorem rate as reported by the committee.

Mr. SMITH. The Senator overlooks the fact that the action of the Senate this afternoon has been to lower all the previous counts and all the previous duties laid, and therefore to maintain the decrease in this paragraph will throw it out of line with the action of the Senate up to the present time. According to the pro rata that has been established, I propose that in place of the 15 per cent rate proposed it be reduced to 5 per cent.

Mr. SMOOT. Of course, that would throw it out of balance even worse than the Senator said it would be otherwise. Nine per cent would be the rate per pound that would equalize steps that have already been taken, and not 5 per cent.

Mr. SMITH. I will not offer an amendment in order to keep the exact ratio that the Senate has stood for, but will ask that the Senate committee amendment be rejected. That will leave the House rate of 9 per cent, which is in exact conformity with what we have done up to the present.

Mr. SMOOT. Mr. President, I want to make a brief statement to the Senate. It is one thing to decrease the rates on coarse yarns, but it is quite another thing to decrease rates on the paragraph now under consideration. I want to call attention now to the reasons why this rate was proposed. We do not want to be stampeded.

Paragraph 903 divides countable cotton cloth for dutiable purposes into classes according to condition, namely, in the gray and not woven figured; bleached; printed, dyed, colored, or woven figured. Progressive rates are provided for each class.

Certain countable cotton cloths representing the highest type of manufacture and entailing considerable labor expense in their production are provided with an additional rate under the provisions of paragraph 905a.

The present system of levying duties according to the average yarn count on cotton cloth is continued. The percentage of labor cost as compared to the total cost increases as the yarn contained becomes finer. The weave, the weight, the width, the yarn count, and the number of ends and picks per square inch, all affect the cost, but the average yarn count is in most instances the primary cost-determining factor, except in cases where the production of the cloth requires special or additional processes.

The specific rates will ordinarily not apply to present price conditions. I want the Senators to remember this statement, that the specific rates will ordinarily not apply to present price conditions, whether it be 15 per cent or whether it be 9 per cent. In this paragraph Senators will note that the rate is not to be less than 35 per cent ad valorem.

Specific rates will ordinarily not apply under present price conditions. At present and until more normal prices obtain

the minimum ad valorem rates will be imposed on imports. Now, just keep that in mind.

A direct comparison of the rates in this bill and act of 1909 is impossible. The basis for levying duties under the act of 1909 was according to thread count per square inch and weight per square yard, or according to the value per square yard, the average yarn count, the basis for assessment of duty under this bill, in no way controlling the rate of duty. The rates generally in paragraph 903 are lower than the rates applying to cotton cloth under the act of 1909.

I explained the reasons for these few differences where the rate was higher, because of the fact that the price within the bracket named, taking the higher rate in a few cases, the price just over the value of a half cent or cent brought it a little higher than the 1909 law.

In some instances, through the addition of the rate provided in paragraph 905a, the rates of duty under this bill will be higher than the rates of the act of 1909. But, of course, that is entirely on account of the duty of 7 cents per pound that has been agreed to upon long-staple cotton.

To contrast the duties on cotton cloth under the act of 1909, 1913, and the Senate bill, the Tariff Commission has prepared a table of 100 typical cotton cloths imported into the United States using maximum invoice prices of 1920.

I have here the samples selected by the Tariff Commission, the 100 samples referred to. The average rate of duty of these 100 samples is as follows:

	Per cent.
Act of 1909	37.26
Act of 1913	21.92
Senate bill	35.88

Now, Mr. President, in order that there may be no mistake I want to call attention again as I did this morning to the fact that these equivalent ad valorems are based upon the prices of 1920. If they had been based upon the prices of 1913, the equivalent ad valorems would have been very different. For instance, I call attention to the fact that the equivalent ad valorem under the Payne-Aldrich act on 1913 prices was 44.82 per cent. That is, on the 100 samples which I have just shown the equivalent ad valorem duty under the Payne-Aldrich law based on the prices of 1913 would have been 44.82 per cent, while under the proposed rates, on the same samples, with the prices of to-day, the equivalent ad valorem rate would be only 35.88 per cent. So we see that there is an actual decrease in ad valorem duty of 9 per cent. That does not mean 9 per cent of the rate. It means 9 per cent equivalent ad valorem duty—that is, the difference between 44.82 and 35.88, and it can be plainly seen that it is a decrease of 20 per cent.

Mr. SMITH. Does the Senator include in the average which he gave, of 35.88 per cent, the compensatory duties that enter into the cloths?

Mr. SMOOT. I do not. Why should I include it?

Mr. SMITH. Because most of the cloths imported include cloths made out of thread that would bear a compensatory duty.

Mr. SMOOT. If the Senator wants to know just what was the equivalent ad valorem duty under the 10 cent per pound imposed on long-staple cotton on the cloths, I could figure it out for him. I have not figured it out, but I can take every step in the whole schedule and tell what it is.

The effect of the rate in the present bill can be seen by the following statistics. I think I shall take the time of the Senate to call attention to these statistics and show by them what is happening under existing rates to-day in the importation of cloth.

Gray and not woven-figured, for the fiscal year 1910, there were imported 4,965,980 square yards, at a value of $494,927. For the calendar year 1914 there were 3,374,679 square yards, at a value of $448,902. For the calendar year 1921 there were 18,000,000—not 3,000,000—but 18,625,545 square yards, or an increase of almost 600 per cent, at a value of $3,835,105. That is only the gray and not woven-figured.

Of the bleached, in 1910 there were 19,033,718 square yards, valued at $2,363,690. In 1914 there were 15,617,374 square yards, valued at $2,783,262. In 1921 there were 19,471,545 square yards, valued at $5,287,299.

Colored or woven figured. Now we are coming into dress goods. We are getting into the class of goods that the eastern mills have to meet. These are not common goods made out of common yarn. These are the fancy woven goods. In 1910, for the fiscal year, there were imported 37,683,944 square yards, valued at $5,944,262. In 1914 there were 39,551,027 square yards, valued at $7,331,013. In 1921 the importations were 74,241,096 square yards, valued at $24,601,504, or an increase over and above the value in 1910 of nearly 500 per cent.

Mr. STERLING. Mr. President, the Senator now refers to imports. What were our exports of the same quality of goods? Has he the figures in regard to that matter?

Mr. SMOOT. Of the same quality?

Mr. STERLING. Yes.

Mr. SMOOT. We export but little of this quality of goods. There may be some exported to Canada, the Philippines, and Cuba. These are the finest goods, and here is where competition comes from foreign lands. We can ship ordinary common sheetings, as I said this morning, to China and to South America. We can ship them into Canada, but we do not export any considerable quantity of the kind to which I have been referring.

Mr. STERLING. Our competition, then, is mostly with Great Britain.

Mr. SMOOT. Mostly with Great Britain, France, and Germany.

Now, Mr. President, that is not all. I want the Senate now to consider these figures: During the calendar year 1921 there was an increase of nearly 500 per cent in the value of importations. What was it for the first four months of 1922? Let us see if there was any competition. Let us see what the present rates are doing to the American mills and American laboring men.

In January, 1922, for the one month, there were imported 16,086,754 square yards, valued at $4,346,869—16,000,000 yards imported—more than were imported during the whole year of 1914, and at a value of nearly twice as much. Is there no competition? In February, 1922, 17,529,305 square yards were imported, valued at $4,777,415.

Mr. LENROOT. Will the Senator yield to me?

The PRESIDING OFFICER (Mr. LADD in the chair). Does the Senator from Utah yield to the Senator from Wisconsin?

Mr. SMOOT. Yes.

Mr. LENROOT. Does the Senator know the numbers of the counts of the cloth?

Mr. SMOOT. No; I have not the numbers, but I will say to the Senator that they would all be of the higher count, as I stated to the Senator from South Dakota [Mr. STERLING]. Are importations dropping off? Let us see what happened in March, 1922. During that month there were imported 20,070,606 square yards, valued at $5,702,277.

Mr. STERLING. Mr. President, I wonder if the Senator from Utah has the figures showing the production in this country of that kind of cloth?

Mr. SMOOT. I can not tell, because the figures as to the production which I have include all kinds of cloth. I do not think the census differentiates as to particular kinds of cloth; but as to imports, the various classes are segregated according to the rate of duty, and the figures have to be recorded at the port of entry.

In April, 1922—we are getting right up to date—there were imported 12,144,302 square yards, valued at $3,479,723. For the four months of 1922 of this class of goods there have been imported 65,830,967 square yards, of a value of $18,306,264. Is that competition?

Mr. President, suppose the importations keep up at the same rate for the remainder of the year?

Now, I want to say that according to reports which I have received from buyers in France and in England and in Germany, if the purchases made by them are delivered this year the imports during the year of 1922 will be almost ten times what they have been in any previous year. It may be that the imports will fall off during the remainder of the eight months, but I do not know why they should do so.

Mr. McCUMBER. Mr. President——

The PRESIDING OFFICER. Does the Senator from Utah yield to the Senator from North Dakota?

Mr. SMOOT. I yield.

Mr. McCUMBER. The question of the Senator from South Dakota [Mr. STERLING] intimated, at least, either that we were not producing that class of goods which were so lavishly imported during the last few months or that we could not produce them; and I should like to have the Senator's statement as to that.

Mr. STERLING. Oh, no.

Mr. McCUMBER. I desire to have the Senator from Utah make it clear that those importations are competitive, and that we can produce those goods and do produce them.

Mr. STERLING. I will say to the Senator from North Dakota that I did not mean to imply any such thing. I understand clearly that we are manufacturing in this country the grade of goods referred to by the Senator from Utah [Mr. SMOOT].

Mr. SMOOT. I stated that these goods were being manufactured in New England, and they did not consist of plain woven cloth, and the importations are competitive.

Mr. McCUMBER. The question of the Senator from South Dakota was whether we manufactured the same kind of goods.

Mr. STERLING. No; I wanted to know what the production in this country was. I did not intimate that we did not manufacture them; but I wanted to compare the annual production in this country with the importations; that was all.

Mr. McCUMBER. Mr. President, it is quite clear that to the extent the foreign manufacturer supplies the domestic market the output of the product in the United States must be diminished.

Mr. SMITH. Mr. President, I think the information desired is obtainable by any Senator who will take the time to interrogate the Tariff Commission, that a great many of the kind of cloths of which the Senator from Utah [Mr. SMOOT] has spoken are not produced in this country.

Mr. SMOOT. Oh, well——

Mr. SMITH. Here [exhibiting] is a sample furnished by the Tariff Commission. It is a specimen of dotted Swiss. There is not a mill in America that is adapted to the production of that kind of cloth. That is also true of some of the other forms of goods of fine weave and of a certain form of lining that is made by Japanese mills. There is a certain gloss which is put on some of the finer goods by the mills abroad, constituting a field which we are not attempting at all to enter.

Mr. McCUMBER. Why are we not attempting it, let me ask the Senator from South Carolina?

Mr. SMITH. Because we find it more profitable to engage in the manufacture of some other form of goods.

Mr. McCUMBER. In other words, that means that we find it unprofitable to engage in the manufacture of these particular goods?

Mr. SMITH. The fact of the matter is, to answer the Senator from North Dakota, that with a protective duty there has not been any attempt on the part of our American manufacturers to enter this domain. They found it more profitable to engage in the manufacture of other forms of cotton cloth, not because the particular class of cloth is manufactured so cheaply abroad but merely because it is not profitable to set up the machinery in this country for its production.

Mr. McCUMBER. If the Senator from Utah will allow me, of course when a concern by reason of the lack of protection on the goods which it is manufacturing finds it unprofitable to continue their manufacture, it has to manufacture goods which are more profitable and it has to drop the manufacture of that class of goods which is unprofitable. That is the reason for the cessation of any particular line of manufacture.

Mr. SMITH. No; I think the Senator will find that the Swiss people have a process under which goods are produced which satisfy the trade better than the goods manufactured either in England or in America. In those instances we find that it is not profitable to set up the machinery to manufacture the quantity of goods required to meet the demand, and therefore the duty is paid and the goods are imported and sold in the American market without our mills having even attempted to enter that domain.

Mr. SMOOT. Mr. President, I can answer the Senator very quickly. What is the use of talking about dotted swiss coming in here in a few pieces. A few years ago every lady in the United States wore dotted swiss, but now dotted swiss is out of style. There may be a few pieces of dotted swiss used in various portions of the United States, but it is not very extensively used to-day. The Senator from South Carolina says we can not manufacture dotted swiss in the United States.

Mr. SMITH. We never have done so.

Mr. SMOOT. Yes; we have manufactured it.

Mr. SMITH. That is beyond my knowledge.

Mr. SMOOT. I know we have produced it in the United States.

Mr. POMERENE. Mr. President, I recognize the expert knowledge the distinguished Senator from Utah has on many subjects, but when did he become an expert on style?

Mr. SMOOT. I do not profess to be an expert on style, but I can tell when a particular class of goods is in vogue. I wish to say to the Senator right now that he will not find the wife of a Senator wearing dotted swiss. This class of goods [exhibiting] is being made in America, and it is this class of goods the Senator's wife, perhaps, is wearing. All these samples [exhibiting] are made in America.

Mr. SMITH. The Senator from North Dakota asked a moment ago why it was that American mills did not enter this domain. Perhaps, as to these fancy products, the fluctuation of style is what makes it unprofitable for the American mills to set up special machinery to make them. However, when the particular goods become the style again, they are imported, because we can not afford to set up the machinery and let it wait during the time that the cloth is out of style.

I think perhaps the Senator from Utah has hit upon the very reason why the American mills do not find it profitable to set up machinery to make a certain class of goods, in that, according to the Senator, they go out of style. It does not pay us to set up machinery to supply fluctuating and uncertain demands.

I shall later put into the RECORD some statistics as to countable cotton cloth, showing the domestic production, the exports, and the imports, which I think will be illuminating to the Senate. I refer to cloths which do not go out of style, which are used for garments that are usually invisible, although, according to present-day fashions, there are very few of them which are not visible. That is the kind of goods the sensible American manufacturer is producing, and in that line he has preempted the markets of the world and driven out competition. He is not foolish enough to set up a lot of fine machinery to satisfy styles that do not last.

Mr. SMOOT. Mr. President, it is all right for the Senator from South Carolina, in whose State no cotton cloth except plain cloth is made, to talk about the character of goods, but we have machinery in the United States to make any kind of cloth that is made anywhere in the world.

I call the Senator's attention to the fact that all of these goods [exhibiting] are made in America; and if we have machinery to make that kind of cloth we have machinery to make any kind of cloth that is needed.

Mr. SMITH. Mr. President, just let me read right now some figures in reference to countable cloth, if the Senator will allow me. The Senate seems to be interested in that branch of the subject. In 1921 the imports amounted to 112,340,000 square yards, of a value of $33,000,000; in 1919, the last year for which production figures in this country are available, of countable cloth we produced 1,134,374,000 square yards, the value of which was $5,628,858,000. We imported in that year, as I have said, 112,000,000 square yards, while we exported 551,000,000 square yards, of a value of $71,573,000. In other words, we exported nearly five times as much as we imported, and we produced and sold in this country over ten times as much as we imported.

Mr. SMOOT. Mr. President, what is the use of trying to present a situation here when the facts in the case, when presented, will place an entirely different construction on it? What classes of goods were exported, and where did they go, and why did they go? They went to the Philippine Islands, they went to Cuba, they went to Porto Rico. Does the Senator think that any other country can successfully ship into those countries cotton goods, with the special rates that we enjoy in those countries, and free in two of them?

Mr. SMITH. Mr. President, the Senator must admit that a vast quantity of these very cloths went into Canada in competition with the English goods.

Mr. SMOOT. Mr. President, the Senator has said time and time again that the plain cloths woven here go to Canada. The manufacturer in the South has the cotton right at his door. He takes it right from the farmer into his place. America has automatic looms in a greater degree than any other country in the world. There is no question about that. But we are not discussing that class of goods.

Mr. SMITH. But the Senator has raised the duty even on those goods almost twice as much as on the others.

Mr. SMOOT. No; as far as that is concerned, you can not raise them by specifically stating what kind of cloth can come in. You have got to specify the number of picks per square inch, or else you have got to take the size of the yarn, and we took the size of the yarn; and I want to say to the Senator, just in passing, that that is exactly what the Democrats did in the act of 1913, and I think it was right.

Mr. President, as I have said, the importations for the first four months of 1922 amount to 65,830,967 square yards. If they are continued at the same rate during the year 1922, the importations of that kind of cloth alone into the United States will be 197,492,901 square yards.

Mr. LENROOT. Mr. President, will the Senator yield?

Mr. SMOOT. Yes.

Mr. LENROOT. Will the Senator give us the average rate of duty imposed on those importations?

Mr. SMOOT. The highest possible rate under the bill when it is amended——

Mr. LENROOT. No; I mean under the present law. What rate of duty are they paying now on those importations?

Mr. SMOOT. About 25 per cent. The imports of 1921 show an increase in yardage over the imports for the year 1914 of 53,795,189 square yards, or 91 per cent increase in imports.

Estimating the possible imports for 1922 from the first four months, the increase in yardage over the year 1914 will be 138,949,821 square yards, or an increase of 237 per cent. Mr. President, if that continues, how are the laboring men in New England in these cotton mills to be employed? Who would prefer to have importers bring into this country 197,000,000 square yards of these cloths in a year, rather than to allow the American laboring man to make them in this country?

Senators note this: Imports for 1921 show an increase in yardage over imports for the year 1910 of 80,654,625 square yards, or an increase of 82 per cent. Estimated imports for 1922 based on imports for the first four months show an increase in yardage over imports for the year 1910 of 135,809,259 square yards, or 220 per cent increase.

Comparison of imports, exports, and United States production:

Imports, fiscal year 1910, 61,683,642 square yards, valued at $8,802,879.

The exports were 309,000,000 square yards, valued at $19,971,491.

Mr. President, this is a long list, and I am going to ask that it may be printed in the RECORD without reading.

The PRESIDING OFFICER. Without objection, it will be so ordered. The Chair hears no objection.

The matter referred to is as follows:

	Imports.		Exports.		United States production.	
	Square yards.	Value.	Square yards.	Value.	Square yards.	Value.
Fiscal year 1910	61,683,642	$8,802,879	309,921,304	$19,971,491	.....	.....
Calendar year 1914	58,543,080	10,563,177	326,477,879	23,635,599	6,383,796,000	$440,574,000
Calendar year 1921	112,338,267	33,723,908	551,512,942	71,573,975	[1] 5,628,858,000	[1] 1,131,374,000

[1] Calendar year 1919.

January, February, March, April, 1922, 65,830,967 square yards; $18,306,284.

The effects of the rates in the present bill can be seen by the following statistics:

Imports—Countable cotton cloths.

	Fiscal year, 1910.		Calendar year, 1914.		Calendar year, 1921.	
	Square yards.	Value.	Square yards.	Value.	Square yards.	Value.
Gray and not woven, figured	4,965,980	$494,927	3,374,679	$448,902	18,625,545	$3,835,105
Bleached	19,033,718	2,363,690	15,617,374	2,783,262	19,471,545	5,287,299
Colored or woven, figured	37,683,944	5,944,262	39,551,027	7,331,013	74,241,096	24,601,504
Total	61,683,642	8,802,879	58,543,080	10,563,177	112,338,267	33,723,908

	Square yards.	Value.
January, 1922	16,086,754	$4,346,869
February, 1922	17,529,305	4,777,415
March, 1922	20,070,606	5,702,277
April, 1922	12,144,302	3,479,723
For 4 months, 1922	65,830,967	18,306,284

Or at the rate of 197,492,901 square yards for the year.

Imports of 1921 show an increase in yardage over imports for the year 1914 of 53,795,187, or 91 per cent.

Estimating the probable imports for 1922 from the first four months the increase in yardage over the year 1914 will be 138,949,821, or 237 per cent.

Imports of 1921 show an increase in yardage over imports for the year 1910 of 50,654,625, or 82 per cent.

Estimated imports for 1922, based on imports for the first four months, show an increase in yardage over imports for the year 1910 of 135,809,259, or 220 per cent.

Mr. SMOOT. Mr. President, I have had worked out the equivalent ad valorems of these 100 samples of cloth selected by the Tariff Commission of all grades and nearly all styles, showing what the equivalent ad valorems are, not only under the Payne-Aldrich Act but under the act of 1913 and under the bill as reported and the amendments that I have already offered, which I have no doubt will be adopted by the Senate, because they are all very great decreases. I also have here the equivalent ad valorems not taking into consideration the 7 cents a pound imposed upon long-staple cotton, that everybody must admit the manufacturer must be compensated for. This statement is too long for me to read, but when we take up the rates in this paragraph no doubt numerous questions will be asked, and at that time I shall be glad to answer anything that is asked as to the equivalent ad valorem rates, either in the act of 1909, the act of 1913, or this bill as reported, with my amendments; also what the difference is in each of the ad valorem rates on account of the 7 cents a pound on long-staple cotton.

Mr. President, it is all very well to slash the duties on yarns, and I do not say that in a critical way at all. I will say right now to the Senator from Wisconsin [Mr. LENROOT] that I suppose in 90 per cent of the cases the changes that have been made in the rates on yarn to-day are not going to affect importations very much; but I want to say to the Senator in all seriousness, now, when you are getting into these high-count yarns made into the fanciest and the most expensive goods, take care that you do not cut those rates so that we will destroy a most important industry now established in this country.

Another thing: Let us take into consideration the fact that nearly all of the goods referred to this afternoon are luxuries, just the same as silks could be described as luxuries. It is not the same as buying a huck towel, or a cotton sheet, or a cotton bag for the farmer, or a plain piece of cotton cloth of any kind. I want to say that in these goods the brain of the American inventor, the brain of the American manufacturer, the designer of these goods, plays a most important part; and in late years the trade as far as the eastern mills are concerned has been almost entirely transferred to this line of work.

Mr. LENROOT. Mr. President, will the Senator yield?

Mr. SMOOT. Yes; I yield.

Mr. LENROOT. I wish to say to the Senator that I do not at all object to a very liberal duty upon the high-count cloths, nor did I object to a very liberal duty upon the high-count yarns. What I have objected to and what I do object to—and it applies to the cloth schedule as well as to the yarn schedule—is that upon the low-count yarns and cloths, where there are no importations, where we are exporting to every country in the world, the committee nevertheless insists upon a very considerable duty. That is my objection.

Mr. SMOOT. The Senator stated it very frankly this morning and I stated, I think, just as frankly to the Senator, why there was any excuse whatever for it. I could not offer any other excuse than I did this morning, and I have not anything further to say as to the action of the committee taken along that line affecting the rates that have already been voted upon.

Mr. SIMMONS. Mr. President, something has been said to-day about the position of Mr. Stuart W. Cramer, of my State, with reference to the duty on ply yarns and plain cloth. I have examined my records, showing correspondence between Mr. Cramer and myself, and documents filed by him with me, and I am satisfied from that and from other information I have received as to Mr. Cramer's attitude that Mr. Cramer's representations to the committee were with a view to bringing about a parity of treatment between the duties imposed upon ply yarns and those imposed upon plain gray cloth. This, I think, about states Mr. Cramer's position as I understand it.

In the Underwood bill the duty is precisely the same on ply yarns as on plain gray cloth, which is a just arrangement, because the market price is the same. In the Senate bill the rate on plain cloth has been raised above the rate on ply yarns. Mr. Cramer is a spinner, not a weaver. This change was regarded by Mr. Cramer as unjust, giving weavers greater protection than that accorded spinners. For this reason he advocated an increase of the proposed rates on ply yarns, in order to bring them nearer to the rates that the committee had decided on for plain cloth.

That is what I understand to be Mr. Cramer's position about this matter. Of course, I do not mean to say that that absolutely reflects his position, but it is the best that I can understand it; and from reading his letters to me I think that is his position and that was his objective, and his only objective. The committee had changed the rates on plain cloths, and he wanted the rates on ply yarns adjusted so as to maintain the parity that theretofore had existed.

I do not want to go into any further discussion of this matter, and I am perfectly willing to have it rest with this statement.

Mr. SMOOT. Mr. President, I want to do Mr. Cramer absolute justice. Mr. Cramer told me himself that he thought the rates on yarn ought to be just exactly the same as on the gray

cloth. That is exactly what he said, what he claimed. There was no question about it. No bill that has ever been drawn has had that same rate. This is what he asked for. I want it distinctly understood that this is his brief, and what he wanted the Senate to put into the bill was as follows:

Cotton yarn, including warps, in any form, bleached, dyed, colored, combed, or plied, of numbers not exceeding No. 10, 4 cents per pound; exceeding No. 10 and not exceeding No. 40, 4 cents per pound, and, in addition thereto, forty one-hundredths of 1 cent per number per pound.

Mr. SIMMONS. I do not think Mr. Cramer would have made any objection to the rates on plied yarns remaining the same as in the Underwood bill, unless you had changed the rate on plain cloth, but when you did that he wanted the rates on yarns readjusted so as to comply with the rates on cloths.

I want to say this—and I am then going to let the Senator from Utah say what he pleases—so far as I now can recall, I have not received a single communication from the cotton mill people of North Carolina—and I have been in very close touch with them; they have been my friends, and I am their friend—asking me to exert my efforts or influence, if I have any, to secure higher rates than those which now obtain, and my impression has been, from their conduct in the matter, their silence, and some things which have been said to me by cotton manufacturers of the State, that they were entirely satisfied with the present rates. If I have misinterpreted their views about it, they have not made their views plain to me.

Mr. SMOOT. Evidently they have not made their views plain to the Senator. I could read the membership of this organization.

Mr. SIMMONS. The Senator from South Carolina [Mr. SMITH] tells me he has not received a single letter from any of the manufacturers of the great State which he represents, his State and my State being the two leading cotton manufacturing States of the South, being about equal in the amount of their spindles and looms with the great State of Massachusetts, or very nearly equal.

Mr. SMOOT. I find names here from South Carolina. They may not have written to the Senator, and if he says so, I take his word; but I find their names here as officers of the national council of the American Cotton Manufacturers. I find a good many names of men from South Carolina, and also some from North Carolina, and they are asking for the rates I have stated.

Mr. SIMMONS. Through Mr. Cramer, and only Mr. Cramer?

Mr. SMOOT. I will not say only through Mr. Cramer, but Mr. Cramer represented the organization.

Mr. SIMMONS. Who else besides Mr. Cramer appeared representing any southern cotton association?

Mr. SMOOT. I really can not remember the names.

Mr. SIMMONS. Does the Senator say that southern cotton-mill men, outside of Mr. Cramer, whose brief I have here and whose brief, I think, does not justify anything more than what I have said, have appeared before the committee asking for an increase in the rates?

Mr. SMOOT. I can not call to mind.

Mr. SIMMONS. I attended the general hearings and I have no recollection of any cotton men from the South appearing there. Of course, I did not attend the hearings before the majority members of the committee, and I do not know who appeared before them, because their meetings were in executive session.

Mr. SMOOT. I want to say frankly to the Senator that it makes no difference to me whether they were all from South Carolina or all from North Carolina; they are American citizens, and had a perfect right to come and appear before the committee.

Mr. SIMMONS. I am not questioning their right, and I am absolutely certain that if the cotton manufacturers of North Carolina or of South Carolina wanted an increase in rates, they would have been here, and their representatives would have known they were here. They would have called on their representatives, because they have confidence in their representatives, which they have shown in the past, as they continue to show it up to the present time. None of them have been to see me, and if they have been here I know nothing about it.

Mr. SMOOT. Does the Senator mean that Mr. Cramer, as chairman of this national council, would file here with the committee——

Mr. SIMMONS. I did not deny that Mr. Cramer appeared before the committee, and I did not deny he filed a brief. I have his brief here, and I say that this brief, so far as I read it, interpreted in the light of the letters I have had from him, bears out the statement I made, that his chief complaint was to the point that the parity between these two things, one produced largely in the South, and produced in part by him, had been destroyed by the Senate rate, and he wanted that parity restored.

Mr. SMOOT. These are the rates he wanted restored: On numbers not exceeding 10 he wanted 4 cents a pound.

Mr. SIMMONS. That is yarn.

Mr. SMOOT. That is yarn. The committee rate is three-tenths of a cent for No. 1 and 3 cents for No. 10. From No. 10, not exceeding up to No. 40, he wanted 4 cents a pound, and exceeding No. 40 and not exceeding 120, 16 cents per pound. The committee recommends 12 cents a pound.

Mr. SIMMONS. Did he not want that increase to conform the rate to the duties which you had written upon cloth?

Mr. SMOOT. No; he did not know what rates we had written upon the cloth when he sent this in. Not only that but all of these ad valorem rates he advocated were on the American valuation. Here is his brief.

Mr. SIMMONS. As to that American valuation, I understand that on a great many of the things covered by this the English price, when the article comes here, is higher than the American price. The American valuation does not apply. But I went over that this morning, and I am not going over it again. The Senator is just reviewing what we went over this morning. I did not want to renew the whole controversy of the morning by making the simple statement I made.

Mr. SMOOT. I have no objection to the Senator making any statement he wants to in order to clear himself with his constituency.

Mr. SIMMONS. Mr. Stuart W. Cramer uses this language:

What we wish given us is the same rate on advanced yarn as on plain cloth in the Simmons-Underwood tariff bill.

Mr. SMITH. As I understand, he simply wanted the parity to be maintained in this bill, and not an increase.

Mr. SMOOT. He did not want that parity at all. He wanted the same rates on yarn that are given on gray cloth.

The PRESIDING OFFICER (Mr. MCKINLEY in the chair). The question is on agreeing to the committee amendment.

Mr. SMITH. If it is agreeable to the Senator from Utah, as we have made considerable progress on this schedule, let us pass over this paragraph until to-morrow.

Mr. SMOOT. Very well; we will stop for to-night and take it up the first thing in the morning.

Mr. MCCUMBER. I understand the Senator from New Mexico [Mr. BURSUM] has a bill that he desires to present.

LAND IN MUSCATINE COUNTY, IOWA.

Mr. BURSUM. From the Committee on Public Lands and Surveys I report back favorably without amendment the bill (H. R. 11233) authorizing the Secretary of Commerce to convey certain land to the county of Muscatine, Iowa, and I submit a report (No. 818) thereon. This is a local bill in which the senior Senator from Iowa [Mr. CUMMINS] is very much interested, and at his request I ask unanimous consent for its immediate consideration. It proposes to give to the county of Muscatine, Iowa, nine-tenths of 1 acre for highway purposes. That is all there is to the bill.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the bill was considered as in Committee of the Whole, and it was read, as follows:

Be it enacted, etc., That the Secretary of Commerce is authorized to convey to the county of Muscatine, Iowa, the following-described land, now a part of the biological station at Fairport, Iowa: A corner of land in the southwest quarter of the southwest quarter of section 30, township 77 north, range 1 east, fifth principal meridian, described as follows: Beginning at a point on the southerly line of a 66-foot public road, as now located, where said southerly line intersects the westerly boundary of tract owned by the United States of America; thence south 19° 30′ east along said westerly boundary of said tract a distance of 56 feet; thence north 36° 30′ east a distance of 174 feet; thence south 55° west a distance of 150 feet to point of beginning, containing ninety-two one-thousandths of an acre: *Provided*, That the land authorized to be conveyed hereunder shall be used for the construction of and be maintained as a public highway free of any expense to the United States, and all work thereon shall be such as not to interfere with the operations and efficiency of the biological station and in a manner satisfactory to the Secretary of Commerce: *Provided further*, That in the event of the discontinuance by the county of Muscatine of the use of the above-described property as a public highway or the failure to maintain same in a manner satisfactory to the Secretary of Commerce the title to said land shall revert to the United States.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

RECESS.

Mr. MCCUMBER. I move that the Senate take a recess, the recess being until to-morrow at 11 o'clock.

The motion was agreed to, and (at 5 o'clock and 55 minutes p. m.) the Senate, under the order previously made, took a recess until to-morrow, Friday, July 14, 1922, at 11 o'clock a. m.

SENATE.

FRIDAY, *July 14, 1922.*

(Legislative day of Thursday, April 20, 1922.)

The Senate met at 11 o'clock a. m., on the expiration of the recess.

PROPOSED DUTY ON RAW WOOL.

Mr. CALDER. Mr. President, I am in receipt of a letter from the New York Clothing Trade Association, of New York City, in which they complain of the duty proposed on wool in the pending tariff bill. I referred the letter to the Tariff Commission, who made a careful examination of the whole subject and have submitted their findings to me. Their report is so illuminating that not only the Senate, but the country, should have the information. I ask, therefore, that the letter from the New York Clothing Trade Association to me, my reply, and the Tariff Commission's memorandum be printed in the RECORD in regular RECORD type.

The PRESIDENT pro tempore. Without objection, it is so ordered.

The matter referred to is as follows:

NEW YORK, *June 8, 1922.*

Senator WILLIAM M. CALDER,
Senate Building, Washington, D. C.

ESTEEMED SENATOR: The members of the New York Clothing Trade Association view the proposed tariff of 33 cents on raw wool as pernicious and not in the public interest, and take this means of registering its opposition to the passage of that legislation.

The imposition of prohibitive tariffs on necessaries can only be justified when dictated by dire and urgent exigency. Such condition does not exist. The burden of the proposed wool tariff will fall mainly on the masses. The members of the Finance Committee well know that the woolgrowing industry is concentrated in the hands of but a few large growers. The approximate total production of raw wool by these growers is about $65,000,000.

The tariff proposed is, in round numbers, to yield, as variously estimated, between $310,000,000 and $360,000,000. The increased price the farmers, who sell to the large growers, would receive for their raw wool would hardly compensate them for the advanced prices of wearing apparel. The working classes, on the other hand, would principally suffer by the increase in prices of clothes. This exorbitant proposed tariff could only inure to the benefit of the few large woolgrowers and manufacturers of woolens. The latter, in anticipation of the proposed legislation, are now raising prices, and the press is teeming with news items of the increased prices the public will have to pay for clothing this coming fall. While prima facie the proposed tariff is only 33 per cent on the raw wool, by the time the spinners, weavers, and manufacturers are compensated for their increased costs it is estimated by experts the proposed tariff on wool will mean an increase in the price of a suit of clothes of $5 and in the price of an overcoat $7. This estimate applies particularly to popular-priced clothing. The higher-grade goods will not be affected proportionately in the same degree.

If revenue must be raised, it should not be saddled on the class least able to shoulder it. If the small woolgrowing industry must be helped, let the Government subsidize it by bounty or otherwise. Moreover, increased prices in apparel will induce a false spirit of economy and we will again witness a nation in tatters.

On May 23, 1922, the members and directors of our association passed a resolution protesting against the aforesaid pernicious proposed tariff on raw wool, and we herewith inclose a true copy thereof.

Trusting this communication will receive your consideration, we are.

Respectfully yours,
NEW YORK CLOTHING TRADE ASSOCIATION,
By WM. A. BANDLER.

—

UNITED STATES SENATE,
COMMITTEE TO AUDIT AND CONTROL THE CONTINGENT EXPENSES OF THE SENATE,
July 6, 1922.

Mr. WILLIAM A. BANDLER,
New York Clothing Trade Association,
347 Fifth Avenue, New York City.

MY DEAR MR. BANDLER: You wrote me on June 8 concerning the proposed duty of 33 cents on clean content of raw wool, indicating that this would tend to increase the price of a suit of clothes approximately $5 and an overcoat $7. You state that this estimate applies particularly to popular-priced clothing.

I have inquired into the matter most carefully and have discussed the situation with the Treasury experts and representatives of the Tariff Commission, who have made a most exhaustive study of the whole subject.

The Fordney-McCumber bill fixed a rate on wool which is substantially the same, if not less, than the duty imposed under the present emergency tariff law, which is now in effect, dependent upon the percentage of shrinkage. I believe you are in error when you state that the proposed duty will increase the price of all clothing; and I presume in making this statement you have in mind the rates provided in the present law and the fact that wool was admitted free under the Underwood law, which was in operation previous to the emergency tariff act.

As an evidence of the fact that your understanding is not correct, I am pleased to submit for your consideration a memorandum prepared for me by the United States Tariff Commission on June 29.

Recently I purchased some clothing from one of our large and well-known clothing establishments, and I am convinced from my own experience that suits and overcoats can be purchased at a cheaper price to-day under the emergency tariff act than they could in the spring of 1921, when we were operating under the Underwood law, which admitted wool free of duty. May I call your attention particularly to the table incorporated in the Tariff Commission's memorandum, which demonstrates that the raw-wool duty in a suit of clothes weighing 2⅞ pounds, exclusive of the merchandising cost, is about 92 cents, while the duty on an overcoat, exclusive of the merchandising costs, would be approximately $1.71. These figures have been carefully prepared and are authentic, and I believe that if you go into the matter again you will be convinced that your understanding is in error, even though the duty of 33 cents a pound clean content has been augmented by the several handlers' gross profits. It is no doubt that this duty when carried through to the ultimate consumer will be increased to a degree. It is estimated by the Tariff Commission that the original duty of 49 cents per pound will finally cost the consumer 93 cents per pound, as indicated in the table of costs incorporated in the Tariff Commission memorandum.

Sincerely yours,

WILLIAM M. CALDER.

—

JUNE 29, 1922.

Memorandum to Senator CALDER relative to a communication of the New York Clothing Trade Association in regard to the duty on raw wool.

The main question raised in the statement of the New York Clothing Trade Association is whether the proposed duty of 33 cents on raw wool, clean content—shown in their statement as 33 per cent, but presumably intended as 33 cents, since this is the actual basic rate proposed—will necessitate an increase of $5 in the price of a suit of clothes and $7 in the price of an overcoat.

It is impossible for anyone to state with certainty how much a duty of 33 cents per clean pound will enhance the price of a suit or an overcoat, even when assuming a standard specification of each article. That such a duty will tend to increase and certainly to check a decrease in the price of these articles seems inevitable, but no exact calculation can be made because of the variable factors involved. It is to be borne in mind that the price of wool may not be enhanced by the full amount of the duty. To be sure, the compensatory duties on the tops, yarn, and cloth are based on the assumption that the duty on the raw material will be fully effective, and if there were no competition in the domestic industry the failure of wool prices to rise by the full amount of the duty would make no difference in the price to the public. But since the duty is competitive, it may be prevented from reaping the full advantage of the compensatory duties under these conditions, except in periods of marked business activity. In such periods the duty on raw wool is likely to be fully effective. In estimating, therefore, the effect of the duty on the price of a suit or overcoat the assumption that the 33-cent duty per pound of clean wool will enhance the cost to the weaver, and hence necessitate an increase of his price by the full amount of the compensatory duty—that is, 49 cents—is open to some qualification.

Another set of variable factors arises in connection with the pyramiding of the duty as the wool passes from the raw state through the various manufacturing and distributing stages to reach the consumer in the form of wearing apparel. Considerable latitude must be allowed in estimating such pyramiding. One result may be arrived at by adding to the compensatory

duty of 49 cents the percentage of overhead and profit, respectively, of the wool dealer, the top maker, the spinner, the weaver, the cloth jobber, the clothing manufacturer, and the retailer. Or a different conclusion may be had by assuming that the wool passes through fewer hands; that all operations from the purchase of the raw material to the weaving of the cloth are integrated in the same establishment; that the margin for overhead and profit are therefore less than the aggregate margins of the specialized establishments; and that no cloth jobber intervenes between the weaver and the clothing manufacturer. Again, there may be some difference of opinion as to what margin for overhead and profit may be regarded as typical in certain instances.

The best method of making the calculation seems to be to assume that the duty will be fully effective and to add a conservative margin in each instance to cover the overhead and profit of the clothing manufacturer and the retailer, then to make such adjustments as may be deemed necessary to cover variable factors. These selling margins may be taken, respectively, as 10, 15, and 50 per cent. A margin of 10 per cent to the cloth maker—say, 6 per cent for profit and 4 per cent for selling expense—would appear to be a very conservative estimate. A margin of 15 per cent to the clothing manufacturer accords with the average conditions shown in the 1916 report of the Department of Commerce entitled "The Men's Factory-Made Clothing Industry." A margin of 50 per cent to the retailer on his purchase price—equivalent to 33⅓ per cent of his selling price—was taken as typical. In the report, "Retail prices are taken as 50 per cent more than the net wholesale price, which the board considers a fair estimate of the lowest figures at which such garments are sold." An effective duty on clean wool of 33 cents per pound is equivalent to 49 cents per pound on all-wool cloth. Pyramiding 49 cents by 10, 15, and 50 per cent, respectively, gives 93 cents per pound of cloth in the garment.

Parenthetically, attention should be directed to the possible criticism that the various "middlemen" are not justified in adding their normal margin to that portion of their costs attributable to the duty, and that when competition is keen they will be unable to do so. Upon reflection it becomes clear that the addition of this margin rests upon a firmer basis than the mere custom of adding a fixed percentage. The enhancement in the cost of the cloth or clothing, as the case may be, resulting from the duty, involves an immediate increase in such expenses as interest charges, taxes, insurance, and an ultimate increase in wages. Fundamentally, it is difficult to differentiate an increase by reason of the duty from an increase in costs attributable to other causes.

The following table shows how a cost of 93 cents per pound of cloth would work out on suits and overcoats of the specifications shown. Additional columns, deducting 10 and 20 per cent, respectively, from the 93-cent computation, to make allowance for possible failure of the duty to pyramid to 93 cents, are also shown. Among the garments listed, suits made of 12-ounce cloth and overcoats of ordinary weight can probably be regarded as most typical. Each garment is, of course, assumed to consist wholly of virgin wool:

	Weight of cloth per linear yard (54–56 inches wide).	Linear yards required.	Weight of cloth in article.	Cost of duty per article.		
				Based on 93 [1] cents per pound of cloth.	Based on 93 [1] cents less 10 per cent.	Based on 93 [1] cents less 20 per cent.
	Ounces.		*Pounds.*

[1] 93 cents includes merchandising costs and profit.

REPORTS OF THE COMMITTEE ON CLAIMS.

Mr. CAPPER, from the Committee on Claims, to which were referred the following bills, reported them severally without amendment and submitted reports thereon:

A bill (H. R. 513) for the relief of George R. Campbell, Milton B. Germond, and Walter D. Long (Rept. No. 819);

A bill (H. R. 862) for the relief of Vivian Hood (Rept. No. 820);

A bill (H. R. 8073) for the relief of the Kineo Trust Co. (Rept. No. 821);

A bill (H. R. 8143) for the relief of Fitzcharles Dry Goods Co. (Rept. No. 822);

A bill (H. R. 9472) for the relief of the Canadian Pacific Railway Co. (Rept. No. 823); and

A bill (H. R. 10544) for the relief of Louis Cayet (Rept. No. 824).

BILLS AND JOINT RESOLUTION INTRODUCED.

Bills and a joint resolution were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. WALSH of Montana:

A bill (S. 3825) to prevent evasions of the antitrust laws; to the Committee on the Judiciary.

By Mr. SHORTRIDGE:

A bill (S. 3826) for the relief of Gordon G. MacDonald; to the Committee on Naval Affairs.

By Mr. BURSUM:

A bill (S. 3827) granting an increase of pension to Sarah E. Roberts; to the Committee on Pensions.

By Mr. HARRELD (by request):

A bill (S. 3828) to authorize the Secretary of the Interior to issue oil and gas permits and leases to persons equitably entitled thereto, and for other purposes; to the Committee on Public Lands and Surveys.

By Mr. TOWNSEND:

A joint resolution (S. J. Res. 224) proposing an amendment to the Constitution of the United States; to the Committee on the Judiciary.

THE TARIFF.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes.

Mr. McCUMBER. I ask that the Senate now proceed to the consideration of section 321, on page 286. This is in pursuance of the general understanding that the dye embargo provision would be taken up to-day.

The amendment of the Committee on Finance was, on page 286, after line 16, to insert a new section, as follows:

SEC. 321. That the dye and chemical control act, 1921, approved May 27, 1921, as amended, shall continue in force for one year after the date of the passage of this act.

Mr. HEFLIN. Mr. President, I suggest the absence of a quorum.

The PRESIDENT pro tempore. The Secretary will call the roll.

The reading clerk called the roll, and the following Senators answered to their names:

Ball	Glass	McCormick	Smith
Borah	Gooding	McCumber	Smoot
Bursum	Hale	McKinley	Spencer
Calder	Harris	McLean	Stanley
Cameron	Harrison	McNary	Sterling
Capper	Heflin	Moses	Townsend
Caraway	Johnson	Nelson	Trammell
Cummins	Jones, Wash.	Norbeck	Underwood
Curtis	Kellogg	Oddie	Walsh, Mass.
Dial	Kendrick	Overman	Walsh, Mont.
du Pont	Keyes	Ransdell	Warren
Ernst	King	Rawson	Watson, Ind.
France	Ladd	Robinson	Willis
Frelinghuysen	Lenroot	Sheppard	
Gerry	Lodge	Simmons	

Mr. HARRIS. I wish to announce that my colleague [Mr. WATSON of Georgia] is absent on account of illness. I ask that this announcement may stand for the day.

Mr. GERRY. I wish to announce that the Senator from Nevada [Mr. PITTMAN] is absent on account of illness in his family. I ask that the announcement may stand for the day.

The PRESIDENT pro tempore. Fifty-eight Senators have answered to their names. A quorum is present.

Mr. MOSES obtained the floor.

Mr. WATSON of Indiana. Mr. President, will the Senator yield to me that I may make a brief statement?

Mr. MOSES. I hope it will not be long.

Mr. WATSON of Indiana. Five minutes.

Mr. MOSES. I yield for that purpose.

Mr. WATSON of Indiana. Mr. President, the figures have just been completed showing estimated imports for the first 12 months under the bill as reported by the committee and the duties collected for the calendar year 1920 on the 14 schedules. I ask unanimous consent to submit this table for printing in the RECORD.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Schedule number.	Duty collected calendar year 1920.	Estimated imports first 12 months under new act.	Estimated duty collected first 12 months under new act.
I	$14,582,617	$56,980,713	$21,265,851
II	9,245,116	24,319,045	10,979,468
III	16,583,723	164,445,106	18,016,578
IV	1,986,621	8,925,410	2,278,585
V	79,542,124	220,475,100	129,667,239
VI	33,685,904	56,217,325	29,079,050
VII	24,599,207	130,220,576	33,301,057
VIII	1,157,492	3,734,100	3,314,950
IX	21,261,983	107,656,525	30,434,385
X	13,441,411	57,066,700	18,267,370
XI	16,637,350	38,662,650	23,576,410
XII	22,327,408	25,210,500	14,751,875
XIII	1,758,347	50,550,645	4,125,208
XIV	68,425,327	184,079,760	69,161,192
Free list	1,321,954	1,927,406,650	
Total	326,556,584	[1] 1,128,544,155	408,219,228
Duty collected calendar year 1920			326,556,584
Increase			81,662,644
Total (including free list)		3,055,950,805	

[1] Dutiable.

Mr. WATSON of Indiana. The estimated imports for 12 months under the bill as it left the committee, with its alleged high rates, total $3,055,950,805. Of that amount of estimated imports $1,128,544,155 are dutiable and $1,927,406,650 on the free list; or, of the total estimated imports under the provisions of the bill as it left the committee 63 per cent will come in free and only 37 per cent will come in dutiable, with both specific and ad valorem duties. This is much the highest per cent of free imports under any tariff bill ever proposed by the Republican Party and but slightly less than for the last five years under the Underwood tariff law.

The duties collected for the calendar year 1920 total $326,556,584. The estimated duties under the pending bill amount to $408,219,288, or an increase of $81,662,644 in revenue collected.

I shall not go into the items, because the Senator from New Hampshire [Mr. MOSES] is anxious to proceed with his speech, but in addition to what I have already stated and for the information of the Senate I want to have printed in the RECORD a statement of the duties collected and the average ad valorem rates paid under the several tariff acts since 1890, showing the amount of revenues and the average ad valorem dutiable, and free, and dutiable. The table shows that in the fiscal year 1891 the average dutiable rates amounted to 46.26; in 1893, 49.56; in 1895, 41.75; in 1899, 52.07; in 1907, 42.56; in 1909, 43.15; in 1911, 41.22; in 1913, 40.05; in 1914, 37.60; for the calendar year 1920, 16.40; and for the calendar year 1921, 29.45; while under the pending bill it is estimated that it would amount to 36.17, or a much lower average duty on imports on the dutiable list than under any previous Republican law.

The average ad valorem on both the free and dutiable lists for 1891 was 25.65; for 1893, 23.79; for 1895, 20.44; for 1899, 29.48; for 1907, 23.28; for 1909, 22.99; for 1911, 20.29; for 1913, 17.69; and for 1914, 14.88; while for the calendar year 1920 it was 6.38 and for the calendar year 1921, 11.44. Under the pending bill it would be only 13.36, but 2 per cent more than last year under the joint operation of the Underwood law plus the emergency tariff act; or, in other words, a much lower ad valorem rate on both free and dutiable goods than under any Republican law ever proposed.

I submit these figures and ask unanimous consent that they be published in the RECORD for the information of the Senate.

The PRESIDENT pro tempore. Without objection, it is so ordered.

The table is as follows:

Duties collected and average ad valorem rates of duty paid under the several tariff acts since 1890.

	Revenue.	Average ad valorem.	
		Dutiable.	Free and dutiable.
Fiscal years:		*Per cent.*	*Per cent.*
1891	$216,885,701	46.26	25.65
1893	199,141,678	49.56	23.79
1895	149,450,608	41.75	20.44
1899	202,072,050	52.07	29.48
1907	329,489,048	42.56	23.28
1909	294,667,054	43.15	22.99
1911	309,965,692	41.22	20.29
1913	$312,509,948	40.05	17.69
1914	283,511,564	37.60	14.88
Calendar years:			
1920	325,645,565	16.40	6.38
1921	292,396,752	29.45	11.44
Estimated, pending act	408,219,228	36.17	13.36

Duties collected and average ad valorem rates of duty paid under the several tariff acts since 1890—Continued.

Mr. DIAL. Mr. President——

The PRESIDENT pro tempore. Does the Senator from New Hampshire yield to the Senator from South Carolina?

Mr. MOSES. May I ask for what purpose?

Mr. DIAL. Will the Senator kindly yield to me in order that I may make a statement?

Mr. MOSES. Does the Senator expect to occupy much time in doing so?

Mr. DIAL. No; I never occupy much time.

Mr. MOSES. I yield to the Senator, because I expect to occupy considerable time, and I do not wish to be interrupted after I begin my speech.

AMENDMENT OF COTTON FUTURES ACT.

Mr. DIAL. Mr. President, since I have been a Member of this body I have occupied as little time as possible in addressing the Senate; in fact, I have refrained from speaking on many occasions when perhaps I should have said something in behalf of my constituents. It is now opportune, while we are considering the tariff bill, to consider another matter which is closely connected with it, and more particularly while we are on the cotton schedule.

We have in this country almost come to a point when there is about to be a failure in the production of cotton. The great trouble from now on is going to be to obtain cotton with which to run the mills for another year. On April 21 of last year I introduced a bill—Senate bill 385—proposing to amend the cotton futures contract law. On February 3 of this year I proposed a substitute amendment to that bill. That bill and the proposed substitute, Senate bill 3146, were referred to the Committee on Agriculture and Forestry of the Senate. That committee has had those measures before it for consideration, but has failed to make a report thereon.

Some time ago I appealed to the committee to make a favorable report, if it were willing to do so, and, if it were not inclined to do that, then to report the bill without recommendation, or, if they would not do that, then to report the bill unfavorably, and I would undertake to take care of the measure on the floor of the Senate. The committee, however, has not acted at all. Some time after making my appeal to the committee for action I served notice that, unless action were taken, I would move to discharge the committee from the further consideration of the measure; and I rise now to say that, beginning on Monday morning next, I am going to take up as much time as is necessary, and I am going to make as many motions as I may be allowed to make, under the obsolete rules of this body, in order to try to bring the matter before the Senate.

I introduced the amendment to which I have referred in good faith, and I have begged the committee, in season and out of season, to make some kind of a report thereon. I think it is due me, representing as I do in part a great cotton State, that the committee should make some kind of a report and let this body act upon the subject. I feel that there can be no fair-minded man in the United States who can oppose the amendment which I have proposed to the existing law. If any Senator here has any better proposition to make to help the people of my section, let him propose it, and I will tear up my measure and throw it into the wastebasket.

According to my view, under the operation of the present law the people of the South are deprived of many hundreds of thousands of dollars each year. We have now come to a time when we have about collapsed in the production of cotton. Our people can not stand the present situation; they can not exist under it any longer. I predict that next year many mills in the world will be shut down for many months in the year by reason of a lack of the raw material.

There has been talk about proper labor, but there is no labor which is treated as are the laboring people in the South who are trying to raise cotton. If we in that section of the country

were out of debt I should be glad if we did not plant another seed of cotton until Congress corrected the present unjust law.

Mr. President, I hope the members of the Committee on Agriculture and Forestry will be here on Monday morning next, for I am going to move as soon as I may properly do so under parliamentary procedure to discharge that committee from the consideration of my bill and amendment and endeavor to bring the measure on the floor of the Senate. I am glad the matter is now up, so that while we are considering the iniquitous cotton schedule of the pending tariff bill the Senate may consider along with it the interests of the producers of the cotton.

Some time ago I sent to every Senator a copy of a speech which I made on the 3d day of February of this year, and if any Senator cares to look into the matter and spend merely a few moments of time in doing so I shall be glad to send him another copy of the speech, not because I made it but because it contains irrefutable facts which have been collated by the Agricultural Department and which are undisputed. I thank the Senator from New Hampshire.

Mr. HEFLIN. Mr. President——

Mr. MOSES. Mr. President, I have already yielded 20 minutes of my time. Only two days were set aside by agreement to deal with the pending question in the tariff bill, and I can not yield further.

Mr. HEFLIN. Then I will wait until the Senator shall have concluded.

DISTRIBUTION OF SPEECHES BY FEDERAL RESERVE BANKS.

The VICE PRESIDENT laid before the Senate a communication from the governor of the Federal Reserve Board, transmitting, pursuant to Senate Resolution 308, a letter from the Federal Reserve Bank of New York relative to the circulation of a speech of Senator GLASS on the Federal reserve system, which was ordered to lie on the table.

THE TARIFF.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes.

Mr. MOSES. Mr. President, the dye and chemical industries are plainly the spoiled children of the Finance Committee. Like most spoiled children they are both greedy and impudent; but dye is the special darling of the pair, while his chemical sister serves chiefly to furnish pseudo-scientific scenic setting for the tragic farce which has been played for eight years before the American public, and which now reaches its climax in an insolent demand for continued special privilege.

Beginning with paragraph 25 of the bill before us, we find these products increased from 30 to 50 per cent in their ad valorem rates; in paragraph 26 their rates are increased from 35 to 60 per cent; and but for an outcry too vigorous to be disregarded the same paragraph would have contained a further provision putting into the hands of a few highly favored, privileged producers the right to deprive the invalids of America of remedies which their physicians might deem desirable or even vital in the care of the sick.

In paragraphs 901 and 903, and again in paragraphs 1205 and 1206, occur another provision, ostensibly designed to enhance the protection to be afforded to textiles, but in effect adding even more to the high favor already shown to the dye manufacturers.

Under Title III, in section 321, will be found the so-called dye-embargo provision which is immediatey before us, while four pages earlier, in section 315, paragraph (d), will be found a provision authorizing the President, upon a showing which no one doubts will be attempted, to double the length of the embargo period later provided for.

I will not comment, Mr. President, upon the peculiar manner in which these items of dye protection have been developed in this bill. They present no continuity nor coherence. If designed purposely to mislead, they could hardly be better arranged to attain that end; yet through them all runs the certain purpose to afford inordinate favor to an industry which neither merits nor requires it.

SIX ITEMS OF TARIFF PROTECTION.

Let me enumerate, Mr. President, the separate items which this bill contains for the delight of the dye makers: First, the fixed rates of duty which the bill establishes; second, the President's authority to increase these duties by 50 per cent for cause shown; third, the additional duty inserted in paragraphs 901 and 903 and 1205 and 1206 and providing a special levy upon certain fabrics when dyed with vat colors; fourth, an absolute embargo for one year; fifth, a provision for the possible extension of this embargo for another like period; sixth, on presidential investigation the duty may be based on the American selling price; seventh, it is provided especially that coal-tar products, which may be considered similar, and so forth—in other words, substitutes—shall by presidential proclamation be embargoed under the dye and chemical control act of 1921.

I am convinced, Mr. President, that the duties carried by this bill upon dyestuffs granting 60 per cent ad valorem in addition to 7 cents a pound specific duty provide in themselves all the protection which the industry needs. This is, however, by no means all the direct protection which the bill gives. In paragraph 26 there are two provisos the effect of which will be to largely increase the protection afforded by the specific rate of 7 cents per pound.

These provisions require that the specific rate of 7 cents per pound shall be imposed according to standards of strength established by the Secretary of the Treasury, and that 7 cents shall be applied only to the lowest commercial strength in which coal-tar dyes were bought and sold in the United States on July 1, 1914. In the event that importations shall be of higher strength than the lowest commercial strength on that date, the specific duty of 7 cents per pound shall be computed upon the weight the dye would have if it were diluted to the standard strength which the Secretary shall establish. In other words, if the lowest commercial strength of a particular dye on July 1, 1914, was 20 per cent, and an importation of this particular dye shall hereafter arrive at an American port of entry at a strength of 100 per cent, the customs officials under this bill will impose upon this shipment a duty of 60 per cent ad valorem, and will then multiply the 7 cents per pound rating by 5, since the importation is five times the established strength of July, 1914. In this case the dye would be dutiable at 60 per cent ad valorem and 35 cents per pound.

These two provisions will be found in paragraph 26 of the bill, lines 7 to 18, inclusive, on page 12; lines 23 to 25, inclusive, on page 13; lines 1 to 10, inclusive, on page 14. They are as follows:

1. *Provided*, That the specific duty of 7 cents per pound herein provided for on colors, dyes, or stains, whether soluble or not in water, color acids, color bases, color lakes, leuco compounds, indoxyl, and indoxyl compounds, shall be based on standards of strength which shall be established by the Secretary of the Treasury, and that upon all importations of such articles which exceed such standards of strength the specific duty of 7 cents per pound shall be computed on the weight which the article would have if it were diluted to the standard strength, but in no case shall any such articles of whatever strength pay a specific duty of less than 7 cents per pound. * * *

2. *Provided further*, That in the enforcement of the foregoing provisions in this paragraph, the Secretary of the Treasury shall adopt a standard of strength for each dye or other article which shall conform as nearly as practicable to the commercial strength in ordinary use in the United States prior to July 1, 1914; that if a dye or other article has been introduced into commercial use since said date, then the standard of strength for such dye or other article shall conform as nearly as practicable to the commercial strength in ordinary use; that if a dye or other article was or is ordinarily used in more than one commercial strength, then the lowest commercial strength shall be adopted as the standard of strength for such dye or other article.

The general commercial practice in the United States on July 1, 1914, and prior thereto, was that dyes imported or bought and sold here were generally to be found in strengths of less than 100 per cent, because the custom of the trade demanded it. For example, practically all indigo was bought and sold as a paste of 20 per cent strength, the reason for using this dye in such weak concentration being due to the fact that it could thus be more easily handled in the dye vats. It is well known, even to the layman, that indigo in powder form is extremely light and flocculent and is exceedingly difficult either to put into solution or to hold in suspension. Naturally, the importers of indigo regarded it as commercially feasible and logical to pay both ocean and domestic freight upon 80 per cent of water to avoid the necessary difficulty and labor costs in putting solid indigo into solution or in suspension. Assuming 20 per cent indigo paste to be standard strength, it will be imported into this country under the bill at the rate of 60 per cent ad valorem and 7 cents a pound. But, in the event that these provisions continue in the bill, an importation of solid indigo entering this country would pay a rate of 60 per cent ad valorem and 35 cents a pound. It is well known commercially that solid indigo alone furnishes the base of color material for ink manufacturers and manufacturers of carpets and many branches of the heavier textile-fabric trade.

WATER TAXED AS DYE.

These provisions, Mr. President, are a complete innovation in tariff legislation. In effect they levy a duty upon water as if it were a dye. In other words, that chemical known as H_2O, necessary for all forms of animal and plant life, which covers three-quarters of the globe, and which Mr. VOLSTEAD would make even more universal in its application, must pay a duty of 7 cents a pound when mixed with any dyes coming within the purview of paragraph 26 of the pending tariff bill. Such

provisions have never before been embodied in a tariff bill, nor were they ever before proposed. They are contrary to the fundamental principle upon which specific rates of duty are framed. The Republican Party has always advocated specific rates of duty, upon the contention that they can be assessed correctly and expeditiously. But neither the consumer nor the importer can possibly foresee what will be the specific rates of duty on dyes coming within the provisions of this section. These specific rates, it should be noted, are to be based upon findings of fact made by the Secretary of the Treasury as to the lowest commercial standard of strength for dyes on a date more than eight years ago. Five thousand different brands of dye enter into international trade, and virtually all of these dyes are bought and sold in at least two strengths and some in five and six strengths, depending upon the working conditions under which they are employed. Consumers of dyes themselves have their own ideas of practices as to the strength of dyes which they use. One manufacturer, for example, may use a certain dye in 50 per cent strength, while another may use the same dye in a 10 or 20 per cent strength; and it is easy to foresee the numerous difficulties which will be encountered by the Secretary of the Treasury in determining the lowest commercial strength as existing on July 1, 1914. He would have trouble enough, Mr. President, indeed his task would be almost impossible, if he had to ascertain the same information as of to-day; but in attempting to ascertain and establish these standards of strength as of a time eight years ago he will undoubtedly encounter so many difficulties that these provisions will be a prolific source of customs litigation.

Furthermore, in the administration of these provisions the Secretary of the Treasury must decide as to the minimum portion of the domestic consumption of a dye that can be regarded as representing that dye commercially. In other words, if practically the entire consumption of a particular dye in this country on July 1, 1914, was in the 50 per cent strength, would a single sale of that dye on that date, in a 10 per cent strength, and in a small lot, justify the conclusion that the lowest commercial strength of this dye on that date was 10 per cent?

I am well aware, Mr. President, that the reason assigned in support of these provisions is that they will prevent the importation of dyes in unusually high concentration and thus evade the protection afforded by the specific rate of 7 cents per pound. It is true that dyes of high concentration were brought over from Germany in 1916 in submarines, and this isolated instance has caused dye manufacturers of this country to insist upon these novel provisions in the pending bill. But the fact is that the standard commercial practice will be resumed whenever normalcy of trade is reestablished, that there are insurmountable difficulties in the administration of these provisions, that they place water upon the dutiable list for the first time, and that neither importers nor consumers can ever know in advance the rate of duties at which dyes should be brought in.

THE AMERICAN DYE INDUSTRY.

Prior to 1909 no serious effort had been made to develop the dye industry in this country. Various plants, for the production of vegetable colors chiefly, had long been in existence, and a few enterprising manufacturers had engaged in the production of the more simply obtained colors from coal-tar intermediates. But it was fully conceded that the German chemical establishments, with their larger experience, their more highly trained staffs, and their inexhaustible patience, had secured dominance in this field of commercial production. It is alleged—and by some the allegation is now made an excuse—that the textile manufacturers, especially those of New England, were enabled to exclude from the tariff bill of 1909 any adequate protective provision for the American dye industry. In 1913, however, the Underwood bill adopted the dye duties carried in the Payne-Aldrich bill. One year later, upon the outbreak of the World War, with its consequent prohibition upon our receipt of foreign dyestuffs, the dye industry of the United States procured its first firm foothold in the home market; and in 1916 its representatives came to Congress and made a showing upon which they were granted tariff protection which they said would be adequate for all time.

Their language, as quoted to the Senate on the 3d of May, 1920, by the then senior Senator from Colorado, Mr. Thomas, was as follows:

> If you will give us this rate of duty within three or four years, we will be able to supply the American market with 80 per cent of its consumption, and when we have the industry thus far advanced we will fear neither God nor devil; we can beat Germany in her own market; we shall make ourselves the great dye industry of the world under this line of duties.

And they added:

> We agree, if we produce 60 per cent of the home demand for dyestuffs, to the reduction of the specific duties which we now ask, graded through a term of years.

These men were taken at their word. In the act of September 8, 1916, they were granted special duties in addition to those provided by the Underwood bill in a sum of 2½ cents a pound upon certain products and of 5 cents a pound upon others. There was also inserted in this act a provision to the effect that after five years of its operation these special duties would be annually reduced by 20 per cent.

This bill remained operative for three years, but within seven months from the date of its passage we ourselves had entered the war. I need not dwell, Mr. President, upon the sordid chapter of greed and profiteering which that era of our history produced. But it is significant that immediately following the armistice the dye makers of America, engulfed in the golden flood of profits which they had secured, took steps to continue their stranglehold upon the consumers of the country.

By that time A. Mitchell Palmer had become Alien Property Custodian. In that capacity he had seized and held all German-owned patents in this country, among them, of course, being the varied formulas for the production of coal-tar dyes. Associated with Mr. Palmer in his office as head of the Bureau of Investigation was Francis P. Garvan, who himself became Mr. Palmer's successor when the latter was translated to the office of Attorney General. Mr. Palmer was originally acting under the so-called "trading with the enemy act," by the terms of which the use of enemy patents was to be exercised under license from the Federal Trade Commission, a Government agency. Later, through an amendment to the trading with the enemy act, procured November 4, 1918, the origin of which is still shrouded in mystery, provision was made for the selling of enemy property which the Alien Property Custodian supposedly held in trust.

SENATOR KNOX'S OPINION.

At this point, Mr. President, I digress only long enough to point out that the late Senator from Pennsylvania, although a most ardent, as he was the most intelligent, advocate of the dye embargo, never failed to inveigh against this policy where by congressional action the Government of the United States became recreant to its trust. Speaking in this body on June 30, 1921, Mr. Knox said:

> I hope the day is not far away when we shall come back to the traditions of the American people that the right upon land of private property belonging to an alien enemy is a sacred right; that such property may be taken into custody only for the purpose of conservation; and that at the end of a war there shall be a strict accounting to the owners of that property by the Government of the United States, which may take it temporarily into its possession. That is one of the principles for which this country has contended for 100 years. While, as Chief Justice Marshall said, "the Congress may have the power to provide that the private property of alien enemies may be taken during a war, it can only do so by putting upon itself a moral turpitude of which we ought to be ashamed."

LAND PIRACY.

But this land piracy had already taken place. In the agile mind of Mr. Garvan there had arisen a "clear vision," as Mr. Palmer subsequently described it, of the vast advantage to be obtained by concentrating these alien patents in the hands of private owners, and with "indefatigable industry," if I may again use Mr. Palmer's laudatory words, Mr. Garvan worked out the plan. He sought first the American Dyes Institute and the American Manufacturing Chemists' Association to aid in the conspiracy.

The Dyes Institute, again using Mr. Palmer's words, gave "instant and enthusiastic approval," and as a result a corporation was organized, to be known as the Chemical Foundation. The first contribution to the Foundation was made in January, 1919, when practically $10,000 was advanced by the Dyes Institute for the purpose of searching the Patent Office records. This search revealed nearly 5,000 alien-owned patents, formulas, and trade-marks, covering not only dye and chemical processes but metallurgical, scientific, and industrial formulas and patents in great number and wide variety. The mere enumeration of them in fine type occupies 102 pages of the report which Col. Thomas W. Miller, the present Alien Property Custodian, has lately submitted to Congress. And I hope I shall not violate the ethics of the hour, Mr. President, if I add that Mr. Garvan during his entire term as Alien Property Custodian never made a report of any character whatever.

I repeat, Mr. President, that Mr. Garvan never made a report; and in the Miller report to which I have just alluded, it is shown that Mr. Garvan expended $173,757.50 for the services of expert auditors and accountants to prepare material for a report which died aborning.

MR. GARVAN'S VERSATILITY.

It is possible that Mr. Garvan may be excused for this dereliction because of the fact that he was simultaneously Alien Property Custodian and President of the Chemical Foundation, while during the same period he had been named and confirmed as Assistant Attorney General after his superior, Mr. Palmer, went to the Department of Justice. It is clear, therefore, that

Mr. Garvan, in these three capacities, was constantly in a position to entrap all critics, both going and coming.

The Chemical Foundation is now before the courts, and I have no desire to prejudice its case. Its president, as I have said, is Francis P. Garvan. Its board of trustees, in the first instance, comprised the advisory sales committee of the Alien Property Custodian's office—which committee passed upon and approved the sale of the patents to Mr. Garvan and themselves. Mr. Joseph H. Choate, jr., is counsel for the Chemical Foundation. He had been a dollar-a-year man in the Alien Property Custodian's office, but his connection with the Chemical Foundation has been much more profitable, inasmuch as his fees from that organization have already amounted to some $20,000.

This should not be confused, Mr. President, with the further sum of $52,524 paid to Mr. Choate, or his law firm, by the American Dyes Institute, of which sum $29,999 went to Mr. Choate, personally, for fees and traveling expenses to Paris.

Associated with Mr. Choate in the Chemical Foundation is Mr. Ramsay Hoguet, who was also a dollar-a-year man under Messrs. Palmer and Garvan, but who has received from the Chemical Foundation more than $50,000 in fees.

The Chemical Foundation paid for the 4,767 patents which it bought the sum of $250,000—an amount less than that required for their mere recording; and while the president of the Chemical Foundation sets forth in splendid language a patriotic, educational, and eleemosynary motive, the foundation's financial statement shows that it has not been wholly unmindful of more material things. Up to December 31, 1921, the Chemical Foundation had collected in royalties and license fees $407,378, a tidy return indeed for a profit in less than three years upon an initial investment of $250,000. With sublime effrontery, it has brought suit, making the Treasurer of the United States a defendant, to recover $356,089, representing accrued royalties and license fees collected by the Federal Trade Commission under the trading with the enemy act. This sum, taken in connection with the latest financial statement of the Chemical Foundation, shows that within less than three years from the date of its organization the foundation has received or is seeking to obtain an income of nearly $1,000,000, or four times its original investment. This income, Mr. President, has been obtained from the use of only a few of the 4,700 patents which the Chemical Foundation holds; and upon the wholly fair assumption that these patents will average at least 10 years more of life, it is readily deducible that the Chemical Foundation, had the President permitted it to go unchecked, would have taken at least $3,000,000 more from the American consumer under the plea of patriotism and education.

MUSCLE SHOALS UNDER TRIBUTE.

In this connection I wish to point out that among the patents thus held by the Chemical Foundation and upon which in a small way it has already collected its royalties is the so-called Haber process for the fixation of nitrates. It is this process which will be used at Muscle Shoals if that ambitious project shall ever be carried to completion, and I wish particularly to call the attention of the junior Senator from North Dakota and others who support Mr. Henry Ford's proposal to the fact that the farmers of the country have been thus marked for tribute by the Chemical Foundation, and that a vote by them to retain the dye embargo provision in this bill is a vote to sustain the abhorrent program against which I am speaking.

I have called attention to the fact that this bill contains a duty on water. All Senators will remember that we have placed a duty upon sand. In the particular matter which I am now discussing, the Chemical Foundation will levy a tax upon the air. Thus, Mr. President, we shall find all the elements of the universe, the air, the water, and the solid earth, placed under tribute.

Mr. President, the figures which I have just quoted in part are contained in detail in a tabulation furnished to me by the Federal Trade Commission, and I ask permission at this point that that table and the accompanying letter from Chairman Gaskill, of the commission, may be inserted in my remarks without reading.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

FEDERAL TRADE COMMISSION,
OFFICE OF THE CHAIRMAN,
Washington, July 7, 1922.

Hon. GEORGE H. MOSES,
United States Senate, Washington, D. C.

MY DEAR SENATOR MOSES: I am responding to your letter of June 26 in which you ask to be furnished with a list of the products of manufacturers under patents sold by the Alien Property Custodian to the Chemical Foundation (Inc.) and the amounts of royalties received by the Federal Trade Commission thereon.

The Federal Trade Commission has never received any royalties, since under the statute such royalties are payable to the Alien Property Custodian. The Federal Trade Commission has, however, audited the books of its licensees and the payments made to the Alien Property Custodian for the purpose of ascertaining whether the proper amounts have been paid, and, of course, has kept itself informed as to the making of proper payments as a prerequisite to the cancellation of any licenses issued by it.

Accompanying this letter you will find a tabulation showing the name of the licensee, the product, the total royalty accrued both prior and subsequent to the transfer of the patents to the Chemical Foundation. These figures do not represent and must not be confused with aggregate royalties accruing under all licenses of the same nature or otherwise, as these figures refer only to such patents as have been assigned to the Chemical Foundation.

The figures do not in every instance show the full amount involved as of a closing of the books on this date because a number of reports covering the semiannual accounting period ended July 1, 1922, have not yet been received, and are not herein included.

I trust that this is the information which you desire, and that it will serve your present purposes. If not the commission will be very glad to furnish you such other information which you may desire as is in its possession.

Cordially yours,

NELSON B. GASKILL, *Chairman.*

SUMMARY.

Aggregate accrued under licenses	$491,855.70
Total accrued prior to transfer to foundation	135,765.91
Total accrued since foundation took title	356,089.79

[NOTE.—The above figures do not represent full amount involved as a number of reports are not yet in for the semiannual accounting period ending July 1, 1922.]

Mr. MOSES. Mr. President, whatever the result of the Government proceedings against the Chemical Foundation, I shall always believe that it was conceived in conspiracy and fostered by falsehood. The conspiracy, as I believe, was formed by Mr. Garvan, his associates in the office of the Alien Property Custodian, and certain of the dye manufacturers of this country. It is most improbable that Mr. Garvan, being chief of the bureau of investigation in the Alien Property Custodian's office, should not have had considerable knowledge of the value of the patents which he sold to himself. As a matter of fact, Mr. President, Mr. Garvan's coconspirator, Mr. Choate, testified before the House Committee on Ways and Means, with regard to the subject of the dye embargo, that, by virtue of the positions which they held, both he and Mr. Garvan had knowledge of the large profits which had been made by the alien owners of these patents.

Mr. Garvan must have known also that on December 12, 1918, four months prior to the sale of these patents to the Chemical Foundation, but only a month prior to the search of the Patent Office to which I have referred, the Alien Property Custodian had sold 1,200 dye and pharmaceutical patents which had belonged to the Bayer Co. to the Sterling Products Co., of West Virginia, and to the Grasselli Co., of Ohio, for the not inconsiderable sum of $5,310,000, or more than twenty times what Mr. Garvan paid to himself for four times that number of patents.

Nor could Mr. Garvan have been ignorant of the sale of the stock and rights of the Heyden Chemical Works, which Mr. Palmer first bargained to dispose of to the Monsanto Chemical Works, of St. Louis, for $605,000—a sum so absurdly low that even the pliable advisory sales committee refused to approve it—and the property was later sold to Allen A. Ryan, of New York, for more than $1,000,000. It may be relevant to add, Mr. President, that the Monsanto Chemical Works which had been thus favored was a member of the American Dyes Institute and a contributor to its funds; and it may be pertinent to say further that this company has been on both sides of the dye embargo question, but finally landed firmly on the side where its larger material obligation lay. It is also a member of the Chemical Foundation.

Mr. President, I now turn to the orgy of falsehood with which the Chemical Foundation camouflaged its real purpose.

The Chemical Foundation was organized in the winter of 1919. On April 10 of that year it took its first title to the patents upon which have been collected nearly $1,000,000 in royalties. On February 26 the papers which had been carefully prepared for his signature were executed by Acting Secretary of State Polk, and one week later Mr. Garvan became Alien Property Custodian. As such, on April 10, he sold to himself for $250,000 property whose earning capacity thus far disclosed indicates it to have been worth many millions.

THE VALUE OF THE PATENTS.

In fact, Mr. President, the total value of patents and trademarks controlled by the Chemical Foundation can hardly be less than $20,000,000. These patents cover many lines of production, chief among them being:

Vat and other dyes, salvarsan and other medicinals, optical and therapeutic instruments, nitrogen products, tanning materials, synthetic camphor, alloys, and cellulose products.

There are also hundreds of miscellaneous patents covering nonchemical products which unquestionably are valuable, but of which there is no definite knowledge, except that Mr. Choate testified that the profits from them were very large.

According to the financial statement of the Chemical Foundation which was filed by Mr. Garvan with the Shortridge committee, the foundation, up to January 1, 1922, had collected royalties amounting to $407,000. The Federal Trade Commission advises, in the letter which I have already presented, that the Alien Property Custodian has received royalties as of July 1, 1922, amounting to $491,855.70 under licenses covering the patents controlled by the foundation. It is thus evident that $898,000 has been paid in royalties on German dye and chemical patents since the passage of the trading with the enemy act, or during the past four years. Since very few licensees were able to manufacture in any appreciable quantity during the first year of the trading with the enemy act, it is evident that practically this entire amount of $900,000 was collected within the last three years. It follows, therefore, that the Alien Property Custodian and the Chemical Foundation have obtained approximately $300,000 a year as royalties from licenses issued under the patents now controlled by the foundation, or an annual income greater than the whole purchase price, which was only $250,000.

The royalties collected under these patents have increased each year, and they soon will undoubtedly considerably exceed the $300,000 per year now received, though this sum represents a handsome return on an investment of at least $5,000,000. Under date of July 5, 1922, the Journal of Commerce published an interview with former Alien Property Custodian A. Mitchell Palmer, in which he was reported to say: "We could have sold at least one of those patents for $10,000,000 if we had wanted to revert back to the same conditions as when Germany held control." Royalties amounting to $276,000 have been collected under the salvarsan patents, indicating total sales of over $5,000,000 of this well-known medicinal agent. The royalties under this one patent alone have exceeded the purchase price of the entire 4,700 dye and chemical and other patents. Licenses for the manufacture of novocain, a well-known local anæsthetic, have yielded royalties of $37,000, indicating sales of $700,000. One concern alone paid $5,000 royalties on atophan, and another firm $9,000 on this same coal-tar medicinal product. The return of $5,000 was based on a license fee of 2½ per cent of the total sales of atophan; but a fee of 5 per cent was charged by the Chemical Foundation on salvarsan, the only recognized cure for the most deadly scourge of mankind.

It may be pertinent to interject that atophan is a cure for gout, and perhaps the projectors of the Chemical Foundation sought to favor themselves by the lower license fee which they placed upon that remedy.

The foundation has generally demanded royalties ranging from 2 to 5 per cent on products made in this country under patents which it controls, and at the same time it has collected royalties of 10 per cent on imported products covered by the same patents. This policy of charging a royalty two to five times larger on imported products than on those of domestic manufacture has been applied to medicinal preparations regardless of the fact that this royalty unquestionably is paid by the ultimate consumer—the poor and the sick.

WRITES ITS OWN TARIFFS.

The foundation charges a license fee of $100 for the use of any trade-mark to which it claims ownership and an additional royalty of 1 per cent of the total business in the product sold under such trade-mark. The foundation has a fixed royalty

charge of 1 per cent for the use of trade-marks on products of domestic manufacture, but its royalty charges are many times greater than this on imported products—no doubt as much as the traffic will bear—so that we have here an instance where a private corporation is enabled to write and enforce tariff rates at its own sweet will.

I know of at least one instance where the Chemical Foundation imposed an import royalty for the use of a trade-mark on a well-known medicinal agent which was twenty times higher than the royalty for the domestic manufacturer of the same product. And this, Mr. President, in the name of philanthropy and amidst a flow of crocodile tears for the sick who are to be benefited by the Chemical Foundation's activities, activities carried on, I may add, under well-established and extremely lucrative royalty payments.

These royalties have been imposed upon all imported products coming under patents which the foundation controls regardless of the nature of the product or the ultimate consumer. Not only has the foundation collected its royalty of 10 per cent on the importation of medicinal products but it has exacted the same royalty on optical and therapeutic instruments, even though imported specifically for the use of hospitals, institutions for the care of the poor and the sick, laboratories, scientists, and institutions of learning. How alluring, Mr. President, may education and philanthropy become when, as in the case of the Chemical Foundation, they are supplemented by an air-tight royalty.

It should be borne in mind, Mr. President, that the sums represented in the income figures which I have quoted have been derived from only 68 of the 4,700 patents which Mr. Garvan is trying defiantly to withhold from the Government. Is it not pertinent to ask how much the other 4,632 will produce? Other details of the conspiracy I leave to be developed by the Department of Justice, which, I am confident, is not to be pulled off its task by any sort of pressure.

I now beg leave, Mr. President, to read the substance of a conversation had with a former Federal official whose name I do not intend to disclose at this time, but whose testimony in full will undoubtedly be used by the Government when the Chemical Foundation case is heard in court:

The trading with the enemy act conferred upon the Federal Trade Commission authority to license the use of all enemy patents seized under the authority of that act. About April, 1919, the Federal Trade Commission began receiving letters from time to time asking permission to cancel licenses running from the commission and explaining that the writers desired to take licenses with the Chemical Foundation. This caused the officers of the Federal Trade Commission to investigate in order to determine just what the Chemical Foundation was. Up to that time they had no definite information except that it was some sort of a private corporation which claimed to be organized for a beneficial purpose.

Before the investigation had proceeded very far the commission was surprised to learn that the licensees who had applied for permission to cancel their licenses were being informed by officers of the Chemical Foundation that the Federal Trade Commission was acting in accord with the Chemical Foundation, and that the cancellation of the licenses as proposed would be acquiesced in by the Federal Trade Commission. Further inquiry brought out a letter which had been sent to these licensees, over the signature of Ramsay Hoguet, who was special patent counsel for the Chemical Foundation, in which he advised licensees of the Federal Trade Commission that the commission approved of what he was doing and that it was entirely agreeable to the Federal Trade Commission to have the licensees cancel their licenses and execute new licenses to the Chemical Foundation.

This letter of Mr. Hoguet created great surprise in the Federal Trade Commission, as no one had given him any such authority and the statements he had made were untrue. Thereupon, Mr. Hoguet was asked to come to Washington, and, after an interview with one of the officers of the Federal Trade Commission, admitted he had acted hastily and upon insufficient information in thus writing to licensees of the Federal Trade Commission, and he agreed to recall the letters and withdraw the statements. Whether he did so or not is not known.

WAS POLK DECEIVED?

Subsequently, when it became necessary for the Chemical Foundation to secure an Executive order approving its course, the Federal Trade Commission learned that Frank L. Polk, Acting Secretary of State (in the absence of Secretary Lansing and President Wilson in Europe), had signed an executive order prepared by the Chemical Foundation and submitted to him by it. Inquiry of Mr. Polk, propounded by one of the officers of the Federal Trade Commission at the request of Mr. Houston Thompson, a member of the commission, elicited the fact that the same misrepresentations had been made to Mr. Polk by the Chemical Foundation as had been made to the licensees of the Federal Trade Commission regarding the attitude of the commission toward the foundation. Mr. Polk explained that he signed the executive order after a hurried reading of it, upon an assurance that the action to be taken was with the full approval of the Federal Trade Commission—a statement which was untrue. Mr. Polk seemed very much disturbed and held several conferences with Federal Trade Commission officers over the telephone and finally intimated very strongly that he had been made the victim of false representations to induce his signature to the executive order—an order, it must be remembered, prepared by the Chemical Foundation.

It is well known that there were many clashes between the Federal Trade Commission and the Chemical Foundation. The commission always insisted that the action of the foundation in acquiring valuable industrial patents, such as improvements upon the gyroscope and other patents of that sort, was entirely foreign to the avowed purpose of the organization, inasmuch as these patents had no relation to the chemical industry.

In the course of its investigation the Federal Trade Commission learned that the Chemical Foundation had made other representations to licensees to induce them to cancel their licenses running to the commission and to take licenses from the foundation. Among these representations was that made by Mr. Hoguet that the Chemical Foundation could render a service to foundation licensees which the Government could not render, in that they stood ready to defend any action brought in the courts by the former German owners against licensees on account of the use of the patents. This statement was a surprise to the Federal Trade Commission, which has a staff of law officers and to which the Department of Justice would be available in a matter of that kind. Apparently, Mr. Hoguet saw an opportunity to offer his professional services for this gigantic undertaking, and it would appear that the Chemical Foundation was not overscrupulous about the representations it made in order to break up the arrangement between the Federal Trade Commission and its licensees and to take over the business for the Chemical Foundation.

In corroboration of the memorandum of conversation which I have just read I now present a copy of a letter written in June, 1919, by an officer of the Chemical Foundation:

You are now the holder of certain licenses from the Federal Trade Commission under letters patent which have been seized by the Alien Property Custodian and sold to the Chemical Foundation (Inc.). The Chemical Foundation thus becomes entitled to receive the royalties paid for the use of such patents.

In order to make the record clear, we have arranged with the Federal Trade Commission to accept a surrender of your license from the Federal Trade Commission and to issue you a license on the same terms from the Chemical Foundation (Inc.). It may be that the Chemical Foundation will be able to issue you a license at a later date in the uniform form which it proposes to issue to all of its licensees instead of that you now hold.

I may add that, aside from regularizing the situation, there are advantages in surrendering your Federal Trade Commission license in that the royalties paid under a license from the Chemical Foundation (Inc.) are not subject to review by a court, as in the case of a license granted by the Federal Trade Commission, and royalties paid by you will go to the advancement of the chemical industry instead of being held for the benefit of the enemy.

The surrender of your license may be in the form of a letter addressed to the Federal Trade Commission, Washington, D. C., attention of Mr. Francis M. Phelps. If you will notify me when you have made the surrender, I will proceed to have a license issued by the Chemical Foundation (Inc.) immediately.

The licensee to whom this letter was addressed immediately communicated with the Federal Trade Commission, and under date of June 26, 1919, the Hon. Victor Murdock, of Kansas, acting chairman of the commission, made reply as follows. The subheads in the letter are Mr. Murdock's and not mine.

A number of those holding licenses with the Federal Trade Commission by virtue of the authority vested in the commission under the trading with the enemy act and the Executive order of October 12, 1917, in re enemy-owned patents, etc., have notified the commission that they have been requested by the Chemical Foundation (Inc.) to relinquish the said licenses and in lieu thereof to accept licenses from the Chemical Foundation (Inc.). The Chemical Foundation (Inc.), through its attorney and representative, Mr. Hoguet, has appeared in person before the commission and asked for an expression from the commission as to its disposition in this matter. In response to these inquiries the commission makes the following statement for your consideration:

LICENSE GRANTED BY THE COMMISSION.

By virtue of the authority vested in it by the act of Congress approved October 6, 1917, known as the trading with the enemy act, and the Executive order of October 12, 1917, vesting it with authority to administer said act, the Federal Trade Commission granted licenses thereunder for the life of the patent, unless otherwise stated, and upon payment to the Alien Property Custodian of a certain royalty. Under said license the commission reserved the power to terminate and cancel the license in whole or in part. It is this license that the Chemical Foundation now requests you to surrender, and in lieu thereof to apply for one to be issued by it.

THE CHEMICAL FOUNDATION (INC.).

At the suggestion of the commission, the Hon. Ramsay Hoguet, counsel for the Chemical Foundation (Inc.), has made the following statement of the objects and purposes of the said foundation:

"The Chemical Foundation is a corporation to which the Alien Property Custodian, acting under the authority of the President, has sold all of the formerly enemy-owned patents relating to dyes, chemicals, and related subjects. The stock of the Chemical Foundation is divided into $400,000 of preferred nonvoting stock, which it is expected will be redeemed within a very short time, and $100,000 worth of common stock, the dividends on which are limited to 6 per cent. This stock is sold in very small lots and is as widely distributed as possible throughout the industries affected by the patents. In order to prevent control falling into the hands of any one group, the stock is made nontransferable except by leave of the board of directors, and is placed in a voting trust for a period of 17 years. The voting trustees are the gentlemen who have been serving as the advisory sales committee to the Alien Property Custodian—Otto T. Barnard, Esq. (chairman the New York Trust Co., New York); Hon. George L. Ingraham (late presiding justice appellate division, first department, New York Supreme Court); Cleveland H. Dodge, Esq.; B. Howell Griswold, jr., Esq. (of Alexander Brown & Sons, Baltimore); Ralph Stone, Esq. (president Detroit Trust Co., Detroit, Mich.). The officers and directors of the foundation are as follows: President, Mr. Francis P. Garvan (the Alien Property Custodian); vice president, Col. Douglas I. McKay (late colonel, General Staff, vice president of J. G. White & Co. and deputy police commissioner of the city of New York under Mayors Gaynor, Kline, and Mitchel); treasurer and secretary, Mr. George J. Corbett (assistant secretary Central Union Trust Co.).

"It is the purpose of the Chemical Foundation to issue nonexclusive licenses on equal terms to all properly qualified American manufacturers and to enforce the patents against infringement by the importation and sale of the patented product made abroad. The royalties charged are to be fixed after consideration of all the facts surrounding the manufacture of the patented product, and will be at a reasonable rate. The

royalties will be used to retire the preferred stock and for the encouragement of chemical industry in the United States. Directors of the Chemical Foundation hope to make it a central body and point of contact for the entire chemical industry and the means of conducting research for the benefit of the industry as a whole.

"The sale to the Chemical Foundation by the Alien Property Custodian having been made unconditionally, no rights are reserved to the former enemy owner of the patents, and under section 7 (c) of the trading with the enemy act as amended November 4, 1918, his only recourse appears to be against the proceeds of the sale from the Alien Property Custodian to the Chemical Foundation. It is the opinion of counsel for the Chemical Foundation that the alien enemy has no right of action whatever against the licensee under a license issued by the Chemical Foundation.

"The Chemical Foundation will issue licenses at the rate of royalty now paid to all licensees of the Federal Trade Commission who apply to the commission for a surrender of their licenses, and the surrender of whose licenses is accepted by the commission."

The commission is informed that on July 1, 1919, the Alien Property Custodian will cease to be a member of the Chemical Foundation (Inc.); that thereafter there will be no connection whatsoever with the United States Government, and that its licensees will be governed by the terms of the license issued by it.

LICENSE OF THE CHEMICAL FOUNDATION (INC.).

There is herewith inclosed a copy of the form of license of the Chemical Foundation (Inc.). A comparison of the form of license of the Chemical Foundation (Inc.) and that of the Federal Trade Commission will reveal a number of differences, several of which are herewith referred to.

According to section 2 thereof, the licensee will not be permitted to import into the United States from any country "any product which is covered by any of said patents or sell in the United States, its Territories or dependencies, any such product made outside of the United States."

By section 13 of said form of license there is reposed in the foundation the exclusive discretion of determining not only whether the licensee has lived up to the terms of the license but the foundation also reserves to itself the right to judge of the qualifications of the licensee at the time of the application and at all times after granting the same, according to the several sections of the said form of license.

ALTERNATIVES OFFERED TO LICENSEE.

The licensee has the privilege of electing one of the following three alternatives:

(a) The licensee may retain its Federal Trade Commission license and operate thereunder for the life of the patent unless otherwise specified, subject to the powers of revocation provided by the Federal Trade Commission license. Or

(b) The licensee may retain its license with the Federal Trade Commission and at the same time apply for one from the Chemical Foundation (Inc.). Should the latter be granted, the licensee may operate under both of said licenses, but subject to either the Federal Trade Commission or the Chemical Foundation (Inc.), or both, according to the terms of the respective licenses. Or

(c) The licensee may surrender its Federal Trade Commission license and thereby withdraw from the protection of the trading with the enemy act and apply for a license from the Chemical Foundation (Inc.), and in the event of issuance of the same operate thereafter under the control of the said foundation as a private corporation, according to the terms of the license issued.

A surrender of license will not be acted upon by the Federal Trade Commission where the licensee is a corporation until a written request is addressed to it by the properly authorized officers of the licensee, together with a resolution of the board of directors authorizing the said request. In the case of licensees not incorporated the request must be in writing, signed by the proper parties. The cancellation of a license will not take place until the commission has acted upon the request and informed the licensee of its action.

Attention is called to the fact that the commission does not have knowledge at this time of the effect of the treaty of peace now being negotiated at Paris upon the same patents or sales or licenses there under. It therefore points out that until the treaty of peace is executed and the effect thereof on patents and licenses is known the licensee may well consider whether he shall surrender the Federal Trade Commission license.

By direction of the commission:

VICTOR MURDOCK,
Acting Chairman.

Mr. McCORMICK. Mr. President, will the Senator give us the date of the letter he has just read?

Mr. MOSES. June 26, 1919. I gave the date at the beginning of the reading of the letter.

Mr. McCORMICK. What was the date of the organization of the Chemical Foundation?

Mr. MOSES. It took title to its patents April 10, 1919.

Acting upon this counsel, and in view of the falsehood with which the Chemical Foundation had thus inaugurated its career, many of these licensees have continued production under the thoroughly legal licenses issued by the Federal Trade Commission and have continued paying to the Alien Property Custodian the royalties and license fees which the Chemical Foundation is now suing the Government to recover.

In pursuance of the educational purpose which the Chemical Foundation so unctuously advertises it is to follow, it has expended nearly $300,000; the sole intention of which was to bolster the propaganda for the dye embargo which we are now considering. Pamphlets, beautifully printed upon expensive paper and bound in rich and costly fashion, have swept over the land like a wave of the poison gas regarding which the dye makers of America have loudly declaimed but a pound of which they never produced, and which the United States has made illegal by solemn treaty engagements. Nearly 60,000 copies of a strikingly interesting book entitled "Creative Chemistry" were distributed to members of women's clubs, the American Legion, to newspapers, to colleges, to agricultural agents, to dye consumers, to authors, to scout masters of boy scouts, and to what Mr. Joseph H. Choate, jr., euphemistically calls "prominent men," but who, in the form letter which accompanied each of these 60,000 books, were designated as "millionaires." I suppose, Mr. President, I may interpolate the suggestion that, in the minds of the great dye makers and the avaricious Chemical Foundation, no man can be prominent unless he possesses a million dollars.

NOT A GOVERNMENT AGENCY.

In each of these letters appears in one form or another the false statement that the Chemical Foundation is a Government agency. Thus, in the letter to women's clubs, it is asserted that "the Chemical Foundation is a quasi-public corporation formed by the Government;" in the letter to the American Legion, keyed in the foundation lists as the "dough-boy" letter, it is asserted that "the Chemical Foundation was formed by the Government;" in the letter to consumers, keyed as "textile form," it is declared that "the Chemical Foundation is formed at the suggestion of the Government;" in the letter to consumers, keyed as "club form," the Chemical Foundation is again held up as a "quasi-public corporation formed at the suggestion of the Government;" in the letter to scout masters of the Boy Scouts, the function of the foundation is described as "simply to lay before you the facts in America's critical chemical situation to-day;" while, in the letter to the millionaires, the foundation resumes its more familiar form of "a quasi-public corporation formed by the Government." In addition these letters, particularly that addressed to club women, stress the "necessity" for the foundation, but no letter contains any reference to the necessities of Mr. Garvan and his coconspirators. The letter to manufacturers in both forms begins with the assertion that at the request of the foundation, "The United States Tariff Commission is sending" a report bearing upon the subjects dear to the foundation's heart. This statement, evidently designed to bolster the original falsehood of the foundation's governmental character, is wholly untrue. I read from a letter under date of June 29, 1922, signed by Hon. Thomas O. Marvin, chairman of the United States Tariff Commission:

A careful search of our files fails to uncover any letter received by the Tariff Commission from the Chemical Foundation (Inc.), of 81 Fulton Street, New York City, containing a request that the Tariff Commission send to a list of names suggested by the foundation, copies of our census of dyes and coal-tar chemicals, 1920.

It is, of course, possible that the Chemical Foundation sent to the trade a letter in which they state: "At our request the United States Tariff Commission is sending to you copy of its report showing the progress of the American coal-tar industry up to June 30, 1920." We are, of course, in no way responsible for this statement. No such request was made of the Tariff Commission, and your letter gives us the first intimation in regard to it.

In the letter to millionaires, Mr. Garvan asserts that he is the president of the Chemical Foundation, and that "Thomas W. Miller, Alien Property Custodian, is its vice president;" and a letterhead of the foundation upon which is written a letter under date of May 18, 1921, carried Mr. Miller's name as such officer. Having known Colonel Miller intimately and affectionately for many years, and having a thorough knowledge of his high character and of his personal and public probity, I knew also that he would lend neither his character, his name, nor his official position to a scheme like the Chemical Foundation; and in confirmation of my belief, I read now a letter written by Colonel Miller:

To whom it may concern:

At no time was I an officer or director, or did I have any interest, own or control any stocks, bonds, or other evidence of interest or ownership in the Chemical Foundation (Inc.), nor have I at any time been officially or unofficially connected in any manner with this corporation. I was informed that the board of directors of the Chemical Foundation (Inc.) had elected me an official and that my name appeared on the door of the New York office as one of its vice presidents. When first informed of this action I requested the removal of my name from the door and asked that the board of directors rescind the action taken. I am reliably informed that my request was immediately complied with.

THOMAS W. MILLER.

ASSAULTING THE YOUTHFUL MIND.

More insidious, however, Mr. President, than the attempt thus made to mislead the millionaires of the country was the Chemical Foundation's onslaught upon the minds of America's children as represented in the membership of the Boy Scouts. To the scout masters of the country, numbering 16,796, and in a position to influence the minds of hundreds of thousands of the rising generation, the foundation sent not only copies of "Creative Chemistry," but a pamphlet which they described as "the latest publication of the United States Bureau of Education," entitled "Treasure Hunting of To-day," a title, I may interpolate, suited to the Chemical Foundation, whose chase for treasure has been persistent.

Wishing to know to what extent the Chemical Foundation had wound its tentacles about the educational system of the country, I wrote on June 26, 1922, to the Commissioner of Education, as follows:

Some time during the month of May, 1921, the Chemical Foundation, with offices at 81 Fulton Street, New York City, distributed a certain pamphlet prepared by the United States Bureau of Education. I do not know the subject matter contained in this pamphlet, but inasmuch as it was very widely distributed I assume you will have no difficulty in identifying it. I am writing to ask if you will not be good enough to send me a copy of the document.

This led to an interesting correspondence, for on June 29, 1922, Commissioner Tigert replied to me as follows:

In reply to your letter of June 26, I take pleasure in sending herewith a copy each of two pamphlets, entitled, respectively, "Treasure Hunting of To-day and Chemistry in Our Schools" and "The Education of the Research Chemist," both of which were prepared by Mr. Robert E. Rose. I believe that one of these is the publication to which you refer.

This was the first intimation I had received of the existence of the pamphlet, "The Education of the Research Chemist," and it interested me greatly. From it I learned that its author was R. E. Rose, of the "chemical department of the E. I. du Pont de Nemours Co., Wilmington, Del." The pamphlet was further adorned with Mr. Rose's portrait, and stamped upon it in a manner to indicate that it was an official publication of the department were the words "Department of the Interior, Bureau of Education." Accordingly I again wrote to Commissioner Tigert, as follows:

I thank you for your prompt reply to my letter of June 26 and for the copies of "Treasure Hunting of To-day and Chemistry in Our Schools" and "The Education of the Research Chemist," which you inclosed.

In connection with the publication and distribution of these two pamphlets there is certain information I would like to have. Will you please advise me how the pamphlet entitled "The Education of the Research Chemist" happens to be in your bureau for distribution, how many copies of the pamphlet were sent to you, where it was printed, and who paid for the printing. I note the cover page has the following thereon:

DEPARTMENT OF THE INTERIOR,
Bureau of Education.

[Reprinted from the Journal of Industrial and Engineering Chemistry, vol. 12, No. 10, p. 947, October, 1920.]

THE EDUCATION OF THE RESEARCH CHEMIST.

(By Robert E. Rose.)

Anybody receiving a copy of this pamphlet would naturally think it was reprinted by the Department of the Interior, Bureau of Education. I assume you must have in your files copies of whatever correspondence you have had in connection with the receipt and distribution of this pamphlet, and I would greatly appreciate it if you would send me a copy of same, together with a copy of the mailing list, if any, that was used for the distribution of this pamphlet.

Will you also advise me how the manuscript of the pamphlet entitled "Treasure Hunting of To-day and Chemistry in our Schools" came into the possession of the Bureau of Education, and at whose suggestion it was printed as a Federal publication? I would also like to know the number of copies of this pamphlet that you have sent out; the name of the party or organization suggesting said distribution, and the mailing list used in connection therewith.

Will you also advise me as to whether Robert E. Rose is now or ever has been connected with the United States Bureau of Education?

On July 5, 1922, the Acting Commissioner of Education, Mr. Kalbach, answered the foregoing letter, as follows:

All the correspondence relating to the distribution of the document "Treasure Hunting of To-day and Chemistry in our Schools" appears to be in the files of this bureau. The arrangements were made, however, very largely in personal conferences between Dr. P. P. Claxton, who was then Commissioner of Education, and Mr. Keohan and Mr. Mead, who represented the Chemical Foundation. Doctor Claxton seems to have "outlined" the pamphlet, which was actually written by Robert E. Rose, formerly assistant professor of chemistry in the University of Washington, but at that time in the chemical department of E. I. du Pont de Nemours & Co. He was never employed in the Bureau of Education.

The whole purpose of the pamphlet was to stimulate the study of chemistry in this country. It appears from memoranda and letters in the files that chemists of high standing were consulted in regard to the matter. Among these were Dr. Charles Parsons, of the Bureau of Mines; Dr. Treat B. Johnson, of the Sheffield Scientific School of Yale University; and Doctor Howe, of the National Research Council. A letter urging the publication was received from Doctor Johnson, but the recommendations of Doctor Parsons and Doctor Howe, if there were any, were made orally.

It is evident that Doctor Claxton was convinced of the desirability of issuing the document, for it was printed with the "Department of the Interior, Bureau of Education," on the title-page, and it was mailed from the Bureau of Education under the bureau's penalty envelopes. It was not printed by the bureau, but 30,000 copies were received from the Chemical Foundation, and they were sent to the following mailing lists:

State superintendents of public instruction.
County and township superintendents of schools.
Superintendents of city schools.
Principals of public high schools.
Principals of private secondary schools.
Principals of normal schools (four copies to each).
Presidents of universities and colleges (five copies to each).

The pamphlet was very favorably received, for a considerable number of requests came later from persons who desired from 25 to 100 copies each. These were supplied from stock which remained from the 30,000 copies after the main distribution. A few copies still remain in the office.

With reference to the pamphlet, "The Education of the Research Chemist," the correspondence on file shows that 300 copies were sent to this bureau by the author and that they were mailed to the libraries of the larger universities and colleges under Doctor Claxton's instructions. The pamphlet was not reprinted by this bureau. The 300 copies were donated to the bureau, and after they were received here "Department of the Interior, Bureau of Education," was stamped on each copy to show that it was the property of the bureau. I do not know where it was printed or who paid for the printing.

For your information I am sending herewith copies of all correspondence in our files relating to the two pamphlets referred to. I am sending also a copy of Commissioner Claxton's letter that was sent with the pamphlet, "Treasure Hunting of To-day."

Mr. President, at this point it may be interesting briefly to describe the gentlemen named by the Acting Commissioner of Education. Mr. Keohan is the Washington manager of the Chemical Foundation and was Mr. Garvan's handy man during the Garvan administration of the Alien Property Custodian's office. Mr. Mead is a vice president of the E. I. du Pont de Nemours Co. and is president of the Manufacturing Chemists' Association, which is the first of the associations of such character so generously spawned under the auspices of the Du Pont Co. and one of the organizations to whom, as I have already pointed out, Messrs. Palmer and Garvan took their precious scheme to organize the Chemical Foundation. Rose is of the staff of the technical laboratory in the chemical department of the Du Pont Co. Doctor Parsons is secretary of the American Chemical Society, which has been actively interested in promoting the dye embargo; he was consulting chemist of the General Chemical Co., a subsidiary of the Allied Dye & Chemical Co., which will be one of the chief beneficiaries of the embargo if it stands; and he is an active member of a group now contesting with Henry Ford for possession of the Muscle Shoals power plant. Doctor Howe is the editor of the Journal of Industrial and Chemical Engineering, in which Mr. Rose's original article, "The education of the research chemist," first appeared. Doctor Claxton is a former Commissioner of Education, and Mr. Garvan has already been sufficiently identified.

It appears, Mr. President, from the letters which I hold in my hand, and which I shall ask to have printed in full as a part of my remarks, that Mr. Garvan wrote to Commissioner Claxton to say:

Mr. Keohan and Mr. Mead have told me of your very kind offer to help in the educational efforts of the Chemical Foundation by personally sending to various educational heads a pamphlet prepared along lines suggested by you.

It might be valuable to know, Mr. President, whether Doctor Claxton's "very kind offer" and the "lines suggested" by him were in any way implanted in his receptive mind by the dulcet diplomacy of Mr. Keohan and Mr. Mead. However that may be, Mr. Garvan goes on to say:

This appeals to me as a very valuable and effective means of conveying our message to the younger generation in this country.

In consequence, Mr. Garvan added, they would make efforts to secure the best talent available and to prepare the suggested pamphlet, and as soon as it had reached final form it would be laid before Doctor Claxton for approval and criticism. And, not to be outdone in the courtesy of the occasion, Mr. Garvan concluded his letter by asking Doctor Claxton to accept "hearty thanks for his patriotic and generous offer of cooperation in his field."

A NEW OCCUPATION.

This, Mr. President, seems to open a new avenue of activity for Government departments and bureaus, and I doubt not that many other equally anxious corporations who clothe their aims in the garb of education and patriotism will be seeking out other Government agencies for like cooperation.

These letters to which I refer, Mr. President, are as follows, and I ask that they may be here inserted without reading.

The VICE PRESIDENT. Without objection, it is so ordered.

The letters are as follows:

THE CHEMICAL FOUNDATION,
New York City, November 19, 1920.

Hon. PHILANDER P. CLAXTON,
Commissioner Bureau of Education,
Pension Office Building, Washington, D. C.

MY DEAR COMMISSIONER CLAXTON: Mr. Keohan and Mr. Mead have told me of your very kind offer to help in the educational efforts of the Chemical Foundation by personally sending to various educational heads a pamphlet prepared along lines suggested by you. This appeals to me as a most valuable and effective means of conveying our message to the younger generation in this country as well as of acquainting its young men and women with the possibilities of a career in chemistry.

I am, consequently, making efforts to secure the very best talent among chemical authorities to prepare data for such a pamphlet as you outline. Just as soon as we have this matter in some sort of final form Mr. Keohan or Mr. Mead will lay it before you for your approval and criticism.

Please accept our hearty thanks for your patriotic and generous offer of cooperation in your field.

Very sincerely yours,

FRANCIS P. GARVAN, *President.*

E. I. DU PONT DE NEMOURS & CO. (INC.),
CHEMICAL DEPARTMENT,
Wilmington, Del., January 3, 1921.

Mr. PHILANDER P. CLAXTON,
Commissioner of Education, Washington, D. C.

DEAR MR. COMMISSIONER: When we were discussing the letter which you propose sending out with the pamphlets on chemistry you said you would like to have some definite figures showing the number of chemists

employed in the different industries, which might serve as an indication of the possibilities open to the youth of the country.

I have made a very earnest effort to obtain such statistics for you, but I find that there is no record of the kind anywhere in the country and there is obviously no means of getting the figures directly.

Under the circumstances it would seem that there is no way open to give a more definite characterization to the nature of chemical employment than that which you have already embodied in your letter.

If I can be of any possible service to you in getting other information to take the place of that which I was unable to obtain, please call upon me.

Very truly yours, R. E. ROSE.

—

DEPARTMENT OF THE INTERIOR,
BUREAU OF EDUCATION,
Washington, January 4, 1921.

Dr. R. E. ROSE,
Chemical Department, E. I. du Pont de Nemours & Co.,
Wilmington, Del.

MY DEAR DOCTOR ROSE: I wish to thank you for your note of January 3. I am sorry that it is impossible to get any adequate estimate of the number of chemists that will probably be needed in the near future. This quantitative side would be very helpful to me, but I can understand the difficulty.

Yours sincerely, P. P. CLAXTON, *Commissioner.*

—

DEPARTMENT OF THE INTERIOR,
BUREAU OF EDUCATION,
Washington, January 14, 1921.

Mr. CHARLES PARSONS,
Bureau of Mines, Department of the Interior.

MY DEAR MR. PARSONS: I am sending you herewith the article about which I spoke to you a day or two ago. The purpose of the article is to inspire boys and girls in high school to study elementary sciences, and particularly chemistry, with a view to continuing the study in college for the purpose of becoming professional chemists. I wish you would tell me very frankly what you think about it.

Yours sincerely,

P. P. CLAXTON, *Commissioner.*

—

SHEFFIELD CHEMICAL LABORATORY,
SHEFFIELD SCIENTIFIC SCHOOL OF YALE UNIVERSITY,
New Haven, Conn., January 20, 1921.

Mr. PHILANDER P. CLAXTON,
United States Commissioner of Education,
Washington, D. C.

DEAR MR. CLAXTON: Mr. Francis P. Garvan, president of the Chemical Foundation (Inc.), has recently brought to my attention a proposed plan of stimulating interest in chemistry in this country. As I understand the proposition, it is one of cooperation between you and the Chemical Foundation in the circulation of literature or a pamphlet concerning a career in chemistry among school superintendents and other educational officials throughout the country. I think this would be an admirable undertaking, and I trust nothing will develop which will interfere with the carrying out of the same.

Mr. Garvan informed me, however, that you are very insistent that there be incorporated in such a pamphlet some definite figures or statistics on the opening for young chemists in the various industries. To make a census of such activities would be an extremely difficult matter at this time, and I doubt very much whether it would be of great value if it could be obtained. It would not be at all accurate, owing to the changing state of our science and industry to-day, and it is my opinion any such compilation would be useless for practical purposes. I think we should get this matter before the public just as soon as possible, and I sincerely hope that the Chemical Foundation will be supported in every way possible in this educational work.

Very truly yours,

TREAT B. JOHNSON,
Professor of Organic Chemistry.

—

ALIEN PROPERTY CUSTODIAN,
Washington, D. C., March 2, 1921.

The Hon. P. P. CLAXTON,
Commissioner of Education, Washington, D. C.

MY DEAR COMMISSIONER: I am sending you herewith a number of booklets on chemistry which the Chemical Foundation prepared and which you were kind enough to offer to distribute to the school superintendents of the country.

As you know, the purpose of this booklet is to encourage the study of chemistry in our schools, and I am quite sure that your kind assistance in their distribution will have an extremely beneficial effect.

Thanking you for your sincere interest in the promotion of the study of chemistry, I am,

Very truly yours, W. F. KEOHAN.

—

DEPARTMENT OF THE INTERIOR,
BUREAU OF EDUCATION,
Washington, March 5, 1921.

Mr. W. F. KEOHAN,
Office Alien Property Custodian,
Sixteenth and P Streets NW., Washington, D. C.

MY DEAR MR. KEOHAN: Your letter of March 2 is found on my desk on my return to the office. I am glad to have the copies of the booklet, I will take steps at once for sending them out.

Yours sincerely,

P. P. CLAXTON, *Commissioner.*

—

DEPARTMENT OF THE INTERIOR,
BUREAU OF EDUCATION,
Washington, March 9, 1921.

DEAR SIR: I am sending you herewith a copy of "Treasure Hunting of To-day," which has been written at my request for the purpose of calling the attention of boys and girls to some of the things of interest in science as a study in school and college, and particularly to the important part which chemistry is beginning to play in our industrial and economic life—a part which will no doubt become much larger in the near future. The demand for technical chemists is constantly increasing, and the more we learn of chemistry the greater and more numerous are the possibilities of important new discoveries.

I wish to suggest to principals of high schools and presidents of normal schools that they read or have this leaflet read to their students in one or more daily assemblies or otherwise.

To colleges and universities and normal schools a sufficient number of copies is being sent for distribution among the various departments and for the tables of reading rooms and libraries.

Yours sincerely, P. P. CLAXTON, *Commissioner.*

—

NOVEMBER 23, 1920.

Mr. PHILANDER P. CLAXTON,
Commissioner of Education,
Department of the Interior, Washington, D. C.

DEAR SIR: At a time when the question of education is receiving such intense attention, both with regard to the supply of teachers and the nature of the courses followed, it may be of interest to you to know the opinion of one who has been both a teacher and a member of a corporation employing a great many research men.

The statement that the future of this country is dependent for its success on the quality of the research work done here and that the research work is in turn primarily dependent on the instruction furnished in our grade schools is not expressing the case too forcibly.

The paper which I inclose is far too brief to do justice to the importance of the subject, but it has served to arouse comment which may ultimately result in constructive efforts being made which will play some small part in the future development of educational methods in this country.

Yours very truly, ROBERT E. ROSE.

—

DEPARTMENT OF THE INTERIOR,
BUREAU OF EDUCATION,
Washington, D. C., November 24, 1920.

Mr. ROBERT E. ROSE,
Chemical Department,
E. I. du Pont de Nemours & Co., Wilmington, Del.

DEAR MR. ROSE: I have your letter of November 23 and a copy of your pamphlet, "The Education of the Research Chemist." This will be called to Commissioner Claxton's attention as soon as he has the time to give it.

Sincerely yours, J. F. ABEL, *Chief Clerk.*

—

DEPARTMENT OF THE INTERIOR,
BUREAU OF EDUCATION,
Washington, D. C., November 7, 1921.

Mr. ROBERT E. ROSE,
Care E. I. du Pont de Nemours & Co., Wilmington, Del.

MY DEAR MR. ROSE: I have just this morning read the reprint of your article, "The Education of the Research Chemist," which you were kind enough to send me some time ago. I have read it with very great pleasure, and am in full accord with your position in almost every part of it. I wish this could get to a very large number of educators—principals of high schools and presidents of colleges and universities. How many reprints did you have made? Would it be possible for this bureau, without cost to it, to have 15,000 or 20,000 copies for distribution?

Yours sincerely, P. P. CLAXTON, *Commissioner.*

—

E. I. DU PONT DE NEMOURS & CO.,
DYESTUFFS SALES DEPARTMENT, TECHNICAL LABORATORY,
P. O. Box 518, Wilmington, Del., March 17, 1921.

Mr. PHILANDER P. CLAXTON,
Commissioner of Education, Washington, D. C.

DEAR MR. COMMISSIONER: I was very much pleased to have your opinion of my little article on the "Education of the research chemist" and to know that you feel that it would be an advantage to have this given wider publicity.

I am looking into the matter of obtaining sufficient reprints to supply your needs, and will let you know if I can manage to obtain them. I could let you have 300 copies at once, if you could make use of them.

With kind regards, I am,

Yours sincerely, R. E. ROSE.

—

DEPARTMENT OF THE INTERIOR,
BUREAU OF EDUCATION,
Washington, March 21, 1921.

Mr. R. E. ROSE,
P. O. Box 518, Wilmington, Del.

DEAR SIR: In the absence of Commissioner Claxton, who is in the Middle West, I am acknowledging your letter of March 17. Doctor Claxton will be back in Washington at the end of this week, and I will submit your letter to him at the first opportunity.

In the meantime I would suggest your sending the 300 copies of your article which you say you can spare, as I am sure he can make good use of them.

Yours sincerely, THEO. HONOUR,
Secretary to the Commissioner.

—

E. I. DU PONT DE NEMOURS & CO., DYESTUFFS DEPARTMENT,
SALES DIVISION TECHNICAL LABORATORY,
Post-office box 518, Wilmington, Del., May 11, 1921.

Mr. PHILANDER P. CLAXTON,
Commissioner of Education, Washington, D. C.

MY DEAR COMMISSIONER: Under separate cover I forwarded to you 300 reprints of my article on the "Education of the research chemist" which you were kind enough to say you thought you could use to good advantage.

I have not yet been able to make arrangements to have a larger number printed, but I have not lost hope of being able to do so.

Yours very truly,

R. E. ROSE.

—

DEPARTMENT OF THE INTERIOR,
BUREAU OF EDUCATION,
Washington, May 13, 1921.

Mr. R. E. ROSE,
P. O. Box 518, Technical Laboratory,
E. I. du Pont de Nemours & Co., Wilmington, Del.

MY DEAR MR. ROSE: I wish to thank you for the 300 reprints of the article "Education of the research chemist." Have these been sent to

the libraries of the better colleges and universities? If not, it occurs to me that this would be the best use to make of them.

Yours sincerely,

P. P. CLAXTON, *Commissioner.*

—

E. I. DU PONT DE NEMOURS & Co., DYESTUFFS DEPARTMENT,
SALES DIVISION, TECHNICAL LABORATORY,
Post-office box 518, Wilmington, Del., May 17, 1921.

Mr. PHILANDER P. CLAXTON,
Commissioner of Education, Washington, D. C.

DEAR MR. COMMISSIONER: With regard to the reprints of the article "The education of the research chemist," I have to inform you that these have not been sent to the libraries of the better colleges and universities. It seems to me that this would be a very excellent way of making use of them.

Yours sincerely,

R. E. ROSE.

—

DEPARTMENT OF THE INTERIOR,
BUREAU OF EDUCATION,
Washington, May 28, 1921.

Mr. R. E. ROSE,
Post-office box 518, Wilmington, Del.

DEAR MR. ROSE: I take pleasure in advising you that we are now mailing the 300 copies of your article on "The education of the research chemist" to the libraries of the more important universities and colleges in the United States.

Yours sincerely,

L. A. KALBACH, *Chief Clerk.*

Mr. MOSES. It is, perhaps, not without interest to note that of the eight letters written to the Bureau of Education by way of seducing it into this scheme five came from the Du Pont Co., one from the Chemical Foundation, one from the Alien Property Custodian, and one from Yale College.

Mr. KING. Mr. President, I did not hear to whom those letters were sent.

Mr. MOSES. These eight letters were addressed to the Bureau of Education.

FIVE DOLLARS FOR A SENATOR.

As another example of the manner in which the dye makers have been able to hoodwink the public and to make use of governmental agencies for their private purpose, I desire to advert to the chemical industrial exhibit which occupied the boards at Rochester, N. Y.; Springfield, Mass.; Du Pont Hotel, Wilmington, Del.; Chicago; and Philadelphia, which found temporary shelter in both the Senate and House Office Buildings, which is now permanently installed at the National Museum, and which, in a condensed and highly idealized form, was paraded before the Shortridge committee. The exhibit as it appeared in this last-named place, Mr. President, constituted a demonstration of scientific processes such as never was on land or sea; and in one or more of the various forms in which this peripatetic pageant of plutocracy held sway in Washington its drawing power was so scant that professional pullers-in were employed to find sightseers at a price per head ranging as high as $5 apiece for a Senator—prices for Representatives and other public officials not quoted. I may add that I have in my possession an affidavit to this effect.

The origin of this exhibit, Mr. President, is shrouded in some mystery. The first authentic reference to it which I have been able to find is contained in a letter from O. E. Roberts, jr., captain in the Chemical Warfare Service and head of the chemical relations section. Writing under date of January 16, 1920, to an officer of the National Aniline & Chemical Co., Captain Roberts refers to plans for an exhibit which he says are "rather up in the air," the Chief of Staff having refused to sanction the project as originally proposed. Captain Roberts, however, was hopeful, and promised to take the matter up again with a view to modifying his request for funds so that the general plan might be adopted. It appears, Mr. President, from the photostat copies of official correspondence which I have before me, that the higher ups in the War Department were wary in their use of public money for private propaganda; but, since no question of money has ever yet served to check the dye propagandists in their work, that obstacle was readily overcome. Funds were provided from various sources; and, in a later letter from Captain Roberts addressed to the chemical department of the Du Pont Co., he voiced his appreciation of "heartfelt cooperation" which he had received from that benevolent institution. Still later, writing to the secretary of the American Dyes Institute, Captain Roberts requested the approval of the institute and its authority—presumably meaning its funds—for the purpose of commencing the preparation of the second exhibit to be sent to Philadelphia; and on the same day, in order to emphasize the urgency of the situation, he telegraphed to Doctor Isermann, of the Chemical Co. of America, and to an official of the Du Pont Co., requesting like "authority." It is evident, Mr. President, that Captain Roberts is a resourceful person who believes in having more than one string to his bow.

Later, writing to an officer of the Calco Chemical Co., Captain Roberts expressed the workings of his mind in connection with this exhibit. Indicating that since he did not know what agency would "stage" it in Philadelphia, he admitted a prejudice in the matter and a feeling—

that the Chemical Warfare Service is by all means fitted to stage such an exhibit.

He argued that—

the publicity thus gained is not considered in the light of propaganda and would be received by the general public in a better spirit than if it was staged as an exhibit of the dyes institute.

Five days after this artful suggestion, Captain Roberts again took his ready pen in hand once more to write to the secretary of the dyes institute, and said:

We have gone ahead with the preparation of this exhibit and have obligated ourselves for several thousand dollars. It is therefore requested that as soon as convenient you mail a check to cover the amount of the exhibit, as stated to your committee for our use—

And, of course, Mr. President, he thanked his correspondent for an early reply.

Mr. President, we thus see the Bureau of Education and the War Department, two great agents of the Government, victimized by the dye makers of the country, and our public agencies turned to use in private propaganda. Small wonder that many well-meaning and impulsive people, including Senators, have been duped by what they thought to be their own Government advocating this vicious legislation; though the proof is here clear that it was merely the work of a corrupt and unscrupulous group of monopolistic profiteers.

Mr. President, if we turn now to the Summary of Tariff Information, so well thumbed by Senators who have taken part in the debate on this bill, on page 79 we may read:

Previous to the war the domestic synthetic dye industry was restricted to assembling a limited number of dyes from intermediates imported from Germany. In 1914, 6,619,729 pounds of coal-tar dyes, valued at $2,470,096, were made from imported intermediates (aniline in part excepted).

During the war the failure of the foreign supply and the great needs of the domestic consumer, combined with great initiative on the part of the dye makers, gave rise to the rapid development of dye manufacturing. In 1917, 45,977,246 pounds were produced, increasing to 88,263,776 pounds in 1920.

According to the same authority, Mr. President, our production in 1914 was only 6,619,729 pounds, with a value of $2,470,096, whereas in 1920 the production, which I have named, was valued at $95,613,749. In other words, both production and value have risen together. In 1914 the importation and production combined were slightly less than 53,000,000 pounds, and their value about $13,000,000, or an average price of less than 25 cents per pound. In 1920 production and importation had risen to 92,000,000 pounds, in round numbers, with a value of more than $100,000,000, or about $1 per pound. During the same period our exports in all classes of dyes have risen to nearly $30,000,000, or an amount three times the value of our total importations from Germany prior to the war. These figures, Mr. President, show that the dye industry in this country has far transcended the 60 per cent of total consumption which the dye makers in 1916 set for themselves as the limit at which they would begin to reduce their demand for protection; yet in spite of this, sir, we find them here impudently demanding a total embargo against all competition from abroad at a time when the chief members of the group are in a position to strangle equally all competition at home.

IS THERE A MONOPOLY?

This latter fact is evident, Mr. President, from the undisputed assertion made before the Shortridge committee that two dye makers in America to-day produce substantially 70 per cent of the total American dye output. These two producers are the National Aniline & Chemical Co., whose output, admitted by itself, is substantially 40 per cent of the total American production; and the Du Pont Co., whose output is more nebulously stated by its president to be about one-sixth of the total production. These per cents combined, Mr. President, account for nearly 60 per cent of the total American production; and it is significant that neither producer saw fit to dispute the assertion of the junior Senator from Utah that the two companies combined handle 70 per cent of the American dye output.

Mr. President, I do not need to argue from this that monopoly exists in the dye business in America; the figures speak for themselves. And they are strengthened each day in Washington by the close correlation and cooperation of the energetic lobbies of these two concerns in a manner to indicate something at least as strong as a gentleman's agreement.

I shall speak in detail of but one of these companies. The E. I. du Pont de Nemours Co. possessed a long and honorable record in American industry up to 20 years ago, at which time

the copartnerships and corporate forms under which its business had been conducted were taken over by a new corporation, which so speedily wandered into evil ways and so soon found itself upon evil days that in 1907 it was proceeded against by the Federal Government and dissolved as a corporation existing in violation of the antitrust law. Having been told then by the courts what they could not do, the Du Ponts have since found able counsel to tell them what they may do. And as a result to-day we find them not only in the manufacture of explosives, which have made the Du Pont name famous, but engaged in the production of dyes to an extent substantially monopolistic, and having a dominant position in such widely varied fields of enterprise as phonographs, automobiles, artificial leather, hard fiber, celluloid, moving-picture films, artificial silks, paints, varnishes—and politics.

At the outbreak of the war, and I quote now, Mr. President, from an article appearing in The Nation's Business for October, 1921, written by Pierre S. du Pont, chairman of the Du Pont Co., its capital assets were about $80,000,000, and its annual business amounted to about $26,000,000. It has since expanded, according to the same authority, to a business of over $300,000,000 a year, and to an investment "in factories for the production of special military explosives of $220,000,000." Its total net profits in six recent years have amounted to $257,000,000, as shown by a computation of figures taken from Moody's Manual.

WHERE DID THEY GET IT?

The reluctant Mr. du Pont will probably never tell in what manner his company was permitted thus to swell its assets and its profits. May I in some small measure, Mr. President, supply his omission?

I have here a tabulation drawn from official sources showing that, beginning with January 10, 1918, and running through to a latest date of February 11, 1919, the Du Pont Co. and two of its subsidiaries secured advances from the Federal Treasury in the gross sum of $99,250,552.80. This money, Mr. President, was paid for the purpose of creating huge establishments which bear the Du Pont name and which were devoted to furnishing supplies to the Government during the war. Thus the people of the United States not only financed the Du Ponts in the tremendous extension of their business but were also mulcted by the Du Ponts to an extent which enabled the company to increase its plant value to an admitted $220,000,000, while at the same time taking out net profits which in one year amounted to $129,000,000.

THE LUCKY DU PONTS.

The Du Ponts still hold, as of July 1, 1922, $35,121,066.02 of Government funds unaccounted for, although the war ended almost four years ago. On practically none of this $100,000,000 of public money advanced to them did the Du Ponts pay interest; and the only security they ever gave for any portion of this huge sum of the public's funds was their own notes or bonds. Lucky, indeed, Mr. President, is that company which, desiring to extend its business, can float its issues of securities through the Federal Treasury, and luckiest of all are the Du Pont companies.

I ask that the table to which I refer may here be printed in my remarks without reading, so that Senators who doubt my conclusions may study the figures from the RECORD to-morrow at their leisure.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

Advance payments made by War Department to the Du Pont interests, 1918–19.

THROUGH WAR CREDITS BOARD.

RECAPITULATION.

Advances made through War Credits Board:	
To E. I. du Pont de Nemours & Co	$27,484,264.29
To Du Pont Engineering Co	3,270,050.00
Advances made through Secretary or Assistant Secretary of War:	
To E. I. du Pont de Nemours & Co	21,192,238.51
To Du Pont Engineering Co	41,904,000.00
To Du Pont American Industries Co	5,400,000.00
Total of advances made	99,250,552.80

[NOTE.—Of the total amount advanced, $99,250,552.80, there remained unrecouped as at July 1, 1922, $35,121,066.02, not including interest due on advances to Du Pont Engineering Co., as authorized by War Credits Board.]

Mr. MOSES. It must not be forgotten, Mr. President, that in addition to these millions of proceeds which were derived from our Liberty loan drives, and which were paid direct to the Du Ponts from the American people's own Treasury, the Du Ponts received what probably will be found to be an even larger number of millions of American money, similarly derived and paid from the loans which we made to the foreign Governments and which we are now trying to recover. To the senior Senator from Utah, being a member of the commission which has this matter in hand, I commend the task of endeavoring to find how many of the American taxpayers' dollars flowed into the coffers of the Du Ponts through foreign channels.

I assume, Mr. President, that Senators who vote for this proposed embargo can do so only upon the theory that the largess of the American people to the Du Ponts is not yet sufficient and that it should be supplemented by the gift contained in the outrageous legislation which they demand in this bill.

The Du Ponts entered the dye business in 1917, its beautifully printed announcement bearing date of July of that year. It started, as the announcement reads, with four organized factors to insure success—the necessary raw materials; a splendid chemical and engineering organization; unequaled plant and laboratory facilities; and an adequate commercial organization.

SEEKING TO DIVIDE THE WHOLE WORLD.

To this they should have added a fifth, comprising the contract which they had made seven months earlier with Levinstein (Ltd.), a British corporation, with whom they sought to divide the world, Levinstein to have Great Britain and its possessions, except Canada, a portion of Europe and other countries, except those in which the Du Ponts had exclusive rights, while the Du Ponts were to have the United States and all its possessions, Mexico, Central and South America, and nonexclusive rights throughout all the world except where Levinstein could preempt them. This contract came to light through the breach of a second contract entered into by the Du Ponts and one Edgar Levinstein, of Boston, who sued the Du Ponts for $1,000,000 in litigation filed in the Federal courts in May, 1920. This suit was never brought to trial. It was settled out of court, but no one knows the terms of settlement. I hope it is no injustice to suppose that the Levinstein contract still exists and that Levinstein and the Du Ponts still are monarchs of all they survey.

In the three years of this dye discussion we have heard much, Mr. President, about the German cartel, and especially about the Badische Co., which, as everyone knows, is the chief German producer of dyestuffs. The cartel and the Badische have been held up before us as the bogie men of the dye world. And we have been repeatedly and solemnly warned to have no traffic or communication with them or to permit them an approach to our shores within the limit of the 3 maritime miles within which the Volstead Act is operative.

A PROPOSED DEAL WITH THE GERMANS.

Nevertheless, we find—and I have here an affidavit in proof of the disclosure—that on the 21st of November, 1919, there gathered in Zurich, Switzerland, Mr. Mead, a vice president of the Du Pont Co.; Mr. Laffey, an attorney for the Du Ponts; Mr. Morris Poucher, whose name is redolent of all that smells of Du Pont; Mr. Eysten Berg, and Dr. E. C. Kuntz, neither of whom I can sufficiently identify. They had journeyed to Zurich for the purpose of conferring with Dr. Carl Bosch, Dr. R. Bohn, two directors of the Badische Co., and Dr. Ernst Schwartz, another representative of the same malignant organization. The object of their travels was to procure the adoption of a plan, proposed by Mr. Poucher and aiming at a trade arrangement between the German works and the Du Ponts. The Badische declined to enter into the arrangement.

CHINA, TOO.

Undismayed by the disaster which had overtaken their monopolistic contract with Levinstein and undaunted by the rebuff received from the Badische Co., the Du Ponts continued to seek new worlds to conquer, and on June 24, 1921, the Republic of China issued a bulletin announcing that the Du Ponts were planning to form a dye company in China in connection with Doctor Wang and Mr. Nieh. This step was taken subsequent to an earlier proposal submitted by the Du Ponts to the American trade counsel in China, and by him reported on March 5, 1921, that his office should attempt to effect an arrangement whereby the Chinese Government would confiscate 18,000 trade-marks held by the Germans for dyes marketed in China and form a joint Chinese company or an American-British company to license these trade-marks from the Chinese Government. We thus see, Mr. President, how the beneficent, educational, patriotic, and eleemosynary principle of the Chemical Foundation was to be imposed upon the patient and long-suffering Chinese.

Mr. SHORTRIDGE. Would not the establishment of such a company over in China have been very beneficial to America?

Mr. MOSES. I am not so clear about that. At any rate, I decline to enter into that now, because I am reciting history.

On May 21, 1921, a memorandum on the dye industry in China was submitted to the British, French, and American Chambers of Commerce, the Du Pont representative modestly signing in last place on behalf of America, and recommending that the Reparation Commission be given authority, after consultation with the principal dye firms of the allied nations, to impose an export duty on dyes from Germany which would be high enough to protect the firms in the least favored of the allied nations as regards exchange—meaning America—and thus to enable the Du Ponts to secure a firm foothold from which to seize the lion's share of the dye business in China.

For more than a year now, Mr. President, I have heard nothing of the imperialistic plans of the Du Ponts in Europe or in the Orient. It is probable that both schemes have crashed to the ground; a probability strongly reinforced by the pressure which the Du Ponts are now making to secure for themselves an embargo in the American market in order that they may mulct from American consumers the sums which they have found themselves unable to take from war-stricken Europeans or the simple-minded orientals.

Mr. President, I now ask to have inserted at this point as a portion of my remarks without reading certain exhibits, which at my written request were admitted as evidence before the Shortridge committee. These exhibits, and indeed the entire testimony taken by the Shortridge committee, are unavailable for the general use of Senators or others interested, because the proceedings before that committee have not yet been printed, and I say this in extenuation of the voluminous documents which I here submit.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

TREATY OF VERSAILLES, PART VIII, ANNEX VI.

1. Germany accords to the Reparation Commission an option to require as part of reparation the delivery by Germany of such quantities and kind of dyestuffs and chemical drugs as the commission may designate not exceeding 50 per cent of the total stock of each and every kind of dyestuff and chemical drug in Germany or under German control at the date of the coming into force of the present treaty. This option shall be exercised within 60 days of the receipt by the commission of such particulars as to stocks as may be considered necessary by the commission.

2. Germany further accords to the Reparation Commission an option to require delivery during the period from the date of the coming into force of the present treaty until January 1, 1920, and during each period of six months thereafter until January 1, 1925, of any specified kind of dyestuff and chemical drug up to an amount not exceeding 25 per cent of the German production of such dyestuff and chemical drugs during the previous six months' period. If in any case the production during such previous six months was, in the opinion of the commission, less than normal, the amount required may be 25 per cent of the normal production. Such option shall be exercised within four weeks after the receipt of such particulars as to production and in such form as may be considered necessary by the commission; these particulars shall be furnished by the German Government immediately after the expiration of each six months' period.

3. For dyestuffs and chemical drugs delivered under paragraph 1 the price shall be fixed by the commission, having regard to pre-war net export prices and to subsequent increases of cost. For dyestuffs and chemical drugs delivered under paragraph 2 the price shall be fixed by the commission, having regard to pre-war net export prices and subsequent variations of cost or the lowest net selling price of similar dyestuffs and chemical drugs to any other purchaser.

4. All details, including mode and times of exercising the options and making delivery and all other questions arising under this arrangement, shall be determined by the Reparation Commission; the German Government will furnish to the commission all necessary information and other assistance which it may require.

5. The above expression "dyestuffs and chemical drugs" includes all synthetic dyes and drugs and intermediates or other products used in connection with dyeing so far as they are manufactured for sale. The present arrangement shall also apply to cinchona bark and salts of quinine.

—

SEPTEMBER 29, 1919.

A. M. PATTERSON, Esq.,
President Textile Alliance (Inc.), New York City.

DEAR SIR: Negotiations are now being carried on in Paris by the representatives of the allied and associated Governments for the purpose of securing the early delivery of German dyes at prices similar to those described in Annex VI of Part VIII of the treaty of peace with Germany. For your convenience, there is inclosed herewith a copy of War Trade Board Ruling 819, in which the provisions of Annex VI are set forth in detail.

The War Trade Board Section of the Department of State has determined to permit the importation of vat dyes from Germany in quantities sufficient to supply the requirements of the consumers in the United States for a six months' period, October 1, 1919, to April 1, 1920, and it may be desirable that manufacturers in the United States are enabled to avail themselves of the benefit of such plan as may result from the current negotiations in securing the above-mentioned quantities of vat dyes. To bring this about it would be necessary to designate a central agency to act as an intermediary between the consumers of dyes in the United States and the allied authorities from or through whom the dyes are to be secured. The Department of State would be prepared to designate the Textile Alliance (Inc.) as such agency to perform the following services under the terms and conditions hereinbelow set forth:

(1) The War Trade Board Section of the Department of State will issue allocation certificates to consumers in the United States, stating that said consumers are entitled to secure the importation from Germany of the vat dyes specified in such certificates.

(2) The War Trade Board Section of the Department of State will advise consumers of such arrangements as may result from the current negotiations and will also inform them that the Textile Alliance (Inc.) has been designated to act in the capacity described in this letter.

(3) The Textile Alliance (Inc.) will accept from consumers holding the above-mentioned allocation certificates orders for vat dyes in amounts not exceeding the amounts specified in such certificates.

(4) The prices to be paid for the dyes so ordered will be the prices agreed upon in Paris and communicated to the Textile Alliance (Inc.) by its representatives in Paris, hereinafter mentioned in paragraph (5). The terms and method of payment for all dyes ordered through the Textile Alliance (Inc.) will be prescribed by the Textile Alliance (Inc.) to accord with such arrangements as may result from the pending negotiations, and they will be subject to the approval of the War Trade Board Section, and subject also to the conditions hereinbelow in paragraph (6) contained.

(5) The Textile Alliance (Inc.) will send a representative to Paris. Said representative will receive by cablegram from the Textile Alliance (Inc.) complete information as to the dyes which have been ordered through the alliance as described above, and he will place these orders with or through the allied authorities and will attend to all the details connected with the acquisition of and payment for the dyes and their shipment to the Textile Alliance (Inc.) for distribution to the consumers who have ordered them. In all these matters the representative of the alliance will receive the cooperation and advice of Dr. Charles H. Herty, who is now in Paris as a representative of the War Trade Board Section.

(6) The Textile Alliance (Inc.) will be entitled to charge a commission for the services rendered by it, which commission shall be sufficient to defray all expenses incurred in carrying out the plan and performing the acts described in this letter; but it is to be understood that the alliance will not retain any profits arising out of this transaction and that any overplus remaining out of commissions collected, after the payment of all expenses, will be distributed pro rata among the consumers by whom such commissions shall have been paid.

The department desires to be advised at an early date whether the Textile Alliance (Inc.) would be willing to perform the services described in this letter, provided the situation would seem to make such an arrangement desirable.

Very truly yours,

WILLIAM PHILLIPS,
Acting Secretary.

—

(Copy to F. A. Fleisch, vice president Textile Alliance (Inc.), 45 East Seventeenth Street, New York City.)

WAR TRADE BOARD,
Washington, October 10, 1919.

IMPORTATION OF GERMAN VAT DYES.

SIRS: 1. Referring to paragraph 7 of our circular letter of October 1, 1919, the War Trade Board Section is now able to advise you that negotiations referred to in said paragraph have resulted in the adoption of a plan under which a substantial portion of the German vat dyes, covered by the vat-dye certificates issued by the War Trade Board Section on the date above mentioned, may be secured at prices agreed upon by the interallied authorities at Paris.

2. The Textile Alliance (Inc.), of 45 East Seventeenth Street, New York City, has been designated as the sole official agency to administer the provisions of the above-mentioned plan and to import and distribute the dyes which will be secured thereunder.

3. Holders of allocation certificates who desire to avail themselves of the provisions of said plan should immediately assign and forward their vat-dye certificates to the Textile Alliance (Inc.).

4. It is impossible at the present time to state definitely the exact amount of vat dyes which will be immediately available under the

above-mentioned plan. A determination of the amounts which may be secured by the holders of vat-dye certificates can not be made until the Textile Alliance (Inc.) has been advised of the exact quantities desired to be purchased by certificate holders. Accordingly, holders of certificates, when forwarding the same, should advise the Textile Alliance (Inc.) of the amounts of vat dyes (not exceeding, however, the amounts allocated to them) which they wish to secure through the Textile Alliance (Inc.) and authorize the Textile Alliance (Inc.) to purchase the same for their account, it being understood that the Textile Alliance (Inc.) shall be entitled, in the event it should prove impossible to secure the entire amounts of the various dyes so applied for, to sell and deliver to each certificate holder his pro rata share of the total amount obtainable.

5. All holders of vat-dye certificates who desire to participate in the above-mentioned plan must deliver their certificates to, and place their orders through, the Textile Alliance (Inc.), as provided in the foregoing paragraphs 3 and 4, on or before October 31, 1919.

6. The Textile Alliance (Inc.) will be prepared within the next few days to inform certificate holders of the further details of the plan herein described, including the prices of various vat dyes, the terms of payment, and the time and manner of delivery.

7. The purchase, importation, and distribution of all vat dyes acquired under the above-mentioned plan will be effected at cost and without profit to the Textile Alliance (Inc.), and, accordingly, it is hereby prescribed as a condition of participation in said plan that all persons participating therein shall release and hold harmless the Textile Alliance (Inc.) and its officers, agents, and employees from any and all claims or liability arising in connection with any importations, sales, or deliveries of the vat dyes hereinabove referred to.

Very truly yours,

WAR TRADE BOARD SECTION,
BUREAU OF IMPORTS.

WAR TRADE BOARD,
Washington, D. C., November 26, 1919.

IMPORTATION OF GERMAN DYES OTHER THAN VAT DYES.

SIRS: (1) The War Trade Board section has issued to you and transmits herewith "nonvat-dye allocation certificate," stating that the War Trade Board section will issue a license for the importation, for your use, of the amount of German nonvat dyes stipulated in the inclosed certificate for consumption in your plant during the six months' period November 15, 1919, to May 15, 1920. The War Trade Board section is now prepared to issue licenses for the importation of the above-mentioned dyes in accordance with the regulations hereinafter set forth.

(2) All nonvat-dye allocation certificates are issued by the War Trade Board section upon the express condition that the consumers to whom they have been issued shall file with the War Trade Board section, on the dates hereinafter specified, statements of the following character, to wit:

(a) On or before March 1, 1920, a sworn statement showing that the dyes covered by said certificates have been actually delivered to said consumers, or the reasons why such delivery has not been made.

(b) On or before June 1, 1920, a sworn statement showing, respectively, the amounts of said dyes which have been actually consumed during the above-mentioned six months' period, and the amount thereof remaining in the hands of said consumers on said date.

The acceptance of a nonvat-dye allocation certificate will be held to constitute an agreement by the consumer to whom said certificate has been issued to file with the War Trade Board section the statements hereinabove described.

(3) Licenses for the importation of German nonvat dyes will be issued only when the applications for import licenses are accompanied by nonvat-dye allocation certificates issued by the War Trade Board section.

(4) If the application for import license is to be made by an importer or any person other than the person to whom such certificate has been issued, the holder of such certificate must assign the same to the applicant for the import license by executing the authorization appended to the certificate. The assignment of such certificate will be permitted only upon the express condition that the assignee of such certificate shall file with the War Trade Board section the sworn statement described in paragraph (a) or part (2) of these regulations, and the acceptance of such assignment will be held to constitute an agreement by said assignee to file such sworn statement with the War Trade Board section.

(5) A separate application for import license must be filed for each allocation certificate. For your convenience there is inclosed herewith copy of application Form "M."

(6) With respect to all applications for import licenses filed pursuant to these regulations, the War Trade Board section has waived the requirements that such applications must be accompanied by the supplemental information sheets heretofore prescribed to be used in connection with the importation of dyes. (See W. T. B. R. 825, issued August 15, 1919.)

(7) In this connection the War Trade Board section advises you that as the result of certain recent negotiations between the representatives of the allied and associated Governments and of the German Government a substantial portion of the German nonvat dyes covered by the nonvat-dye certificates, which have been issued by the War Trade Board section to satisfy the requirements of consumers for the six months' period November 15, 1919, to May 15, 1920, has been made available to consumers in the United States at prices agreed upon by the interallied authorities at Paris.

(8) The Textile Alliance (Inc.), of 45 East Seventeenth Street, New York City, has been designated as the sole official agency to import, on behalf of consumers, such part of the total allocation of nonvat dyes as has been made available as the result of the negotiations referred to above, and to the extent to which consumers may desire to obtain a part of their requirements from that source. Importation through the Textile Alliance (Inc.) is optional with the consumer and not mandatory, but consumers who desire to import dyes which have been made available as the result of the negotiations referred to above must do so exclusively through the Textile Alliance (Inc.).

(9) Holders of allocation certificates, who desire to import through the Textile Alliance (Inc.) from the official source referred to above, should assign and forward their nonvat dye certificates to the Textile Alliance (Inc.).

(10) It is impossible at the present time to state definitely the exact amount of nonvat dyes which will be immediately available to each consumer from the official source referred to above. A determination of the amounts which may be secured by the holders of nonvat dye certificates can not be made until the Textile Alliance (Inc.) has been advised of the exact quantities desired to be purchased by certificate holders. Accordingly, holders of certificates, when forwarding the same, should advise the Textile Alliance (Inc.) of the amounts of nonvat dyes (not exceeding, however, the amounts allocated to them) which they wish to secure through the Textile Alliance (Inc.), and authorize the Textile Alliance (Inc.) to purchase the same for their account, it being understood that the Textile Alliance (Inc.) shall be entitled, in the event it should prove impossible to secure the entire amounts of the various dyes so applied for, to sell and deliver to each certificate holder his pro rata share of the total amount obtainable.

(11) All holders of nonvat dye allocation certificates who desire to import through the Textile Alliance (Inc.), must assign and deliver their certificates to and place their orders through the Textile Alliance (Inc.) as provided for in the foregoing paragraphs 9 and 10, not more certificate herein described.

(12) The Textile Alliance (Inc.) is prepared to inform certificate holders of details in relation to prices, terms of payment, and time and manner of delivery.

(13) The purchase, importation, and distribution of all nonvat dyes acquired under the above-mentioned plan will be effected at cost and without profit to the Textile Alliance (Inc.) and, accordingly, it is hereby prescribed as a condition of participation in said plan that all persons participating therein shall release and hold harmless the Textile Alliance (Inc.) and its officers, agents, and employees from any and all claims or liability arising in connection with any importations, sales, or deliveries of the nonvat dyes hereinabove referred to.

Very truly yours,

WAR TRADE BOARD SECTION,
BUREAU OF IMPORTS.

APRIL 10, 1920.

In reply refer to Ta.

THE TEXTILE ALLIANCE (INC.),
New York City.

GENTLEMEN: I beg to refer to conferences held recently between Mr. Van S. Merle-Smith, of this department, and a representative of your company with regard to the purchase of 1,200 tons of German dyes, available under option to the United States.

By agreement entered into in connection with the peace negotiations the German Government gave to the allied and associated powers a right of option to dyes from impounded stocks as well as from subsequent production of German manufacturers. Inventories were furnished by the German authorities covering impounded stocks as of August 4, 1919. These inventories contained also the prices at which Germany desired to receive credit for these dyes on account of the claims of the allied and associated powers. These prices were stated in German marks, upon the understanding that credit would be given for the marks at the rate of exchange current on the date of delivery of the dyes by the shippers to the transportation company, as evidenced by the bill of lading.

The total amount of dyes covered by the inventories was approximately 20,000 metric tons, of which the allied and associated powers were entitled to receive not to exceed 50 per cent.

Thus far there has been but a partial allocation of these impounded dyes among the allied and associated powers. The apportionment amounted in all to 5,200 metric tons, of which the United States was given the right to take, at the prices above referred to, an amount up to 1,500 metric tons, without restriction as to colors, except that the amount taken of any one color was limited to 10.22 per cent of the total stock of that particular color, as covered by the inventories above referred to.

American consumers were informed of this 1,500 tons of German dyes available from this source and were given an opportunity to order therefrom through the Textile Alliance (Inc.) such colors and amounts as were permitted to be imported under governmental regulations. Only 300 tons were so ordered. There remain approximately 1,200 tons still available to the United States at the prices above referred to. Such dyes may be acquired at a price far below the present market value, and therefore present an exceedingly valuable asset, whether for internal use or for resale on foreign markets to which this country is entitled. We are informed that unless arrangements can be made allowing further time to the United States in which to exercise its option an order, with full specifications, must be given to the proper authorities in Paris, not later than April 15, 1920, by the United States or its nominee. In default of such order these 1,200 tons of dyes will revert to their source for reapportionment among the allied and associated powers and will be for the most part lost to this country, with detriment to American interests.

While recognizing the loss that would result if these dyes were allowed to revert, the department can not take upon itself the commercial function of purchase and sale. The Textile Alliance (Inc.), of New York, therefore, provided the necessity arises, is authorized to purchase in its private capacity in the interest of the people of the United States those 1,200 tons of dyes upon the following conditions:

1. The Textile Alliance (Inc.) will select such colors and may make trades with other nations during allocation of the colors as in its judgment may seem desirable and are approved by representatives of the Department of State. The alliance will fully cooperate with the proper officials of this Government in arranging the details of this transaction.

(a) The Textile Alliance (Inc.) will undertake to furnish to the proper authorities in Paris, not later than April 8, 1920, a formal order, together with specifications for these dyes not exceeding in all 1,200 tons, such order being conditional on the dyes being of standard quality and available at prices similar to those referred to in the second paragraph of this letter, and with the additional provision that the alliance shall not be required to pay for any of these dyes until delivery is accepted and receipted for by the alliance or a transportation company acting as its agent.

(b) The Department of State will in due course advise the Textile Alliance (Inc.) to whom the purchase price of these dyes is payable, and in what manner.

2. The following conditions shall apply to the importation and sale of these dyes by the alliance:

(a) The Textile Alliance (Inc.) will not import dyes into this country except in accordance with governmental regulations as to their entry into this country.

(b) In the sale of dyes which may be imported the Textile Alliance (Inc.) will not charge prices considered unreasonable by the Department of State. It shall conform with advices as to the policy of the War Trade Board or its successors, which shall be given for the purpose of protecting generally the interests of dye consumers and manufacturers,

and it shall discriminate in no way by price or otherwise between consumers that wish to purchase such dyes.

(c) The Textile Alliance (Inc.) may sell the dye abroad with the approval of the Department of State. The following considerations shall govern such approval by the Department of State:

"The retention for a reasonable period by the Textile Alliance (Inc.) of such dyes as may be necessary for import into the United States under governmental regulations; the prevention of 'dumping,'—dyes to be sold at reasonable market prices; the arrangement of sales so that as far as reasonably possible the marketing of these dyes will not compete with the sale of dyes exported from the United States."

3. It is recommended that until imported into this country for sale as provided above, the dyes shall be kept stored outside of this country.

4. The net profits accruing from the sale of these dyes by the Textile Alliance (Inc.) shall be paid into the Treasury on such conditions as shall be authorized by the Secretary of State and the Secretary of the Treasury: *Provided, however,* That the Textile Alliance (Inc.) may retain as a reserve fund to meet accruing expenditures such sums as may be agreed upon between the alliance and the proper officials of the State and Treasury Departments.

I am, gentlemen,

Your obedient servant (for the Secretary of State),

FRANK L. POLK,
Undersecretary.

—

JUNE 30, 1920.

The TEXTILE ALLIANCE (INC.),
New York City.

GENTLEMEN: By agreements entered into in connection with the peace negotiations, the German Government has given the allied and associated powers options upon certain dyes of German manufacture, which options the United States Government has not yet exercised upon the following:

(a) Dyes herein referred to as Option A, being the final apportionment of impounded stocks covered by inventories of the German manufacturers as of August 30, September 5, 19, and 27, 1919. This option will expire August 10, 1920, if the United States does not by that date notify the Reparation Commission of its intention to exercise the option and specify the kinds and amounts of dyes wanted and furnish shipping directions to the German factories not later than September 1, 1920. You are in possession of the inventories referred to, containing prices, also lists showing the amount of each dye to be apportioned and this country's share. These inventories and lists will be identified for the purpose of any undertaking that may be entered into.

(b) Dyes herein referred to as Option B, being the present existing stocks manufactured between the dates of February 1, 1920, and June 30, 1920, both inclusive. Lists with prices are furnished by the Germans of dyes manufactured monthly. The option upon such dyes expires 90 days after each list is furnished to and approved by the Reparation Commission. None is yet approved. You are in possession of certain of these lists and others are to be furnished you in due course, all of which will be identified for the purpose of any undertaking that may be entered into. An agreement of similar nature is in contemplation whereby the United States shall have an option upon specified portions of the following:

(c) Dyes herein referred to as Option C, being the amount that may be produced by German manufacturers during the period of about five years, beginning with July 1, 1920, which amount it is said may be substantially the entire dye production of the German manufacturers in excess of the quantity required for current domestic consumption in Germany. It appears that in order to participate in Option C the United States must shortly express its intention of doing so without, however, committing itself to order, take or pay for any dyes whatsoever, but nevertheless preserving its right to such kinds and amounts within the limits of the option as it may from time to time desire after the dyes have been produced and definite prices established, which shall not exceed the lowest prices at which the Germans currently sell the same dyes to any purchaser, German or the other. There are known to be available under Options A and B appreciable amounts of colors now needed by American consumers and other colors which are quite certain to be badly needed a little later. It is reasonably certain that if Option C is not availed of consumers in this country will be at a serious disadvantage with foreign competitors. The Department of State, therefore, deems it essential that this option be exercised and that a suitable concern be found or forced to undertake the matter. Through previous similar undertakings the Textile Alliance has become experienced in these matters, and its services have been satisfactory to this department.

In view of all the foregoing circumstances the Department of State desires and requests and hereby authorizes the Textile Alliance to undertake upon the following terms and conditions, under Option A and Option B and also, if later found to be necessary, under Option C, the purchase of such available dyes as may be necessary for American consumption, or, in discretion of the Textile Alliance for foreign resale, as hereinafter provided:

1. It is understood the obligations to purchase on the part of the Textile Alliance pertain only to dyes of standard or pre-war quality. The State Department will render such assistance as may be proper to obtain redress in cases of dyes delivered being of inferior quality.

2. The prices to be paid by the Textile Alliance for all dyes that it may order under Options A and B shall be the price in marks that are quoted in the lists referred to, but payment shall be in dollars at the average rate of exchange established by the Federal reserve bank in New York for the week prior to the date of the bill of lading from point of origin.

3. No dyes shall be ordered for domestic consumption unless requested of the Textile Alliance (Inc.) by consumers or selected by the Textile Alliance and approved by the Department of State.

It shall be within the discretion of the Textile Alliance to order under Options A and B whatever dyes it may deem advisable for sale or exchange abroad, which sale or exchange shall be such as the Textile Alliance may deem to be satisfactory and without prejudice to the interests of American consumers and producers of dyes, it being understood that the Textile Alliance shall use its utmost endeavor to secure for American consumers the maximum amount of dyes wanted that are not produced in this country.

It shall be within the province of the Textile Alliance (Inc.) to negotiate for the sale of stocks of dyes included in Options A and B held through purchase or exchange by the Textile Alliance other than those dyes listed as importable by the Department of State, and to sell the same for consumption abroad to any firm, corporation, or individual in any country in the world, including the United States, its possessions and protectorates, providing the price charged by the Textile Alliance (Inc.) will in its judgment be fair and reasonable and not so low that such sale or sales might be considered as "dumping" of the dyes, or that when goods are dyed therewith the sale price of the dyes would allow foreign manufacturers of finished products to compete with American goods at a price impossible for American manufacturers to meet, or that so far as is reasonably possible the marketing of these dyes will not compete disadvantageously with the sale of dyes exported from the United States.

4. There shall be no obligations upon the Textile Alliance to receive or pay for any dye whatever excepting such kind and amount as it may order, and no obligation, excepting in the case of Option A, to order any dye until it shall have been manufactured, the price, rate of exchange, and terms definitely fixed, and a firm order received from consumer with suitable provision for payment. Both the Department of State and the Textile Alliance (Inc.) each reserve the right to abrogate at any time this agreement with respect to Option C dyes, without prejudice to anything to which the Textile Alliance or the Department of State shall at that time be committed.

5. No dyes shall be imported into the United States for domestic consumption without the approval of the Department of State or its nominee.

6. There shall be no discrimination in the sale of imported dyes in favor of or against any consumer in the United States, and the prices at which dyes are offered or sold for consumption in the United States shall be subjected to the approval of the Department of State or its nominee.

7. Upon the conclusion of the operations under this agreement by the Textile Alliance, the surplus moneys, if any, after the payment of all other expenses, shall be disposed of in the following manner to meet the conditions of underwriting which the Textile Alliance feels obliged to secure for its protection in connection with these operations:

"One-half to be paid into the United States Treasury. One-half to be retained by the Textile Alliance as a revolving fund so long as need may appear for funds to carry on other work upon request of the Department of State, and when such need shall have passed, the Textile Alliance shall devote one-half of the said revolving fund to educational and scientific institutions conducted for public benefit and not for profit; the remainder to be paid into the United States Treasury. Moneys paid into the Treasury shall be disposed of as Congress may direct. The Secretary of State, however, will make recommendations to Congress that said moneys paid into the Treasury be appropriated for educational and scientific purposes."

If any liabilities appear to exist upon the conclusion of operations, the Department of State will allow sufficient funds to be retained by the Textile Alliance (Inc.) to cover such liabilities.

It is contemplated settlements shall be made upon the conclusion of each operation if practicable.

8. Upon the acceptance of these undertakings by the Textile Alliance the Department of State shall instruct the embassy at Paris to notify the Reparation Commission, the German Government, and the German manufacturers that the Department of State has empowered the Textile Alliance (Inc.) to order and receive any or all of the dyes in question within the limits of the options on the understanding that the dyes so ordered shall be of standard quality and that all directions pertaining thereto will be given by the Textile Alliance direct to the German manufacturers or to the Reparation Commission through the proper American representatives.

9. The Department of State shall in due course advise the Textile Alliance to whom and in what manner the cost of the dyes shall be paid. The Textile Alliance shall not be obliged to pay for dyes until shipped and until the receipt of a bill therefor, nor shall it in the event of a deferred bill be obliged to pay more than the agreed prices with such interest, if any, as the Textile Alliance may have received thereon subsequent to the date of shipment.

10. At intervals of three months, or at such other times as the department may designate, the Textile Alliance shall render reports to the Department of State indicating the dyes that have been ordered, showing how disposed of, and at what prices. The Department of State shall have a right to audit the accounts covering transactions under this agreement if desired. Should the transactions of the Textile Alliance as evidenced by these reports or audits be unsatisfactory to the Department of State it shall have the right to require such changes as it may desire with respect to future transactions.

11. The Department of State will extend whatever assistance it may consistently offer in overcoming any obstacles the Textile Alliance may encounter in marketing dyes ordered under Option A.

I am, gentlemen,

Your obedient servant (for the Secretary of State),

NORMAN H. DAVIS,
Undersecretary.

—

(Statement to the press for release in the ——— papers of September 8, 1920.)

WAR TRADE BOARD SECTION,
DEPARTMENT OF STATE.

GERMAN DYESTUFFS.

The United States Government, through the War Trade Board section of the Department of State has, in the interest of the people of the United States, authorized the Textile Alliance (Inc.), of New York City, to undertake, without profit to itself, the following action in connection with reparation dyes:

(1) To purchase certain dyes, being the final apportionment of impounded stocks covered by inventories of German manufacturers as of August 30, September 5, 19, and 27, 1919; in order that certain dyes which are not manufactured in this country and which are included in these impounded stocks might not be lost to the United States with detriment to American interests.

(2) To purchase dyes from the present existing stocks manufactured by Germany between the dates of February 1, 1920, and June 30, 1920, both inclusive, in order that certain dyes which are not manufactured in this country and which are included in these stocks might not be lost to the United States with detriment to American interests.

(3) If found to be necessary and advisable to purchase such dyes as may be required and ordered through it by American consumers from future daily production of German manufacturers for the four and one-half year period commencing July 1, 1920.

(4) The authority of the Textile Alliance (Inc.) to resell to American consumers the dyes acquired as above provided is subject to strict provisions regarding selling price and manner of sale, for the purpose of insuring fair and equal treatment to all consumers who may wish to avail themselves of the opportunity offered.

The Government has decided to exercise its option upon German impounded stocks and has authorized the Textile Alliance (Inc.) to pur-

chase these stocks in the interest of the American consumer. Under existing regulations of the War Trade Board section no dyes from these stocks may be imported by the Textile Alliance (Inc.) which are either manufactured here or for which suitable substitutes are manufactured here on reasonable terms as to price, quality, and production. No consumer will be allowed to receive more than a six months' supply of any dye at any one period from this source. Practically the same understanding is in effect regarding the daily production of the German factories from February 1 to July 30, 1920.

Regarding the subject of future daily production, the Department of State has received information which would indicate that for some time to come the German factories will not be in a position to supply all expected requirements of the allied and associated countries and to fill Government orders emanating from these sources. If these indications are correct, it would appear that unless this Government indicated a desire to exercise its option on future daily production and should render available machinery which would make it possible for American consumers, if they so desire, to obtain colors from this source, the American consumer might not be able to get such German dyes as he required. The consumer should clearly understand that he is not obligated or even advised to place orders through the machinery made available by the Government. If he believes that German dyes may be obtained from unofficial sources, he may, subject to the then existing import regulations, either order such dyes as he needs direct from the German manufacturer or through such agent or agency as he may designate.

If the consumer, however, can not obtain, or believes he can not obtain, dyes by other means, the Government can exercise its option on the subsequent daily production of the German factories and the Textile Alliance (Inc.) can transmit his orders for purchase from official sources.

—

REPORT OF E. S. CHAPIN, PARIS REPRESENTATIVE OF THE TEXTILE ALLIANCE (INC.), WHO RETURNED TO NEW YORK SEPTEMBER 27, TO THE DYE ADVISORY COMMITTEE OF THE STATE DEPARTMENT, SEPTEMBER 29, 1920.

I will divide the report into four parts: First, the Herty option colors; second, the reparation colors from the impounded stocks; third, German daily production and the future; and fourth, general comments.

HERTY OPTION.

The orders placed with the cartel by the Textile Alliance from assignments to them of licenses under the first six months' allocation amounted to 1,700,000 pounds. Up to September 7 the cartel had delivered or were preparing to ship 1,200,000 pounds, approximately 70 per cent of the total orders. Of this, 374,000 pounds have been shipped from reparation sources, and 800,000 pounds, or 400 tons, have been shipped under the Herty option. There have been 124,000 pounds of cancellations, about 7 per cent of the total orders, leaving 397,000 pounds—that is, about 23 per cent—still to be delivered.

Orders placed were divided into vats and nonvats; 460,000 pounds of vats and 1,240,000 pounds of nonvats. The vat color orders are of especial interest. Of these, 83 per cent have been delivered. The cancellations of vat colors were practically negligible—that is, only 3,000 pounds—about two-thirds of 1 per cent. Of the 385,000 pounds of vat colors delivered 134,000 pounds have come from reparation and 251,000 pounds have been shipped under the Herty option.

The most notable aspect of the delivery of colors under the Herty option is the change in the attitude of the Germans from apparent hostility to active cooperation with the Textile Alliance. In February and early March they had offered against the Herty option the small sum of 192,000 pounds and gave little promise or encouragement of being able speedily to deliver further quantities. In the last four or five months, however, they have been able to deliver an additional 600,000 pounds.

As regards the vat colors, in March they stated that they could deliver about 40,000 pounds and held out no promise nor encouragement of being able to ship large quantities in the future, but since then they have shipped 210,000 pounds.

The record of the Badische Co. is especially interesting in connection with this change of attitude and improvement in performance by the Germans. The Badische Co. received 43 per cent of the orders placed; that is, 732,000 pounds out of 1,700,000 pounds; and of the vat colors 70 per cent of the orders; that is, 318,000 pounds out of 360,000 pounds. To date the Badische have delivered 625,000 pounds; that is, 85 per cent of their total orders; and of the vat colors they have delivered 280,000 pounds; that is, 89 per cent.

For months in letters and personal interviews various representatives of the cartel have insisted upon the "bonne velonte" of the cartel and their desire to do everything possible to cooperate with the Textile Alliance and to send their colors to the consumers in America.

Some comparisons are at times interesting and to the point. I was told by a British authority that Great Britain had secured on the free market up to August 1, 200 tons of German dyes. This should be compared with our figures of 400 tons as of September 7 plus the unknown quantity imported into the United States under license through other channels. It is quite evident that the cartel have made unusual efforts to send a large proportion of their free production to the United States. That they are anxious to sell to the United States came out quite strongly during my last trip to Germany. The representative of one of the factories asked me if they could not secure some more Herty option orders. I was in Frankfort on the 1st of September when the cartel was holding a special meeting and had at that time several interviews with representatives of different factories in which they showed the greatest desire to cooperate in numerous ways to place their colors in America.

REPARATION COLORS FROM THE IMPOUNDED STOCKS.

In the first place, we must note that the impounded stocks were not so large in tonnage as was currently believed last fall. Erroneous information then placed the impounded stocks at 40,000 tons, of which one-half—that is, 20,000 tons—was to be divided among the Allies. As a matter of fact, the total of the August 15 inventory of impounded stocks was 20,000 tons, of which 50 per cent—that is, 10,000 tons—was to be distributed among the Allies. There were in the impounded stocks 13,000 different types of colors.

The distribution of the impounded stocks among the Allies was done in two divisions: First, a division of 5,200 tons, commonly known as the 5,200-ton agreement, or the protocol of November 4. According to this arrangement the different allies were permitted to select certain colors not to exceed a certain percentage of each color and a certain gross tonnage; that is to say, the United States was allowed to choose 10.22 per cent of any color in the impounded stocks not to exceed a gross tonnage of 1,500 tons. France, for instance, was allowed to select 15 per cent of any color, not to exceed 1,000 tons, etc. Great Britain had the same allocation as the United States.

The United States allocation of 1,500 tons was taken in two different lots, known respectively as the 300-ton lot and the 1,200-ton lot. The 300-ton lot included the 374,000 pounds above mentioned as having been shipped against the first six months' allocation orders. It also included 76 tons of indigo paste, 20 per cent, which were given by the United States representatives in Paris last winter to Belgium. The balance of the 1,500 tons has been called the 1,200-ton lot.

The cause of the division of the 1,500 tons into two lots, ordered at different periods, was the method of providing payment. The Textile Alliance received, as is well known, the money for the 374,000 pounds of reparation dyes applied against the first six months' allocation orders before placing orders with the cartel, but for the balance of the 1,500-ton lot had neither orders nor money. Further sound policy required that money must be in hand, or underwriting guaranties of payment, before the dyes should be ordered. In this emergency, in the interest of the United States and of American consumers, a few individuals, with the support of your underwriting committee, came forward and, by providing underwriting, saved the balance due the United States from the 5,200-ton agreement.

The balance of the stocks was divided among the Allies according to a different system. The dyes were divided into 13 groups, according to their nature; that is to say, whether alizarin red, vat color, indigo paste, direct cotton, or acid, and so on. These different classes were divided among the Allies according to their different percentages, roughly corresponding to the needs for home consumption of the Allies. Thus the percentage of the United States for indigo paste was 5 per cent, because this product was not needed in the United States, whereas for indanthrene blue GCD, which was needed, the percentage was 55 per cent.

The second division, known as the pool, that is to say, the balance of the impounded stocks, amounted roughly to 5,000 tons. Here again we were confronted with the financial difficulty of the necessity of providing funds or underwriting before we could place orders for our allocated portion of dyes from the pool; again the difficulty was solved by the underwriting already mentioned. The pool contained many types in very small amounts and also many types and mixtures that it was not desirable to order. The gross of our orders after the New York office and the Paris office of the Textile Alliance had scanned the figures of the pool amounted to approximately 500 tons.

To summarize: The total of our orders from the impounded reparation stocks amounts to 2,000 gross tons, or, to be exact, 4,435,635 pounds.

Of these 2,000 tons, 190 tons have been applied to fill orders under the first six months' allocation, approximately another 100 tons of importable colors have been sold to consumers in the United States; 76 tons of indigo paste were given by our representatives in Paris last winter to Belgium, and 450 tons of indigo paste have been sold to China. The balance is about 1,200 tons.

The Textile Alliance has rented a warehouse in Antwerp in which these 1,200 tons are now stored or to which they are in process of shipment. Of the 1,200 tons in the warehouse about one-half can be classed as colors that may be imported into the United States. We have thus approximately 600 tons of nonimportable colors.

Early realizing that the amount of nonimportable colors from the impounded stocks would be considerable, on my first trip to Germany in May I took up with the Frankfort people the matter of exchanging nonimportable colors for importable colors. At that time the answer was that they had nothing to give in exchange. On my last trip, however, I found a different state of affairs. The manufacture of the factories had increased considerably during the summer and there was a willingness to make trades.

I have also taken up with our various allies the matter of exchanging our nonimportable colors for importable colors and this is still in process of negotiation.

By securing all of the colors from the impounded stocks that were of value and to which the United States had the right we have thus built up a reserve of products which can be used either directly for the benefit of the consumers of the United States or else indirectly by exchanging the nonimportable for the importables. After making all the exchanges possible of nonimportable for importable colors we are preparing to sell the balance of nonimportable colors.

I have already compared the 400 tons of dyes the United States has received under the Herty option with the 200 tons received by Great Britain from the free market. In this matter of the shipment of reparation dyes a brief statement of what our allies have been doing will be interesting. The British found considerable difficulty in distributing the reparation dyes allocated to them. Doctor Philippi, of the Cassella Color Co., made a trip to England in August in order to assist in facilitating the distribution and avoiding further delay. Last April Herr von Weinberg and his secretary, Director Molner, made a trip to Italy, in the course of which they assisted the Italians similarly in distributing their dyes and avoiding the difficulties found in dealing with such a complicated matter. The French Government distributed colors very actively among French consumers but nevertheless there was considerable complaint. Belgium's problem was simpler because of the small amount of colors received and they appear to have been dealt with quite successfully. None of the above-mentioned countries have had to contend with the most serious problems which faced the United States, namely, the Rotterdam strike and the distance from Germany.

GERMAN DAILY PRODUCTION AND THE FUTURE.

The treaty provides that the Allies may exercise an option on 25 per cent of the daily production of the German factories for the period specified in the treaty. It further provides that in the event that this production is below the normal the Allies may require 25 per cent of the normal production.

The question of just what "normal production" means has not yet been settled by the Reparation Commission. In the meanwhile the Reparation Commission has exercised this option and is accepting 25 per cent of the actual production of the German factories. This daily production it has been arranged to divide among the Allies very much in accordance with the scheme by which the pool was divided among the Allies, that is to say, the different colors produced are divided into classes according to their nature, and the classes divided among the Allies according to different percentages corresponding approximately to the estimated needs of the various Allies.

During last winter the various Allies exercised very stringent supervision over the activities of the German factories. In order to break this control the Germans came forward in January and offered to supply all the needs of the Allies irrespective of the treaty stipulations, provided control was lifted from the factories. This proposition was

accepted, and in February and March the different Allies were busy in preparing a list of the requirements to be submitted to the Germans.

Our representatives were not in accord with the proposal, but as the French, Belgium, and Italian Governments were insistent on their needs of the dyestuffs, and that the proposal should be accepted, our representatives did not feel that they could negative an offer on the part of the Germans to supply to the Allies all their requirements. Accordingly, in May, after much discussion and many meetings, the lists of the requirements of the different Allies were forwarded to the Germans. This proved unacceptable to the Germans, and this first proposal accordingly fell to the ground. Since then a new protocol has been drafted by the Dyestuff Bureau of the Reparation Commission. This new arrangement has not yet been discussed with the Germans and indeed has not yet been put into final shape by the Dyestuff Bureau of the Reparation Commission. It is expected that in late October the new protocol will be discussed by the various bodies of the Reparation Commission and will be ready for discussion with the Germans in November.

In the meanwhile the Germans are putting aside 25 per cent of their daily production, and this is allocated to the Allies in accordance with class and percentage. In order that the Allies may know what the Germans are making, on the 15th of each month the Germans submit a statement of the 25 per cent due the Allies from their production of the previous month. This includes every color produced, a statement of 25 per cent of the amount produced, and the price to the Allies, which according to the arrangement is the lowest price quoted during the month of production to any buyer, German or otherwise. A brief analysis of the quantitative and qualitative production of the German factories for the past six months will be of interest.

The total production of the German factories in the month of February, the first month for which a daily production list was submitted, was 1,600 tons, approximately 10 per cent of their pre-war capacity. This production has steadily increased—2,400 tons in March, 3,300 tons in April, 3,800 tons in May, 4,800 tons in June, and 5,500 tons in July—thus, from approximately 10 per cent of their pre-war capacity in the course of six months to 33⅓ per cent.

From the standpoint of consumers of dyestuffs in the United States this rapidly increasing production on the part of the German factories is not so satisfactory as might at first appear, for a large part of the increase in production is not the Herty Option colors, the colors desired by the consumers in the United States, but the big bulk colors, the colors that are being made by American manufacturers.

Take the three months—May, June, and July. The total production by all the German factories of vat colors and fast alizarin colors, which are especially desired by consumers in the United States, was approximately 800 tons. During the same period the production of indigo 20 per cent paste, direct cotton colors, acid colors, and sulphur colors amounted to 8,600 tons; that is to say, eleven times as much as the production of vat colors and fast alizarin colors.

Further, while the production of the vat and alizarin type dye is increasing slowly from 228 tons in May to 261 tons in June and 272 tons in July, the production of the type dyes made in the United States is increasing by leaps and bounds from 2,400 tons in May to 2,800 tons in June and 3,800 tons in July.

The large German production of dyes of the same type as are being made in the United States is evidence of the necessity of special protection for the American industry. The relatively small German production of dyes of the Herty Option type explains the 25 per cent of the first six months' allocation orders still to be delivered.

The question naturally arises whether the Germans can not produce more of the special colors desired by the United States. The arrangement which is being considered by the Reparation Commission aims to effect this purpose. The Germans do not like the necessity of putting aside 25 per cent of every color which they make during the month for the Allies, and especially dislike the necessity of holding this 25 per cent against future orders, more or less problematical. Accordingly, the Germans are inclined to consider a permanent proposition which will do away with the necessity of their putting aside 25 per cent of their daily production. The future of the supply of German colors to the United States is linked up with this permanent proposal. According to all indications when I left Europe it seemed almost certain that the permanent proposal would be adopted in the course of a few months.

—

REPORT OF EDWARD S. CHAPIN, PARIS REPRESENTATIVE OF THE TEXTILE ALLIANCE (INC.), TO THE DYE ADVISORY COMMITTEE OF THE STATE DEPARTMENT, SEPTEMBER 22, 1921.

A new protocol governing the delivery of dyes has recently been adopted by the Reparation Commission. The provisions of this protocol bid fair to revolutionize the situation as regards German dyes in allied countries.

Before considering this protocol it will be necessary to review briefly the steps leading to its adoption and, in particular, significant developments in the work of the Textile Alliance since the report before this committee made last year, September 29, 1920.

Annex VI of the treaty of Versailles accorded the Reparation Commission an option on 50 per cent of the existing stocks of dyes in Germany and an option on 25 per cent of the German daily production.

The option on the existing stocks was exercised based on an inventory taken August 15, 1919. The inventoried stocks amounted to 20,000 tons; the 10,000 tons due the Reparation Commission was distributed among the allied and associated powers. The United States has taken 2,000 tons.

In my report of last year to this committee on September 29 I stated that 800 tons of this 2,000 had been distributed, certain lots of importables to America, indigo to Belgium and China, and that the 1,200 tons which remained were being warehoused at Antwerp; that of these 1,200 tons approximately half were importable; and that the nonimportables we were preparing to sell on the export market or to exchange.

Of the 600 tons considered importable only about 75 tons have been imported. This was due to the depression of last fall and winter and the tightening of control at home. The selling of the balance on the export market was investigated, and it was decided—first, that only a fraction could be marketed to advantage; and second, that it was unwise to make export resales of reparation stocks on the European or Far Eastern markets. In lieu we have exchanged about 1,000 tons with the German color works for special and importable types. We turned back these 1,000 tons to the German color works at approximately four times their cost to us and received in exchange 264 tons of special types for which we paid prices ranging from Herty price to Herty price less 20 per cent. There remain of the original stocks about 125 tons, 96 tons of intermediates, which the Germans have refused to take back and dyes from smaller factories that have not been able to offer suitable types in exchange.

The option on 25 per cent of the German daily production was exercised by the Reparation Commission in February, 1920. The United States has ordered from daily production only importable types. The amounts available have been relatively small, and accordingly our total orders for the past year and a half from daily production have amounted to only about 180 tons.

The question arises, Why did the United States take such large quantities of nonimportables from the inventoried stocks? This was because due to the rapid fall in German exchange in the fall and winter of 1919–20 these were remarkably cheap, and, offered with a minimum of financial risk, a means of indirectly securing increased quantities of desired types, i. e., by exchange.

With daily production no such possibility had existed. The color works early in 1920 began to raise prices. Accordingly we have ordered from daily production only such products as could be freely imported and sold at home.

German daily production in February, 1920, was 1,600 tons and increased rapidly to 5,500 tons in July, 1920. This monthly production was maintained despite the general trade depression until December, 1920, when a 10 per cent reduction occurred. In February, 1920, there was a sharp drop to 3,600 tons, due in part to a strike at the Bayer plant and in part to general curtailment. Since February the monthly production has averaged 4,000 tons.

Let us consider the production of specialties, the vat and the alizarin colors. Taking the high point month of July, 1920, for comparison, the proportion of vat colors to total production has steadily increased from 2.88 per cent in July, 1920, to 4.35 per cent April to July, 1921. The proportion of alizarin colors, on the other hand, after a sharp rise, declined greatly—from 2.09 per cent in July, 1920, the proportion rose in September, 1920, to 3.02 per cent, then steadily declined to 0.75 per cent in March, 1921. Combining the percentages of the two groups, there has been an increase in the past year from 4.97 per cent in July, 1920, to 6.18 per cent in July, 1921, and these latter figures compare favorably with the proportional pre-war production of these products.

The question arises, Why, then, has the Textile Alliance had so much difficulty during the past year in securing from daily production supplies of these types? For three reasons: First, the Reparation Commission has an option on only 25 per cent of the German daily production, and this 25 per cent is divided among five powers. The percentage of the 25 per cent reservation of these types accorded the United States is large, 40 per cent; but even this only gives 10 per cent of the German daily production. Second, measurable quantities of the dyes produced have been types not demanded by the American trade. Third, allocations to the various powers are only reserved for three months from the approval of the monthly lists, after which unordered quantities may be taken freely by any of the Allies entitled to receive reparation dyes. This includes not only Great Britain, France, Italy, and Belgium, but also Japan, Greece, Rumania, and the Yugoslovakian State. Consequently where the United States has not ordered its allocation within the prescribed three months these quantities have frequently been absorbed by other powers.

The total of 180 tons secured by the Textile Alliance (Inc.) from the daily production of the past year and a half is inadequate to the needs of the American consumers.

This would seem to defeat the purpose of Annex VI, which aimed to supply allied consumers, through the Reparation Commission, with sufficient quantities of desired types. A strict interpretation of the provisions of the treaty would have gone far to remedy the situation, but this the Reparation Commission has declined to do.

One of the reasons for exchanging rather than selling the Antwerp stocks was the fact that this would give increased supplies of special types. By the exchange of the Antwerp stocks we have secured in the past three months 264 tons of special types, more than the entire amount secured from the daily production of the past year and a half; further, these types were secured at very advantageous prices.

Exchange of stocks has for the time being given increased supplies of required types, ready for immediate delivery; but it was recognized that these would soon be exhausted and that the old, unsatisfactory situation would continue unless a new arrangement could be worked out which would give larger supplies of required types. Such an arrangement is the new protocol which has just been negotiated between the Reparation Commission and the Imperial Government.

The new protocol provides that the Germans shall deliver such quantities as may be ordered by the Allies, irrespective of whether the amounts demanded exceed 25 per cent of their production. The only limits are the capacity of the Germans to produce and the domestic requirements of the Allies. Orders are to be placed in advance, once every three months. The low reparation price will apply to an amount of each of the dyes to be determined by common agreement between the Reparation Commission and the Imperial Government. For the quantities superior to this amount the price will be the lowest price quoted any buyer in the country receiving the dyes the month preceding or the month of delivery.

In short, the Germans agree, as far as possible, to accept and fill the orders of the Allies and to deliver at prices lower than to agents outside reparation.

The new protocol insures—

First, that dyes needed to supplement the manufactures of domestic producers can actually be secured.

Second, it places the control of the importation and distribution of these dyes in the hands of friends of American producers.

The new protocol places no limit on the quantities that may be ordered by the Allies, except the capacity of the Germans and the domestic requirements of the Allies. The Allies may even exhaust the entire German manufacture of any desired type. The Textile Alliance can even order the entire American requirements.

It was an appreciation of these facts that caused the Germans to resist long and tenaciously the protocol. Why did they sign? For two reasons principally: First, they wanted orders. The world-wide depression had affected their business. Under the old arrangement orders through the Reparation Commission were relatively small. The new protocol promised increased orders. Second, it was a case of must. The German Government agreed in May, 1921, to pay the Reparation Commission for the ensuing year 2 milliards of gold marks plus a sum equal to 26 per cent of the German exports. The memorandum of the German Government outlining how these payments will be made includes an item of pharmaceuticals and dyes to the amount of 43,000,000 gold marks.

According to the new protocol, it will be necessary to order in advance. I have canvassed the home situation with the New York office of the alliance and with Mr. Moorhouse, and we have prepared a modest list of 90 tons, which we suggest should be ordered as a preliminary trial of the advantages of the new protocol. We estimate that about 55

per cent of this list will be at the low reparation price and 45 per cent will be at the American export price, the price quoted other importers. Under the present conditions of exchange the reparation price is one-third to one-quarter the American export price.

The alliance would be thus reasonably safe against market declines. First, because such a large proportion of the orders would be at low reparation prices, and, second, because the price for the quantities delivered at the American export price would always be the lowest price charged to any buyer in the United States the month preceding or the month of delivery.

This brings us to the question of distribution. Little avails the new protocol if distribution in America fails. If the German agents reach the consumer and the alliance does not, things continue as before.

An illustration of this fact is happily at hand. Bulletin No. 39 has just been issued to the trade. This bulletin comprises the exchange quantities and various reliquats from previous lots. Except from one customer, the orders which have been received are small; the total orders amount to about one-fifth of the quantity offered.

To insure that the largest circle of consumers shall have the benefit of the dyes listed in Bulletin No. 39, the preliminary offering through the bulletin should be supplemented by personal calls on the trade by a representative of the alliance. It can scarcely be doubted that such calls would result in the early distribution of the great part of the quantities offered.

Many consumers hesitate to order through the alliance because they are not sure of regular supplies. No mill wishes to start using a dye if presently supplies are not available. A representative of the alliance calling on consumers and explaining the possibilities from the new protocol would perform a genuine service. He would be able to find out the bona fide requirements of consumers to supplement the products furnished by American producers. Their requirements could be immediately put together into a program of manufacture to be submitted to the Germans. In this way consumers could be assured of regular supplies through the alliance, and the distribution problem would be solved.

I might even suggest that this be carried a step further. Some few months ago, when the lists of dyes were being prepared for the exchange transaction, certain quantities of certain types were declared importable, but when those quantities reached America American manufacture rendered them nonimportable. A posting of the alliance by producers of the dates when they expect to bring on the market new types would enable the alliance to avoid in the future ordering such products.

The new protocol leads inevitably to the lodging of all the business in German dyes in America in the hands of the Textile Alliance; it serves alike the interests of producers and consumers; it gives added protection of the American industry, in conjunction with the embargo control at home; and makes available to consumers the widest latitude in the choice of dyes.

Let us consider briefly the situation if the embargo control is given up:

This would open the American market to accumulated stores of reparation dyes and dyes of foreign manufacture which are now nonimportable.

Reparation dyes in considerable quantities are being held by various of the Allies. The head of the French Union informed me the other day that they had on hand 1,320 tons. I understand that Great Britain has between 1,500 and 2,000 tons. No figures have been received from Italy, but inasmuch as Italy has taken in gross tonnage nearly as much as Great Britain, and in actual value more, with a smaller domestic consumption, it is possible that Italy has on hand as great a tonnage as Great Britain, i. e., about 2,000 tons. Belgium appears to have cleaned up well on her takings. Japan has a considerable reliquat of unsold reparation dyes. Other powers receiving reparation dyes have small balances. All told, the total of reparation dyes in the hands of the various powers amounts to assuredly not less than 5,000 tons.

The explanation of these unsold balances in the hands of our allies comes from the fact that in an endeavor to swell their reparation accounts they ordered freely both from the inventoried stocks and from daily production, and far in excess of the domestic requirements. During the past year various of the Allies sought to realize on these dyes by export resale, hence the Italian sales to various importers not only in the United States but also in France. The Belgians complained, and, by a curious coincidence, also the Italians, that their home markets were being disturbed by export resales of reparation dyes by the other powers. France complained that not only the home but also the neutral markets were being disturbed. Fortunate indeed was it for the United States for the success of more important affairs that we refrained from such sales in the markets of the Allies.

For the past five months the question of export resales has been before the commission. A strong resolution was passed in July, in which all the Allies concurred, to prevent the resale of products ordered in the future. The great difficulty has been with the old stocks, which were sold to the respective Allies with no strings attached. A recent far-reaching decision of the commission, due largely to the insistence of the American delegation, bids fair to decrease and even to prevent dumping resale of stocks. According to this decision the most efficient measures are to be formulated so that deliveries of dyestuffs to the Allies on reparation account should not have the effect of injuring nascent industries in the allied and associated countries by undue disturbance of world markets.

Among the measures contemplated is the stipulation that each Government shall offer these stocks to the other allied Government organizations.

These reparation dyes in the hands of the Allies constitute only a small part of the stores of dyes that on the raising of control would become importable.

Eleven thousand tons are known to be in the German factories, consisting of that portion of the 25 per cent reservation of the past year which has not been ordered by the Allies. This is reverting to the Germans. Large as these quantities are they must be increased by the unsold portion of the free 75 per cent of the German daily production and the surplus of British, French, Swiss, Italian, and Japanese manufacture. Further, there are measurable quantities of dyes purchased by our allies on the free market from Germany which remain unsold. Thus in 1920 the British bought freely at virtually Herty prices. I have been told by two British authorities that they now have left 300 to 400 tons, which cost approximately $2,000,000. This should be compared with our record for the original 850 tons ordered in February, 1920. Of this quantity 84 per cent was delivered, and of the vat color 96 per cent.

The situation is thus set for the demoralization of the home market by dumping. In this situation the rights that come from relationship with the Reparation Commission would enable the alliance to stabilize the market. By the purchase of reparation stocks, either from allied organizations at low prices or by the purchase of a certain quantity of types made in America under the terms of the new protocol, the alliance would have an advantage over any other importer. This would discourage price disturbances. To effect this it would not be desirable nor necessary to order large quantities of the types made in America—a certain minimum should suffice.

The new protocol promises even more if carried to its logical conclusion. This will not come without considerable constructive work both in Paris and in America. The new protocol was consummated as a result of two years of endeavor. The tabulations on the table give some idea of the data that it was necessary to assemble for the final negotiations of the new protocol. These data were prepared for the dyestuff bureau of the Reparation Commission by the Textile Alliance organization. The new protocol provides for future developments on the request of the Reparation Commission. Before working for further developments it will be first necessary to try out the advantages of the present protocol.

—

SEPTEMBER 9, 1919.

TEXTILE ALLIANCE (INC.),
45 East Seventeenth Street, New York.

GENTLEMEN: The advisory committee on dyes of the War Trade Board section of the State Department has been asked to advise the section as to what method should be adopted in disposing of the importations of German dyestuffs which are to be secured from the existing supplies controlled by the Reparations Commission.

The functions of the War Trade Board section will, of course, continue only until the ratification of the peace treaty, but the intention is to bring about immediate importation of a few months' supply of dyestuffs which are particularly needed and which are not now obtainable from domestic sources. The committee's view is that your organization is quite the most suitable for the purpose of bringing those dyestuffs into the United States and appropriately distributing them to bona fide American consumers upon the order of such consumers; that both the importation and distribution can be handled very much as your organization handled imports during the war.

With that end in view and subject, of course, to the approval of the War Trade Board section of the State Department, this letter is written on behalf of the committee to ask whether or not it is feasible for you to undertake the entire control and disposition of such importation, as you did the various articles which were brought in by you during the war.

The suggestion which we have to make is as follows:

In order to relieve your board of the work which would be involved by this undertaking, we suggest the appointment by your board of a subcommittee consisting of the following gentlemen, who would assume entire charge of the work:

Mr. Manton B. Metcalf, Mr. Frank D. Cheney, and Mr. Andrew C. Imbrie.

If you could put at the disposal of this committee such portion of your offices and office force as may be necessary, the salaries and other expenses connected with the work would be paid out of the proceeds of the undertaking.

As the proposed enterprise is certain to be temporary and might in case of prompt ratification of the treaty fall through altogether, we should expect to pay liberal salaries and agree to give such employees as were engaged in the work 90 days' notice, if necessary.

The members of the committee would also expect to guarantee the Textile Alliance against any liability in connection with the undertaking.

If the Textile Alliance would be willing to act in accordance with this suggestion in case the War Trade Board section of the State Department should approve it, I should be obliged if we may notify the War Trade Board section.

Yours very truly,

HENRY B. THOMPSON, *Chairman.*

—

THE ADVISORY COMMITTEE ON DYES,
WAR TRADE BOARD SECTION OF THE STATE DEPARTMENT,
September 15, 1919.

Mr. HENRY P. THOMPSON,
Chairman Advisory Committee on Dyes,
War Trade Board Section of the State Department,
320 Broadway, New York.

DEAR MR. THOMPSON: I submitted your letter of September 9 by mail to the other members of the executive committee of the Textile Alliance, who have, in writing, authorized me to make an arrangement with your committee such as you suggest.

At the next meeting of the committee the arrangement between us will be ratified, but will become effective only when approved by the War Trade Board Section of the State Department.

The Textile Alliance will undertake the entire control and disposition of dyestuffs and chemicals subject to the jurisdiction of the War Trade Board, and has appointed for that purpose a committee consisting of—

Mr. Manton B. Metcalf, Mr. Frank D. Cheney, and Mr. Andrew C. Imbrie, who shall have full authority on behalf of the Textile Alliance, subject to its board of directors and executive committee, to deal with the matter.

The Textile Alliance will place at the disposal of this committee its equipment and employees with the exception of Mr. Frank A. Fleisch, vice president. Rent is $1,300 per annum. Telephone service is $900 per annum. The force consists of—

Mr. William B. Denton, secretary and treasurer, salary $4,000 per annum.

Mr. B. R. Price, chief clerk, salary $3,600 per annum, which in view of increased responsibilities should be somewhat raised.

One bookkeeper—salary to be determined, as our last bookkeeper has just left. Two stenographers, file clerks, telephone operator and office boy. We estimate that two additional bookkeepers and one additional stenographer will probably be necessary to deal with the volume of business that you indicate.

The force above indicated is competent to deal with all legal, transportation, and insurance questions. Mr. Denton is a member of the New York bar and has had a large experience in the legal matters of the Textile Alliance. Should outside consultation be necessary we should expect the committee to consult Messrs. Coudert Bros., and to pay for their services.

It is necessary for the alliance to continue the existing organization for its protection, and the expenses thereof are to be defrayed from the income of the present reserve fund. The alliance will make such additions to its force as may be necessary. It is proposed that in return

for the use of the organization and of the alliance's name and the advice of the executive committee and officers of the alliance the dyestuff committee shall pay to the alliance from its receipts all of the alliance's out-of-pockets plus 50 per cent. The money thus paid is to be used for the corporate purposes of the alliance, which, generally speaking, means the good of the textile trades.

The dyestuff committee is to hold the Textile Alliance harmless against all losses or liabilities in connection with the undertaking. The alliance will lend the committee what funds are needed to start up to $50,000 at 6 per cent interest. Ninety days' notice is to be given to the alliance at the termination of this arrangement.

Yours very truly,

TEXTILE ALLIANCE (INC.).

SEPTEMBER 16, 1919.

MR. A. M. PATTERSON,
President Textile Alliance (Inc.),
45 East Seventeenth Street, New York City.

DEAR SIR: I acknowledge the receipt of your letter of September 15 and have had sent copies of it to the members of the dye advisory committee, as well as to Mr. Bennett, secretary of the War Trade Board section of the State Department.

When the plan proposed has received the approval of the War Trade Board our committee will be ready to act.

Yours faithfully,

HENRY P. THOMPSON,
Chairman Advisory Committee on Dyes, War Trade Board.

OCTOBER 2, 1919.

WILLIAM PHILLIPS, Esq.,
Acting Secretary of State, State Department,
Washington, D. C.

SIR: I beg to acknowledge receipt of your letter of September 29 in the matter of German dyes and the proposed connection of the Textile Alliance therewith.

I am pleased to advise that the directors of the Textile Alliance have already authorized me to make such arrangements as are set forth in your letter with a single exception, and I feel confident that the committee will withdraw that objection in the event that the Textile Alliance is definitely asked to undertake the work.

We are sending our Mr. F. A. Fleisch, vice president and general manager, to Paris at once, and he will, upon arrival, put himself in touch with Dr. Charles H. Herty. Mr. Fleisch is thoroughly familiar with the workings of the Textile Alliance, but is not a dye expert, and it is suggested that a dye expert should be sent to Paris as soon as possible after the arrangements have been decided upon. May we suggest that you communicate also with Mr. Henry B. Thompson, chairman advisory committee on dyes, War Trade Board, in regard to the matter in general and with regard to the selection of the dye expert?

A committee of the trade has also been formed to advise with the Textile Alliance in the matter of dye importations.

Yours very truly,

TEXTILE ALLIANCE (INC.).

THE TEXTILE ALLIANCE (INC.),
45 East Seventeenth Street, New York City.

GENTLEMEN: Referring to the department's letter of September 29 setting forth the proposal that the Textile Alliance (Inc.) should be designated as the agency to effect the importation and distribution of German dyes proposed to be secured as the result of negotiations then being conducted in Paris, and referring also to your letter of October 2, in which you informed the department that the Textile Alliance (Inc.) was prepared to act in the capacity aforesaid (subject to an exception which has since been withdrawn), the plan outlined in the first-mentioned letter has been finally completed in all substantial respects; and, accordingly, the Textile Alliance (Inc.) is hereby designated as the agency to effect the importation and distribution of German dyes under the conditions set forth in the above-mentioned letter of September 29, 1919.

The supervision of the operation of the above-mentioned plan will be conducted for the department by the War Trade Board Section, and you are requested to consult with the chief of said section with respect to all further arrangements necessary for the consummation of the purchase, importation, and distribution of the dyes which will be secured under said plan.

I am, gentlemen,

Your obedient servant (for the Secretary of State),

WILLIAM PHILLIPS,
Assistant Secretary.

ACTING CHIEF OF WAR TRADE BOARD SECTION,
October 10, 1919.

Plan described last paragraph our circular October 1 has been completed. Textile Alliance (Inc.), 45 East Seventeenth Street, New York City, has been designated as sole official agency to administer provisions of plan. Persons desiring to secure dyes under plan should assign allocation certificates to Textile Alliance. Letter follows.

WAR TRADE BOARD SECTION.

OCTOBER 13, 1919.

MR. A. M. PATTERSON,
President Textile Alliance (Inc.),
45 East Seventeenth Street, New York City.

DEAR MR. PATTERSON: May I ask that you be kind enough to consider this letter as being confidential?

Mr. Price will have advised you that at the eleventh hour, after we had worked out quite satisfactorily the details of the plan under which the Textile Alliance (Inc.) will handle, on behalf of consumers, the importation of certain dyes from official sources, this section received a letter from the Grasselli Chemical Co., stating that it would insist on the rights which accrued to them as purchasers from the Alien Property Custodian of certain German-owned American patent rights relating to dyestuffs. It may be that the Chemical Foundation (Inc.), likewise the purchaser of similar patent rights from the Alien Property Custodian, will seek to safeguard those patents. Were it not that the Department of State had designated the Textile Alliance (Inc.) as an official agency for facilitating the importation of certain quantities of German dyes from official sources the department would not concern itself at all of the manner in which those patent rights would be administered or protected by the owners. But for obvious reasons the Department of State can not establish an official agency for the importation of German dyes from an official source, which, although obtainable in part from such official source, may also be obtained from private German sources, if the Grasselli Chemical Co. and the Chemical Foundation (Inc.) will seize upon this opportunity and for the purpose of eliminating certain importers, accord to the Textile Alliance (Inc.) greater privileges of selling or using imported dyes of German origin which come within the scope of the dye patents now owned by the Chemical Foundation (Inc.) and the Grasselli Chemical Co. than would be accorded to any other private importer of American citizenship.

In view of these circumstances, two letters were mailed this morning, signed by the Secretary of State, one to the Grasselli Chemical Co. and the other to the Chemical Foundation (Inc.). I am inclosing for your confidential information copy of letter to the Chemical Foundation (Inc.), letter to the Grasselli Chemical Co. being identical, mutadis mutandis.

Unless the Grasselli Chemical Co. and the Chemical Foundation (Inc.) will give the Department of State assurances that the Textile Alliance (Inc.) will receive at the hands of the Grasselli Chemical Co. and the Chemical Foundation (Inc.), as patent owners, no greater privileges than will be accorded by those patent owners to any other individual American importer, I fear that we will have to abandon the plan to which you have been kind enough to lend your support.

I am hoping that such assurances will be given.

Meantime, inasmuch as holders of allocation certificates for the importation of vat dyes have been advised both by telegram and by letter that they may select the Textile Alliance (Inc.) as an importing agency for obtaining part of their requirements from an official source, I think it would be inexpedient to convey the foregoing information to them at this time. Inasmuch as we have already issued a large number of licenses covering much the greater part of the allocation, it is not likely that the Textile Alliance (Inc.) will receive many allocation certificates. In the event that it becomes necessary to abandon the plan, I think that we will be able to prepare a statement which will be satisfactory.

The incident referred to above is unfortunate, inasmuch as we had expected and had already, to a certain extent, been given to understand that if we designated the Textile Alliance (Inc.) it would not be selected as the recipient of greater privileges than would be extended by patent owners to other American importing agencies.

I should like very much to have an expression of your views in connection with the foregoing.

Of course, even though the department should receive the assurances referred to above, it is not likely that, in view of the large number of licenses already issued for vat dyes, the Textile Alliance (Inc.) will be called upon to import a very appreciable quantity of vat dyes. However, the plan was instituted not only to take care of the importation of vat dyes from official sources but also to facilitate the importation from such official sources of German dyes other than vat dyes.

I am inclosing herewith a copy of a circular letter which we mailed on October 8. A large part of the quantity of dyes which will be allocated as a result of this circular letter will likewise be obtainable from an official source, and it was especially with reference to the forthcoming allocation that the plan was devised.

Very truly yours,

ST. JOHN PERRET,
Acting Chief War Trade Board Section.

OCTOBER 11, 1919.

THE CHEMICAL FOUNDATION (INC.),
81 Fulton Street, New York City.

GENTLEMEN: There is inclosed herewith a copy of ruling No. 825, issued by the War Trade Board section of this department on August 15, 1919. The dyes, dyestuffs, and related chemicals which are enumerated in paragraph 4 thereof are excluded from the scope of the general or blanket import license described in the ruling, and accordingly such commodities may be imported into the United States only upon issuance of such individual import licenses. When the commodities enumerated in the said paragraph 4 are of German origin the issuance of such individual import licenses is made dependent upon the need in this country of the commodities so licensed.

An urgent need in this country of certain quantities of dyes of German origin having been made manifest, the War Trade Board section has determined to issue individual import licenses authorizing the importation of such quantities of dyes of German origin as will satisfy the requirements of consumers for a six months' period. As the result of certain recent negotiations between the representatives of the allied and associated Governments and of the German Government, a substantial portion of the amount of such dyes as will be needed to satisfy the six months' requirements will be made available to consumers in this country.

The obtainment by consumers of the dyes which have thus been made available from an official source can be effected only through the establishment of an official agency in this country, and, accordingly, this department has designated the Textile Alliance (Inc.), 45 East Seventeenth Street, New York City, as such sole official agency to import and distribute, on behalf of such consumers as might wish to avail themselves of the opportunity of obtaining a part of their requirements from such official source, the dyes which will be secured as the result of the negotiations hereinabove referred to. Consumers who desire to import German dyes from such official sources must do so exclusively through the Textile Alliance (Inc.). Consumers who do not wish to import dyes from such official source may do so through any other American channel of importation.

This department is informed that the Chemical Foundation (Inc.) and the Grasselli Chemical Co. are the sole purchasers, from the Alien Property Custodian, of certain German-owned American patent rights relating to dyestuffs which had theretofore been seized by the Alien Property Custodian pursuant to authority derived from the trading with the enemy act. This department is likewise informed that the importation of certain dyes of German origin, which are included among those which will be licensed for importation to satisfy the six months' requirements of American consumers, may possibly constitute an infringement of certain of those patents which were purchased by the Chemical Foundation (Inc.) and the Grasselli Chemical Co., from the Alien Property Custodian. Accordingly, this department requests the Chemical Foundation (Inc.) to inform it on the following points:

1. In view of the present needs of American consumers for certain dyes which are not obtainable from American sources, will the Chemical Foundation (Inc.) administer the rights which may accrue to it as

purchaser of the patents referred to above, in such manner as will insure that all consumers in the United States will be accorded by the Chemical Foundation (Inc.), in all respects, the same treatment irrespective of whether such consumers obtain their six months' requirements through the Textile Alliance (Inc.), or through other private American channels of importation?

2. If the Chemical Foundation (Inc.) has determined to charge a royalty for such sale or use of imported German dyes (required by consumers for a six months' period) as might otherwise constitute an infringement of the patent rights now owned by the Chemical Foundation (Inc.), will these royalties be nominal or substantial, and will the rate of royalty be made uniform for, and the privilege of paying the same be extended to, all consumers irrespective of whether they obtain their supplies through the Textile Alliance (Inc.) or through any other American channel of importation?

3. Will the Textile Alliance (Inc.) and all other American importers of dyes of German origin be accorded by the Chemical Foundation (Inc.) uniform treatment with respect to any action which the Chemical Foundation (Inc.) may take as patent owner in relation to the sale or use of dyes licensed for importation from Germany to satisfy the six months' requirements of consumers?

This department, of course, recognizes in the Chemical Foundation (Inc.) an independence to exercise such patent rights and privileges as it may have, and accordingly this department seeks from the Chemical Foundation (Inc.) no dispensation from the possible infringement of patents owned by the Chemical Foundation (Inc.), either on behalf of the Textile Alliance (Inc.) or of private importers or consumers. However, it must be clear to the Chemical Foundation (Inc.) that the Department of State could not place itself in the position of becoming a party to any action by the Chemical Foundation (Inc.) which might result in a denial of equal rights to all American citizens in the matter of the sale or use of dyes imported from Germany.

Therefore this department would be disposed to proceed with the plan of partial importation from official sources through the Textile Alliance (Inc.) if assurances were given to the department that both the Chemical Foundation (Inc.) and the Grasselli Chemical Co. will accord the same treatment and extend the same privileges to both the Textile Alliance (Inc.) and to all other importers of American citizenship, as well as to all consumers irrespective of the channels of importation through which such consumers effect their importations. In the absence of such assurances this department would consider the advisability of recalling its designation of an official agency for obtaining on behalf of consumers such portion of German dyes as have been made available as the result of the negotiations between the representatives of the allied and associated Governments and of the German Government.

The Department of State solicits the promptest expression of the views of the Chemical Foundation (Inc.) with reference to the foregoing.

I am, gentlemen,
Your obedient servant,

MINUTES OF MEETING OF THE DYE ADVISORY COMMITTEE OF THE TEXTILE ALLIANCE (INC.), HELD AT THE MANHATTAN CLUB, 1 P. M., OCTOBER 20, 1919.

Present: Messrs. Patterson and Price, of the Textile Alliance (Inc.); Messrs. Metcalf and Cheney, dye advisory committee of the Textile Alliance (Inc.); Mr. St. John Perret, Acting Chief of War Trade Board Section, Department of State; Mr. Henry B. Thompson, chairman of the advisory committee on dyes, War Trade Board Section, Department of State; Mr. Joseph Choate, jr., representing the Alien Property Custodian and the Chemical Foundation (Inc.); Dr. J. Merritt Matthews, representing the Grasselli Chemical Co.

Mr. Patterson notified those present of the appointment of a dye advisory committee, being composed of Mr. Manton B. Metcalf, Metcalf Bros., 45 East Seventeenth Street, New York; Mr. Frank D. Cheney, Cheney Bros., South Manchester, Conn.; Mr. Andrew C. Imbrie, United States Finishing Co., 320 Broadway, New York, N. Y. The duties of this dye advisory committee were then outlined, they to have full authority to deal with the matter on behalf of the Textile Alliance (Inc.), subject to its board of directors and executive committee.

The attention of the committee was then called to the necessity of indemnifying the directors of the Textile Alliance in connection with possible expenses and liabilities that might be incurred in taking on this work. That portion of the letter of September 9 from Mr. Henry B. Thompson, chairman of the advisory committee on dyes of the War Trade Board section of the State Department, was read into the records, i. e., "The members of the committee also expect to guarantee the Textile Alliance against any liability in connection with the undertaking." The proposed indemnification and agreement to be executed by the advisory committee on dyes, War Trade Board section, prepared by Messrs. Coudert Bros., was presented to Mr. Thompson, their chairman, who signified his unwillingness to execute same. The proposition was then put forward that arrangements be completed with either a surety or insurance company to give such indemnification to the directors of the Textile Alliance (Inc.), as was acceptable to Messrs. Coudert Bros., our attorneys, and it was proposed that Mr. Thompson handle this feature with Mr. Frederic Coudert.

The committee having failed to organize, no further minutes were taken of the conversation which took place in relation to the importation under the supervision of the State Department, War Trade Board section, and the manner in which they might be affected by contract and patent rights.

In closing, Mr. Perret expressed the desire that a statement from him, which follows, be read into the minutes.

He stated that at the close of business October 18, 1919, the War Trade Board had issued to importers other than the Textile Alliance (Inc.) 195 import licenses covering 609,344 pounds of vat dyes. He further stated that the total allocations of vat dyes made by the War Trade Board October 1, 1919, was 1,093,397 pounds; that the total quantity of vat dyes which would be available from official sources would approximate 30 per cent of the entire allocations. He continued with the statement that the War Trade Board in approximately 10 days' time would make allocations to the consumers for six months' requirements of dyes other than vat dyes and that the War Trade Board contemplated asking the Textile Alliance (Inc.) to handle such part of that allocation as was made from official sources in a like manner as they propose to handle the vat dyes.

Mr. Perret requested the Textile Alliance (Inc.) to state whether it was disposed to proceed with the plan mentioned above in connection with the dyes other than vat dyes, as well as the handling of the vat dyes regarding which there was an exchange of correspondence between Mr. Phillips, Acting Secretary of State (his letter of September 29, 1919, Mr. Patterson's letter of October 2, and Mr. Phillips's without date but which was handed to the writer in Washington on October 10).

B. R. PRICE, Jr.,
Acting Secretary.

OCTOBER 20, 1919.

SECRETARY OF STATE,
Washington, D. C.

SIR: I have the honor to inclose herewith copy of memorandum dictated by Mr. Perret, representing the War Trade Board section, at a meeting to-day at the Manhattan Club.

The meeting included:

1. The representative of the War Trade Board section.
2. Mr. Henry B. Thompson, representing the War Trade Board advisory committee on dyestuffs.
3. Messrs. Manton B. Metcalf and Frank B. Cheney, representing the Textile Alliance (Inc.) committee on dyestuffs.
4. Messrs. A. M. Patterson, president, and B. R. Price, jr., representing the Textile Alliance (Inc.).

In response to Mr. Perret's request as to the Textile Alliance's willingness to proceed I beg to submit that in a letter dated September 15, 1919, to Mr. Henry B. Thompson, chairman advisory committee on dyestuffs, War Trade Board section, it was stipulated: "The dyestuffs committee is to hold the Textile Alliance (Inc.) harmless against all losses or liabilities in connection with the undertaking." This provision was inserted in the letter in accordance with the instructions of the executive committee of the Textile Alliance (Inc.).

Mr. Thompson's letter in reply, September 9, said:

"The members of committee would also expect to guarantee the Textile Alliance (Inc.) against any liability in connection with the undertaking."

At the meeting to-day it appeared that the guaranty proposed by the Textile Alliance (Inc.) was not such as met with the approval of the members of the advisory committee present, and the alliance is unable definitely to proceed with the matter until satisfactory indemnification shall have been arranged, for which Mr. Thompson is now in process of negotiation. As soon as this shall have been provided the Textile Alliance (Inc.) will be prepared to proceed with the plan mentioned by Mr. Perret in connection with all dyes and chemicals as well as vat dyes, as the authority received from the executive committee is not limited in this respect.

I have also to inform you that the representatives of the Grasselli Chemical Co. and the Chemical Foundation (Inc.) present at the meeting appear not to be in agreement with each other or with the War Trade Board section of the State Department in respect to royalties upon importations and as to the eligibility of certain classes of importers. Until this difference of opinion can be satisfactorily arranged, the Textile Alliance (Inc.) can not proceed and the difference would appear to affect equally all other importers.

The Textile Alliance (Inc.) has received certificates from persons desiring to import vat dyes to the amount of 36,000 pounds. It is our intention to hold these certificates for a few days in order that opportunity may be given to complete the necessary arrangements and upon Mr. Perret's statement that, if necessary, the time fixed for importation, namely, October 31, 1919, as stated in his letter of October 10, would be extended.

We think, however, we should return these certificates not later than Saturday, October 25, if no satisfactory settlement is reached.

It was my intention to leave town to-day, to be absent until next Monday, but in view of the circumstances which have arisen I am remaining here and am at the service of the department in case of necessity.

Respectfully,

TEXTILE ALLIANCE (INC.)

OCTOBER 24, 1919.

To MR. FLEISCH, *Paris:*

For Fleisch, care Dr. Charles H. Herty, War Trade Board representative. Due to complications in connection with assessment of royalties claimed under patents held by the Chemical Foundation and Grasselli Chemical Co., also failure to date to compel entire importations through this organization, dyestuffs situation at standstill until Tuesday, when we shall be able to cable you outcome. If successful conclusion is reached by then will advise you as to financial arrangements and particulars as to each consumer's requirements, giving description of dye and Schultz publication, 1914 edition, reference number, specifying whether paste or powder form, as well as quantity. It is understood here that quantity for distribution by reparation committee represents only one-third of requirements and plan provided for distribution of this portion to consumers pro rata. Question of accepting Cartel's offer of remaining quantity will be settled Tuesday. Our contemplated arrangements with importers for handling these dyestuffs are identical with your suggestions. For your information, Holland-American Line quotes freight rate per 1,000 kilograms, Rotterdam to New York, 80 guilders on aniline and alizarine dry. On aniline and alizarine paste, 50 guilders. Above quotations subject to their handling exclusively entire movement. Red Star Line quote per 1,000 kilograms, from Antwerp to New York, aniline or alizarine dry fr. 94.50, aniline or alizarine paste fr. 84. Quotations based on present rate exchange. Account competition, probably more favorable freight rates available at your end. Insurance rates quoted in my cable 20th were marine rates. War risk rate prevailing, 7½ cents per $100. Have you received our cable of the 20th, sent you care Coudert?

OCTOBER 25, 1919.

MR. A. M. PATTERSON,
Care of Textile Alliance (Inc.), 45 East Seventeenth Street, New York City.

MY DEAR MR. PATTERSON: I am pleased to advise you that we were successful this morning in reaching an agreement with the Chemical Foundation (Inc.) and the Grasselli Chemical Co., the terms of which were perpetuated in a memorandum, copy of which I am inclosing for your confidential information.

You will note that the Chemical Foundation (Inc.) and the Grasselli Chemical Co. have given to the Department of State the assurances asked for in the department's letter of October 11. Those patent owners will, I understand, charge a substantial royalty for the same or use of the German dyes covered by their patents, but these royalties will be

made uniform to all consumers irrespective of whether they obtain their supplies through the Textile Alliance or through any other American channel of importation. I have requested the Grasselli Chemical Co. and the Chemical Foundation (Inc.) to advise the Textile Alliance immediately of the rate of royalty in order that the alliance might be in a position to give the necessary information to those consumers on behalf of whom the alliance will function.

The department has agreed to advise all American importers that if those importers desire to supply their customers with dyes from the official source that the department will interpose no objection to such importation by the importers provided that the importation is effected through the Textile Alliance on behalf of these importers but for the ultimate benefit of the consumers, the right being reserved to the importers to sell these dyes, after having purchased the same through the alliance, to their customers at any price.

This statement to the importers will not be made until the alliance has issued its bulletin and opportunity shall have thus been given to allocation certificate holders to assign their certificates to the Textile Alliance.

This statement to the importers will be thus postponed for the following reasons:

The Textile Alliance will give preference to all of the orders placed with it as the result of direct assignments of allocation certificates by consumers to the alliance and will import from the official sources on behalf of importers such quantities as will be available after those preferential orders have been filled. The alliance will therefore not be in a position to tell the importers of the amount which will be available for their customers until the alliance has received all the outstanding allocation certificates which are intended to be assigned directly to the alliance.

When the foregoing statement shall have been made to the importers, and if those importers decide to avail themselves of the Textile Alliance, we will be able to determine whether the cartel offer should be accepted. If the importers decide to import all of their dyes through the alliance, the alliance may then accept the cartel offer in toto. If the importers decide to import only a part of their customers' requirements through the Textile Alliance, it may be that the available quantity from the official source will be sufficient. If not, it will be necessary for us to ascertain whether the cartel offer may be accepted in part. To the extent to which the cartel offer may be accepted the Textile Alliance, in filling orders from that source, will treat all consumers alike, irrespective of whether the allocation certificates have been directly assigned to the Textile Alliance or to a private importer.

I am sending to-day under separate cover to Mr. Price the draft of the alliance bulletin, which has been slightly modified by us to an extent to which Mr. Price has agreed. I spoke to Mr. Price over the phone to-day and he told me that he would probably be in a position to issue this bulletin not later than Tuesday evening. I strongly recommend that this be done; that copies of the same be distributed in the most catholic manner; and that it be given due publicity in the press.

In view of the agreement which has been reached with the Chemical Foundation (Inc.) and with the Grasselli Chemical Co., I assume that you will have no misgivings on the matter of restraint of trade. Indeed, I understood from Mr. Price that on Mr. Coudert's advice the alliance has decided not to seek to obtain from a private insurance company any indemnity against such risk. The Department of State is much pleased to be advised of your decision in this regard, inasmuch as the department would have been loathe to see its agent seek an indemnity against any possible liability incurred by that agent for having entered into a contract in restraint of trade while performing functions within the scope of the authority delegated to it by the Government.

In view of the foregoing, the success of the plan now appears certain; the opportunity for discrimination has been eradicated, dyes will be immediately available for consumers, and the rights of private importers have been preserved.

May I take this opportunity to apologize for my laches in not thanking you earlier for the very enjoyable luncheon?

Very cordially yours,

_____,
Acting Chief War Trade Board Section.

The Chemical Foundation (Inc.) and the Grasselli Chemical Co. agree to give to the Department of State the assurance asked for in the department's letter of October 11.

The department will make every effort consistent with its policy to bring about that the private importers shall utilize the machinery of the Textile Alliance for their imports, to the end that the entire importation may be brought about through one channel.

The department will instruct the Textile Alliance (Inc.) to fill the orders of those consumers who have consigned their allocation certificates directly to the Textile Alliance first, and the department will instruct the Textile Alliance that it may, after having filled those orders, import on behalf of private importers but for the ultimate benefit of allocation-certificate holders such quantities from the official sources as will be available from the official sources after the previous orders have been filled.

If it shall be deemed desirable to accept the cartel offer, the department will instruct the Textile Alliance (Inc.) to treat all consumers alike in filling orders from that source, irrespective of whether the allocation certificates have been directly assigned to the Textile Alliance or to private importers.

OCTOBER 16, 1919.

Mr. ST. JOHN PERRET,
Acting Chief War Trade Board Section,
Washington, D. C.

DEAR SIR: This will acknowledge receipt of yours of the 13th inclosing further list of German dye firms located in unoccupied Germany, which you have just received from Doctor Herty.

It would appear to be of the utmost importance to have the question of the rate of exchange settled at least before Monday, when our advisory committee will meet at the Manhattan Club. I hope that you will succeed in getting something definite from Doctor Herty in this connection.

Could you also cable Doctor Herty and inquire of him as to whether the sources through which they are to be procured guarantee them as to quality, strength, or shade, or that they conform in every particular to the Schultz type? Undoubtedly some arrangement has been made by the other allied Governments for securing a guaranty of this character in connection with the dyes that they are securing, and we feel that the sellers should be pressed for a similar guaranty in connection with the dyes that are coming here. I understand from the trade that there are always differences of this character coming up, and we feel that it would be rather a revolutionary practice to ignore this feature entirely. I feel that it will come up at our meeting on Monday; and if so, would appreciate your handling by cable with Doctor Herty with view of seeing what can be done in this connection.

We have not as yet received from you the complete particulars of the allocation certificates thus far granted in connection with vat dyes, nor have we received the contract form which you suggest we use in connection with same. I am specially anxious to get both of these, as there is considerable preliminary work to be done before we can go ahead should the scheme go through. Will you endeavor to get both of them to me by Saturday morning at the latest?

I noticed the attached clipping from the Daily News Record in connection with the importation of dyes other than vat dyes. If it should be contemplated that this organization handle this character of dye, could it possibly be arranged whereby the issuance of the vat dye allocation certificates would be withheld until such time as we were able to place in the hands of each individual consumer the bulletin as well as the other form? This is a suggestion that would possibly avoid the confusion that existed in connection with the vat dye allocation certificates.

I certainly hope you can arrange to stay over for the meeting Monday, as everyone will be present at that time and we can clean up the whole situation.

Yours very truly, TEXTILE ALLIANCE (INC.).

[Bulletin No. 35.]

TEXTILE ALLIANCE (INC.),
45 EAST SEVENTEENTH STREET,
New York, October 28, 1919.

1. COMMODITY SUBJECT TO THIS BULLETIN.

The information contained in this bulletin pertains to the purchase, importation, and distribution of vat dyes from Germany to consumers at prices agreed upon by the interallied authorities at Paris.

2. WAR TRADE BOARD AUTHORIZATION AND INSTRUCTIONS.

On October 1, 1919, the War Trade Board section of the Department of State began to issue to consumers of dyes in the United States allocation certificates for the purpose of enabling those consumers to import from Germany such quantities of vat dyes as would be necessary to satisfy their requirements for the six months' period October 15, 1919, to April 15, 1920.

As the result of certain recent negotiations between the representatives of the allied and associated Governments and the German Government, a substantial portion of the amount of such dyes as may be needed to satisfy the six months' requirements of consumers has been made available to consumers in this country.

The War Trade Board section of the Department of State has designated the Textile Alliance (Inc.) as the sole official agency to import on behalf of consumers such portion of the total allocation of dyes as has been made available as the result of those negotiations.

Accordingly, the Textile Alliance (Inc.) will perform the following services in connection with the importation of vat dyes from the official sources referred to above.

(a) To accept from the consumer vat dye certificates issued by the War Trade Board for vat dyes in amounts not exceeding the amounts specified in such certificates.

(b) To file all applications for licenses for vat dyes secured through this source and covered by such allocation certificates as have been indorsed to the Textile Alliance (Inc.).

(c) To attend to all the details connected with the acquisition of and terms of payment for the above-mentioned vat dyes and their shipment to the Textile Alliance (Inc.) and to arrange for distribution to the respective consumers who have ordered them through this source.

3. PROCEDURE.

(a) The consumer indorses and delivers allocation certificates to the Textile Alliance (Inc.), at the same time executing and forwarding the order (Form No. D–1) stating the amount of dyes (not exceeding, however, the amount allocated to him) which he desires to purchase under this arrangement.

(b) On receipt of the above an application for an import license will be filed by the Textile Alliance (Inc.) with the War Trade Board.

(c) At the same time a pro forma invoice will be rendered to the consumer, same to be based on figures available at that time representing approximately the cost (including all charges incidental to complete delivery on a c. i. f. New York basis) of the dyes so ordered. A check (New York funds) in favor of the Textile Alliance (Inc.) for the amount of the pro forma invoice must be sent to this office immediately. On receipt of same the order will be cabled to the representative of the Textile Alliance (Inc.), in Paris, who will proceed with the purchase.

(d) In the event that it should prove impossible to secure the entire amount of the various dyes applied for, it is understood that the Textile Alliance (Inc.) shall be entitled to procure for and deliver to each certificate holder his pro rata share of the total amount obtainable.

(e) On arrival of the merchandise invoice will be rendered showing the charges so far as then ascertained and settlement must be made at that time, subject to correction.

4. TEXTILE ALLIANCE (INC.) CHARGES.

The purchase, importation, and distribution of all vat dyes acquired under the above-mentioned plan will be effected at cost and without profit to the Textile Alliance (Inc.). To meet the estimated expenses of this organization in conducting this work a charge of 15 per cent will be made upon the amount of each purchase, computed upon the delivered cost including duty. Any unexpended balance of the funds remitted for the expenses of the Textile Alliance (Inc.) will be returned pro rata.

5. LIABILITY.

All purchasers ordering vat dyes under this plan must indemnify and agree to hold harmless the Textile Alliance (Inc.) and its officers, agents, and employees from any and all claims or liabilities arising in connection with any importations, sales, or deliveries of the vat dyes covered by this bulletin.

Importations after arrival will be at owners' risk and expense.

ORGANIZATION.

The Textile Alliance (Inc.) was organized February 24, 1914, as a membership corporation under the laws of the State of New York. It has no capital stock and is legally incapable of either making or retaining a profit.

The affairs of the alliance are under the general supervision of an executive committee, consisting of the following:
Mr. H. D. Cooper, Mr. Arthur E. Gill, and Mr. A. M. Patterson.
All matters relating to dyes and chemicals have been referred with power to a committee consisting of the following:
Mr. Frank D. Cheney, Mr. Franklin W. Hobbs, Mr. August Merz, Mr. M. R. Poucher, Mr. H. B. Thompson, Mr. W. H. Watkins, and Dr. Charles H. Herty, with the following as a subcommittee: Mr. Frank B. Cheney, Mr. A. C. Imbrie, and Mr. Manton B. Metcalf.

—

CONTRACT AND ORDER FROM TEXTILE ALLIANCE (INC.).

(Order No. —.)

TO TEXTILE ALLIANCE (INC.),
45 East Seventeenth Street, New York.

GENTLEMEN: We inclose herewith vat-dye certificates issued on our behalf by the War Trade Board Section of the Department of State, and in accordance with their instructions of October 10, 1919, we herewith place order with you for the following quantity of vat dyes covered by the inclosed certificates:

Vat-dye certificate No.	Date of issuance.	Designation of dye.	Schultz number.[1]	Pounds desired.	Name and address of producer abroad.

[1] If number is not found in Schultz's Dye Table, 1914 edition, classify if possible under proper group as given by Schultz.

This order is subject to the following terms and conditions:
(a) This order is subject to acceptance and confirmation by the Textile Alliance (Inc.).
(b) Dyestuffs covered therein sold on a c. i. f. New York basis, the Textile Alliance (Inc.) to complete customs formalities.
(c) The undersigned acknowledges receipt of Bulletin No. 35 of the Textile Alliance (Inc.) and agrees to conform to the requirements, regulations, and provisions set forth therein and any changes, amendments, and reissues which may be made therein or thereof hereafter.
(d) Further, the undersigned will indemnify and hold harmless the Textile Alliance (Inc.), and/or its officers, agents, and employees individually and/or collectively from and against any and all claims or liability arising or which may arise in connection with any importations, sales, or deliveries of the vat dyes hereinbefore mentioned.

MINUTES OF THE MEETING OF THE ADVISORY COMMITTEE ON DYES OF THE WAR TRADE BOARD HELD AT THE MERCHANTS' CLUB ON OCTOBER 27, 1919, AT 1 P. M.

Present: Mr. H. B. Thompson, chairman; Mr. Frank D. Cheney, Mr. W. H. Watkins, Mr. August Merz, Mr. Franklin W. Hobbs, Mr. M. R. Poucher (Mr. E. V. Patterson alternating), Mr. A. M. Patterson, Mr. A. C. Imbrie, Mr. Joseph H. Choate, jr.
A communication, dated October 25, 1919, from the State Department to Mr. A. M. Patterson was read and explained by Mr. Choate. A letter to be written by the chairman was drafted and approved, as follows:

OCTOBER 27, 1919.

Mr. ST. JOHN PERRET,
Acting Chief War Trade Board Section,
State Department, Washington, D. C.

DEAR SIR: The Advisory Committee on Dyes of the War Trade Board section of the State Department at a meeting to-day discussed informally the proposed import of dyes other than vat dyes from Germany. The committee was unanimous in reaching several conclusions, which they asked me to state to you, as follows:
1. The proposed importation, unless limited to dyes really necessary, will endanger the American dye industry to an alarming extent, since the dyes which are desired are not, like the vat dyes, of a class with which no American product competes, but are in many cases in direct competition with domestic goods. Many dyes not made here do precisely the work of other dyes which are made here.
2. Unless the policy of the department is determined with a full and expert knowledge of the real needs of the dye-consuming industries, and the execution of that policy in the actual decision on applications for license is handled by a body similarly informed, the gravest damage may be done.
3. Therefore the department's policy ought not to be formulated without the approval of somebody having such expert knowledge, nor should any licenses be issued without like approval.
4. The present committee was intended to furnish such knowledge; and if it is now deemed lacking therein, can be expanded to meet the department's requirements.
5. In view of the dangers of the proposed imports and of the probability of protective legislation the department's actions should not under any consideration be hurried. The task should be undertaken with all possible deliberation.
6. Conforming to the methods that have obtained during the past five months we suggest that Doctor Penniman or any other representative of your board acting in collaboration with our committee shall make all decisions as to the importation of these dyes.

Yours faithfully,
H. B. THOMPSON,
Chairman Advisory Committee on Dyes, War Trade Board Section.

Mr. W. R. Morehouse, of the National Aniline & Chemical Co., and Mr. R. S. Lunt, of E. I. du Pont de Nemours & Co. (Inc.), were then appointed to act as technical experts to the Textile Alliance (Inc.), and it was suggested that they arrange an appointment with Mr. Price on Wednesday morning, October 29.
A letter from the State Department to Textile Alliance, dated October 26, was read. Mr. Patterson said that counsel had intimated that such a letter, coupled with releases from importers doing business with Textile Alliance, would be sufficient protection against suits. Letter from Coudert Bros. of October 28, in confirmation as follows, was read and ordered into the record:

OCTOBER 28, 1919.

Mr. A. M. PATTERSON,
President Textile Alliance (Inc.),
45 East Seventeenth Street, New York.

MY DEAR MR. PATTERSON: Referring to our conversation of yesterday and your request for an opinion upon the question whether the undertaking by the alliance to act as requested by the State Department in handling the importation of dyes obtained through the Reparation Commission would possibly be obnoxious to the antitrust laws, we would say:
The alliance, in undertaking the work which the State Department has requested of it, would be in fact acting as the agent of such department and really in a public or quasi public manner itself, and, moreover, the State Department so construes the relationship created by the acceptance of the alliance, for in its letter of October 25 it speaks of the alliance in this connection as "its agent."
Under these circumstances we advise you that the antitrust laws have no application, as they do not embrace within their scope governmental action undertaken for public ends by duly constituted departments or organs of the Federal Government.
Regarding any legal liabilities which might arise in carrying on the work of importation and distribution of German dyestuffs, we would say that the alliance must obtain from each consumer for whom the dyes are procured and to whom they are delivered a contract completely releasing the alliance from all liability on the part of the alliance or its officers, acting within the scope of their authority, that could arise, and under these circumstances we advise you that there is no legal obstacle in the way of your undertaking this work for the State Department. Moreover, it is a work of great public importance, and you are to be congratulated in having so useful a rôle assigned to you by the Government.
Believe me, my dear Mr. Patterson, with assurance of sincere regards,
Faithfully yours,
FREDERIC R. COUDERT.

The alliance was therefore ready to proceed with the proposed arrangement as to dyes covered by its letter of September 15 to Mr. H. B. Thompson and letter of October 2 to the State Department, and the State Department's letter of September 29 and October 10.
Mr. Patterson stated that he would appoint, subject to the approval of the executive committee of the Textile Alliance, the members of the advisory committee on dyes for the War Trade Board as a dye committee for the Textile Alliance, with power, retaining as a subcommittee in the capacity for which they were originally appointed Mr. F. D. Cheney, of Cheney Bros.; Mr. A. C. Imbrie, of United States Finishing Co.; and Mr. Manton B. Metcalf, of Metcalf Bros. & Co. The committee approved and accepted the offer.
Mr. Price was requested to obtain from the customs a ruling as to rate of exchange on marks used as a basis for assessment of duties.
The proposed Textile Alliance (Inc.) Bulletin No. 35 was approved, with the following changes:
Paragraph 4, second sentence, reading: "To meet the actual expense of this organization," etc., and corrected to read: "The estimated expenses of this organization," etc.
And changing the rate to be assessed for alliance charges (see par. 4 of Bulletin 35) from 5 per cent to 15 per cent, to be computed upon the delivered cost, including duty.

B. R. PRICE, Jr.,
Acting Secretary.

—

RÉSUMÉ OF MINUTES OF MEETING OF THE ADVISORY COMMITTEE OF THE TEXTILE ALLIANCE (INC.), HELD AT THE MERCHANTS CLUB, 1 P. M., OCTOBER 28, 1919.

Present: Messrs. Henry B. Thompson, Frank D. Cheney, Manton B. Metcalf, Andrew C. Imbrie, A. M. Patterson, and B. R. Price, jr. (acting secretary).
In view of the recent individual indemnifications from purchasers and the appointment of the alliance as an agent for the War Trade Board section of the State Department in connection with these dyestuffs matters on advice of counsel, it would appear that no further indemnification or agreement by either the department or the Advisory Commission on Dyestuffs to the War Trade Board is necessary.
Acceptance of Bulletin 35 and contract order, Form D I.
The basis of our charges established at 15 per cent of each purchase, computed on delivery cost, including duty.
Resolution to the effect that dyestuffs account shall take over the organization of the Textile Alliance (Inc.) from October 1, 1919, until the conclusion of this arrangement, and its operating expenses to be paid out of this fund, realizing income from investment to be applied as the executive committee may direct.
Advancement of $25,000 out of regular funds of the Textile Alliance (Inc.) for establishment as of November 1 of a special dyestuffs account, against which all operating charges shall be directly deductible. Interest rate on this loan, 6 per cent, to be repaid as directed by dyestuffs committee.
Authorization Chemical National Bank, New York, as official depository.
Accounts appointed: Barrow, Wade & Guthrie Co.
Approval of Mr. Fleisch's trip abroad.
Approval of Mr. W. R. Morehouse, of the National Aniline & Chemical Co., and Mr. R. E. Lunt, of E. I. Du Pont de Nemours & Co. (Inc.), to act as technical experts to the Textile Alliance (Inc.) in New York; Mr. W. H. Cady, of the United States Finishing Co., as alternate.

Memorandum of matters discussed and agreed upon between Capt. Reginald Norris, of the committee on organization of the Reparation Commission, and Mr. E. A. Fleisch, of the Textile Alliance (Inc.), of New York and Paris, November 4, 1919, on the subject of German dyes.

(1) REPARATION DYES.

(a) Where reference is made in these notes to reparation dyes it is understood to mean those dyes that are available to the United States from reparation stocks as per inventories of August 15, 1919, rendered by the Germans and certified by them to be complete and correct.

(b) The dyes have thus far been only partially apportioned between the countries entitled to receive them. Of this partial apportionment the United States' share is 1,500 tons, all or any part of which the United States is free to accept at any time without being committed in any way to take any portion not wanted.

NOTE 1: The total stocks of dyes in German factories on August 15, 1919, is roughly estimated at 40,000 tons, of which one-half, say 20,000 tons, will be available to the allied and associated powers. Of these 20,000 tons only 5,200 tons have thus far been apportioned, as follows:

	Tons.
United States	1,500
Great Britain	1,500
France	1,000
Italy	700
Belgium	500
Total	5,200

The above apportionment merely indicates aggregate metric tons and does not represent the apportionment of each individual dye that each country is to receive.

The proportion of each dye that each country is to receive out of the quantity available to the allied and associated powers has thus far been fixed as follows:

	Per cent.
United States	22.44
Great Britain	20.44
France	15
Italy	10
Belgium	5
Total	70.88

This leaves 29.12 per cent to be divided among the allied and associated powers when peace comes into force. How this 29.12 per cent may be divided can not now be stated.

When peace comes into force there will remain, say, 14,800 tons to be apportioned between the allied and associated powers, being the difference between 5,200 tons already apportioned and the total of, say, 20,000 tons. Whether or not the United States will accept an apportionment either of the 29.12 per cent or of the 14,800 tons is not yet ascertainable.

NONREPARATION DYES.

(c) Where reference is made in these notes to nonreparation dyes it is understood to mean dyes upon which the United States Government has no claim and which may be secured only by direct treaty between intending purchasers and the German manufacturers under an option given on October 4, 1919, to Dr. Charles H. Herty by Dr. C. von Weinberg, head of the German cartel. The option was good "until further notice, at least four weeks." No notice has been received, but in anticipation thereof Doctor Herty asked the Germans for an extension of the option, which has not yet been received.

NOTE 2: The question as to whether the option of October 4, 1919, on nonreparation dyes is accepted, rejected, extended, or altered does not involve the United States authorities nor does it involve the question as to whether or not the Textile Alliance will be the medium of importation into the United States for any or all of these dyes. If the option is lost and importation of nonreparation dyes is permitted through the Textile Alliance and also direct by importers and consumers, it would seem that the Textile Alliance will have to negotiate with the Germans direct for prices on what they will order.

(2) COMMITTEE OF ORGANIZATION OF THE REPARATION COMMISSION'S POSITION.

(a) Col. J. A. Logan, jr., Paris, will notify the German authorities that the United States Government has designated the Textile Alliance (Inc.), of New York, as its "accredited representative" with full authority in all matters (with the exception of withdrawal licenses) pertaining to dyes to be supplied to the United States from reparation stocks and will request that the German authorities direct the several German dye manufacturers to honor instructions they may receive either direct or through Dr. C. von Weinberg, head of the German cartel, from the Textile Alliance (Inc.).

(3) WAR TRADE BOARD'S POSITION.

REPARATION DYES.

(a) The War Trade Board gives allocation certificates to consumers only.

NONREPARATION DYES.

(b) It is not clear whether the Textile Alliance will have any participation in the nonreparation dyes. It is possible, however, that allocation certificates will be issued by the War Trade Board under the Textile Alliance arrangement to such consumers as may desire to obtain their nonreparation dyes through the alliance.

(c) It now appears certain that both the consumers and importers may obtain nonreparation dyes independently of the Textile Alliance if they so desire.

(4) TEXTILE ALLIANCE (INC.) POSITION.

REPARATION DYES.

(a) The Textile Alliance (Inc.) has exclusive access to the reparation dyes and apparently deals with consumers only and not with importers.

(b) The consumers assign their allocation certificates to the Textile Alliance.

(c) The consumers place their orders in contract form with the Textile Alliance.

(d) The Textile Alliance secures import licenses in its own name.

(e) The Textile Alliance sends the orders to its Paris representative, who proceeds as indicated in section (5).

NONREPARATION DYES.

(a) Mr. A. M. Patterson, the president of the Textile Alliance, states in a cable received in Paris October 31, 1919: "Importers have access to dyes from manufacturers through regular commercial channels" and "acceptance cartel's offer hinges on developments next 10 days." From this it appears:

(i) That consumers may be given the option of obtaining nonreparation dyes either through the Textile Alliance or not as they may prefer.

(ii) That if such orders are placed through the Textile Alliance the process will be the same as in the case of reparation dyes, except that no documents will be sent to the United States authorities for nonreparation dyes.

(5) ORDERS—PROCESS REGARDING.

FOR REPARATION DYES.

(a) Consumers in the United States will place orders with the Textile Alliance, New York, not exceeding the amounts covered by each consumer's allocation certificate.

(b) The Textile Alliance, New York, will send orders in duplicate by separate mails to their representative in Paris.

(c) The Textile Alliance Paris representative will send the original of each order to Dr. C. von Weinberg, head of the German cartel, who will distribute the orders among the several German manufacturers.

(d) Whenever the amount of any one dye due the United States from reparation stock is insufficient to fill all orders placed by consumers through the Textile Alliance for such dye, each order is to be reduced pro rata.

FOR NONREPARATION DYES.

(a) In case consumers are given the option of obtaining nonreparation dyes through the Textile Alliance the procedure will be the same as for reparation dyes except:

(i) Withdrawal licenses may be unnecessary.

(ii) No documents will be sent the United States authorities.

(iii) Payment will be arranged between the Textile Alliance and the German manufacturers.

NOTES.

(1) It appears orders are now being made out in the United States for reparation vat dyes, and that orders for reparation nonvat dyes will be made out shortly.

(2) The Textile Alliance, New York, is expected to inform its Paris representative shortly the particulars as to consumers' requirements, giving description of dye and "Schultz" publication, 1914 edition reference, stating whether paste or powder form as well as quantity.

(6) PACKING.

FOR BOTH REPARATION AND NONREPARATION DYES.

(a) Each individual order covered by a different number must be separately packed.

(7) SHIPPING DIRECTIONS.

(a) These will be made out in Paris on forms which Mr. Fleisch will prepare.

(b) A copy of the form filled out will accompany each individual order. The filling out of these forms may be done by whoever is intrusted with the work upon Mr. Fleisch's departure.

(c) There will be one form of directions for reparation dyes, and another form for nonreparation dyes, but the two will be alike except in a few particulars.

(8) DOCUMENTS.

(a) Shipping directions accompanying each order will state the kind and number of documents to be furnished and to whom.

(b) The manufacturers are to supply separate documents for each individual order bearing a different number.

(c) The documents are to be dispatched as soon as possible after shipments are made.

(d) Every copy of every invoice and packing list must show the number of the individual order which will in each case be designated as T. A. I. Order No. —.

(e) The following documents are to be supplied for each order:

(i) For reparation dyes: Invoices, 3 certified copies and 2 plain copies; packing lists, 5 copies; bills of lading from factory to seaport, 1 original and 2 certified copies; consular invoices, 1 original and 1 duplicate.

(ii) For nonreparation dyes: Plain invoices, 3; packing lists, 3; bill of lading to seaport, 1 original and 1 plain copy; consular invoices, 1 original and 1 duplicate.

(f) All of the above-named documents, both for reparation and nonreparation dyes, are to be sent by the manufacturers to the Textile Alliance (Inc.) at their Paris address, which will be given the manufacturers, except that in case of reparation dyes the manufacturers are to furnish the United States officer in control of withdrawals the two certified copies of each bill of lading. The shipments are not to pass the control officer until these two certified copies of each bill of lading are furnished him. These bills of lading must show the shipments to be consigned to the steamship company at a seaport "for reshipment" to the Textile Alliance (Inc.), New York, for illustration:

Consigned to the Holland-American Steamship Co., Rotterdam, Holland, for reshipment to the Textile Alliance (Inc.), New York. Destined for John Jones.

NOTES.

(1) The control officer is to retain one of these certified bills of lading and send the other to the Textile Alliance, Paris office, numbered consecutively.

(2) It is assumed that the United States visé of the consular invoices may be obtained in Germany, probably from the Spanish consulates. Captain Norris has telegraphed Mr. Noyes at Coblenz for this information.

(9) LICENSES FOR THE WITHDRAWAL OF DYES FROM GERMAN FACTORIES.

(a) The Inter-Allied Rhineland Commission will at once issue a license for the 1,500 tons of dyes that are available to the United States from reparation stocks. This license will be available only to the Textile Alliance (Inc.) as the "accredited governmental representative."

NOTES.

(1) This license will be honored upon the withdrawal of shipments of reparation dyes up to the total of 1,500 tons, even though the system of issuing withdrawal licenses may be discontinued when the peace treaty comes into force.

(2) It is understood that when peace comes into force a new system of control is to be established to prevent the Germans from removing the dyes from the present occupied territory in violation of agreements.

(10) INSURANCE.

(a) On all shipments through the Textile Alliance, whether reparation or nonreparation dyes, the insurance will be covered by the Textile Alliance from the German factory through to final destination.

(11) PRICES AND PAYMENT.

(a) For reparation dyes it is understood prices are to be as per inventories of August 15, 1919, at factories in full packages with additional charges for smaller packages.

(b) For nonreparation dyes the prices at factories in United States dollars for full packages are as per option given by Dr. C. von Weinberg to Dr. Chas. H. Herty, October 4, 1919, assuming that the Germans do not give notice of change or that the option will be extended.

(c) The Textile Alliance, New York, will in all cases collect the approximate c. i. f. amount of each order from the party who places it with them at the time it is placed.

(d) The funds will be deposited with the Chemical National Bank of New York.

(e) For nonreparation dyes the matter of payment must be arranged direct with the Germans by the Textile Alliance or whoever else may place the orders, as the United States Government is not concerned therewith.

(f) For reparation dyes the following is agreed:

(i) On the 1st and 15th of each month the Paris representative of the Textile Alliance will furnish the C. O. R. C., Paris, in duplicate a summary of invoices received during the preceding two weeks with an acknowledgment that the documents evidencing shipment have been received. To these summaries will be attached certified copies of the invoices.

(ii) The C. O. R. C. will transmit to the German delegate a copy of the summary with a note that the reparation account has been credited.

(iii) As no payment is to be made Germany for reparation dyes, it is desired that the Textile Alliance defer payment until the dyes have reached destination and proven satisfactory, and that some time thereafter the United States authorities will indicate to the Textile Alliance of New York when, how, and to whom payment is to be made. Captain Norris has kindly agreed to have the question raised with the proper United States authorities to ascertain whether such payment will be satisfactory to them.

NOYES.

—

SEPTEMBER 27, 1919—4 P. M.

AMMISSION, *Paris:*

Your (4270) Septemper 19, 1 p. m.

1. The department concurs in your opinion that the resolution adopted on September 18 by the London committee is in substance an attempt to avail of the provisions of annex 6 to that treaty. The department is, however, willing to approve the plan in view of the wishes of the other delegates and of the advantages of the lower prices, although we are advised that so far as the prospective shipment of vat dyes is concerned the question of price is not as vital to our consumers as it appears to be to the French.

2. The outstanding feature of our situation is the pressing need for immediate supplies of vat dyes. Although it is desirable to secure these dyes otherwise than through the old German agencies, this consideration as well as the question of price is subordinate to the need of prompt delivery.

3. As stated in department 3062, September 8, 8 p. m., we are now withholding import license awaiting the outcome of the current negotiations in Paris, and your recent cablegrams create the impression that these negotiations may not result in a satisfactory and practicable plan for some time to come. One month has already elapsed since we announced to the consumers our decision to permit the early importation of a six months' supply of vat dyes, and you state in your 4270 that it is the universal opinion that the Germans will not consent to the plan of the committee and that then the only remaining solution will be to anticipate the treaty option. On this point the department is now entirely willing to agree in principle to such anticipation. On the other hand, however, as stated above, time is of the very essence and we are beginning to doubt whether arrangements to secure our six months' supply of vat dyes through such anticipation could become operative soon enough to fulfill our pledges to the consumers. We are much embarrassed at present and can not defer much longer the issuance of import licenses.

4. In view of the foregoing it is of the utmost importance that we be advised immediately when it will be possible to actually secure the delivery of dyes under a plan to anticipate the treaty provisions; we should have advices which will warrant our informing the consumers. If this will not be possible in the very near future we will be compelled to adopt the second alternative mentioned in your 4270. In this connection the following are certain practical considerations which should be taken into account:

(A) The consumers in this country have applied for and we have allowed allocations aggregating 977,019 pounds of vat dyes for consumption during the six months' period beginning October 1.

(B) Under the plan to anticipate the treaty it will be necessary to designate some single agency to act as an intermediary between the consumers and the sellers. The department is prepared to designate the Textile Alliance as such agency to accept orders from the consumers in this country and to place these with or through the Reparation Commission under such plans as may be devised. It will be necessary for the Textile Alliance to send a representative to Paris to handle the details connected with the purchase of and payment for the dyes and their shipment to this country.

(C) As stated in department's 3061m, September 8, 8 p. m., we do not see upon what ground we can deny consumers the right to import through the old German agencies. At best we can only make it optional with the consumers whether they will avail themselves of an anticipation of the treaty provisions. The only possible ground in denying the right to import through the old German agencies would be that purely from the point of view of reparation. It is desirable for all American dye requirements to come through the Reparation Commission, so that the value thereof may be credited to the reparation account. It is therefore urged that you send your views on this point.

(D) We have not yet decided to permit the importation of any dyes other than a six months' supply of vat dyes. If the provisions of the treaty are anticipated to the extent of securing for us these particular dyes, will that be regarded as only a partial exercise of the option, leaving it open to us to secure such additional amounts of the other dyes as we may decide are needed by our consumers? Or will the Germans insist that the option be regarded as completely exercised to meet the pressing demands of the American consumers? We are considering the immediate issuance of allocation certificates which will entitle importers or their nominees to secure import licenses from us. At the same time we wish to announce the possibility or probability of being able to secure these dyes at treaty prices, and the consumers could either proceed immediately to order dyes through old agencies or arrange to purchase under the contemplated plan to anticipate the treaty. Please consult Herty and wire us immediately your views on this proposal. (3262.)

PHILLIPS, *Acting.*

—

(3279) SEPTEMBER 29—4 p. m.

AMMISSION, *Paris.*

For Herty from War Trade Board. The following is a complete list to date of the aggregate amounts of the vat dyes which our consumers wish to import, and whose importation we have decided to permit under one of the two alternative plans referred to in Mission's 4270, September 19, 1 p. m. The figures preceded by the letter "S" denote the Schultz number of the dye, and the figures which follow denote the quantities in pounds: S. 748, 117,950; S. 759, 1,400; S. 760, 12,900; S. 761, 36,370; S. 762, 75; S. 763, 5,920; S. 765, 24,150; S. 765A, 400; S. 766, 870; S. 767, 39,075; S. 768A, 47,450; S. 791, 10; S. 795, 100; S. 810, 3,400; S. 810A, 100; S. 811A, 200; S. 812, 95; S. 813, 50; S. 814, 100; S. 815, 575; S. 816, 1,100; S. 817, 2,050; S. 818, 1,150; S. 819, 7,975; S. 820, 11,325; S. 821, 1,320; S. 822, 1,000; S. 824, 400; S. 825, 5,200; S. 827, 2,500; S. 828, 570; S. 829, 50; S. 830, 1,000; S. 831, 7,895; S. 832, 10,100; S. 833, 550; S. 834, 750; S. 836, 800; S. 838, 8,500; S. 839, 275; S. 840, 550; S. 841, 3,000; S. 842, 355,450; S. 843, 400; S. 844, 2,850; S. 845, 50; S. 847, 2,200; S. 848, 625; S. 849, 72,784; S. 850, 1,500; S. 867, 2,310; S. 869, 150; S. 869A, 2,300; S. 870, 600; S. 873, 100; S. 873B, 9,500; S. 873D, 670; S. 880, 100; S. 881, 7,200; S. 882, 30; S. 883, 3,075; S. 885, 4,000; S. 887, 1,500; S. 891, 100; S. 892, 1,520; S. 893, 3,500; S. 895, 4,200; S. 896, 350; S. 896A, 800; S. 901, 100; S. 902, 2,200; S. 904, 6,990; S. 904A, 500; S. 907, 4,250; S. 910, 54,760; S. 912, 2,000; S. 913, 2,495; S. 913A, 2,000; S. 914, 275; S. 915, 3,800; S. 916, 1,625; S. 917, 1,855; S. 918, 13,270; S. 919, 50; S. 920, 18,905; S. 921, 500.

Please advise us at once whether the lists of stocks which have been submitted indicate that we will be able to secure the foregoing amounts of the various dyes specified.

We wish to take this occasion again to impress upon you that prompt delivery is so vital a factor in our domestic situation that we should be informed at the earliest possible date what prospects there are for securing an early delivery of the official dyes through plan mentioned in paragraph 4 of 4388, on anticipation of treaty provisions. (3279.)

PHILLIPS, *Acting.*

—

(4474) OCTOBER 1—11 P. M.

SECSTATE, *Washington.*

(Department's (3262), September 27, 4 p. m.)

One. On September 25 a letter was addressed to the German representative at Versailles by the interim Reparation Committee, stating that the committee had decided (a) to take immediate delivery of 2,200 tons of dyes for France, Italy, and Belgium; (b) that this amount might be increased to 5,200 tons to provide for the reservation of 1,500 tons each for the United States and Great Britain; (c) that the prices should not exceed those of German lists of August 15; (d) that this decision shall not prejudice in any way the ultimate decisions of the Reparation Commission as to the option it holds under the treaty terms upon half of the dye stocks in Germany. On the contrary, this decision is entirely independent of the treaty rights given to the Reparation Commission, which rights are not affected in any manner by this arrangement; (e) that the tender of the lists of August 15, 1919, is not to be considered a beginning of the execution of annex 6 of part 8 of the treaty. The letter explains, however, (f) that such immediate deliveries would be a charge against the amounts to be delivered in accordance with the option in case the option should be later accepted; (g) that Germany was to be allowed under the arrangement to dispose freely of an amount of each dye equaling that delivered under the present decision.

Two. The arrangements proposed by this letter will be considered at an interallied meeting on October 1, and meeting with the German representatives at Versailles has been called for October 2. In view of the department's assent to anticipating the option, which will not, however, be made use of unless found necessary, it is now believed that a satisfactory result may be attained.

Three. The need for prompt deliveries is fully understood, and this will be insisted on as an essential factor in all discussions with the Germans.

Four. As only approximately 500 tons of vat dyes are required, the 1,000 tons remaining of total American reservation could be used for supplying such needs of American consumers as were developed by your questionnaire to consumers in general last summer.

Five. While a representative of the Textile Alliance would be welcomed and given every facility Ammission is of opinion that Herty is entirely competent to handle situation. In any case, it seems unnecessary to delay until arrival of Textile Alliance representative before arranging for vat dye shipments, as copies of all German lists of August 15 were forwarded you on September 22 giving prices, quantities, factory designations, concentrations, etc.

Six. It is strongly urged that no license shall be issued except for dyes secured through interallied action, the proceeds of which transactions will go into reparation fund. According to understanding of Ammission the granting of licenses for dyes is exceptional and is waiver by the President of the prohibition established under the powers conferred on him by the trading with the enemy act. The peace treaty provides for a specific method of securing the requirements of the allied and associated powers for dyes, and unquestionably contemplates that so far as possible the reparation fund shall have the benefit of these transactions. If licenses are granted for purchase through American agents of German manufacturers, the reparation fund will be deprived proportionally of the intended benefit. Such action would undoubtedly create unfortunate impression on our allies, especially as stocks at German plants are ready for delivery, prices are low, and the meeting with the Germans is nearly at hand.

Seven. Referring Ammission's 4270, September 19, 1 p. m., last paragraph but two, Noyes states that he has personally ascertained that not 1 pound of dyestuffs can leave the Bayer plant without permission of the Rhineland Commission. This plant is covered by 3 officers and 50 soldiers in charge; states that leaks are impossible. Noyes further states that he is informed that in the Bayer plant 700 tons of dyestuffs are on hand in excess of the quantity existing on January 15. He will report later after personal investigation on other plants. 4474.

POLK, *Ammission.*

OCTOBER 6, 1919.

SECSTATE, *Washington.*

(C. H. Herty. For Garvan from Herty):

At meeting with Germans, October 4, Allies accepted German lists of August 15, both as to stocks and prices in marks at current exchange rates on day of delivery at factory. Stock and process guaranteed by German Government. For each kilo of dye taken by Allies from stocks on the lists a kilo of same dye is released to Germans for free sale.

Under interallied London agreement of September 15, made in advance of my reaching London, we are entitled in present distribution to 10.225 per cent of total stocks of each item on lists of August 15, up to 1,500 tons. Allied lists are to be filed with committee on organization this week. However, we reserved the right to file a supplementary list somewhat later if we desire to do so. Committee on organization will forward lists to German manufacturers.

Our share of present distribution of stocks is only approximately 30 per cent of total amount of available dyes listed in Wartrabord's 3279 of September 29, 4 p. m. This because of Wartrabord's desire for specific vat dyes and limitation of our percentage of each dye in the distribution.

After the general meeting with the Germans I had a conference with Von Weinberg, present head of cartel, and his associates regarding direct purchase from plants of dyes needed to complete our requirements. Von Weinberg gave me in writing an offer to fill such balances at following scale of prices: (1) For vat dyes per kilo, divide price in marks on lists of August 15 by 4 and quotient equals price per kilo in dollars; (2) for general colors, divide by 5.

Thus a vat dye listed at 10 marks per kilo would cost us at factory $2.50 per kilo, while a general color listed at 10 marks would cost us $2 per kilo. Terms, cash, in dollars, on delivery of dyes at plant. This offer holds for at least four weeks.

These prices represent at German factory, without including tariff duties, slightly less than current American prices on dyes now manufactured in America. French, Belgians, and Italians inform me that these prices conform to those they paid under previous authorization to purchase from German stocks at open-market prices.

Effort to gain consent of Allies to increase our percentage of present distribution unsuccessful, as all are in need of vat dyes.

Vat dyes of the present distribution are so cheap that we should place immediately with committee on organization application for immediate delivery of our full share of each dye listed in Wartrabords 3279.

Decision of Wartrabord outlines in No. 3325, October 3, 11 a. m., is incredible, taken as it was just while negotiations with Germans were actually in progress here, although department's 3262, September 27, 4 p. m., stated that import licenses were being withheld "awaiting the outcome of the current negotiations in Paris." Furthermore, I stated in Washington in presence of Mr. Bennett, of Wartrabord, that I would not undertake mission to Paris under any such policy as has now been decided upon, because I was unwilling to engage in a matter of competition with German agents.

Wartrabord's announcement that "negotiations have been instituted with a view to securing German dyes at prices similar to those contemplated in annex 6 of part 8 of the peace treaty with Germany" is very unfortunate, in view of my repeated statements as to extremely low prices of peace-treaty dyes. Department's 3262, September 27, 4 p. m., paragraph 2, emphasized that "price is subordinate to the need of prompt delivery."

Wartrabord in No. 3325 questions accuracy of my statements as to prices of dyes under peace-treaty distribution. This information was, of course, given correctly in my No. 4298, September 20, 8 p. m., and was confirmed in my 4507, October 3, to you. Germans on October 4 accepted without hesitation this basis of settlement on current exchange rates in terms of marks. I again repeat the statement. Von Weinberg informed me that stocks on August 15 were listed at these very low prices in order to conclude as quickly as possible this part of treaty. British inform me that Germans were required to submit prices in marks instead of Swiss francs, as in lists of April 5.

Please cable quickly instructions as to peace-treaty dyes. If they are desired, to whom shall consignment be made, from whom will committee on organization receive payment, etc. In view of Wartrabord's action as to distribution of import authorizations my presence here no longer required. Offer of Germans regarding needs above distribution share holds good for at least four weeks and an order can be cabled direct to Von Weinberg, in care of Leopold Cassella & Co., Frankfort, by Textile Alliance or whatever body may handle the matter. Of course, there is the possibility that Germans may decline to comply with terms of their offer to me in view of the fact that the offer was made for the total balance of our needs over and above our peace treaty distribution share. As soon as I hear regarding wishes as to peace-treaty dyes I will return.

AMMISSION.

—

(O urgent 3361.)

OCTOBER 7—2 P. M.

AMMISSION, *Paris:*

Your (4474) October 1, 11 p. m.

One. Please explain what is meant by the provision "That such immediate deliveries would be a charge against the amounts to be delivered in accordance with the option should it be later exercised further."

Two. Does the plan now contemplated still contain the provision that the quantities secured shall not consist of more than 30 per cent of the amounts under option of any particular dye; and if so, will such provision prevent our securing the various quantities of the different vat dyes mentioned in department's 3279, September 29, 4 p. m.?

Three. It is our understanding that the London conference recommended only a two months' supply for France, Italy, and Belgium. Is it expected that we will be granted a six months' supply of vat dyes? Or is the reserve, 1,500 tons for the United States, intended to provide only a two months' supply of various dyes?

Four. The department does not understand exactly the practical steps you contemplate if the pending proposal is accepted by the German delegates. Neither Herty or department has any authority to make a commitment on behalf of this Government to purchase or pay for any dyes. As stated in paragraph B of section 4 of department's 3262, September 27, 4 p. m., it is our view that such purchase and commitment can be made only by some agency, such as the Textile Alliance, and then only to the extent that orders are actually placed with it and payment guaranteed by the consumers. The application referred to in department's 3262 and department's 3279 are merely indicative of the amounts which consumers wish to import and which we will permit them to import. Advise us of any change. Do not constitute any firm commitment by them to take these dyes and to pay for them. We do not understand how Herty can request or take delivery of any specified dyestuffs simply on the faith that he would probably be able to dispose of them in this country. It is our view that he can do no more at present than state that our requirements will be approximately the amounts indicated in department's 3279, leaving it to the Textile Alliance, after receiving guaranteed orders, to state the exact figures and to make such commitments or arrangements for payment as may be necessary under the provisions of the plan. It is therefore important that we be advised as soon as possible what the conditions of payment will be for the dyes which our consumers secure.

Five. We agree that arrangements should not be delayed until the arrival of the Textile Alliance representative, but the alliance will have a distinct responsibility in the matter, and we feel that they should send a representative abroad if they desire. Mr. F. A. Fleisch, vice president of the alliance, has just left for Europe on other business, and it will be convenient for him to attend to the dye matter at the same time. He will arrive at Paris about October 15.

Six. Referring to paragraph 6 of your 4474. Since the resumption of general trade with Germany on July 14 our control over dye imports has assumed in substance the character of purely protective measure to safeguard our domestic dye industry against the influence of competing German dyestuffs. This attitude was clearly stated in department's 2632, July 25, 4 p. m., in reply to Ammission's 3166, July 15, 1 p. m. Under present conditions it is the restrictions which are exceptional rather than the reverse.

Seven. Very confidential. The department is unable to assent to your conclusion in your 4474, paragraph 6, that the treaty gives rise to any obligation on the part of this Government to compel our citizens to secure their dyes only through the Reparation Commission. The language of the treaty merely accords an option so to secure them, and the adoption of your view would prove most embarrassing, because upon the ratification of peace there will be no statutory authority to give it effect. The issue bill does not grant authority but on the contrary makes it expressly mandatory upon the commission to issue licenses immediately for the importation of all dyes not obtainable in this country. Dulles, who participated in the drafting, has advised us that there is no obligation of any kind on the United States to insure the utilization of the Reparation Commission in the purchase of dyestuffs, and that in fact it was understood in Paris that the United States would not avail itself of the option accorded by annex 6. The department is willing to continue to protect the domestic industry by restricting importations to limited quantities of dyestuffs not obtainable here, but we are not prepared to dictate to consumers the prices at which, or the channels through which, they shall purchase these commodities. We feel that we have gone as far as warranted in assenting to a plan to anticipate the option leaving it optional with the consumers whether they will avail themselves of such, having admitted the pressing need of vat dyes in the United States. It seemed clear that an adherence to the policy expressed above, together with the pressure brought to bear upon the War Trade Board Section by the consumers, demanded immediate action of the character described in the department's 3325, October 3, 12 a. m. Furthermore, we had assumed, in view of the declaration secured by Dulles, referred to in Ammission's 4173, September 12, 8 p. m., that there would be no objection to our permitting our citizens to secure a limited supply of German dyes through ordinary commercial purchases. Please show to Herty.

LANSING.

(4572) OCTOBER 8—1 P. M.

SECSTATE, *Washington:*

Referring Herty's cable to Garvan, sent by Ammission's (4551), October 6, 9 p. m., the letter mentioned in Ammission's (4774), October 1, 11 p. m., was accepted in full by Germans at meeting of October 4. The option, therefore, was not involved, except as diminishing the quantity of stocks on which it will operate. A proposition made by the American delegates that the Germans should hold 50 per cent or 25 per cent of stocks on hand between August 15 and the date of the coming into force of the treaty was not insisted on, as the general opinion was that it would be impolitic to attempt to enforce too severe restrictions.

In accordance with the suggestion of the Belgian delegation the lists of the requirements of the allied and associated powers will be sent promptly to the Rhineland Commission, who will then discuss with the German representatives the means of filling the orders as expeditiously as possible with regard to choice of factories, details of shipment, etc.

This appears the most feasible agreement, as the Rhineland Commission is conversant with the whole situation.

Ammission agrees with Herty in considering Wartrabord's action in issuing permits freely licensing consumers to secure dyes through any commercial channels on the very date before negotiations were concluded with the Germans as exceedingly unfortunate for the following reasons:

1. From the information at hand the German agencies concerned will perpetuate the old methods, for the existence of which there is no real necessity.

2. The action will infallibly handicap us in our relations on this matter with our allies.

3. It is embarrassing to Herty, who on the day following the issue of licenses made an adequate arrangement, subject to approval from America, with the head of the German dyestuff experts for the purchase of the balance of the needs of American consumers.

4. The method initiated by the Wartrabord's decision will diminish appreciably the amounts to be paid in the way of reparation.

5. While control is still being maintained, as stated in Ammission's (4474), paragraph 7, it is inadvisable to offer inducements to unauthorized diminutions of the stocks under co—— [word not entirely printed].

The decision comes just at the moment when what appears to be a thoroughly satisfactory agreement had been reached with the Germans and also a complete understanding had been attained with our allies.

AMMISSION.

—

(3383) OCTOBER 9—3 P. M.

AMMISSION,
Paris (urgent).

Your (4551) October 6, 9 p. m. (Garvan from Herty):

First. In reference to the "Incredible decision of the War Trade Board, outlined in the department's 3325, October 3," and referred to

in your cable, please inform Mr. Herty that the decision of the War Trade Board was directed by the Department of State for certain important reasons here, but if dyes can be obtained promptly through the Reparation Commission it is the opinion of the department that practically all the dyes licensed to be imported will be purchased through the channel of the Reparation Commission.

Second. Concerning Mr. Herty's reference to the War Trade Board in No. 3325 as questioning the accuracy of his statements as to price of dyes under peace treaty distribution, please inform Herty, Dresel, and Rathbone of the following:

The War Trade Board had no intention of questioning Herty's understanding of agreement with the Germans, but both the board and Department of State were doubtful of the ratification of the Reparation Commission of such a proposition. Norman Davis, Dulles, and others handling reparation matters in the department feel there is grave danger in doing anything which will establish a precedent that the value of commodities handed over by Germany as part of reparation should be credited to her against the reparations bill at a depreciated rate. The money paid for the dyes will go to the credit of the reparation account. It is felt that the rate of exchange between Germany's mark and American dollars, for instance, is due to abnormal conditions of foreign trade, etc., and that the value of the dyes in dollars at the current rate of exchange is not a fair credit to the reparations fund. Exhaustive study is being made of this general matter in the Treasury and State Departments at the present time and it is felt of utmost importance that until a conclusion is reached the American representative on the Reparation Commission, if consent is given at all to such a policy in reference to dyes, will make it clearly understood that the action taken in reference to the dyes will in no way stand as a precedent or effect the adoption of a definite policy as regards credits in reparations. We realize the amount involved in respect to the dyes is small, and if decision has been taken already in this matter by the Reparation Commission no objection will be made by the department, provided reservation is made as outlined above. It is important that you let us know as soon as possible whether the Reparation Commission has ratified the basis of settlement on current exchange rates.

Third. Please explain to Herty the department's appreciation of his efficient work, and that it considers of great importance Mr. Herty's presence in Paris as a dye expert. It is felt inadvisable that Mr. Herty, a Government employee, should, for himself or the Government, take the responsibility of the details of the commercial transaction of actual buying the dyes. The handling of this matter by the Textile Alliance will probably relieve the Government of a great deal of the responsibility and obnoxious detail in the matter. The arrangement for treaty dyes should be pushed rapidly to its conclusion; representative of the Textile Alliance should be on the spot in a few days to arrange the details, with power to take the dyes and pay for them.

Fourth. As regards offer of Germany regarding needs above distribution share, we see no objection to the Textile Alliance closing with Von Weinberg for the dyes it will need to supply consumers ordering dyes through them. It will seem wise, however, that this transaction should be considered a private commercial transaction on the part of the Textile Alliance. There would appear to be no real difficulty in the Textile Alliance prorating the dyes and the different prices.

Fifth. This cable approved by A. P. C. 3383.

LANSING.

—

(4633) OCTOBER 12—11 P. M.

SECSTATE, *Washington.*

W. L. DRESEL: Your (3361) October 7, p. m. Answering your paragraph 1, concluding word "further," quoted as contained in Ammissions 3262, September 27, 4 p. m., paragraph 1, is not in that cable as sent. The stocks given in the list of August 15 constitute by agreement the basis for a final settlement. Advanced withdrawals from these stocks as arranged October 4 will diminish by corresponding extent amount of each dye available for final exercise of peace treaty option.

Your paragraph 2: Plan agreed on with Germans provides that France, Belgium, and Italy together may in present partial distribution secure not more than 30 per cent of the 50 per cent option on each item of stocks listed—that is, 15 per cent of total weight of each item—provided such withdrawals shall not aggregate more than 2,200 tons. Under London agreement of September 15 United States and Great Britain together have privilege of withdrawing not more than 40.9 per cent of the 50 per cent option on each item of stocks listed—that is, 20.45 per cent of the total weight of each item—provided such withdrawals shall not aggregate more than 3,000 tons. As United States and Great Britain are placed under an equal basis under the London agreement, United States are entitled to withdraw 10.2 to 5 per cent of total weight of each item listed, provided that total weight does not exceed 1,500 tons. On this basis it will be impossible to secure the full amount desired by consumers of all dyes specified in No. 3279, September 29, 4 p. m.

Your paragraph 3. These preliminary withdrawals from stocks are not based on a supply for a definite number of months. Definite tonnage allotments have been made regardless of time requirements. If, as is expected, the peace treaty will soon become effective, a prompt exercise of the option on the remainder of stocks as of August 15 may be looked for.

Your paragraph 4. Neither Ammission nor Herty have ever considered a commitment of our Government to a purchase of dyes or payment therefor, but it was the understanding that either the consumers' association, referred to in your 3062, September 8, 8 p. m., or the Textile Alliance, referred to in your 3262, September 27, 4 p. m., would be able to advise promptly as to what dyes should be applied for under the terms of the treaty. It was presumed that, on account of the very favorable terms indicated by the lists furnished by the Germans, a guaranty or specific statement would be forthcoming which would make it possible to state definitely the American requirements. This was strengthened by the authority conferred by department 3262, September 27, 4 p. m., to anticipate the option. Such anticipation even though partial would of necessity entail at least a moral obligation toward our allies to make ourselves responsible for a definite quantity, and though it was agreed that it was not necessary, under the arrangements actually made, to anticipate the option, it is evidently equally unsatisfactory in that case to make only a noncommittal estimate of what the consumers' needs may be. In your 3262 you state that it is. The other powers have, in each case, definitely stated what amounts they are willing to take up, and it is difficult to see how they can be expected to reserve stocks for us until the consumers have made up their minds how much they wish to obtain by benefit of the treaty clauses and how much from outside sources. It is obviously impossible to make the amount ordered from the Germans in pursuance of the present arrangements a varying quantity. However, in view of your paragraph 4, distinct statements will be made that we are not authorized to take up any specific quantity, but must await definite orders from the consumers.

Outside of the treaty provisions and in order to cover the shortage of dyes resulting from the small percentage allotted under the London agreement, Herty obtained an offer from the Germans to complete the amounts of each item in your 3279 of September 29, 4 p. m. He has never, however, contemplated taking delivery of any specific dyes except on authorization of the consumers' association or the Textile Alliance, and the offer of the Germans committed us to nothing, but afforded a means of quickly filling American needs.

Your paragraph 7. Ammission has never been of opinion that the treaty in any way compels American citizens to secure their dyes only through Reparation Commission, but has been in entire agreement with the language of your 3622, in which you state that it is desirable that all American dye requirements should come through the Reparation Commission, so that the value thereof may be credited to the reparation account. It has been felt that our citizens would naturally prefer that, as far as possible, funds arising from dye purchases should go to the reparation funds rather than to individual German manufacturers and agents.

POLK, *Ammission.*

—

(4651) OCTOBER 14—9 P. M.

SECSTATE, *Washington.*

E. L. DRESEL: Referring Ammissions 4572 October 8, 1 p. m., German Government has by letter signed by president of German delegation, guaranteed the accuracy of the lists of dyestuffs stock as handed over to interim reparation committee.

The latter has expressed its willingness to examine the possibility to render less severe the control now being exercised on dyestuffs factories in the occupied territory if the German Government gives the following guaranty: "It is further guaranteed that the stocks existing August 15, 1919, will be strictly maintained until the expiration of the delay of the option with the sole exception of the quantities mentioned in the letter bearing the number 796 and dated September 25, 1919 (this is the letter mentioned in Ammissions 4474, October 2, 11 p. m.), and that all necessary measures will be taken so that the allied and associated powers can begin as soon as the treaty is ratified proceedings under the option and exercise within the stipulated term the option on the production, as provided for by paragraph 2 of annex 6 of title 8."

Interim Reparation Commission has communicated to the Interallied Rhineland Commission the agreement arrived at with the Germans and this commission has been requested, first, to assure the execution of the agreement; and, second, to give its opinion as to the measures which can be taken to render control less severe in case the German delegation should give the above guaranty.

Your 3383, October 9, second paragraph memorandum for next meeting of Interim Reparation Committee has been prepared and covering statement will be made in accordance with your views.

POLK, *Ammission.*

—

(3471) OCTOBER 17, 6 P. M.

AMMISSION, *Paris:*

Mission's 4651, October 14, 1 p. m.: Please refer to department's 3383, October 9, and advise immediately whether Reparation Commission has approved of purchase of German dyes which have been made available as result of the recent negotiations at current rate of exchange. If so, will such current rate for American purchases be Paris rate *of* United States rate? (*or* United States rate?).

Referring your Garvan from Herty, 4551, October 6, 9 p. m., and in modification paragraph 4 of department's 3383, October 9, department is now of opinion that Von Weinberg offer to Herty, because of its official character, should be handled by Textile Alliance as official. It is not likely that this offer will be availed of, because War Trade Board has already issued to private importers licenses covering the greater part of the vat dye allocation. Unless these importers agree to participate in acceptance through Textile Alliance of Von Weinberg offer, its acceptance may not be necessary.

War Trade Board will cable to Herty fully Saturday or Monday. Show this to Herty. 3471.

ADEE, *Acting.*

—

NOVEMBER 12, 1919.

Hon. STEPHEN G. PORTER,
House of Representatives.

SIR: I have the honor to acknowledge the receipt of your letter of October 31, 1919, addressed to Mr. Lay, acting foreign trade adviser, making inquiry relative to the status of dyestuffs, and your subsequent letter of November 7, 1919, in regard to the same matter.

The War Trade Board (by Executive order of the President now the War Trade Board Section of the Department of State), so far as the control of imports is concerned, derives its authority from section 2 of the trading with the enemy act. It had always been the opinion of the War Trade Board, and it is now the opinion of this department, that the trading with the enemy act was enacted purely as a war measure. Accordingly, it has always been believed that the War Trade Board should function solely as a war agency. For this reason import restrictions were imposed during the war primarily for the purpose of conserving tonnage to divert it to war usages. The necessity for such conservation having disappeared after the signing of the armistice of November 11, 1918, the War Trade Board began to remove those restrictions as rapidly as possible. Since the conclusion of the armistice there have been presented to the War Trade Board numerous requests that import restrictions be maintained or instituted for the purpose of protecting industries and stabilizing prices.

Consistently with the belief expressed above, these requests were not acceded to on the theory that the enactment of such protective measures appeared to be the exclusive prerogative of the Congress, and that to maintain or impose restrictions in such cases would be a clear case of supererogation on the part of the War Trade Board.

The control over the importation of dyes, dyestuffs, and related chemicals of German origin was maintained as an exception to the above-stated policy because of the peculiar and special circumstances which were involved. The War Trade Board were advised that a bill had been introduced in Congress for the purpose of protecting the American dye industry because of its relation to the problem of national defense. The War Trade Board was urgently requested to maintain the control as an interim measure against the day when the introduced legislation would become a law or would fail. Accordingly the War Trade Board agreed to make the exception because of the emergencies of the

case and to maintain the control temporarily, not for the purpose of protecting the industry for its own sake but because of its relation to the problem of national defense.

In order that the control thus maintained might be properly administered the War Trade Board appointed an advisory committee on dyes, on which consumers and manufacturers have equal expert representation. Inasmuch as the War Trade Board was exercising the control as an interim measure against the possibility of legislation already introduced, the War Trade Board believed that, in formulating their policies in relation to the control, every effort should be made to conform to, and not to exceed, the control contemplated by the legislation. Accordingly the War Trade Board limited its control to the very dyes, dyestuffs, and related chemicals which were enumerated in the Longworth bill. The War Trade Board also borrowed textually the language of that bill in adopting the policy of authorizing the importation of the controlled commodities when the same are not obtainable from United States sources, or, if obtainable from those sources, when they are not obtainable on reasonable terms as to price, quality, and delivery.

In the early part of September, 1919, a need of certain quantities of vat dyes of German origin having been made manifest in this country, the dye advisory committee informed the War Trade Board section ti at those dyes were not obtainable from United States sources, and recommended that importations of quantities sufficient to meet the requirements of consumers for a six months' period should be permitted. The dye advisory committee also recommended to the War Trade Board section that, in authorizing the importation of the aforesaid quantities of dyes, consumers should be required to import the same exclusively through a designated official agency.

The purpose of this recommendation was, avowedly, to bring about the elimination as agencies of importation of the former American agents of German dye manufacturers. The dye advisory committee as well as a large number of manufacturers stated to the War Trade Board Section that in their opinion any substantial importation through those agencies would endanger the American industry. I instructed the War Trade Board Section to accede to the recommendation of the advisory committee to the extent of permitting importations to satisfy the six months' requirements of consumers, but to inform the committee that the department, howsoever much it desired to protect the American industry for reasons of national defense, could not compel consumers to effect their importations exclusively through a designated official agency; that the designation of such official agency would partake of the nature of an exclusive monopoly, and that such exclusive monopoly would be repugnant in that it would be a discrimination against American citizens who were engaged in the business of importing.

Accordingly, an allocation of license privileges to import a six months' supply of vat dyes of German origin into this country was made among consumers on October 1, and consumers were advised that they themselves or their assignees of the allocation certificates could apply to the War Trade Board Section and obtain, upon surrender of the certificates, licenses authorizing the importation of the quantities stipulated in the certificates.

In the latter part of September the need of certain quantities of dyes of German origin, other than vat dyes, having been made manifest in this country the dye advisory committee recommended to the War Trade Board Section that importation of quantities sufficient to meet the requirements of consumers for a six months' period should be permitted. In this connection the dye advisory committee informed the War Trade Board Section that vat dyes are not produced in this country. Accordingly when the War Trade Board Section, on October 8, advised consumers to file their applications for allocation certificates the War Trade Board Section, mindful of the provisions of section 503(b) of the Longworth bill, advised consumers as follows:

"Allocations will be made only when the articles desired to be imported are unobtainable from United States sources, or, though obtainable from United States sources, are unobtainable on reasonable terms as to prices, quality, and delivery."

The applications which have been received will be considered by the advisory committee at a meeting to be held on November 10, and at that meeting an allocation of license privileges will be made among the consumers. As in the case of vat dyes, and for the same reasons of policy that prevailed then, consumers, upon receipt of their allocation certificates, will be advised that they themselves or their assignees of the certificates may apply to the War Trade Board Section and obtain, upon surrender of the certificates, licenses authorizing the importation of the quantities stipulated in the certificates.

The dye advisory committee upon being informed of the policy of this department, as stated above in relation to the forthcoming allocation, informed the War Trade Board section that many dyes made in this country will do the same work as other dyes not produced in this country, and that accordingly allocation certificates should be denied in every case where an equivalent or substitute dye which is produced in this country will do the same work as the dye sought to be imported.

On instructions from me the committee has been advised by the War Trade Board section that the stated policy of this department in connection with the forthcoming allocation was to permit the issuance of allocation certificates in all cases when the articles sought to be imported are unobtainable from United States sources, or though obtainable from United States sources are unobtainable on reasonable terms as to prices, quality, and delivery.

I appreciate that the substitutions which the committee recommends may be of appreciable benefit to the American industry, but I have deemed it expedient to instruct the War Trade Board section that substitutes and equivalents, howsoever satisfactory, should not be forced upon unwilling consumers. In issuing these instructions I was moved by the following considerations:

In the first place, as stated above, the present control of the War Trade Board section should not, I believe, go beyond that which is contemplated in the pending legislation. The Longworth bill does not, in my opinion, authorize substitutes and equivalents.

In the second place, I fear that the dye advisory committee and the War Trade Board section will find it extremely difficult to decide upon a formula of reasonableness for price, quality, and delivery which, after being defined, must be applied to the application. In adopting this formula, howsoever accurate it might be, the dye advisory committee and the War Trade Board section, in my belief, will invite criticism on the part of many consumers. However, the administrative difficulties which the dye advisory committee and the War Trade Board section will experience in establishing the formula referred to above are difficulties which the legislation itself suggests, and to that extent the control does not extend beyond that which is contemplated in the present legislation. However, the legislation does not authorize substitutes and equivalents, and I feel that if I should give my sanction thereto the War Trade Board section and the dye advisory committee would find it more difficult to suffer the criticism of unwilling consumers, because in that case the control would have been carried far beyond that which the legislation contemplates.

I have instructed the War Trade Board section, however, to inform the dye advisory committee that if the committee agrees unanimously that a substitute or an equivalent will do the same work as the dye sought to be imported I will agree that the decision of the committee should be referred to the consumer, and that if the consumer refuses to accept the recommendations of the committee, then an allocation certificate will be issued to such consumer entitling him to import the very dye he has applied for.

You will conclude from the foregoing that, having agreed to maintain the precost control as an interim measure of protection against the day when the present legislation shall either fail or be adopted, it has been the policy of the War Trade Board and of the Department of State to go no further than the legislation itself. The Longworth bill permits of no discrimination in the matter of importation and authorizes no substitution in the dyes themselves. When the need for the controlled product has been ascertained the act makes the issuance of the license mandatory. In my judgment the extension of the present control beyond the scope of the contemplated legislation, for the very purpose of discriminating between importers and of forcing substitutes upon unwilling consumers, would be not only impolitic but the very clearest case of supererogation of congressional authority by this department.

I have the honor to be, sir, your obedient servant,

ROBERT LANSING.

Mr. SHORTRIDGE. It may be of interest to the Senator to know that the testimony is being printed, and we are promised that it will be finished within two or three days.

THE REPARATION DYES.

Mr. MOSES. We here enter, Mr. President, upon the extended and thickly undergrown field of operations wherein figure the so-called German reparation dyes and the Textile Alliance. This organization was established in 1913 for the chief purpose of eliminating the unfair practices existing in the textile trades through the intense competition of dye merchants and importers. That work was performed by the Textile Alliance with marked success, and upon its completion the alliance contemplated relapsing into inactivity. An occasion arose, however, for the exercise of its functions in connection with certain necessary manufacturing materials upon which the British Government had set an embargo at the beginning of the war, and this task was also performed to the ready acceptance of American manufacturers. It was only when the alliance stained its hands with the dyes which have corruptly tinctured substantially the entire fabric of American commerce that it departed from its original purpose of stamping out unfair practices and itself resorted to the most unfair business practices of which there is record and of which the documents I have just asked to be printed contain ample proof.

From these documents, Mr. President, we learn first of all that the State Department throughout has pursued an honorable course, seeking in no instance to lay burdens upon the American consumers of dyes and standing vigorously on every occasion for the perfect freedom of every individual American importer or consumer of dyestuffs to have free access to such foreign market as has been afforded us.

The alliance committed its dye interests to a committee of seven members, six of whom were supposedly representative of the dye manufacturing and consuming interests, with the seventh supposedly neutral. This neutral member proves, however, to be none other than Dr. Charles H. Herty, who, in his testimony before the Shortridge committee, admitted himself to have been an active and vigorous propagandist for the dye embargo from the very beginning of the agitation. Another member was Mr. Morris Poucher, whose identification with the Du Pont interests I set forth completely in an earlier speech in the Senate on this subject, and another was Mr. W. H. Watkins, representing the National Aniline. Thus the two concerns, the Du Ponts and the National Aniline, who constitute the monopolistic features of the dye industry in this country, have had constant representation in everything that has been done concerning the German reparation dyes, and Mr. Watkins is even now assisting Mr. Edward S. Chapin in the office of the Textile Alliance at Paris. It may not be without further significance, Mr. President, that on certain occasions, as these documents show, when this committee met, Mr. Joseph H. Choate, jr., was also in the company.

This committee of the Textile Alliance was constituted, in addition, as the advisory committee on dyes for the War Trade Board, and since it is fair to assume from the record of their transactions that the members of the War Trade Board were wholly ignorant of the dye industry, it is no stretch of the imagination to conclude that the dye consumers were thus sewn up in a bag provided by the Textile Alliance, and as still further indicating the strangle hold which the great dye interests of this country were enabled to exercise upon the War

Trade Board, which was a Government agency, I point out that there were named as its experts Mr. W. R. Morehouse, of the National Aniline, and Mr. R. S. Lunt, of the Du Pont Co.

ACCESS TO GOVERNMENT SECRETS.

The importance of enabling these two great domestic dye manufacturers to have access to a government agency's private information need not be emphasized. It has been a constant source of unfavorable comment by dye consumers in this country and doubtless accounts in part for their expressed desire to revert to normalcy in the process of securing necessary dyestuffs from abroad—as indicated by a petition recently filed with the State Department, signed by more than 300 of the leading consumers of dyestuffs in this country and protesting against a continuance of the practices which are now in vogue and which are sought to be perpetuated by the embargo portion of this bill.

It was in September, 1919, Mr. President, that the Textile Alliance began operations in the field of dyes, but it was not until October that any arrangement was entered into between the alliance and our Government. Its function was supposed to be solely that of an intermediary for the procurement and distribution of German reparation dyes for all American consumers who might wish to avail themselves of its services. Although its charter prohibits it from earning profits, it has, in less than three years of operation, accumulated undivided earnings amounting to nearly $2,000,000, which are held in its treasury, though it was expressly stipulated, as these documents show, that its surplus, over and above necessary and legitimate expenses, should be divided pro rata among the consumers who had availed themselves of its services.

Its activities speedily spread from the limited scope afforded by the reparation dyes to the wider field opened by the opportunity to import other dyes; and, if we may judge from the declarations contained in the annual reports of their European representative, which I have here submitted, and from statements made by its president before the Shortridge committee, whose record is not yet available, it is a fair conclusion that their activities have been chiefly, if not solely, in the interests of the two great American dye producers, the Du Ponts and the National Aniline, whose representatives the alliance thrust into the councils of the War Trade Board.

Although designed, as I have said, to function only in connection with the reparation dyes, the Textile Alliance speedily undertook to force American consumers who sought nonreparation dyes to transact their business through the alliance agency. This they were enabled to accomplish primarily because they alone had access to the low-price reparation dyes, and with this weapon were enabled to cut prices and generally to resort to the unfair trade practices which the Textile Alliance was originally organized to stamp out. The alliance was not content with the use of this weapon alone, and it appears from a letter of October 25, 1919, addressed to the president of the Textile Alliance by the acting chief of the War Trade Board, that arrangements had been made to force American consumers holding allocation certificates for German dyes to assign these certificates direct to the Textile Alliance or otherwise to be shut out from any participation in importations of low-priced dyes or to share equitably in any surplus remaining after the allocation certificates had been filled.

ANTITRUST LAWS DO NOT APPLY.

There can be no doubt, Mr. President, that one purpose in the back of the alliance's head from the beginning of its operations was to establish a monopoly, because its counsel, under date of October 8, 1919, advised the alliance that "the antitrust laws have no application."

Under these circumstances the alliance continued its activities until December 14, 1921, when Secretary Hughes terminated the arrangement upon the ground that no legal authority existed therefor. Since then, however, the State Department has notified the Reparations Commission, through our unofficial delegate upon that body, that this Government has no objection to the continuance of the arrangement whereby the Textile Alliance received and distributed the reparation dyes, and the alliance, under this nebulous authority, is still in operation.

There is but one essential fact in this connection yet to be adduced: Whereas the reparation dyes are delivered to the representatives of other countries without cash payment and are credited upon the reparations account, the United States is compelled to pay cash for its dyes from this source and more American money is thus being pocketed by those who already owe us billions, while the profits on the transaction go into the treasury of the Textile Alliance, and already amount to substantially $2,000,000.

It will be noted, Mr. President, that I have dealt with only three of the actors in the gigantic fraud which I am opposing—the Du Ponts, the Chemical Foundation, and the Textile Alliance. There are many others, a discussion of which would occupy hours and even days to outline. These three, however, are significantly interlocked in their related personnel and in their activities; and it is they whose subsidiaries, officers, stockholders, lobbyists, paid propagandists, and faked and kept organizations have been the most aggressive, avaricious, and insolent of all the profiteering crew who pertinaciously push this legislation.

Since August, 1914, an embargo on dyestuffs has been effective in the United States—part of the time through operation of war and part of the time through operation of law—and since the proposal which I am now discussing looks to a continuance of that condition of affairs it may be interesting, Mr. President, to inform the Senate and the country exactly how it works.

THE NEW COLOR, "ELEPHANT'S BREATH."

May I preface this portion of my remarks, sir, with a few observations upon the dye industry in general? While substantially every leading industry in the country is compelled to use colors, it is the textile industry which offers the chief field for the consumption of dyestuffs, and the textile industry thrives almost wholly upon the fickleness of fashion. Fashions, I may add, rarely originate on this side of the Atlantic. It thus happens, Mr. President, that if the Sisters Caillot should determine that the fashionable shade for autumn wear in this year of grace 1922 shall be a new color to which is given the enticing name of "elephant's breath" or some other appellation equally alluring, textile manufacturers everywhere will rush to produce cloths in the "elephant's breath" tint, and their first impulse will be to seek the dye makers for the shade which fashion decrees. It may happen, it always has happened, and it probably will continue to happen, that this shade has first been produced in a European dye factory. Imitations, of course, will everywhere spring up; but the American manufacturer, wishing to be sure of his trade, will naturally seek an authentic source of supply for his color.

What happens under the embargo as existing and as proposed to be continued? The manufacturer applies to the Federal authority for a license to import the color he seeks. The Federal authority promptly notifies the American dye manufacturers that John Smith, a weaver at Fall River, wishes to buy a thousand pounds of "elephant's breath." An agent from an American dye manufacturer promptly appears in John Smith's office and offers him a color which he avers to be "equally as good" and for which he intends to charge a much higher price than the European product will command. Mr. Smith, after making sample dyeings, discovers that the substituted color which is offered him is proof against neither the sun, the rain, nor the laundry, and after a long delay and the use of much emphatic language he establishes these facts before the Federal authority. Permission is then given him to make the desired importation and he places his order. This is a condition, Mr. President, which Secretary Lansing foresaw in his letter which I have above presented, written to Representative PORTER, and in which the Secretary predicted that the extension and continuance of embargo control could be only "for the very purpose of discriminating between importers and of forcing substitutes upon unwilling consumers," and by the time the importation reaches this country the delay has been so great that the season is past and Mr. Smith, of Fall River, is unable to make and market his goods.

HOW IT WORKS IN FACT.

Lest, Mr. President, I shall be deemed in this supposititious instance to have overstated the facts, I desire to refer at this point to a letter from Joseph Bancroft & Sons Co., doing business, it may seem strange to add, at Wilmington, Del., who complain of "the delays and holdups in getting dyes" which they had ordered from the Textile Alliance, with whom they placed an order for a certain shade of brown on the 27th of January of this year. On the 22d of April they had received nothing but excuses, and they then endeavored to procure the color through a private agency. In this they were unsuccessful, because none of the color was made or was stocked in this country; and both the consumer and the importer were compelled to go through the interminable process of a circumlocution office in a Federal department in Washington, while the man in Wilmington, Del., lost his order.

Another instance with which I happen to be even more familiar arose in November of last year, when a manufacturer in my State sought to import a quantity of dye known as Idanthrene Blue B C S. This consumer obtained from the Federal Government a consumer's license for this importation only after exhaustive representations and tests proving that this particular dye was less sensitive to lime, faster to chlorine,

and in every way superior to the domestic product which the Du Ponts attempted to thrust upon him. After many weeks' delay, to wit, on January 16 of this year, 11,000 pounds of this color were entered at the customhouse in New York for the New Hampshire consumer, entry was granted, and the dye was shipped to New Hampshire. It was received at the mill on January 20, and was immediately put in process in the fulfillment of a large order which the manufacturer had two months before received for that particular color of goods; yet five days later a Government demand was made for the return of this color, already in the vats and partly in the cloth, because the American producer had been able to secure the attentive ear of the bureau at Washington. This ridiculous demand, of course, could not be complied with; and it was only after the most energetic of representations on my part, fortified by actual samples of the two colors, imported and domestic, as shown by sample dyeings in the yarn and in the fabric, that the absurdity of the situation was made apparent and the order rescinded. And in this connection, Mr. President, I wish to add only that among the American experts from whom the Government bureau sought an opinion regarding this color was the Du Pont Dye Works, whose opinion, as might be expected, was in their own interest and contrary to that of the textile schools at Lowell and Philadelphia, upon whose judgment the Government bureau finally acted.

Another example of the delays occasioned by the dye embargo is that of an order entered by the United States Worsted Co., of Lawrence, Mass., for 200 pounds of Alizarine Blue Sky. This order was placed on October 20, 1921, and the merchandise was not received in this country until March 20, 1922, five months later. An interval of five months between the date of an order for a dye and its receipt unquestionably interferes with the proper conduct of the business of any dye consumer, and it happened in this case that market conditions had so changed that the American manufacturer could not afford to pay the price for this dye which was stipulated in the order.

Another instance of a like nature is to be found in a case arising from the endeavor of the Pacific Mills, whose plants are located in New Hampshire, Massachusetts, and South Carolina, to obtain a license for the importation of 6,000 pounds of Indanthrene Yellow R. This dye had been offered from abroad at $1.85 per pound. The pre-war selling price of this color in America was 60 cents per pound, yet the Federal authorities refused to issue the desired license upon the ground that the price of $3.75 per pound charged by the Du Pont Co. was reasonable, and this decision was maintained in the face of a protest lodged by the Pacific Mills in the following terms:

1. The difference between the market price of the imported dye and the market price of the domestic dye constitutes the equivalent of approximately one-half a cent per yard upon the goods to be manufactured, which represents in some of the lines more than the entire margin of profit.
2. Such a condition would force the plant to supplement this dye with inferior dyes at the expense of quality and to the detriment of the mill's reputation.
3. The domestic price of this dye was based on the cost of a small production, and the dye consumer was penalized and his business jeopardized because of this small production.
4. Figuring upon their present consumption of this dye over a period of 12 months the mill concluded that owing to this price difference they would pay the Du Pont Co. a premium of $75,000 per year.

The condition set forth in paragraph 3 of the foregoing argument, Mr. President, contains the iniquitous heart of the entire dye embargo proposal. The dye manufacturers of America, realizing that for certain shades there is small demand and knowing that these shades are difficult to produce, have predicated their embargo demand upon all colors in the list, including those which are produced in tonnage proportion.

Another instance of how the embargo works and will continue to work in practice, an incident evidently of the erroneous information furnished to dye consumers by the Federal authority, is shown in the attempt made by the Merrimac Manufacturing Co., of Lowell, Mass., to obtain a license for the importation of only 100 pounds of a color known as Rhoduline Yellow 6 G T. On November 4, 1919, more than three weeks later, this concern made application for a license for this importation. On November 26 they were advised by the Government authority that their application had been referred to the advisory committee on dyes, whose personnel I have already commented upon. This committee reported that 50 per cent of the quantity of color desired could be obtained from a domestic manufacturer, and on December 8 the Merrimac Co. was advised that the names of these manufacturers could be obtained from the American Dyes Institute, this being the organization, Mr. President, whose lavish expenditures in lobbying in behalf of the proposed dye embargo I commented upon in detail in my speech in the Senate of May 9, 1921. The Dyes Institute, however, declared that it knew of no manufacturer of this color, but that the dye producers of America would be circularized to secure the information. After some days of delay the Merrimac Co. was advised to communicate with three American dye makers, and after spending more than two months in an unsuccessful effort to obtain only 50 pounds of color the company canceled this order and lost the business dependent upon obtaining this dye.

THE REAL OBJECTION.

The correspondence in this case is to be found in full in the record of the Shortridge committee, and the witness before that committee who adduced this incident summarized the practical objections to the embargo in operation. His language is so clear and succinct that I venture to repeat it here.

Mr. Thoron said:

First. There were the delays in obtaining the dyes owing to the fact that they must be imported after obtaining the license.

Second. The delays in obtaining the license for dyes where questions of quality, price, and delivery were involved.

Now, the third objection is the impossibility of testing out substitutes satisfactorily. We believe that laboratory tests are dangerous, and proper running tests involving delays will require frequently larger samples for comparison than can be obtained in a reasonable time, and, taking only the question of fastness to light, in many cases to get a proper test it might require waiting for a summer sun, and it would be practically impossible.

Now, the fastness to light in certain kinds of product is a very important one. There are certain plain light fabrics which women make shirt waists out of that unless they can stand the summer sun or the beach sun, why they won't touch, and one may have had the experience of manufacturing with a foreign dye which had those qualities and then an American dye is produced which is claimed to have those qualities. You can not take the risk of adopting the American dye, even though its chemical composition is apparently the same, without testing to see whether it really does, because you may ruin the reputation of the fabric.

The fourth point was the reasonableness of price, which I have considered at some length. And we think that that is impossible, because beyond a certain point the consumer can not stand more than a certain price, and as long as the competing product is not embargoed out of the country, we ought to be given a chance, we ought not to have it at the same price as the foreign country, but we do think that double is the limit that we can stand.

Then, fifth, there is the hardship of carrying large supplies of chemicals. Certain people it does not fall very heavily on, because they have got ample capital. It is a serious matter with small people, and they will go without rather than be put to that. That simply means that the product will probably become gradually poorer.

Then there is the difficulty of the loss which one suffers from carrying large supplies of chemicals in case the use of them should become obsolete. Fashions change.

Now, the sixth point, and a very important one in my mind, is the lack of opportunity, or the difficulty of availing one's self of the opportunity, in keeping up with the best progress in textile dyeing, for many of the reasons already pointed out. This is particularly serious owing to the fact that no tariff protects dye textiles in the matter of quality. And textile manufacturers in this country for the home market are in competition with foreign textile manufacturers who have better opportunities to progress in their art and in their industry. Our dye industry will be busy catching up with the foreign dye industry. The foreign dye industry will be busy going ahead. If we are limited to easily obtaining only what our own industry is producing, we will always be a mile or two behind our foreign competitors, who are following those that are making further advances.

And in the seventh is an intangible but very demoralizing element—a feeling that everybody knows one's business. You write your necessities to the customhouse, and the customhouse refers your necessities to the dyes institute, and before long everybody knows what you are after, and that is not fair to the manufacturer who is trying to catch the market by being a little cleverer, a little more ingenious—disclosing what is running through his mind to everybody. I am not suggesting that they intentionally make any use of it, but the thing demoralizes you. You don't know—there is something about it that discourages you; and that is serious.

In addition, Mr. Thoron presented to the Shortridge committee a statement showing the period of time which elapsed between the date of application made by his company to the Federal bureau at Washington for a license to import and the date of the arrival of the importation at the port of New York. In no instance, Mr. President, was he able to secure his dyes in less than one month; in one instance it took three months, in three instances it took two months, in two instances it took three months, in three instances it took four months, and in three instances it took six months to procure his colors. I believe, Mr. President, that any person having any knowledge of conditions in the textile business would know that a delay of this character would utterly destroy the market for goods in process of manufacture.

MANY STATES INTERESTED.

Mr. President, at various times in the progress of this controversy I have been accused of opposing the dye embargo because of the textile interests of my own State. It is true, sir, that the largest individual consumer of dyestuffs in the world is my constituent; but I do not speak for him alone. The few instances which I have to-day adduced cover textile establishments not only in my own State but in the States of Massachusetts, Delaware, and South Carolina; and the Shortridge committee received other instances of a like character to show the hardship worked upon manufacturers in the States

of Pennsylvania, Michigan, Illinois, Wisconsin, New York, Rhode Island, and Maine.

Mr. President, only the other day, in the course of a discussion regarding the duty to be levied upon soya-bean oil, the senior Senator from New Jersey presented to the Senate what I then regarded and still regard as an irrefutably logical statement of a real protectionist's position. He said that he desired to give adequate protection to all, but that he did not wish to load upon the producer a tariff burden upon his raw material which would unnaturally increase the cost of the manufactured product. Yet, Mr. President, that is exactly what has happened to the dye consumers of the United States under the embargo as it exists and as it is now proposed to continue it.

On February 10, 1922, the United States Tariff Commission addressed the following letter to a woolen manufacturer of Massachusetts:

> Please let us know, in regard to your last fiscal year, the total value, weight, and square yards of your sales of dyed or colored wool goods, also the total weight and value of the dyestuffs used by you during the same period. These data, in connection with data from other mills, will be used in ascertaining the average cost of dyestuff per yard and per pound of cloth, and the percentage that the dyestuff cost bears to the wholesale market price of the cloth.
>
> This information, which will be held confidential, is needed in connection with proposed tariff changes now under consideration, and a prompt reply will be appreciated.

Replying promptly, the Massachusetts manufacturer said:

> In reply to your letter of the 10th instant, asking for costs of coloring wool goods, which you require to enable you to ascertain the average cost of dyeing per yard and pound of cloth, and the percentage that the dyestuff bears to the market price of the cloth, we have selected one of our leading fabrics of large production, viz, blue serge, and give you herewith the actual cost of dyestuffs used per pound, no labor or any other items included, on 1,000,000 pounds of cloth, for the years 1921 and 1914, for comparison:
>
> "1921 cost of dyestuff per pound—1,000,000 pounds of cloth, at 7½ cents per pound, $75,000. (Approximately 1,250,000 yards, 6 cents per yard.)
>
> "1914 cost of dyestuff per pound—1,000,000 pounds of cloth, at 1¢ cents per pound, $12,500. (Approximately 1,250,000 yards, at 1 cent per yard.)
>
> "This shows the cost for actual dyestuffs in 1921 for our blue serge was six times pre-war cost. The selling price of the cloth referred to was $2 per yard.
>
> "Dye used in 1914 was imported, identical dye, used in 1921, of domestic manufacture."

Yet the Senator from New Jersey has been one of the most industrious and successful advocates of legislation which would heap such costs as these upon the dye consumers of the country in contravention of his theories of protection as applied to the soap manufacturers of New Jersey.

Mr. President, at the outset of these remarks I enumerated the elements of tariff protection which this bill gives to the American dye manufacturer. At the risk of redundancy I here repeat them:

(1) A duty of 60 per cent ad valorem, plus a specific duty of 7 cents per pound.

(2) A method of computation of the specific duty which will, in most cases, multiply this 7 cents many times.

(3) A provision that the President may increase these duties 50 per cent upon proper showing.

(4) A provision that the President may apply such rate of duty as he decides upon to the American instead of the foreign valuation.

(5) A special countervailing duty of 5 per cent upon fabrics dyed with 40 per cent of vat dyes.

IT IS ORGANIZED GREED.

I submit that these items of straight tariff protection are ample for an industry which is already so firmly established that it produces $88,000,000 of the $92,000,000 worth of dyes annually traded in in this country. I will never consent to the embargo, which is contrary to every principle of true protectionism. It is not mentioned in Hamilton's famous report on manufactures; it appears nowhere in Clay's discussion of the American system; it was undreamed of by Morrill, McKinley, Dingley, Payne, or Aldrich. It is un-American, un-Republican, and un-Democratic. It is merely an expression of organized greed.

With the senior Senator from New Jersey I insist that adequate protection shall be given to every essential American interest; but unlike him, Mr. President, I insist that this protection shall be given in the form to which we have become accustomed in a long line of our fiscal legislation, that it shall be given in the form of tariff duties, and that it shall not be given so as to create a nesting place for monopoly. I can see no reason why the dye industry shall be dealt with differently from the woolen industry, or the cotton industry, or the tin-plate industry. In 1890 no tin plate was made in this country; yet following the enactment of the McKinley tariff bill, with its tin-plate duties, we saw the American tin-plate manufacturer moving forward to supply substantially all the needs of the American market and even to export tin plate as against foreign competition.

The dyestuffs industry is no puny infant to-day. It has enjoyed eight years of full embargo, either through war or by statute. It produces at least 90 per cent of the total domestic consumption, and its exports are already large and growing. There is no reason why the embargo should be continued for its benefit; no reason why this embarrassment should longer be laid upon the American dye consumer; and there is especially no reason, Mr. President, why this unusual gratuity should be given to an industry whose chief beneficiaries have enriched themselves through the use of capital advanced from the Federal Treasury, without interest and without proper security; whose subsidiaries, after three and a half years, continue to withhold an accounting for $35,000,000 of public money; whose agencies have penetrated the inner precincts of the executive departments; whose propaganda has been one of extravagance, both in money and statement; and whose chief activities have been devoted not to the development of the dye industry but to besieging Congress with a demand for extraordinary privilege. The President of the United States has already directed action which has been begun, both civil and criminal, against one of the chief offenders in this whole program. Is it to be, Mr. President, that the Senate of the United States will flout the Executive and, in defiance of the positive stand already taken by the House of Representatives, and in the face of the vote had here the other day upon a proposed embargo on fish, now vote to extend this special privilege to the partners in the offense against whom the Department of Justice has not yet taken action?

To give this privilege to the dye makers of the country means to empower them to levy tribute upon every woolen mill, every cotton mill, every knitting mill in America; it means to grant them license for extortion from every tanner, every ink maker, every paint manufacturer, every printer, every hat maker and milliner, every paper mill, every lithographer in the land; it means their authorization to exact toll from every citizen; to take their tithes from every workingman's blouse; to get their bit from every farmer's overalls; and to reach their hands into every washtub in the country.

I have scant sympathy with the onslaughts made upon this bill from the other side of the Chamber. They have been confined to an attack upon tariff duties alone, and they may be taken as representing only the expressions of a divergent school of economic belief. But, sir, if this dye embargo remains in the bill, color—and I intend no pun, Mr. President—color will be given to all of the accusations leveled against this measure, and we shall go before the country convicted of surrendering to an iniquitous, impudent, and avaricious monopoly.

Mr. SMOOT. Mr. President, let the Secretary report the pending amendment.

The PRESIDING OFFICER (Mr. WADSWORTH in the chair). The Secretary will state the pending amendment.

The READING CLERK. On page 286, after line 17, the committee proposes to insert a new section, as follows:

> SEC. 321. That the dye and chemical control act, 1921, approved May 27, 1921, as amended, shall continue in force for one year after the date of the passage of this act.

Mr. SMOOT. As it is about luncheon time, when many Senators are out of the Chamber, I suggest the absence of a quorum.

The PRESIDING OFFICER. The Secretary will call the roll.

The roll was called, and the following Senators answered to their names:

Ashurst	Hale	McKinley	Robinson
Bursum	Harreld	McLean	Sheppard
Calder	Harris	McNary	Shields
Cameron	Heflin	Moses	Shortridge
Capper	Johnson	Nelson	Smith
Culberson	Jones, N. Mex.	New	Smoot
Cummins	Jones, Wash.	Nicholson	Spencer
Curtis	Kellogg	Norbeck	Stanley
Dial	Kendrick	Norris	Sterling
du Pont	Keyes	Oddie	Townsend
Edge	King	Overman	Trammell
Ernst	Ladd	Pepper	Underwood
Fletcher	Lenroot	Phipps	Wadsworth
France	Lodge	Pomerene	Walsh, Mont.
Frelinghuysen	McCormick	Ransdell	Willis
Glass	McCumber	Rawson	

The PRESIDING OFFICER (Mr. LADD in the chair). Sixty-three Senators having answered to their names, a quorum is present. The question is on agreeing to the committee amendment.

Mr. McCUMBER. Mr. President, if it should be found, on a most careful examination, that there was a contract made during the war that was not a fraud upon the American people, I should be glad to have the investigation made, and to have it

demonstrated that one out of the thousands and hundreds of thousands of contracts was made in good faith and was made with the idea of protecting the Government of the United States.

I have no doubt that all through the war there were contracts made with favored individuals and for their benefit. But, notwithstanding that fact, I desire to say now that I do not think the Senate of the United States is the proper tribunal to try any one of the charges made. Under the direction of the President of the United States, Colonel Miller, the Alien Property Custodian, has been directed to demand the return of the patents which were sold to the Chemical Foundation, and to forbid any further transfer of patents. I presume that is done with the idea that the Attorney General will institute the proper proceedings, and in the trial a court will determine whether or not the patents should be returned. The court will determine whether or not a fraud was perpetrated. I assume that the case may be a jury trial, but I am absolutely certain that there is not a Senator in this Chamber who could qualify as a juror; every one of us would be excluded upon the ground of prejudice. That being the case, inasmuch as we could not qualify as jurors, I am a little inclined to believe that we should leave to the court the determination of the cause which is about to be instituted.

The only question before the Senate is the question of the embargo upon dyestuffs. On that subject there was a disagreement in the committee itself. One thing we do know, that prior to 1914 a foreign nation, a foreign people, furnished practically all the dyestuffs for American manufacturers.

Another thing we do know is that after we were engaged in the war we found ourselves entirely cut off, or almost entirely cut off, from the dye products. We found, in addition, that we had to pay many times the pre-war value of our dye products. We then came to the conclusion that it was necessary to develop the dye industry in the United States. The previous administration inaugurated the idea of the use of the licensing system for the development of the dye industry. We followed along that pathway and along the previous idea of the Democratic administration, and in our emergency tariff law we provided for an embargo. How long the embargo should continue is, after all, a question to be determined by the Senate. We agreed that it should be continued for another year. We know that as a rule, notwithstanding the embargo, the prices of dyes have gradually gone down from the highest peak until now they are only about 50 per cent of the high prices of 1917.

It may be, with the protection we have given them, the dye people will be able to continue to produce; but, Mr. President, I think in some instances they will not be enabled to continue the production without the embargo for a brief length of time. That, after all, is the only question before the Senate to-day, not the trial of the Chemical Foundation but the determination whether or not we desire to continue the dye industry in the United States and whether or not the duties that we imposed are sufficient, and if not sufficient, for a space of one year whether we had better maintain the present embargo. To that subject I wish we could direct our attention rather than to be misled and drawn away from the real question by a trial of a matter which is not before the Senate.

Mr. FRELINGHUYSEN. Mr. President, I had no intention of speaking on this question until those who are opposed to the dye embargo should have been heard. I had hoped that those Senators who wished to attack the provision might have spoken first, but in view of the fact that the question involves a matter of national policy and also a question of industrial policy it might be well for me briefly to express my views on the question at this time. I have no prepared speech—prepared by some one entirely familiar with these technical questions. I have no exhibits to show the Senate of supposed corruption or fraud, attacking an American industry. I know no corruption exists. I do not intend to make any attack, individually or personally, on anyone in the industry or to question the motives of anyone.

This is not a question of policy as to whether the Chemical Foundation is a proper agency to license these patent rights and privileges which the United States Government seized. The ethics of that question I am not going to discuss. The Government of the United States undoubtedly will protect the rights of all who are involved in that controversy.

This is a question as to whether an existing provision of law shall be continued, whether the Senate shall provide for an embargo on the importation of dyes under the selective license system which Congress imposed as a protection for American industry against the domination of a foreign country when it was thought that to throw open our markets to that foreign country would be a menace to our national defense. The question is whether we shall continue that policy or not.

We have the example of England, France, and Italy, who have embargoed importations of German dyes. In one instance we have a national subsidy, as in the case of Japan, in order to establish a dye industry.

These governments have found it necessary, from the standpoint of national defense, to embargo German dyes and to encourage the building up of the dye and coal-tar industry in their own countries. The question before the Senate is whether an independent American dye industry is to be maintained or whether, after eight years of respite from German domination, we are to destroy this American industry by our action here and turn it back to German control. I stand on the American side. There are advocates, able advocates, of Germany's interests. The Senator from New Hampshire [Mr. MOSES] has spoken of the propaganda of the Chemical Foundation, a propaganda which was utilized to educate the people of the country to the necessity of having an independent dye and chemical industry for national defense and the possibilities of the expansion of the organic chemical industry. But the eloquent Senator from New Hampshire failed to say anything about the insidious propaganda that has been going on throughout the country, German propaganda, designed to secure again the control of our markets.

As to the necessity of maintaining this industry in the United States as a national policy through an embargo, so that it may have time for development and expansion, and so that our chemists may make the necessary research and experimentation, I am going to call to the witness stand certain important officials and prominent men in this country to bear testimony.

The Senator from New Hampshire [Mr. MOSES] stated that I had gone far beyond the protective system in asking for an embargo; that I had deserted that system. That is not true. I believe in the protective system, but I also believe in an embargo on dyes and coal-tar products, for the reason that we are protecting ourselves against the superior knowledge and experience of the German chemists, who, fostered by the German Government, through 30 years of research have prepared themselves in such way that we can not meet their competition, and no tariff duties can protect us against that. We have not yet the men of extended experience, training, or knowledge to accomplish this. Therefore, the chemists who are employed by these great American industries to develop this field must have the time for research and experimentation, and that is the reason why we need the embargo.

Now, this is not a small, trifling question with which we are dealing. It concerns a great principle, the question of national preparedness; and when we recall what the industries on the Rhine and the German chemists did to our boys at Ypres with their poison gas, the frantic efforts which we made to manufacture enough of the toxic gases to counteract this new weapon of warfare, we realize how important it is from the standpoint of national protection to make this country independent of any other nation in Europe, because at Ypres, if the Germans had followed up their gas attacks, they would have gassed their way to the channel ports.

We have built up an industry in this country. Prior to the war there was a very small amount of capital employed, only $3,000,000, I believe. When the war broke out and we found we had none of the acids and chemicals necessary to manufacture explosives, or dyes to dye the goods we were manufacturing in our textile industries, the textile men came to the Congress and asked that protective measures be proposed, and we did place a tariff on dyes, which, according to present prices and comparative costs, is not sufficient. The textile men then asked for more support. They asked Congress to do something in order that they might keep their industrial workers employed, in order that there might be a dye industry stimulated in this country, so they could secure the colors which the war had embargoed and which previously they had obtained from Germany. So the captains of industry, the chemists, the workingmen, went forth with unparalleled energy and genius to build up a dye chemical industry in this country, the capital investment of which amounts to $174,000,000, paying salaries and wages of $35,000,000, manufacturing products valued at $135,000,000, and employing 15,000 wage earners. But in addition to that, the chemical industry, oils, paints, and all related products provided for under Schedule 1, to-day has a capital employed of $2,539,000,000; wages paid, $297,000,000; value of products, $3,234,000,000. This great organization, established during the war, of which we are justly proud, is about to be destroyed. Therefore, Senators, the position we are in with regard to the chemical and dye industry is whether we are going to maintain it, first, from the standpoint of the right of this country to protect itself against foreign competition, and, second, and

more imporant, so that we may never be in the position we were in when the war broke out, absolutely crippled and unable to meet the domestic need for these products, but more particularly in order that our country may never be menaced by the danger of 1917.

I said I was going to call some witnesses to the stand to testify as to the wisdom, from the standpoint of statesmanship, of maintaining this embargo. I refer first to a message of a former President of the United States, Mr. Wilson, of May 20, 1919. From it I read, in part, as follows:

> There are parts of our tariff system which need prompt attention. The experiences of the war have made it plain that in some cases too great reliance on foreign supply is dangerous, and that in determining certain parts of our tariff policy domestic considerations must be borne in mind which are political as well as economic. Among the industries to which special consideration should be given is that of the manufacture of dyestuffs and related chemicals. Our complete dependence upon German supplies before the war made the interruption of trade a cause of exceptional economic disturbance. The close relation between the manufacturer of dyestuffs on the one hand and of explosives and poisonous gases on the other, moreover, has given the industry an exceptional significance and value. Although the United States will gladly and unhesitatingly join in the program of international disarmament, it will, nevertheless, be a policy of obvious prudence to make certain of the successful maintenance of many strong and well-equipped chemical plants. The German chemical industry, with which we will be brought into competition, was, and may well be again, a thoroughly knit monopoly capable of exercising a competition of a peculiarly insidious and dangerous kind.

After that, on December 2, President Wilson again called the attention of Congress to the matter in the following language:

> In the matter of tariff legislation, I beg to call your attention to the statements contained in my last message urging legislation with reference to the establishment of the chemical and dyestuffs industry in America:
>
> "Among the industries to which special consideration should be given is that of the manufacture of dyestuffs and related chemicals. Our complete dependence upon German supplies before the war made the interruption of trade a cause of exceptional economic disturbance. The close relation between the manufacture of dyestuffs, on the one hand, and of explosives and poisonous gases, on the other, moreover, has given the industry an exceptional significance and value. Although the United States will gladly and unhesitatingly join in the program of international disarmament, it will, nevertheless, be a policy of obvious prudence to make certain of the successful maintenance of many strong and well-equipped chemical plants." * * *

Now I call to the witness stand the senior Senator from North Carolina [Mr. SIMMONS], who, in his speech on May 11, 1921, in answer to the Senator from Utah, said:

> Mr. President, I think it is the sense of this country that we have not yet reached that point in the development of the dye industry in this country where it is able adequately to meet the requirements of preparedness in case of war; so that, as I regard it and as I think it ought to be regarded, this is a mere extension of a provision necessary to the national defense until we can have reasonable time to develop that industry to the point of making it adequate to supply our demands in case of hostilities between this country and some other country in the world. It is important that we are prepared for all eventualities and that we propose to continue that state of preparedness.

The late Senator Knox, of Pennsylvania, in arguing the necessity of an embargo in the emergency tariff bill——

Mr. SIMMONS. Mr. President——

Mr. FRELINGHUYSEN. I yield to the Senator.

Mr. SIMMONS. The Senator from New Jersey knows perfectly well that, as chairman of the Finance Committee, I gave hearty support to the bill that we then passed providing greatly increased tariff rates upon dyestuffs. The Senator also knows that later after we had enacted the embargo and when it became necessary to extend it I voted for that extension. I think there was a second extension, and I voted for that. As I recall the speech from which the Senator has read was a speech which I made at the time of the second extension of the embargo. A majority of the Senators on this side of the Chamber voted against that extension, but I voted for it. It was perfectly well understood, and I so stated at the time—the Senator has read only a part of my speech—that my position was that as soon as we were able to revise the tariff and adopt a permanent tariff law there ought to be no further extension of the embargo provision with reference to dyestuffs, and that the party in power should provide for the dyestuff industry by the imposition of such rates of tariff protection as it might under the circumstances think the industry justly entitled to receive. I shall therefore, Mr. President, have no hesitation in voting against a further extension of the embargo upon dyestuffs. In doing that I shall be exactly carrying out the purpose I expressed and declared when I favored the last extension of the embargo that was made by the Congress.

Mr. FRELINGHUYSEN. Mr. President, I should like to ask the Senator a question.

Mr. SIMMONS. The Senator from New Jersey will probably remember, although I do not recall whether or not he was a member of the Finance Committee at the time we were having hearings upon the dyestuff industry, having become, as he did, a member of the committee rather late in the year, that in the hearings before the Finance Committee I took exactly the position I have just stated, and notwithstanding the fact that I had voted for all the former propositions to increase the rates of duty and for the embargo, and had voted for the extension of the embargo, I insisted that there should be no further embargo and that the Senator's party should deal with the matter by the imposition of tariff duties.

Mr. FRELINGHUYSEN. At the time to which I have referred the Senator from North Carolina said:

> I think it is the sense of the country that we have not yet reached that point in the development of the dye industry in this country where it is able adequately to meet the requirements of preparedness in case of war; so that, as I regard it and as I think it ought to be regarded, this is a mere extension of a provision necessary to the national defense.

The Senator from North Carolina made that statement on May 11, 1921. May I ask him if he believes the dye industry at the present time has reached a point of development which is sufficient to meet the necessities of this country in case of war?

Mr. SIMMONS. The Senator can find nothing in that quotation that is inconsistent with my position as I now express it. I will say to the Senator that I am not at all prepared to say even now that the dyestuff industry should not be given certain preferential consideration in connection with the fixing of tariff rates. Whether such a preference should be extended to all branches of the industry is another question and one that I think should be very thoroughly worked out. I think it was the duty of the committee in connection with revising the tariff and in imposing these dyestuff duties for protection purposes to have made a very thorough study of the dye situation, and wherever they found that any particular dye was being produced in this country in anything like adequate quantities and that any branch of the industry had attained a position where it was self-sustaining and no longer needed the assistance of the Government, or, if it needed it, not to the extent originally extended, they should have reduced the rates accordingly. On the other hand, if it found that some particular dyestuff was in a stronger position, so far as the necessity for further fostering on the part of the Government was concerned, they should have considered that in connection with the revision and should not have brought in here now in a permament tariff bill a wholesale, all-embracing embargo provision. In other words, I think the committee in dealing with this question from a protective tariff standpoint—and that, of course, is the standpoint from which the committee were dealing with it—should have taken into consideration, in fixing the rates, the question of adequacy based on the application of their principles, and they should have entered into a very thorough study of the dyestuff industry in this country and should have regulated the tariff rates according to what appear to be the real necessities of that industry.

Mr. President, so far as my speech from which the Senator has quoted is concerned, that was made in May, 1921, something over a year ago. It was made in connection with the proposition further to extend the embargo until we might pass a permanent tariff bill and deal effectively with the dyestuffs question. When we originally passed the measure increasing the duties upon dyestuffs in order to enable the dye industry to function in a manner commensurate with the requirements of the situation that presented itself to us in 1916, we put in that bill—and we put it in there with the consent of the representatives of the dyestuffs industry—a provision limiting the time during which the rates should apply. We provided that if at the end of five years, as I now recall, the industry or any branches of the industry were able to produce 60 per cent of the American requirements, or substantially so—I do not recall the exact figures—that the duties then provided should cease.

It has been demonstrated, I think—and the able speech of the Senator from New Hampshire [Mr. MOSES] further demonstrated it, although there was sufficient demonstration without it—that with respect to most of these dyes, although probably not as to all of them, we are producing to-day in the United States fully 60 per cent of the domestic requirements.

Mr. FRELINGHUYSEN. Mr. President——

The PRESIDING OFFICER (Mr. ODDIE in the chair). Does the Senator yield?

Mr. SIMMONS. I am speaking in the Senator's time; he yielded to me.

Mr. FRELINGHUYSEN. I want to be courteous to the Senator.

Mr. SIMMONS. I want to say to the Senator very frankly that I have been a very great friend of the dyestuff industry; I have believed in it; I have fully appreciated the importance—the transcendent importance—to the United States of providing

itself with the products of that industry, and especially with its derivatives, which are so essential to the national defense and which ramify and touch to such large extent all the industries of the country.

I have felt the vital importance of it, and I have voted every time I conscientiously could to give the dyestuffs people everything that I thought in good conscience they were entitled to; and I say to the Senator now, to-day, that while I will not vote for an embargo, I think his party is justified in dealing out tariff protection to this industry if it can find that in any case the industry is not yet able to stand upon its own feet and needs further help from the Government, and if he regulates his tariff scientifically and measures it by the actual facts and necessities of the situation.

Mr. FRELINGHUYSEN. Then, Mr. President, the Senator believes that if we could not impose a rate of duty high enough to protect our markets against German invasion and the destruction of the American dye industry that further measures should be taken to protect ourselves against that invasion for national defense, or else the Senator has deserted the principle which he enunciated in May, 1921.

Mr. SIMMONS. Mr. President, the Senator may think that, but I think in view of my record upon this matter and my statements made heretofore and my votes heretofore and my statement to-day, the Senator from New Jersey is the only Senator in this Chamber who will think that I have deserted my position or that I am in any way inconsistent. He is welcome to whatever comfort he finds in the expression of that view. I am satisfied now that a great many of these dyes can be made as cheaply here as elsewhere. I am satisfied that with respect to many of these dyes our industry is in a position where it is absolutely self-sustaining as against Germany or anybody else. As to the dye industry or any other industry, so far as that is concerned, Mr. President, which is in that position, I can not consent to giving them the high rates that are proposed; certainly I shall not consent to giving them an embargo; but if the Senator is able to show that there is any particular dye industry in this country that is still struggling under difficulties, that is not able to protect itself with a reasonable tariff duty such as he proposes to place upon that industry, then the Senator may deal with that in any way he pleases. That is an exception; but an embargo, such as we adopted during the war, when we had practically no dyestuff industry in America, is all-embracing and covers everything, whether it is able to stand on its own feet or whether it is still in swaddling clothes and unable to protect itself. I shall oppose it to the end.

Mr. FRELINGHUYSEN. Notwithstanding the Senator's lengthy statement, the situation resolves itself to this: The Senator from North Carolina was willing to support an embargo under a Democratic administration, but he is not willing to support it under a Republican administration.

Mr. SIMMONS. Why, Mr. President——

Mr. FRELINGHUYSEN. Mr. President, I refuse to yield further.

Mr. SIMMONS. That is an absurd statement, in view of the fact——

Mr. FRELINGHUYSEN. Mr. President, I refuse to yield.

Mr. SIMMONS. Mr. President, I ought to be permitted to answer that.

Mr. FRELINGHUYSEN. All right.

Mr. SIMMONS. I say the Senator's statement is absurd, in view of the fact that the last time I voted for the extension the Republican Party was in complete control of both Houses of Congress and had its own President in the White House. The Senator ought to be more careful of his facts before making a statement of that nature.

Mr. FRELINGHUYSEN. But the Senator has stated that he voted for it simply until we could enact a permanent tariff law. Now he deserts the principle, and yet there is no evidence that this industry has been developed as he desired so that our national defense could be secure. He has no evidence of that, and yet that was the reason for his voting for it before. He deserts the principle of national defense.

Mr. SIMMONS. Mr. President, the Senator did not hear the able speech of his colleague the Senator from New Hampshire [Mr. MOSES] this morning, or he would not make that statement.

Mr. FRELINGHUYSEN. Mr. President, I heard that speech and I reiterate my statement. A great deal has been said about the rates of duty being sufficient to protect the American dye industry against Germany. The Tariff Commission, after an exhaustive study of the entire dyestuffs and coal-tar chemical industry, states as follows, on page 24 of a report on "Dyes and related coal-tar chemicals":

> What rate of duty would protect all branches that now show any growth and will guarantee the development of those that are missing? To this the Tariff Commission is bound to answer that this end apparently can not be accomplished by any rate of duty familiar in American tariff legislation. This conclusion is inevitable when a comparison is made of what is known of domestic costs with the pre-war prices of German dyes, or even with the very recent prices at which those dyes were offered in exchange for food.

Further on this report states:

> Again, deceptive advertising and misleading propaganda can be protracted by many shrewd devices long enough to demoralize a market in spite of any law that has thus far been enacted.

And further:

> A law that would be effective against German dumping of dyestuffs will be difficult to draw, for the usual test of dumping can hardly be applied. A comparison of their export with their domestic prices will have little meaning, because both are fixed by a monopoly and may be adjusted at will, and because private contract prices may easily be made to vary widely from published quotations.

In order to show the efforts of the German importers and their agents during the consideration by the committee of this question I want to refer to a bill which was submitted by certain German importers, who prepared it and sent it to a United States Senator. This bill was prepared by the lawyer of a prominent textile industry in this country and another man representing one of the German importers. It was a new method of imposing duties by identifying according to Schultz numbers; but in the bill there was what was afterwards found to be a joker, a provision that dyes invoiced by the manufacturer or his agents in the country should have a certain low rate of duty, but a higher rate of 90 per cent was imposed on all dyes invoiced by any person other than the manufacturer or his agent. When the Tariff Commission made their report this is what they said:

> PREFERENTIAL RATES ACCORDING TO WHO IS THE SHIPPER.
>
> The provision in paragraph 26 and paragraph 27 which specifies a certain rate of duty on dyes invoiced by the manufacturer or his agents in the country of origin, and a higher rate (90 per cent) on all dyes invoiced by any person other than the manufacturer or his agent, is a type of preferential rate legislation which would result in a complete domination and control of all imported dyes by agents of the foreign manufacturer. This also violates the policy of the United States in regard to preferential tariff treatment. Instead of granting preferential duties to any one country, it grants preferential treatment to a group of exporters or individuals.

That outrageous proposition was actually proposed by these German importers and sent to the Tariff Commission, who fortunately discovered this joker in its provisions, and reported to the committee against it, outlining the menace to the American industry if that system should be imposed.

Mr. President, I stated that there was a great deal of activity among the German importers in this country. The two great firms that imported dyes were the Hochst Co., represented by Herman Metz, and the Badische Anilin Dye & Soda Fabrik Co., represented by Kuttroff, Pickardt & Co. Their agents have been in this country and in this Capitol assiduously making this fight against the embargo. Germany wants to secure the American market for her dyes. She will go to any extent to accomplish this purpose. I think Germany will surrender her commerce in fabrics, metals, and toys if she can only control again this dye industry.

Chemicals formed a large part of the materials used in the war. I think the late Senator Knox spoke of the large German dumps that were discovered after the armistice, where over 50 per cent of the shells contained poison gases. This war was largely fought with chemicals. The next war will be fought entirely with chemicals—in the air with chemical bombs; from the land with high-explosive projectiles.

The Senator from New Hampshire [Mr. MOSES] spoke of the fact that we had engaged in a treaty prohibiting chemical warfare. It is true that we have engaged in a treaty prohibiting chemical warfare, but that treaty is not made with Germany; and while to-day we might observe its conditions, if to-morrow we were attacked by Germany, with her tremendous resources in these great chemical industries on the Rhine that gassed our boys before—300,000 of them were affected by that gas—if those industries to-morrow were turned from peace pursuits to war activities they could supply an army at once with the necessary chemicals and explosives with which to attack, notwithstanding the fact that we have entered into an agreement not to use chemicals and poison gas with other countries.

As a question of national policy I quoted President Wilson's indorsement of the dye embargo; I spoke of Senator Knox's great speech when the dye embargo was placed in the emergency tariff; I have here President Harding's indorsement of it, dated August 10, 1921; that of Secretary Weeks, dated July 26, 1921; Secretary Denby, dated July 27, 1921; General Pershing, dated July 15, 1921; General Fries, of the Chemical Warfare Service;

and so I might go on, showing the absolute necessity from the standpoint of national defense of maintaining independently this chemical industry in this country.

The question is, Shall we continue this policy of an embargo? For what purpose? Have they not had time enough in the two years to establish their facilities, to understand the processes and secrets of these German patents, to supply the American market and the American manufacturer with the necessary dyes? No. Our national policy has been a fast-and-loose policy for the last two years, a short three-months embargo, and then an emergency embargo, and the new industry had no means of knowing whether this was a permanent policy or not.

The time necessary for research and experimentation has been too short. To-day there are building great extensions to these dye plants. Chemists are making researches. I understand a great college is willing to erect a laboratory for further research in dye and chemical science. This industry is all in a state of initial development, but if, as the Tariff Commission says, we can not impose a duty high enough to properly protect, it is necessary that we go further and close the doors to those dyes which can be manufactured here, and which can be and will be imported from abroad, opening the door only wide enough to admit those dyes which we have not been able to manufacture as yet, and closing it gradually as they develop, through research, the knowledge of making these dyes which at the present time are not made here.

I say this policy is established. It is a question of protecting a great industry created during the war; but it is more than that; it is a question of the national policy of preparedness and of defense, and no one dare desert the safety of his country, with the knowledge that he has of the history of the recent war. During the war no one would have dared make the speeches which have been made in this body during the last three months, encouraging Germany's commerce and production in the dye industry, practically defending Germany's interests. There would have been a united protest in this body.

But we have forgotten. Time blots from our memories the heinous offense of Germany when she launched her first gas attack on the helpless soldiers of Canada and France, and there was no means known by those armies to counteract it until we invented the gas mask to protect our soldiers from the suffering caused by that heinous method of warfare.

The secret gases were known to the chemists of those industries on the Rhine. It was not known to our chemists here, because with lack of vision and lack of statesmanship we had always yielded to the lobby of the German interests, and had failed to protect our dye industry and establish it firmly on an independent basis in this country. We had no industry and practically had to build it during the war.

Mr. McCUMBER. The Senator has just intimated that we invented the gas mask. In fact, we did not even do that. It was invented by foreign chemists rather than American chemists.

Mr. FRELINGHUYSEN. If I said "we," I was referring more generally to the Allies and those associated with us.

Mr. McCUMBER. I simply wanted to go further and state, in justification of what the Senator is saying, that the chemical industry was not sufficiently established in this country so that we could even invent a defense against the gas attack.

Mr. FRELINGHUYSEN. I thank the Senator very much. I know that we made large quantities of gas masks in this country, but I did not know where the gas mask was invented. I simply wished to show how helpless we were, our ignorance of this method of warfare, and how lacking the whole world, except Germany, was in knowledge of the technical science necessary to make this gas.

I desire to introduce, at this point, a partial list of 12 poison gases manufactured from coal tar, and the output, naming the factories, of finished poison gases for the "I. G."—that is, the Interessen Gemeinschaft of Germany—a detailed statement that has been prepared, showing the gases that were manufactured during the war in certain dye plants, to counter the statement which has been made that they were not made in dye factories.

There being no objection, the matter was ordered to be inserted in the RECORD, as follows:

A PARTIAL LIST OF 12 POISON GASES MANUFACTURED FROM COAL TAR.

Chlorpicrin (United States capacity, 1,500 tons per month), brombenzyl-cyanid (one of the four gases produced on large scale in the United States), di-phenyl-chlor-arsine, phenyl-di-chlor-arsine, xylyl bromide, benzyl bromide, phenyl carbylamine chloride, benzoyl bromide, chloracetophenone, bromacetophenone, benzyl chloride, benzoyl chloride.

There are dozens or maybe hundreds of coal-tar chemicals already worked out suitable for toxic and poison gases, and there are possibilities for thousands of others.

A PARTIAL LIST OF COAL-TAR EXPLOSIVES.

Picric acid, tri-nitro-toluol (T. N. T.), tetra-nitro-methyl-anilin, trinitroxylol.

A number of other coal-tar explosives have been manufactured and the future will bring forth a great many more, but the above named are the principal ones used during the last war.

Chief organic chemicals used as war gases by Germany (all these were made in the plants of the Interessen Gemeinschaft).

OUTPUT OF FINISHED POISON GASES.

(From various works.)

Gases.	Factory.	Monthly output in metric tons.		Total production in metric tons (if known).	Manufacture began.
		Average.	Maximum.		
Chlorine	Leverkusen	600	.....	28,000	Prior to war.
	Höchst	240	.....	.....	Do.
	Ludwigshafen	860	1,261	38,600	Do.
Phosgene	Leverkusen	.....	30	1,450	Do.
	Ludwigshafen	288	621	10,682	Do.
Diphosgene	Leverkusen	.....	300	5,000–10,000	June, 1915.
	Höchst	139	266	3,616	September, 1916.
Chlorpicrin	Leverkusen	.....	200	.....	July, 1916.
	Höchst	45	101	1,127	August, 1916.
Xylyl bromide	Leverkusen	.....	60	500	March, 1915.
Bromacetone	do	.....	20	.....	Early in 1916.
Bromacetone. Bromethylmethylketone.	Höchst	19	45	685	April, 1915.
Phenyl carbylamine chloride.	Höchst	65	124	721	March, 1917.
B. dichlorethylsulphide (mustard gas).	Leverkusen and one other factory.	.....	300	[1] 4,500	Before July, 1917.
Diphenylchlorarsine Diphenylcyanarsine.	Höchst	150	300	3,000	[3] May, 1917.
	A. G. F. A.	.....	.....	[2] 4,400	
Ethyldichlorarsine	Höchst	78	50	1,092	August, 1917.
Dichlormethylether	do	26	51	233	September, 1917.
Dibrommethylether	do	7	29	69	April, 1917.

[1] Estimated from capacity of plant. Probably the same quantity was produced at some other factory as the output of thiodiglycol would suffice for this.
[2] Estimated from Leverkusen output of diphenylarsinic acid.
[3] Diphenylchlorarsine was first produced in May, 1917, and from February, 1918, onward itwas converted to diphenylcyanarsine.

High explosives and intermediates, in metric tons per week.

[Quantities of intermediates are shown only where not converted to finished explosives in the producing works.]

Factory.	Amm. nitrate.	Dinitrobenzene.	Dinitrotoluene.	Trinitrotoluene.	Mononitronaphthalene.	Dinitronaphthalene.	Dinitrochlorbenzene.	Dinitrophenol.	Picric acid.	Trinitroanisol.	Dinitrodiphenylamine.	Hexanitrodiphenylamine.

Schlebusch	100	.....	.....	150	.....	.....	.....	.....	.....	.....	.....	.....

[1] For 3 months only.
[2] For 1 year.

Other intermediates: Ludwigshafen, Sodium benzene sulphonate, 100 tons per week.
Other explosives: Schlebusch, Hexanitrodiphenyl sulphide, 15 tons per week.

Output of intermediate products for poison-gas manufacture.

Finished gas.	Intermediate products.	Total output (metric tons).	Place of production.	Destination of intermediate products.
Phenyl carbylamine dichloride.	Phenyl (mustard oil).	(1)	Kalle.....	Höchst.
BB-dichlorethyl sulphide (mustard gas).	Thiodiglycol..	7,026	Ludwigshafen	Leverkusen and one other factory.
Diphenylchlorarsine....	Phenyl arsinic acid.	1,600	Ludwigshafen	Unknown.[3]
	Diphenyl arsinic acid.	1,200 [3] 4,800	Kalle. Leverkusen...	Do.[2] Probably A. G. F. A. Berlin.
Ethyldichlorarsine.....	Ethyl arsenious oxide.	840	Ludwigshafen	Höchst.

[1] Not obtained.
[2] Probably Leverkusen.
[3] Estimated from capacity of plant.

NOTE.—In addition Höchst produced 3,000 tons of diphenyl chlor and cyanarsines from own intermediates.

Mr. FRELINGHUYSEN. I also ask leave to insert, at the end of my remarks, a statement of the extent of the chemical industry in this country as developed before, during, and since the war, and a statement of the dye industry as developed during the war. (See appendix.)

I want to read, for the benefit of the Senate, a part of the speech the late Senator Knox delivered during the debate on the emergency tariff bill, on the necessity for an embargo. He followed the Senator from New Hampshire [Mr. MOSES] in his previous speech on this subject, and said:

I have listened with great attention, some amusement, and some astonishment to the combination of logic, eloquence, doggerel, and prejudice which have been emitted by my distinguished friend the Senator from New Hampshire [Mr. MOSES]. It is not my purpose to approach the consideration of the amendment to this bill for which I am responsible from the standpoint of a profit and loss account of a Dolly Varden calico mill in New England, but from the standpoint of the roster of the dead who have died in this Great War, from the standpoint of the list of casualties, and I make my appeal to the men who have followed the history of this war and learned the lessons it has taught. It will require but a few moments, Mr. President, to justify this amendment, explain its purpose, and satisfy thoughtful men of its wisdom.

When the Great War with Germany broke out, 99 per cent, perhaps, of all the projectiles that were flung against the allied forces were filled with high explosives, high explosives which France and Great Britain could not and did not produce, but which eventually were produced by the United States. In the last great retreat an examination of the huge ammunition dumps of the German Army showed that over 50 per cent of their projectiles, instead of being charged with high explosives which merely exploded the projectile and scattered its fragments, were filled with poisonous gases which mingled in the air and asphyxiated and destroyed thousands, even though not within their immediate range.

What does that lesson teach? It teaches that from practically a negligible quantity of projectiles charged with poisonous gases during the war there developed fully 50 per cent so charged, and if the war had continued two years longer and America had not made the progress which enabled us to meet these people upon common ground the story of the war would have been different.

* * * * * * *

Mr. President, to-day perhaps the noblest call to man is the dissipation of the possibility of future war, and perhaps one of the strongest arguments that can be put up to governments is that to avoid war we must disarm. But what profits it, Mr. President, if we shall destroy our battleships, if we shall destroy our arsenals, if we shall cease to cast guns and swords and bayonets, if we leave the world's productive capacity of organic chemistry in the hands of Germany, which enables her to turn out instantly, with the flexibility of her plants, the most deadly weapon that human ingenuity has yet devised? You may sink every German battleship to the most remote cave of the sea, you may reduce to dust her proudest fortresses, you may blow the great Krupp plant to hades, and you may cast the big Berthas into plowshares and pruning hooks, but if you leave the dye industry in the possession of Germany she has the world by the throat.

There are 55 chemical plants in my State, and, I think, over 200 throughout the country. Those chemical plants, with the exception of one or two, have no relation to the great Du Pont interests. The dye industry is only a part of their great production, a small part, and I think the value of their production as related to the entire production of dyes in this country is some 15 per cent. I have no interest whatsoever in that factory or its future prosperity, although it is within my State. I am interested in the general proposition that these great plants, and the facilities of these great plants, should be maintained for national protection.

Two days ago I crossed the Delaware River from Wilmington to Penns Grove. There was a great town which had been created during the war, where two large powder plants had been established. They had schools, electric lights, splendid water facilities, fine homes. Half of those homes were closed; the other half were occupied by men who formerly worked in those powder plants but are now working in a dye industry located there.

Six years ago I stood before 5,000 men working in those plants. They were making powder for our allies and for ourselves to fight the great war of civilization against Germany, and I said to those men that I hoped the time would come when that great war industry could be turned to commercial uses and peaceful pursuits. One man in the audience said, "What will you do if you get to the Senate to protect us?" I said, "There is only one availability for a plant of this character, and that is to manufacture dyes. I will do everything in my power to see that a dye industry is established in this country and properly protected."

I never expected we would have the experience we had during the war; I have learned a great deal by it; but I would rather stand here to-day with an embargo, obnoxious as it seems to be to the tastes of some men in this body, than desert those men working in that factory who worked so patriotically for this country during the war. If the proper protection is given that great plant, it will not be long, in my opinion, before that entire city will be restored and rehabilitated.

But I said the influences were here. Already it is expected by these German interests that this dye embargo will be defeated.

Mr. WILLIS. Mr. President——

The PRESIDING OFFICER. Does the Senator from New Jersey yield to the Senator from Ohio?

Mr. FRELINGHUYSEN. I yield.

Mr. WILLIS. The Senator knows that I am a profound believer in the protective policy. He knows that I am interested in the maintenance in this country of the dye industry, because I believe it to be a key industry, vitally important. What I should like to hear the Senator explain is why an embargo, the thing which the Senator has just said is something obnoxious, is necessary in this particular industry when we rely upon the general idea of a protective tariff in other industries?

Mr. FRELINGHUYSEN. That is a very fair question. The Senator was not here when I read from the Tariff Commission's report an official statement to the effect that no rate could be imposed which would protect us against Germany's connection. I shall be glad to read it again to the Senator.

Mr. WILLIS. But what I can not understand is why there can not be a rate imposed which will afford protection.

Mr. FRELINGHUYSEN. In the first place, the cost of production in Germany is so low, compared with the cost of production here, that we can not impose a rate which will be high enough to properly protect us against that differential. Second, Germany's method heretofore, through private contracts and through substitution of markets, has been such that she would evade any protective law that we can lay down. Furthermore, Germany will ship her goods in here for nothing in order to regain the market and get the trade back again. To show that she is expecting to secure this business again, I wish to read, for the information of the Senate, a letter from Kuttroff, Pickhardt & Co., of 128 Duane Street, New York, representing the great Badische Analin Co. It is as follows:

NEW YORK, *July 1, 1922.*

DEAR SIRS: We beg to offer you our services for the importation of coal-tar dyes, including indanthrene and other vat dyes, manufactured by the Badische Anilin & Soda-Fabrik and by other makers. We have the assurance of the manufacturers that they will give prompt attention to our orders. The prices will be as low as can be made and, we have every reason to believe, will be found satisfactory by you.

It is to be hoped that the embargo and license provisions which were eliminated from the tariff bill by the House of Representatives will not be put back. It is also to be hoped that these same provisions now in force under the terms of the emergency tariff bill will be repealed. The removal of these restrictions on importations of coal-tar dyes would enable us to carry in stock all the dyes needed and to fill your orders promptly at current prices. It would permit us to bring in samples of new products as soon as they are put on the market as well as to provide quantities sufficient for your practical trials. Thus you would be in a position to adopt improvements as quickly as the foreign-dye consumer.

Soliciting your favors, we remain,
Yours truly,

KUTTROFF, PICKHARDT & CO. (INC.).

Mr. President, the industries of my State are flooded with similar circulars.

Mr. BURSUM. Mr. President——

The PRESIDING OFFICER. Does the Senator from New Jersey yield to the Senator from New Mexico?

Mr. FRELINGHUYSEN. I yield.

Mr. BURSUM. I wish to ask the Senator from New Jersey if it is not true that Germany, France, England, and Italy all have embargoes which prohibit the importation of dyes into those countries?

Mr. FRELINGHUYSEN. Yes. Even Germany embargoes against our dyes.

Mr. BURSUM. Japan has guaranteed an 8 per cent return to her dye manufacturers. Connected with the policy of creating an embargo on behalf of those countries is a policy in behalf of the national defense of those countries in case of war. The natural policy for Germany to pursue would be to control the dye industry of the world. If she could control the dye industry of the world, it would place her in a superior position so far as having a controversy with any other country is concerned.

The primary reason for the embargo which is sought for this country is to guarantee an adequate national defense in case of trouble. Notwithstanding the fact that we all hope there will be no further war, and that agreements have been entered into between many of the countries to maintain peace, the fact that countries like Germany, England, Italy, Japan, and France have created embargoes in order to maintain the industry in those respective countries, thus giving them the tools with which to create war, indicates that it would be unsafe for this country, as long as the embargoes are maintained by foreign countries, to leave the bars down for importations and thus destroy our industry here.

Mr. FRELINGHUYSEN. The Senator is absolutely correct in his statement. If Germany regains her domination of the world's dye and chemical markets, and in my opinion she is all-powerful, every nation which does not protect itself by an independent dye industry would be at her mercy.

Mr. President, before closing I want to read a letter which was sent to me by a chemist in my State who built a small factory during the war. He manufactured only one color and put all the money he had saved into the one little plant. He made a little money. He expanded that plant. To-day all the money he has is invested in that plant and it is closed. He is not manufacturing because he is uncertain as to the policy of the Government and as to what permanent policy it is going to establish in regard to the independent dye industry. He writes me this letter, which quotes from a friend of his who has just returned from Germany, as follows:

"The wage agreement of May 26, mentioned at the close of Mr. Payne's report, fixes an average rate of 23 marks per hour, or 4,585 marks per month, exclusive of family allowances, pay for overtime, etc. Although this wage level is extremely low when expressed in gold, yet the German laborer is more favorably situated than the figures seem to indicate, due to the higher purchasing power of the paper mark within Germany and to Government subsidies, chief among which are the bread subsidy and the rent restrictions act."

The figures as to the subsidies, etc., are interesting and have a bearing on the question of protection for the American chemical industry, but of surpassing interest is the situation in a nutshell as given in the extract above.

Twenty-three marks per hour amounts to approximately 8 cents in American gold. The American importer uses identically the same yellow metal that we manufacturers use as standard of value. He buys an hour's chemical labor in Germany for 8 cents. We buy an hour's American labor at an average of just about six times that amount. Let us suppose that he has a 60 per cent duty to pay and it costs him 13 cents against our 48 cents. It is the same old yellow metal in both cases. We have to have our profits on top of the cost; so does he. Question: Where would we get off even with 100 or 200 per cent protective duty?

Mr. President, a great deal has been said about the Du Pont concern. The statement of the Senator from New Hampshire [Mr. MOSES] as to corruption and fraud may or may not be true. I do not know his object in attacking that corporation. It is an American corporation doing business in America and employing American labor. The Du Pont concern is only one of over 200 concerns engaged in the manufacture of coal-tar products. If that concern has been guilty of any fraud or of any dishonesty of purpose there are adequate laws to punish it.

But their services during the war appealed to many as patriotic and as efficient. I think a French officer stated in one of the hearings before the Committee on Military Affairs that if it had not been for the genius and ability of this great powder-making concern, with its century of history, the war could not have been won. I like to think of the good things about men and about business. But because they make chemicals and dyes and desire protection the same as their competitors, stating that the only assurance on which they can go forward is the pledge of the Government that the embargo will be continued, I do not believe that is criminal on their part. I have a statement of some of the activities of the Du Pont Co. during the war, prepared by the Ordnance Department. I ask that it be inserted in the RECORD as an appendix to my remarks. It is quite lengthy and I shall not take the time to read it.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See Appendix A.)

Mr. FRELINGHUYSEN. Mr. President, to support my contention regarding German wages and the differential between German and American wages I wish to insert in the RECORD, as an appendix to my remarks, the report of the United States Department of Commerce, a special report on labor costs in the German chemical industry.

The PRESIDING OFFICER. Without objection, permission is granted.

(See Appendix B.)

Mr. FRELINGHUYSEN. Mr. President, my fight for a dye embargo and my insistence upon its continuance is based upon two motives—first, to protect and continue the industry in my State; and, secondly, because I believe it is absolutely essential for the national defense, as I read the history of the war and what was accomplished by Germany by reason of her advanced position in chemical manufacture. This is a great question for the Senate to decide at this time. The only harm that will come from a dye embargo is to the German industries—the German cartel that furnished Germany with all her chemicals and ammunition during the war. If we make a mistake now and lift this embargo, it may destroy, and probably will destroy, this great industry, which was created during the war by the men of energy and genius who had the courage and the ability quickly to provide our armies with the necessary materials with which to meet the onslaught of Germany.

There is just one question involved. Inasmuch as the former President of the United States, Mr. Wilson, recommended the embargo, since President Harding has recommended its continuance, and every Cabinet officer and military officer who is familiar with the situation and every man who has studied it makes similar recommendations, the question which we have to decide as to its continuance is whether we are going to stand for America first or for "Deutschland uber Alles."

APPENDIX A.

MEMORANDUM ON THE WORK OF THE DU PONT CO. FOR THE ORDNANCE DEPARTMENT.

1. During the early years of the World War—1914, 1915, and 1916—when the Du Pont Co. was furnishing smokeless powder to foreign Governments at prices ranging from $1 to 80 cents per pound, it continued to fill all powder requirements of the United States Army and Navy, aggregating probably in excess of 10,000,000 pounds at prices ranging from 50 to 53 cents per pound.

2. The initial price of $1 per pound to foreign governments can not be considered as particularly excessive when the enormous expansion of plant capacities necessary is considered, together with increased costs of labor and raw materials. Furthermore, most foreign contracts were for powder for small arms and field guns, and pre-war prices to the trade for such granulations had not been much lower—about 80 cents per pound.

3. In April, 1917, the Du Pont Co. announced its readiness to manufacture all of the estimated joint requirement of the United States Army and Navy for the year 1917 of 115,000,000 pounds of smokeless powder at 47½ cents for cannon powders and 62 cents for small-arms powder. This price was lower than that of any other manufacturer, and 5½ cents less than the maximum price of 53 cents per pound fixed by Congress in 1913 to be paid to manufacturers of cannon powder for the United States Government. In its operation of the Old Hickory Plant the Du Pont Co. produced smokeless powder for as little as 38 cents per pound.

4. At the beginning of the war, in 1914, the total capacity of the three smokeless-powder plants of the Du Pont Co. was only 1,000,000 pounds of cannon and rifle powder per month. In April, 1917, the combined capacity of these three plants was 33,000,000 pounds per month, and in the last month before the armistice the total capacity of these plants, combined with that of the Government plant at Old Hickory, built and operating by the Du Pont Co., was 52,000,000 pounds per month.

5. The Old Hickory Plant, at Nashville, Tenn., was built by the Du Pont Engineering Co. to manufacture 900,000 pounds per day. Its cost was estimated at $90,000,000.

According to contract requirements it was to be in operation within eight months. Powder was actually being produced within five months after construction was started and nearly 20,000,000 pounds were manufactured prior to November 11, 1918, or about 8,000,000 pounds in excess of contract requirements, while construction was 96 days ahead of schedule time, the plant being 93 per cent completed. This plant was the largest smokeless-powder plant ever constructed in the world. It covered an area of 4,706 acres, including a village for housing nearly 30,000 people, and was complete in all respects with units for purification of cotton and manufacture of nitric acid, sulphuric acid, diphenylamine, and other materials used in the manufacture of powder.

6. Prior to the war the high explosives manufacturing capacity of the Du Pont Co. was about 600,000 pounds of crude T. N. T. and 60,000 pounds of mercury fulminate per month. No capacity existed for the manufacture of tetryl, picric acid, ammonium picrate, and other high explosives. By November, 1918, the capacity of the Du Pont T. N. T. plant had been increased to 6,000,000 pounds per month and construction on an additional plant started. A monthly capacity for 150,000 pounds of tetryl and 250,000 pounds of ammonium picrate, together with 700,000 pounds of ammonal and 65,000 pounds of T. N. T. blocks for the Engineer Corps had been reached.

7. Prior to the war T. N. T. sold for about 20 cents per pound, with toluene at about 19 cents per gallon. In 1915 and 1916 the price of toluene rose rapidly to as high as $7 per gallon, and T. N. T. was sold at prices from $1 to $1.50 per pound. The Du Pont price on foreign contracts did not exceed $1, while its price to the United States Army varied from 64 cents to as low as 35 cents. New contracts were being made shortly before the armistice on a base price of 26½ cents per pound.

8. The technical organization of the Du Pont Co. was enlarged to meet all requirements. In addition to the enlargements of its existing plants mentioned above, it constructed the Old Hickory smokeless powder plant, the guncotton plant at Hopewell, Va., which actually produced over 1,000,000,000 pounds of guncotton for the Allies, the large shell and booster loading plant at Penniman, Va., loading plants for smokeless powder, airplane bombs, etc.

9. The research and chemical organizations of the Du Pont Co. cooperated to the fullest extent with the Ordnance Department and under

took to the fullest extent to aid in solving any problems which presented themselves.

10. Since the armistice the Ordnance Department has continued its efforts to develop improved smokeless powder and high explosives. The Du Pont Co. agreed to undertake the development of flashless, nonhygroscopic smokeless power for both cannon and small arms. This development work has been conducted at the company's own expense, the Ordnance Department conducting firing tests of all samples submitted. The expense to which the Du Pont Co. has gone in this work is indicated by the fact that in the course of the past year a total of about 375 experimental samples of various compositions and granulations have been made, varying from a few pounds to 100 pounds in weight—mostly about 10 to 20 pounds each. Ninety-six of these have been given firing tests at the Aberdeen Proving Ground, and this development work is still in progress.

11. As a result of this work an improved flashless, nonhygroscopic, smokeless powder for the 75-millimeter gun has been developed and an order for an experimental lot of 50,000 pounds given the Du Pont Co. at the remarkably low price, considering the great cost of the development work, of 60½ cents per pound. No assurances whatever have been given the Du Pont Co. as to the quantity of this powder to be ordered if it is finally approved for use.

12. As a further result of the same line of development the Du Pont Co. has developed improved powders for both .30 caliber and .50 caliber armor-piercing ammunition, which are practically flashless, nonhygroscopic and smokeless and give improved ballistic results. Orders have been placed with them for 100,000 pounds of the .30 caliber powder and 10,000 pounds of the .50 caliber powder at 65½ cents per pound and 87½ cents per pound, respectively.

13. The prices being paid to the Du Pont Co. on the contracts for improved powders mentioned above, are considerably lower than the bids submitted by Picatinny for supplying powders developed at that arsenal to meet the same requirements.

SUPPORTING DATA IN CONNECTION WITH MEMORANDUM ON THE WORK OF THE DU PONT CO. FOR THE ORDNANCE DEPARTMENT.

PARAGRAPH 1. In 1913 Congress fixed the maximum price of 53 cents per pound to be paid to manufacturers of cannon powder for the United States Government. The figure for the quantity supplied to the United States during 1914, 1915, and 1916 is obtained from reports of the Du Pont Co.

PAR. 2. The increase in costs of labor and materials is a matter of common knowledge. The figure for the pre-war price of powder furnished to the trade is taken from the Du Pont report.

PAR. 3. It is apparent from the following figures that all of the powder supplied to the Ordnance Department by the Du Pont Co. in 1917 and 1918 was not furnished at the fixed price of 47½ cents, but it will be noted that the price on all of the contracts listed is below 53 cents.

Prices on Du Pont contracts for smokeless powder.

Contract number.	Amount.	Price.	Deliveries.
GE 151	$10,382,500	$0.47½	December, 1917.
	18,117,500	.49½	September, 1918.
GE 152	13,500,000	.47½	August, 1917–May, 1918.
GE 167	4,000,000	.52	June–October, 1918.
G 616–311 E	14,000,000	.49½	November, 1917–February, 1918.
G 628–312 E	40,500,000	.49½	April–December, 1918.
G 674–314 E	100,440,000	.49½	June–December, 1918.
P 14585–1389 E	15,350,000	.49½	November, 1918.
P 15386–1441 E	122,160,000	.43½	January, 1919.
	54,000,000	.4505	
	18,000,000	.46½	June, 1919.

The above are the largest of the Du Pont contracts for cannon powder.

Paragraph 4: The actual production of smokeless powder at Du Pont plants in October, 1919, is given in Ordnance Department records as follows:

Plant.	Cannon powder.	Small arms powder.	Total.
Carneys Point	21,041,992	3,184,685	24,226,677
Parlin	6,097,995	.....	6,097,995
Haskell [1]	.....	.....	.....
Old Hickory	9,474,794	(2)	9,474,794
Total	36,614,781	3,184,685	39,799,466

[1] Figures not available. [2] Not started.

It is believed that the figure given for the total capacity of 52,000,000 pounds is not excessive.

Paragraph 5; Old Hickory plant: See History of Propellants Section, Explosives, Chemical, and Loading Division, December 15, 1918. Part 3, pages 10–12; also "America's Munitions," 1917–18, By Benedict Crowell.

Original expenditure of $75,000,000 increased by $15,000,000.

Month.	Contract requirements.	Actual production.
	Pounds.	*Pounds.*
July	.....	1,297,291
August	1,300,000	2,873,754
September	3,900,000	6,180,042
October	6,500,000	9,474,794
Total	11,700,000	19,795,880

Paragraph 6: The figures given in this paragraph for T. N. T. capacities are verified in the History of the Explosives Section, Explosives, Chemical, and Loading Division, part 2, volume 6, while the figures for the tetryl capacity of 150,000 pounds per month is found in part 2, volume 7, of the same history.

Paragraph 7: The following figures have been obtained regarding the principal Du Pont contracts for T. N. T.:

Prices on Du Pont contracts for T. N. T.

Contract No.	Amount.	Price.
GE 154	$29,232,000	$0.50
G 1123–404E	5,250,000	.35
G 1251–415E	10,000,000	.64
P 3603–769E	10,000,000	.50
P 15092–1423E	28,800,000	.36

ASSOCIATION OF THE DU PONT CO. WITH THE UNITED STATES GOVERNMENT.

The Du Pont Co. was organized early in the nineteenth century for the purpose of providing the United States Government with a satisfactory war powder, and has continued to supply the same since its organization, approximately in 1802. During that period they have produced a great many million pounds of military propellants and explosives, to such an extent that the Government has always looked on the Du Pont Co. as a dependable branch of the supply service of the United States Government. In this period of time great progress has been made in improving both propellants and high explosives, and the Government has always been able to depend on the Du Pont Co. in keeping up with the progress of the world, giving the benefits of all improvements to the United States Government and supplying material at a fair price. The greatest improvements have been made since the advent of smokeless powder, and when the Du Pont Co. undertook to manufacture a satisfactory powder for the United States Government a great deal of money was spent before the same could be produced, but eventually a powder second to none in the world was the result. All developments in connection with this powder were turned over to the Government by the Du Pont Co. without charge other than the nominal payment of $1 per year in some cases, and in other cases merely a letter of thanks.

When the United States Army decided to have its own powder plant at Dover, N. J., now called Picatinny Arsenal, the officials of the Du Pont Co. assisted in every way possible in the location and construction of this plant, allowing the engineers and draftsmen of the Government free access to all plans of the engineering department of the Du Pont Co., and further than that, allowing the use of Du Pont machinery, so that to-day both Picatinny Arsenal and Indianhead are manufacturing powder by the Du Pont process with machinery of the Du Pont type. In the equipment used are such important items as the dehydration process, alcohol recovery, and such equipment as a centrifugal wringer, mechanical dipper, etc., which are devices or machines patented and the patents owned by the Du Pont Co. In the matter of alcohol recovery alone the Du Pont Co. has been the means of the saving of a great many dollars to the United States Government.

When the European war came along the Du Pont Co. prepared plans for the plant at Charlestown, W. Va., called "Nitro," bought the land and advanced the money to pay for the land. They also provided the Government with cost data relating to labor and salaries to be paid. They built the old Hickory plant, near Nashville, for the manufacture of smokeless powder and were ready to begin construction on another plant to be located near Louisville, Ky., for the same purpose. They extended their plant at Barksdale to the limit of the land and were constructing a T. N. T. plant near Racine, Wis. They built and operated a plant at Penniman, Va., for the loading of high explosive shell and boosters, and assembling of complete rounds of ammunition. At the urgent request of the Ordnance Department they undertook the operation of two bag-loading plants, one at Seven Pines, Va., and the other at Tullytown, Pa., and also assisted the Remington people in their operation at the Woodbury bag-loading plant. When the Government urgently needed special small-arms ammunition, such as tracer and incendiary, they undertook this work although the field was new to them. They produced smoke boxes for the Navy, as well as smoke funnels. With a shortage of silk for silk bags for powder charges, they developed a nitrotite container to take the place of the silk. With a shortage of T. N. T. they developed for the Navy a substitute explosive called "T. N. X." for use in submarine mines, and for the Army two explosives called "Lyconite" and "Starite" for use in drop bombs and hand grenades, respectively.

They did any experimental work the Government requested of them whether or not it was work ultimately to be done by the Du Pont Co., and all information in connection with the same was turned over to the Government for whatever disposition they might see fit. When the German submarine began to menace the Atlantic coast in the summer of 1918 they loaded several hundred drop bombs and got them to New York in time for the emergency, while they did not expect to get into production on drop bombs. They took T. N. T. directly from the melting kettles and loaded it into submarine mines for the Navy in order to expedite the preparation of mines for the North Sea barrage.

In purchasing cotton, Mr. F. L. Connable, of the Du Pont Co., practically handled all purchases of cotton for the United States Government, and as the Du Pont Co. had developed a means for utilizing hull fiber as well as cotton linters these were also purchased. Had the war continued the project of utilizing wood pulp and wood cellulose mixed with cotton cellulose for the production of smokeless powder was all ready to put into operation. Mr. J. B. D. Edge, of the Du Pont Co., handled the purchase of nitrate for the United States Government.

In the conservation of raw materials during the war, which was more important than money, the Du Pont Co. was able to increase the yields from the amount of raw material used, and the methods by which this material was conserved were turned over to the United States Government, as well as to other manufacturers.

During the war the Du Pont Co. produced ——— pounds of T. N. T. for the United States Government. At the time the first proposals for supplying powder to the United States Army were discussed and when it was fully expected that the old congressional price of 53 cents would be the minimum the Du Pont Co. came in with a proposition of 47½ cents for water-dried powder and 49½ cents for air-dried. The water-drying process was a development of the Du Pont Co., which expedited the deliveries of powder by shortening the drying period. The number of pounds of smokeless powder produced by the United States Government during the European war was ——— ———. When it is realized that at the time the 53-cent price was set by Congress as a fair one for smokeless powder the cost of the ingredients in powder were 18 cents less than they were in 1917, on the same basis a fair price for smokeless powder could readily have been understood to mean

71 cents; but the benefit of all the saving and economies in manufacture were given the Government in the price of 47½ cents.

The construction of the shell-loading plant at Penniman, Va., the smokeless-powder plant at Old Hickory, and the T. N. T. plant at Racine was on the basis of cost plus $1.

Since the European war the Du Pont Co., continuing its policy since organization, has undertaken experimental work at its own expense for the development of flashless and nonhygroscopic powder, and has made an agreement whereby this powder will be sold to the United States Government without any charge being made for royalties on any patents owned by the company or taken out by employees of the company, and, further, that in time of war other manufacturers of powder can make the same powder under similar terms.

As in all wars since 1802, the Du Pont Co. cooperated in every way possible with the Government in the late World War.

The Du Pont Nitrate Co., for instance, put at the disposal of the Government its experience and knowledge of the nitrate business in Chile and this country, its facilities for purchasing nitrate of soda, and the shipping of it to this country.

In August, 1917, Mr. Bernard M. Baruch, chairman of the War Industries Board, called Messrs. Tallman and Edge to Washington to discuss the nitrate situation. After receiving their offer to cooperate, Mr. Baruch called the other importers of nitrate of soda, namely, W. R. Grace & Co.; Wessel, Duval & Co., and H. J. Baker & Bro. Co., together in October, 1917, and informed them that the allied Governments had decided to form a pool for the purchase of all nitrate of soda in Chile. This was agreed to, and the nitrate committee of the United States was formed with headquarters in New York City, with Mr. H. Ray Paige, of the War Industries Board, as director of the committee representing the United States Government.

Under this arrangement Du Pont Nitrate Co. brought up at cost for the Army and Navy a total of 218,654 tons nitrate of soda from July 2, 1918, to January 30, 1919. The Government, through the nitrate committee, assigned the boats to the company to load this nitrate, and it was loaded and discharged under the supervision of the Du Pont men. In addition, from January 2, 1918, to December 27, 1918, the company brought up 558,045 tons to be used at its plants in the making of munitions for the Government. The other importers also brought up nitrate for the Army and Navy and for their own account, but they sold their nitrate for various purposes, its uses not being confined to munition plants.

In cooperating with the Government to the above extent the company was consequently in touch with Navy and Army officials, including Hon. Josephus Daniels, Secretary of Navy, Washington, D. C.; Commander C. C. Grimes, Bureau of Supplies and Accounts, Navy Department, Washington, D. C.; General Wheeler, Acting Chief of the Ordnance Department, Washington, D. C.; Samuel McGowan, Paymaster General of the Navy; Roy L. Lowman, lieutenant commander, Navy Department, Bureau of Orders; Maj. Myron S. Falk, Procurement Division, War Department, Washington, D. C.; and Charles H. MacDowell, Chemical and Explosives Division, War Industries Board, Washington, D. C.

The Du Pont Nitrate Co. also cooperated with the finance division at Washington and New York and the nitrate committee of the United States at New York in arranging for proper settlement of nitrate brought up for the Army and Navy, such as suggesting forms and accounting methods to pursue in keeping these records.

At the close of the war the Du Pont Nitrate Co. received letters from all the departments thanking them for their splendid cooperation. One sent to the nitrate committee, of which we were a member, is attached.

UNITED STATES WAR INDUSTRIES BOARD,
OFFICE OF THE CHAIRMAN,
Washington, December 15, 1918.

Mr. GEORGE DUVAL,
Chairman Nitrate Committee of the United States,
50 Broad Street, New York, N. Y.

DEAR SIR: At the close of the activities of the War Industries Board it is but simple justice to express our appreciation and gratitude for the loyal support given us by the industries of the Nation.

As chairman of the board I offer on behalf of my associates and myself a tribute of thanks to the patriotism and devotion shown by the entire commercial body of America. Its members have made service, and not profit, their rule. They have shown a desire to subordinate self and exalt public interest, and to this readiness to make sacrifices in the common cause has largely been due whatever success we may have been able to attain. I would be doing the industries in America an injustice if I did not make this acknowledgment.

May I express the hope that this same spirit may continue in times of peace, so that problems affecting all may be approached in the same spirit of helpful cooperation that has prevailed during the period of the war.

May I, through you, send this message of gratitude to you and to your loyal coworkers in the great industry which you have so ably represented.

Sincerely yours, BERNARD M. BARUCH.

Boats brought up for Army and Navy.

APPENDIX B.

SPECIAL REPORT ON LABOR COSTS IN GERMAN CHEMICAL INDUSTRY END OF 1921.

UNITED STATES DEPARTMENT OF COMMERCE,
BUREAU OF FOREIGN AND DOMESTIC COMMERCE.
(Received April 26, 1922–7–3.)

TRADE COMMISSIONER.

BUDAPESTERSTRASSE 21,
Berlin, W. 8, February 14, 1922.

The DIRECTOR BUREAU OF FOREIGN AND DOMESTIC COMMERCE,
Department of Commerce, Washington, D. C.

Subject: Submitting special report.

DEAR SIR: Herewith I beg to submit my special report, No. 4, on the subject of "Labor costs in the German chemical industry in 1921." The data contained in this report was obtained from the Arbeitsgemeinschaft Freier Angestelltenverbände, Zentralverband der Angestellten, and the Verband der Fabrikarbeiter Deutschlands.

I am attaching herewith a list of the chemical companies who have agreed to the wages and allowances set forth in the report.

Very truly yours, O. S. PAYNE,
Assistant Trade Commissioner.

COSTS OF LABOR IN THE GERMAN CHEMICAL INDUSTRY IN 1921.

Labor costs in the chemical industry are divided into three general classifications:

(a) General workers, such as factory hands, transport workers, boiler men and machinists, hand workers, coppersmiths, and apprentices.

(b) Technical workers, such as laboratory workers, workers without technical school training, workers with technical school training, construction engineers, chemists (nongraduate), pharmacists (nongraduate), dye chemists, etc.

(c) Office workers, such as shipping clerks, registrars, statisticians, typists, telephone operators, bookkeepers, cashiers, etc.

Each of these three classes is organized under a trades union. Of the total number of 350,000 employees in the chemical industry, 90 per cent are said to be organized.

The labor agreement made between the employees' association of the chemical industry and the trades union of factory workers covers employees under the first class (a) for Greater Berlin and the Province of Brandenburg. This territory is divided into four districts in which different rates of pay prevail. These districts are comprised as follows, each district coming in its order from A, having maximum rates, to D, having minimum rates:

A. Greater Berlin, Aldershof, Ridow, Koepenick, Friedrichshagen, Erkner, Gruenau, Wildau, Koenigswusterhausen, Oranienburg, Spandau, Staaken.

B. Lautawerk, Lonzawerk, Berman, Heiligensee, Nowawes, Spremberg, Velten.

C. Brandehburg/H. Cottbus, Doebenitz, Eberswalde, Forst i. h., Frankfurt/O. Kuerstrin, Premnitz, Vordamm, Michendorf, Werder.

D. Finkenheerd, Liebenwalde, Perleberg, Rheinsberg, Schniebuchen, Arnswalde.

The table given below shows the maximum wages paid in class A at the beginning and at the end of 1921 and also the average wage for the year.

Hourly labor wage rate, Berlin district.

(Wages per hour.)

	Beginning 1921.		End of 1921.	
	In marks.	In dollars.	In marks.	In dollars.
Factory hands:				
Men	6.40	0.094	8.50	0.045
Women	4.25	.055	5.75	.03
Transport workers:				
Chauffeurs	6.76	.104	9.35	.05
Drivers	6.54	.101	9.13	.048
Elevator and stable men	6.43	.099	8.96	.047
Boiler men and machinists	6.45	.099	9.00	.048
Helpers	6.25	.096	8.65	.046
Hand workers:				
Skilled	6.55	.101	9.10	.048
Partly skilled	6.30	.097	8.70	.046
Coppersmiths	6.75	.104	9.30	.049
Apprentices:				
First year	0.90	.014	1.50	.008
Fourth year	2.35	.036	4.00	.021

Marks converted to dollars at (German) Federal Statistical Bureau's (Statistiches Reichsamt) average exchange rates as follows:
For January, 1920, marks 64.92 per $1.
For December, 1921, marks 188.67 per $1.

LIST OF MEMBERS OF THE EMPLOYERS' ASSOCIATION OF THE GERMAN CHEMICAL INDUSTRY.

53. Huth & Richter, Wormlitz, III.
54. Verein chem. Fabriken Zeitz A. C., Zeitz, III..

With the exception of the coppersmiths and apprentices, all these workers start at a wage averaging 4.6 per cent less than the rates given above, which are reached after a two months' probationary period. District D rates average 33 per cent less than those paid in District A, this difference being due to the higher cost of living which exists in the latter district. The before-mentioned agreement likewise makes the following supplementary provisions:

A family allowance of 14.40 marks per week will be allowed for—

(a) A dependent wife.

(b) Every child under 14 years, or if attending school until 18 years old. Illegitimate children are to be regarded as equal to legitimate children when belonging to the same household.

(c) A dependent person in the home of the employee and whom he is bound to support, either because of legal or moral obligations.

In case the employee is taken ill, the family allowance will be paid for the week in which he is taken sick and for the following week, independent of the payment of his wages.

Women employees whose husbands are capable of earning their living have no claim to the family allowance.

It is agreed by the parties to this agreement that all questions arising regarding the family allowance shall be decided by an impartial commission.

If an employee is absent from work through his own fault more than two days per week, he loses his right to the family allowance.

Working outside the fixed working hours for pay for another employer is not permitted and an infraction will result in immediate dismissal.

The wages paid in 1921 to the technical workers listed under Classification B above are shown in the following table. These figures, which cover the districts of Berlin, Leipzig, Cologne, Bavaria, central Germany, and Silesia-Posen, give the minimum, maximum, and average wages for the beginning and the end of the year. By the minimum wage is meant the beginning wage, while the maximum wage is that paid workers with 11 years' experience:

Average monthly technical workers' wage rate in German chemical industry.

PERIOD—BEGINNING AND END OF 1921.

Marks converted to dollars at (German) Federal Statistical Bureau's (Statistiches Reichsamt) average exchange rates as follows: For January, 1920, M. 64.92 per $1; for December, 1921, M. 188.67 per $1.

The agreement covering the conditions of labor of the technical and office employees in the greater Berlin district comprises the following:

Employees in these branches of the chemical industry are paid according to length of service. Starting with the first year the rates increase to the maximum with the eleventh year.

The regular weekly working time is 46 hours. Ordinarily, work stops at 2 p. m. Saturdays and at 1 p. m. on the days before Christmas, New Year's, Easter, and Whitsunday.

Overtime is restricted to occasions of extraordinary necessity. For overtime between the ordinary closing time and 7 p. m. one two-hundredths of the monthly wage plus 25 per cent is paid per hour. Between 7 p. m. and 6 a. m. and also Sundays and legal holidays this rate is increased to 50 per cent.

After six months' employment holidays are allowed according to the following schedule:

21–25 years of age, 12 workdays per year.
25–30 years of age, 15 workdays per year.
30–35 years of age, 18 workdays per year.
35–40 years of age, 21 workdays per year.
Over 40 years of age, 24 workdays per year.

In cases of sickness the employee is entitled to his wages for 6 weeks, which is increased to 13 weeks after 9 years' service. When the sickness lasts more than 3 days the employee, upon the request of the employer and at his expense, must furnish a certificate of sickness from an official doctor.

The following extra compensation is allowed:

1. For married men, 100 marks monthly.
2. For each child, 100 marks monthly.
3. For women workers with dependents, 10 per cent less than the above.

All disputes arising out of the agreement signed by the employees' and employers' representatives shall be settled by a deliberation between the delegates of both sides. In case of a settlement not being arrived at the matter is to be brought before a tribunal established by law and consisting of members of both parties to the dispute.

The agreement for the district of Leipzig comprises the following:

Working time, 8 hours per day, 48 hours per week.

Overtime receives one two-hundredths of the monthly wage plus 25 per cent per hour for the first two hours, which is increased to 50 per cent for all other overtime, including Sundays and holidays:

Vacations are allowed as follows:

After 1 year of service, 6 working days.
After 3 years of service, 12 working days.
After 6 years of service, 18 working days.
Workers 30 years old have a right to at least 12 days.
Workers 35 years old have a right to at least 18 days.

Apprentices receive a monthly expense allowance of 75 marks the first year, 100 marks the second year, and 125 marks the third year.

Wages of female employees, except those between 15 and 19 years old, can be reduced up to 15 per cent.

The agreement for the district of Cologne provides for:

1. An allowance for married men at the beginning of 1921 of 100 marks monthly and 300 marks monthly at the end of 1921.
2. An allowance for each child at the beginning of 1921 of 50 marks monthly and 150 marks monthly at the end of 1921.
3. Women employees with dependents receive 10 per cent less than the above.

The agreement for Bavaria provides:

Working time, 46 hours per week; and the daily working hours to be between 7 a. m. and 7 p. m. On Saturdays and the days before Christmas and New Year's the offices and laboratories to close at 1 p. m.

Overtime between closing and 10 p. m. receives 25 per cent extra. Sundays and holidays 50 per cent extra, while Christmas, Easter, Whitsunday, and May 1, 100 per cent extra.

In case of sickness the salary is paid for six weeks and after three years' service for three months. In case of death the dependent relations are entitled to a settlement of three months' salary.

Vacation with pay are allowed on a basis of 6 week days after one year's service, increasing to 18 days after eight years' service. Employees 25 years old get in addition 3 days, those 30 years old get 6 days, and so on to its maximum of 18 days. Absence from work of more than 6 days can be counted on the vacation time.

Employees reserve the right to organize and can not be persecuted or reduced in salary because of belonging to a trades-union. They, however, are not allowed to carry on political or union propaganda during working hours.

A special daily allowance of 15 per cent is given for work abroad supplementary to traveling expenses.

A married man's allowance of 10 to 15 per cent of the monthly salary is granted.

Women employees with dependents get 10 per cent less.

All disputes arising out of the agreement will be passed upon by a commission consisting of two members of each side. In case of a deadlock the four members will elect an impartial presiding judge.

The agreement for middle Germany—Saxony, Anholt, and Thuringia—is as follows:

Weekly working time, 45 hours.

Employees working 48 hours per week are entitled to two half holidays per month, while those working 56 hours get the same and one one-hundred-and-seventieth of the monthly wage for each hour over 48.

Overtime is paid by 25 per cent extra for the first two hours, while all other overtime, including that on Sundays and holidays, receives one one-hundred-and-seventieth of the monthly salary plus 50 per cent per hour extra.

In case of sickness the salary is paid for 6 weeks and after 10 years' service for 3 months.

A yearly vacation with pay is allowed, which is determined according to the age or length of service of the employee.

An agreement by which an employer binds other employers not to hire an employee who is or has been in his service is forbidden.

The same provision applies for the settlement of disputes as is in effect in the Berlin district.

A wage commission is provided for on which both sides are to have equal representation. Appeals may be made to the regular labor tribunal provided for by law.

An allowance of 100–200 marks per month is made to employees having children.

The labor agreement for Silesia-Posen provides: For the same working time as that in force in the Leipzig district, except that employees averaging 56 hours per week are allowed two half holidays in every four weeks. Overtime is likewise paid the same, except that on Christmas, Easter, and Whitsunday 100 per cent extra per hour is allowed.

Notice of termination of employment must be given six weeks before the termination of the quarter, and after five years' uninterrupted service three months before the ending of the quarter. Notice can not be given to a sick employee during the first six weeks of his illness.

Vacation is allowed as follows after six months' service: Up to 20 years old, 8 workdays per year; over 20 years old, 12 workdays per year, increasing 1 day each year to a maximum of 18 workdays.

In case of disputes not settled by negotiation they will be brought for decision before an impartial commission made up of three representatives of each side.

Apprentices get the following expense allowances: First year, 80 marks monthly; second year, 150 marks monthly; third year, 120 marks monthly; fourth year, two-thirds of wage of minor employees over 17 years old.

In comparing the foregoing labor costs with those of the costs in the chemical industry in the United States the average value of the mark in terms of dollars for each month will be of assistance. The following figures are those issued by the federal statistical bureau (Statisches Reichsamt):

Average for 1921:	
January	64.90
February	61.30
March	62.45
April	63.53
May	62.30
June	69.38
July	76.67
August	84.31
September	104.91
October	150.20
November	260.96
December	192.00

As an indication of how the cost of living has risen in conjunction with the depreciation of the mark and the increase in wages during the year, the following index numbers for the first 11 months of 1921 are of interest. These index numbers which are issued by the Statisches Reichsamt cover only food, heat, light, and housing:

1913–14	100
1921:	
January	944
February	901
March	901
April	894
May	880
June	896
July	963
August	1045
September	1062
October	1146
November	1397

Owing to the recent extraordinary rise in the cost of clothing, the above figures do not give an accurate conception of the increased cost of living, unless taken in conjunction with the following index figures on clothing costs in the Berlin and Ludwigshafen districts:

Berlin.

February, 1914	100
April, 1921	1,077
July, 1921	1,077
October, 1921	1,436
November, 1921	2,188

Ludwigshafen.

June, 1914	100
April, 1921	1,642
July, 1921	1,638
October, 1921	1,882
November, 1921	2,187

APPENDIX C.

Coal-tar products—1919 census of manufactures.

Number of firms	183
Capital	$174,991,835
Salary and wages	$35,235,209
Value of products	$135,482,161
Number of wage earners	15,663

UNITED STATES CHEMICAL INDUSTRY.

MAY 2, 1922.

In order that the Senate may be correctly informed as to the amount of capital actually invested in the various branches of the chemical industry which are covered by Schedule 1, Chemicals, oils, and paints, of this bill, I have had prepared from the Summary of Census of Manufactures, by Industries, for the United States, 1919, compiled for the use of the Committee on Finance, United States Senate, by the Bureau of the Census, Department of Commerce, a table showing the total number of establishments in each branch of the industry, the capital invested, and the amount of wages paid to wage earners, which does not include salaries of officers of corporations, superintendents and managers, and clerks, stenographers, and salesmen, but simply the wage paid to ordinary laborers. This table also shows the total value of the products of that industry for the year 1919:

Industry.	Number of establishments.	Wage earners.	Capital.	Wages paid to wage earners (laborers).	Value of products, 1919.
United States, all industries	290,105	.....	$44,688,093,771	$10,531,600,340	$62,418,078,773
Blacking, stains, and dressings	220	2,455	13,080,901	2,109,103	25,284,072
Bone, carbon and lampblack	35	675	9,790,167	808,332	6,186,204
Charcoal, not including production in the lumber and wood distillation industries	41	209	518,762	156,072	589,418
Chemicals	598	55,586	484,488,412	72,848,324	438,658,869
Cleansing and polishing preparations	499	1,955	12,979,414	1,898,447	26,703,109
Coal-tar products	183	15,663	174,991,835	23,402,140	135,482,161
Drug grinding	31	1,347	14,991,135	1,526,137	16,937,698
Druggists' preparations	524	15,568	102,129,257	12,161,925	114,593,486
Dyestuffs and extracts, natural	144	4,342	38,689,058	4,734,614	53,744,283
Explosives	118	9,249	133,247,684	12,504,986	92,474,813
Fertilizers	600	26,296	311,633,259	25,363,132	281,143,587
Flavoring extracts	453	2,188	13,561,337	1,665,285	30,116,932
Glue, not elsewhere specified	62	4,264	27,237,123	4,776,724	32,134,067
Ink, printing	90	1,988	18,702,523	2,574,920	26,244,470
Ink, writing	61	702	4,803,485	596,168	6,433,941
Oil and cake, cottonseed	711	26,766	203,457,371	20,615,193	581,244,798
Oil, essential	78	321	6,379,910	391,213	5,698,403
Oil, linseed	26	2,173	73,954,065	3,052,269	120,638,100
Oil, not elsewhere specified	280	5,930	91,475,009	6,141,145	156,479,654
Paints	601	17,485	177,314,815	19,550,371	256,714,379
Patent medicines and compounds	2,467	17,444	143,498,611	13,748,813	212,162,255
Perfumery and cosmetics	569	5,405	32,666,633	3,983,016	59,613,391
Salt	86	6,495	47,725,231	7,353,420	37,513,821
Soap	348	20,436	212,416,866	21,228,063	316,740,115
Sulphuric, nitric, and mixed acids	39	4,961	51,160,004	7,916,531	31,470,480
Turpentine and rosin	1,191	28,067	33,595,986	16,972,881	53,051,294
Varnishes	229	4,022	62,461,021	4,567,788	83,632,424
Wood distillation	115	4,946	42,334,503	5,309,689	32,545,314
Total of all chemical industries	.....	287,958	2,539,284,377	297,956,701	3,234,231,538

APPENDIX D.

WAR DEPARTMENT,
OFFICE CHIEF OF CHEMICAL WARFARE SERVICE,
Washington, D. C., June 9, 1922.

Hon. JOSEPH S. FRELINGHUYSEN,
United States Senate, Washington, D. C.

MY DEAR SENATOR: Replying to your letter of June 6 regarding the testimony of Mr. Earl J. W. Ragsdale, formerly lieutenant colonel, Ordnance Corps of the Army, before the Senate Finance Committee on the dye and chemical schedule, I desire to say that I have read over this testimony carefully.

It will be noted that Colonel Ragsdale did not state definitely that high explosives and war gases are not made in war plants. For instance, in one case he stated, "As for the dyestuff industry being regarded as a potential military strength, it unquestionably is." He stated at another time, "I will grant you that the training of a chemist in the dye industry is a severe one, and one which fits him to undertake the research work which is so essential to the improvement of existing chemical weapons or the invention of new ones."

However, I have observed that in his letter published in the American Economist, November 18, 1921, he endeavored to make it appear that high explosives and war gases were made in general chemical plants other than dye plants. In that he is in error, both as regards Germany, our allies, and the United States itself. For instance, mention is made in the report of the allied mission to study chemical plants in the occupied territory that one dye plant was changed over from the making of dyes to the manufacture of 250 tons of T. N. T. per month in six weeks' time.

The same report states that the German sneeze gas was manufactured in the plants of Kalle & Co., Biebrich, and the Bayer Co., at Leverkusen, with equipment which is being used to-day for the production of azo dyes. Furthermore, the latter firm, namely, Bayer & Co., manufactured the war gas phosgene, as well as the high-explosive T. N. T. with the same equipment that was used prior to the war for the production of dye intermediates. The firm of Meister Lucius & Bruning, at Hochst, manufactured a large part of their most important war gases in apparatus which existed before the war, principally for the production of dyes.

Furthermore, the first successful manufacture of mustard gas by the French was in the plant of the Usine du Rhone Co., which was making dyes and similar chemicals prior to the war. Likewise, the first and most successful method of manufacturing mustard gas in England was in the plants of Mr. Levenstein, who manufactures dyes and similar chemicals.

Even in the United States, where the dye industry was in its infancy prior to the war, practically the only war gases made outside the Government plant at Edgewood were in plants of companies making dyes or similar organic chemical products. For instance, it was the American Synthetic Color Co., at Stamford, Conn., that produced nearly 3,000,000 pounds of chloropicrin after December 13, 1917. The Dow Chemical Co., manufacturers of dyes and other chemicals, was the only concern that actually made mustard gas outside of the Government plant at Edgewood Arsenal.

The National Aniline & Chemical Co., of Buffalo, N. Y., had a mustard-gas plant 50 per cent completed at the close of the war for the manufacture of 50 tons of mustard gas per day. A similar 50-ton mustard-gas plant was 95 per cent complete at the organic chemical plant of Zinsser & Co., Hastings-on-Hudson, N. Y. Likewise, the Newport Chemical Co., a dye-making concern, at Carrollsville, Wis., had plans under way when the armistice was signed for producing a large quantity of the gas D. A., one of the war gases. Finally the Federal Dye & Chemical Co., Kingsport, Tenn., was actually making brombenzylcyanide, a war gas, at the close of the war.

Phosgene, one of the most important war gases, was made in quantity outside of the Government plant at Edgewood Arsenal only in the works of the Frank Hemingway Co. in New Jersey. Frank Hemingway had made small quantities of phosgene prior to the war and had done considerable work in organic chemicals.

I might add that during the past year a Chemical Warfare Service officer was detailed to George Washington University for the purpose of studying the relation between the manufacture of dyes and other organic chemicals and war gases. In connection with this study he made an extensive tour of observation of four of the largest dye plants in the country. His report shows not only that these dye plants are potential arsenals but that many parts of them can be converted into the manufacture of war gases in a very short time.

Colonel Ragsdale was head of the Trench Warfare Section of the Ordnance Department in the war. The manufacture of gases and other chemical warfare materials was a small part of his work. In the very beginning Edgewood was put under a Lieutenant Colonel Chance, who started the work in the fall of 1917. Later Col. William H. Walker, professor of chemical engineering in the Massachusetts Institute of Technology, was put in entire charge of chemical warfare gases and other materials, with station in Baltimore. He had charge not only of Edgewood Arsenal but of all outlying plants manufacturing war gases of any kind.

This work in May, 1918, passed under the control of the newly created Chemical Warfare Service, with Maj. Gen. W. L. Sibert in charge in the United States. Thus Colonel Ragsdale, with his many other duties in trench warfare, had but very little time to give to chemical warfare in the beginning, while the entire work passed out of his hands before we made any real headway in the production of gas.

Very sincerely,

AMOS A. FRIES,
Brigadier General, United States Army,
Chief Chemical Warfare Service.

Mr. KING addressed the Senate. After having spoken with interruptions for two hours and a half,

Mr. McCUMBER. May I ask the Senator if he is especially desirous of closing his argument before we take a recess?

Mr. KING. I would prefer, if it suits the pleasure of the Senator, to go on in the morning.

Mr. McCUMBER. That is entirely satisfactory.

Mr. McCUMBER. I ask unanimous consent that when the Senate closes its session this calendar day it take a recess until to-morrow at 11 o'clock.

The PRESIDING OFFICER (Mr. JONES of Washington in the chair). Is there objection to the request of the Senator from North Dakota? The Chair hears none, and it is so ordered.

EXECUTIVE SESSION.

Mr. McCUMBER. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to; and the Senate proceeded to the consideration of executive business. After five minutes spent in executive session the doors were reopened, and (at 6 o'clock and 5 minutes p. m.) the Senate, under the order previously made, took a recess until to-morrow, Saturday, July 15, 1922, at 11 o'clock a. m.

NOMINATIONS.

Executive nominations received by the Senate July 14 (legislative day of April 20), 1922.

MEMBER OF FEDERAL BOARD FOR VOCATIONAL EDUCATION.

C. F. McIntosh, of Indiana, to be a member of the Federal Board for Vocational Education for a term of three years from July 17, 1922. (A reappointment.)

APPRAISER OF MERCHANDISE.

George O'Brien, of Philadelphia, Pa., to be appraiser of merchandise in customs collection district No. 11, with headquarters at Philadelphia, Pa., in place of Albert L. Moise, resigned.

ASSISTANT APPRAISER OF MERCHANDISE.

Laid Curtin, of Philipsburg, Pa., to be assistant appraiser of merchandise in customs collection district No. 11, with headquarters at Philadelphia, Pa., in place of George O'Brien.

UNITED STATES MARSHAL.

Andrew J. Russell, of Arkansas, to be United States marshal, western district of Arkansas, vice John H. Parker, resigned.

PROMOTION IN THE REGULAR ARMY.

MEDICAL CORPS.

To be captain.

First Lieut. Thomas Franklin Weldon, Medical Corps, from July 11, 1922.

APPOINTMENTS, BY TRANSFER, IN THE REGULAR ARMY.

AIR SERVICE.

Capt. Dudley Blanchard Howard, Infantry, with rank from July 1, 1920.

First Lieut. John Dean Barriger, Field Artillery, with rank from July 1, 1920.

APPOINTMENTS IN THE OFFICERS' RESERVE CORPS OF THE ARMY.

To be brigadier generals.

Col. George Edmund de Schweinitz, in the Medical Officers' Reserve Corps.

Col. Clinton Goodloe Edgar, in the Signal Officers' Reserve Corps.

Col. William Barclay Parsons, in the Engineer Officers' Reserve Corps.

Col. Burke Haddan Sinclair, in the Field Artillery Officers' Reserve Corps.

PROMOTIONS IN THE NAVY.

The following-named chaplains of the United States Naval Reserve Force to be chaplains in the Navy, with the rank of commander, from the 1st day of July, 1922, in accordance with a provision contained in the act of Congress approved that date:

Edwin B. Niver.

John J. Brokenshire.

POSTMASTERS.

ALABAMA.

James W. Fincher to be postmaster at Theodore, Ala. Office became presidential April 1, 1922.

John L. Shotts to be postmaster at Hamilton, Ala., in place of C. E. Mitchell. Incumbent's commission expired March 16, 1921.

Charley N. Thompson to be postmaster at Piedmont, Ala., in place of H. B. Ralls. Incumbent's commission expired July 21, 1921.

Lillian R. Maugans to be postmaster at Eufaula, Ala., in place of C. S. McDowell. Incumbent's commission expired January 24, 1922.

ARKANSAS.

Jacob Y. Sayre to be postmaster at Stuttgart, Ark., in place of L. K. Buerkle. Incumbent's commission expired January 24, 1922.

CALIFORNIA.

Oliver N. Thornton to be postmaster at Brea, Calif., in place of W. M. Smith, resigned.

James E. Pharr to be postmaster at Scotia, Calif., in place of George Gribble, resigned.

COLORADO.

Will J. Wood to be postmaster at Crawford, Colo. Office became presidential January 1, 1921.

CONNECTICUT.

Louis E. Chaffee to be postmaster at Stafford Springs, Conn., in place of L. E. Chaffee. Incumbent's commission expired May 20, 1922.

FLORIDA.

Urban P. Eytchison to be postmaster at Marianna, Fla., in place of E. C. Lewis. Incumbent's commission expired August 1, 1921.

GEORGIA.

Herbert J. Knowles to be postmaster at Cuthbert, Ga., in place of A. B. Bussey. Incumbent's commission expired February 18, 1922.

Robert W. Graves to be postmaster at Toccoa, Ga., in place of H. F. Gilmer. Incumbent's commission expired August 7, 1921.

Paul L. Smith to be postmaster at Athens, Ga., in place of J. H. Rucker, resigned.

HAWAII.

Arcenio H. Silva, jr., to be postmaster at Kahului, Hawaii, in place of A. H. Silva, jr. Incumbent's commission expired July 21, 1921.

Antone F. Costa to be postmaster at Wailuku, Hawaii, in place of A. F. Costa. Incumbent's commission expired July 21, 1921.

ILLINOIS.

Hugo L. Schneider to be postmaster at Highland Park, Ill., in place of W. M. Dolley. Incumbent's commission expired February 4, 1922.

Samuel J. Davis to be postmaster at Mooseheart, Ill., in place of J. F. Petit. Incumbent's commission expired March 16, 1921.

Leo H. Borgelt to be postmaster at Havana, Ill., in place of Matthew Bollan. Incumbent's commission expired February 4, 1922.

Edward A. Catour to be postmaster at Atkinson, Ill., in place of Edward Johnston. Incumbent's commission expired February 4, 1922.

Allie M. Reineke to be postmaster at Perry, Ill. Office became presidential January 1, 1921.

Charles W. Russell to be postmaster at Hurst, Ill. Office became presidential April 1, 1922.

Bert R. Johnson to be postmaster at Kewanee, Ill., in place of J. H. Mulligan, removed.

INDIANA.

Shad R. Young to be postmaster at Cicero, Ind., in place of C. F. Bardonner. Incumbent's commission expired July 21, 1921.

John E. Ward to be postmaster at Gas City, Ind., in place of W. D. Hunt. Incumbent's commission expired July 21, 1921.

Calvin Ulrey to be postmaster at North Manchester, Ind., in place of Charles Wright. Incumbent's commission expired January 24, 1922.

Thomas C. Dodd to be postmaster at Gosport, Ind., in place of E. A. Smith, resigned.

Homer E. Wright to be postmaster at Crandall, Ind. Office became presidential July 1, 1922.

IOWA.

Benjamin S. Borwey to be postmaster at Eagle Grove, Iowa, in place of H. A. Cooke. Incumbent's commission expires July 24, 1922.

Alfred G. Rigby to be postmaster at Independence, Iowa, in place of A. T. O'Brien. Incumbent's commission expired January 24, 1922.

George Banger to be postmaster at La Porte City, Iowa, in place of E. R. Ashley. Incumbent's commission expired January 24, 1922.

Janette E. Gilliland to be postmaster at Melbourne, Iowa, in place of Josephine McMahon. Incumbent's commission expired March 16, 1921.

Flossie K. Pfeiff to be postmaster at West Burlington, Iowa, in place of K. A. Schwarz. Incumbent's commission expired January 24, 1922.

Frank K. Hahn to be postmaster at Cedar Rapids, Iowa, in place of C. D. Huston. Incumbent's commission expired January 24, 1922.

Phillip T. Serrurier to be postmaster at Sabula, Iowa, in place of J. F. Goos. Incumbent's commission expired January 24, 1922.

KENTUCKY.

Eddie E. Shelton to be postmaster at Clay, Ky., in place of James Stiman, removed.

Fountain S. Aynes to be postmaster at Pleasureville, Ky. Office became presidential April 1, 1921.

MASSACHUSETTS.

Burton D. Webber to be postmaster at Fiskdale, Mass., in place of H. L. Upham, deceased.

John P. Brown to be postmaster at Bass River, Mass. Office became presidential July 1, 1922.

MICHIGAN.

Otis J. Cliffe to be postmaster at Lakeview, Mich., in place of S. F. Kennedy, deceased.

Natalie G. Noble to be postmaster at Elk Rapids, Mich., in place of E. S. Noble. Incumbent's commission expired January 24, 1922.

Ward R. Rice to be postmaster at Galesburg, Mich., in place of H. L. Shirley. Incumbent's commission expired January 24, 1922.

Victor H. Sisson to be postmaster at Freeport, Mich. Office became presidential July 1, 1922.

MINNESOTA.

Fritz von Ohlen to be postmaster at Henning, Minn., in place of Fred von Ohlen. Incumbent's commission expired August 7, 1921.

Kenneth S. Keller to be postmaster at Kasson, Minn., in place of E. R. Brown, deceased.

Charles A. Allen to be postmaster at Milaca, Minn., in place of C. A. Allen. Incumbent's commission expired July 24, 1920.

Peter G. Peterson to be postmaster at Villard, Minn. Office became presidential October 1, 1920.

MISSOURI.

Charles E. Bedell to be postmaster at Hale, Mo., in place of Lee Jones. Incumbent's commission expired January 24, 1922.

John T. Garner to be postmaster at Carrollton, Mo., in place of William Arterburn, resigned.

George E. Richars to be postmaster at Lilbourn, Mo., in place of F. A. Hearn, appointee not commissioned.

NEBRASKA.

Hugh E. Mallory to be postmaster at Litchfield, Nebr., in place of Orren Slote. Incumbent's commission expired February 4, 1922.

Clyde S. Burkerd to be postmaster at Shelton, Nebr., in place of John Conroy, deceased.

NEW YORK.

Pearla S. Kling to be postmaster at Albany, N. Y., in place of W. H. Murray, deceased.

Ruth M. Marleau to be postmaster at Big Moose, N. Y., in place of F. B. Peck, removed.

Harry M. Barrett to be postmaster at Mahopac, N. Y., in place of E. A. Jennings, declined.

George M. Edsall to be postmaster at Nanuet, N. Y., in place of H. M. Fisher. Incumbent's commission expired July 21, 1921.

Earl W. Kostenbader to be postmaster at Groton, N. Y., in place of A. J. McMahon, removed.

George A. Gardner to be postmaster at Newfield, N. Y. Office became presidential January 1, 1921.

Jay E. Davis to be postmaster at Deansboro, N. Y. Office became presidential July 1, 1922.

NORTH CAROLINA.

Walter F. Long, jr., to be postmaster at Rockingham, N. C., in place of W. S. Thomas, resigned.

OHIO.

Ross H. Hartsock to be postmaster at Waynesville, Ohio, in place of J. P. Cummings. Incumbent's commission expired April 16, 1922.

Brice H. Murphy to be postmaster at Maynard, Ohio. Office became presidential July 1, 1920.

OKLAHOMA.

John W. Bishop to be postmaster at Fairview, Okla., in place of J. B. Wilson. Incumbent's commission expired February 4, 1922.

Bessie A. Porter to be postmaster at Buffalo, Okla., in place of G. H. Overbeck, resigned.

Henry L. Wallace to be postmaster at Calvin, Okla., in place of E. B. Logan, resigned.

OREGON.

James Henderson to be postmaster at Cascade Locks, Oreg. Office became presidential January 1, 1921.

Henrietta Sandry to be postmaster at Rogue River, Oreg. Office became presidential July 1, 1920.

Charles H. Watzek to be postmaster at Wauna, Oreg. Office became presidential October 1, 1920.

PENNSYLVANIA.

Elmer G. Cornwell to be postmaster at Mansfield, Pa., in place of R. E. Urell. Incumbent's commission expired February 4, 1922.

Richard C. Jockers to be postmaster at Jenkintown, Pa., in place of T. J. Barry, removed.

Benard Peters to be postmaster at Brackenridge, Pa., in place of C. O. Wherry. Incumbent's commission expired July 24, 1920.

William S. Tomlinson to be postmaster at Newtown, Pa., in place of J. H. Mitchell. Incumbent's commission expired August 7, 1921.

Malcolm F. Clark to be postmaster at Coudersport, Pa., in place of W. A. Shear. Incumbent's commission expired February 4, 1922.

Edward R. Dissinger to be postmaster at Mount Gretna, Pa. Incumbent's commission expired October 1, 1920.

Frederick C. Patten to be postmaster at Narberth, Pa., in place of E. S. Haws. Incumbent's commission expired February 5, 1922.

SOUTH CAROLINA.

Alice Singletary to be postmaster at Bowman, S. C. Office became presidential October 1, 1920.

SOUTH DAKOTA.

Signora Hjermstad to be postmaster at Wallace, S. Dak. Office became presidential April 1, 1921.

TEXAS.

Robert E. Johnson to be postmaster at Pecos, Tex., in place of H. N. McKellar. Incumbent's commission expired May 20, 1922.

Mary Lovely to be postmaster at Weslaco, Tex., in place of J. B. Christner, declined.

Leo I. Steiner to be postmaster at Columbus, Tex., in place of A. P. Hinton. Incumbent's commission expired July 14, 1920.

Sallie P. Lunday to be postmaster at Naples, Tex., in place of S. P. Lunday. Incumbent's commission expired March 8, 1922.

Lotta E. Turney to be postmaster at Smithville, Tex., in place of J. K. Barry. Incumbent's commission expired April 6, 1922.

VIRGINIA.

Lula E. Northington to be postmaster at Lacrosse, Va. Office became presidential April 1, 1920.

WASHINGTON.

Herman S. Reed to be postmaster at Redmond, Wash. Office became presidential January 1, 1921.

Otto F. Reinig to be postmaster at Snoqualmie, Wash. Office became presidential January 1, 1921.

Gladys Jacobs to be postmaster at Vashon, Wash. Office became presidential January 1, 1921.

WEST VIRGINIA.

Katherine E. Ruttencutter to be postmaster at Parkersburg, W. Va., in place of W. E. Stout, resigned.

Flavius E. Strickling to be postmaster at West Union, W. Va., in place of H. T. Davis. Incumbent's commission expired January 24, 1922.

WISCONSIN.

Otto C. Nienas to be postmaster at Camp Douglas, Wis., in place of E. D. Singleton. Incumbent's commission expired January 24, 1922.

Gilbert J. Grell to be postmaster at Johnson Creek, Wis., in place of P. R. Stiehm. Incumbent's commission expired January 24, 1922.

William Reuschlein to be postmaster at Plain, Wis. Office became presidential April 1, 1922.

Clytie Geiger to be postmaster at Rothschild, Wis. Office became presidential April 1, 1921.

Alice M. Clinton to be postmaster at Sullivan, Wis. Office became presidential October 1, 1920.

CONFIRMATIONS.

Executive nominations confirmed by the Senate July 14 (legislative day of April 20), 1922.

DIPLOMATIC AND CONSULAR SERVICE.

Gordon Paddock to be secretary of embassy or legation, class 2.

NAVAL OFFICER OF CUSTOMS.

Joseph W. Pascoe to be naval officer of customs, customs collection district No. 11, Philadelphia, Pa.

SENATE.

SATURDAY, *July 15, 1922.*

(Legislative day of Thursday, April 20, 1922.)

The Senate met at 11 o'clock a. m., on the expiration of the recess.

Mr. SMOOT. Mr. President, I suggest the absence of a quorum.

The VICE PRESIDENT. The Secretary will call the roll.

The Assistant Secretary called the roll, and the following Senators answered to their names:

Ashurst	France	McCormick	Ransdell
Ball	Frelinghuysen	McCumber	Rawson
Borah	Gooding	McKinley	Robinson
Brandegee	Hale	McLean	Sheppard
Cameron	Harreld	McNary	Shortridge
Capper	Harris	Moses	Simmons
Caraway	Harrison	Nelson	Smith
Culberson	Heflin	New	Smoot
Cummins	Johnson	Nicholson	Sterling
Curtis	Jones, Wash.	Norbeck	Trammell
Dial	Kendrick	Oddie	Walsh, Mass.
du Pont	Keyes	Overman	Walsh, Mont.
Edge	King	Pepper	Warren
Ernst	Ladd	Phipps	Watson, Ind.
Fernald	Lodge	Pomerene	Willis

Mr. HARRISON. I desire to state that the Senator from Nevada [Mr. PITTMAN] is absent on account of illness in his family. I ask that this announcement may stand for the day.

Mr. HARRIS. I wish to announce that my colleague [Mr. WATSON of Georgia] is absent by reason of illness. I ask that this announcement stand for the day.

The VICE PRESIDENT. Sixty Senators have answered to their names. There is a quorum present.

THE LEAGUE OF NATIONS.

Mr. BRANDEGEE. Mr. President, I ask unanimous consent to have inserted in the RECORD in 8-point type two short dispatches which I find, one in the Washington Post of this morning and the other in the New York Herald of to-day, in relation to a letter which is said to have been written by the Secretary of State, Mr. Hughes, to Mr. Hamilton Holt, replying to certain questions which Mr. Holt had asked him in relation to the League of Nations. I ask that the dispatches may be printed in the RECORD. If I had a copy of the entire letter written by the Secretary of State, I should ask to have that inserted; and I may do that later, if I have the good fortune to get the letter.

There being no objection, the matter referred to was ordered to be printed in the RECORD in 8-point type, as follows:

[From the Washington Post of July 15, 1922.]

SEES WORLD COURT TREATY AS UNLIKELY—PARTICIPATION BY UNITED STATES MUST BE OTHER THAN THROUGH LEAGUE OF NATIONS, HUGHES SAYS—REPLIES TO HOLT LETTER—DENIES ASSERTION THAT HE BLOCKED MOVING HEALTH CENTER FROM PARIS TO GENEVA.

(By the Associated Press.)

Secretary Hughes, replying yesterday to a letter recently addressed to him by Hamilton Holt, president of the Woodrow Wilson Foundation, of New York, said he could see no prospect for any treaty or convention by which the United States Government should share in the maintenance of the permanent court of international justice until some provision is made by which, without membership in the League of Nations, the American Government could be able to have an appropriate voice in the election of the court's judges.

HUGHES REPLIES IN DETAIL.

The Secretary of State replied in detail to Mr. Holt's letter, which brought up a number of points with respect to relations of the United States and the League of Nations.

Declaring that "there had been much fruitless talk about answering communications from the league," Mr. Hughes said that "it may be pointed out that a large number of these are of a purely formal nature for the purpose of giving information," and that he had endeavored to deal with all communications courteously and appropriately, and reports to the contrary are evidently based on inadequate information."

The United States has had appropriate representation at health conferences, the Secretary added, denying Mr. Holt's assertion that he had "blocked the moving of the world health center from Paris to Geneva, where it was to be put under the jurisdiction of the League of Nations."

HOLT AGAIN IN ERROR.

The Secretary likewise told Mr. Holt he was in error in saying that the State Department had "prevented the American Hague judges from sending in nominations for the permanent court of international justice of the league," adding that "the American Hague judges had acted in accordance with their own views of propriety."

Mr. Hughes further said he could not agree with Mr. Holt's statement that the results of the recent arms conference could have been accomplished sooner and better had the United States been a member of the League of Nations, and added:

"My own view is that the important results of the conference were made possible because it was a limited conference, held in Washington, by the nations immediately concerned and was not associated with other enterprises."

Denial also was made by the Secretary that the United States abandoned the Allies in making a separate treaty of peace with Germany.

—

[From New York Herald of July 15, 1922.]

HUGHES DENIES STRIKING AT LEAGUE—DEFENDS SEPARATE PEACE TREATY WITH GERMANY IN LETTER TO HAMILTON HOLT.

(Special dispatch to the New York Herald.)

NEW YORK HERALD BUREAU,
Washington, D. C., July 14.

A strong rejoinder to the criticism of the international policies of the Harding administration coming from the supporters of the League of Nations and lieutenants of Woodrow Wilson was offered by Secretary of State Hughes in a letter made public to-day, which he addressed yesterday to Hamilton Holt, of New York, president of the Woodrow Wilson democracy.

Secretary Hughes's letter was an answer to a communication sent to him on July 7 by Mr. Holt, in which he contended that the United States was in various ways interfering with the activities of the League of Nations. The charge, Secretary Hughes declared, was without foundation.

In his letter the Secretary made clear the relations of this country to the League of Nations, the treaty of Versailles, and

defended the action of the United States in making a separate peace with Germany, declaring that this was service to allied powers rather than an abandonment, as Mr. Holt contended.

Referring to the contention of Mr. Holt that the League of Nations could have obtained the results achieved at the Washington conference, Secretary Hughes said that the important results of the conference was due to the fact that it was a limited body gathered in Washington and composed of the nations immediately concerned.

"I do not agree with your comment," he said, "that the results of the recent Conference on the Limitation of Armament could have been accomplished or the work could have been better done and long ago had the United States been a member of the league. I do not care to discuss matters which are obviously subjects of conjecture, but my own view is that the important results of the conference were made possible because it was a limited conference, held in Washington by the nations immediately concerned, and was not associated with other enterprises."

Speaking of the separate peace, Secretary Hughes said: "I regret that you should permit yourself in your zeal for the course you have espoused to say that I had abandoned our late allies in making a separate peace with Germany. Such observations will do your cause no good. The separate peace with Germany was concluded for the sufficient reason that it became perfectly clear, after the most careful consideration, that the resubmission of the treaty of Versailles with suggested reservations would have no other result than the renewal of the former controversy and its continuance for an indefinite time."

Secretary Hughes flatly declined to comply with Mr. Holt's request for a discussion of governmental policies, adding that these would be the subject of official announcement from time to time.

There is no truth in insinuations that the United States has been discourteous to the League of Nations or took communications from it in an offhand manner, Mr. Hughes said.

PETITIONS AND MEMORIALS.

Mr. HARRIS presented a joint resolution of the Legislature of Georgia, which was referred to the Committee on Agriculture and Forestry, as follows:

Whereas there is now idle the magnificent property of the United States Government at Muscle Shoals; and

Whereas it would be for the best interests of the United States and for the South that Muscle Shoals should be fully developed; and

Whereas there continues in the South a great army of unemployed; and

Whereas the best offer for the shoals has been made by Mr. Henry Ford: Now, therefore, be it

Resolved, That the General Assembly of Georgia hereby urges the Congress of the United States to accept the offer for Muscle Shoals as made by Mr. Henry Ford, and we urge Members of Congress from Georgia to use their influence to this end; be it further

Resolved, That a copy of this resolution be sent to each Member of Congress from Georgia.

Mr. KENDRICK. Mr. President, I present a copy of a resolution passed by the Public Service Commission of the State of Wyoming, which has to do with the decision of the Supreme Court of the United States in connection with the ownership and control of the Central Pacific Railway. It is a short resolution and of very great importance to my State, and I ask that it may be read by the Secretary.

There being no objection, the resolution was read and referred to the Committee on Interstate Commerce, as follows:

BEFORE THE PUBLIC SERVICE COMMISSION OF THE STATE OF WYOMING.

Resolution adopted at a meeting of the commission held July 12, 1922.

1. Whereas the Supreme Court has held that the holding of the Central Pacific by the Southern Pacific Co. constitutes an unlawful monopoly; and,

2. Whereas plans are being made to set aside the court's ruling by congressional action; and

3. Whereas the Central Pacific was built under laws of the United States as a part of a central system of transportation to and from California, and was intended to function as a part of such central system of transportation, and was not built or intended as a part of a southern system of transportation, and is not a part of any southern system of transportation; and

4. Whereas the shipping public between Ogden and Chicago are able to secure a large part of their transportation service by reason of the movement along their railroad lines of transcontinental shipments, and the returns on such shipments greatly assist in maintaining their railroads, and the future needs of such shipping public make necessary the full development of such railroads: Therefore be it

Resolved by the Public Service Commission of the State of Wyoming, That the commission recognizes the wisdom and justice of the decision of the Supreme Court freeing the Central Pacific Railroad from the control of the Southern Pacific Co., and that this body recognizes the harm which would result to the interests of Wyoming if the separation is not carried out in accordance with the opinion of the Supreme Court; and be it further

Resolved, That the commission is opposed to all attempts to nullify the decision of the Supreme Court and to the Southern Pacific Co. having the power to impede or obstruct traffic over the short direct transcontinental route when obstructing that traffic would be to its advantage; and be it further

Resolved, That Wyoming representatives in Congress be urged to take such steps as may be necessary to prevent the passage of any legislation which might set aside the decision of the Supreme Court.

By the Public Service Commission of the State of Wyoming.

Dated at Cheyenne, Wyo., this 12th day of July, A. D. 1922.

CLAUDE L. DRAPER, *Chairman.*
[SEAL.] MAURICE GROSHON, *Commissioner.*
H. M. HUNTINGTON, *Commissioner.*
Attest: E. W. CROWLEY, *Secretary.*

Mr. WARREN subsequently said: Mr. President, I wish to have printed in full in the RECORD—it is a matter of only a page—resolutions of the Public Service Commission of the State of Wyoming opposing the enactment of any legislation that might tend to nullify the decision of the United States Supreme Court which resulted in the dismemberment of the Southern Pacific and the Central Pacific Railroads.

The VICE PRESIDENT. The Senator from Wyoming [Mr. KENDRICK] presented the same resolutions to-day, and they were ordered to be printed in the RECORD.

Mr. WARREN. Very well.

The VICE PRESIDENT. The resolutions will be referred to the Committee on Interstate Commerce.

PUBLIC LANDS IN LOUISIANA.

Mr. PHIPPS (for Mr. NORBECK), from the Committee on Public Lands and Surveys, to which was referred the bill (H. R. 10361) authorizing the sale and patent of certain alleged public lands in Louisiana, reported it without amendment and submitted a report (No. 827) thereon.

FRANCES MACK MANN.

Mr. PHIPPS. Mr. President, from the Committee on Public Lands I report back favorably without amendment the bill (H. R. 8244) permitting Frances Mack Mann to purchase certain public lands, and I submit a report (No. 825) thereon. I ask for the present consideration of the bill.

I will state that a similar measure passed the Senate during a previous Congress, but was not acted upon in the House by reason of adjournment. The bill has now passed the House. All it does is to permit the purchase of 73 and a fraction acres of forest land which had been improperly surveyed and upon which improvements have been erected by the occupant.

Mr. ROBINSON. Does the Senator ask unanimous consent for the present consideration of the bill?

Mr. PHIPPS. I do.

Mr. ROBINSON. I tried to hear the statement which he just made and which I take it was in explanation of the bill, but on account of conversations about me I could not hear a word he said. Will the Senator repeat his statement?

Mr. PHIPPS. A similar bill was previously passed by the Senate, but was not reached in the House before final adjournment. The bill has now been passed by the House. It permits the sale of 73 and a fraction acres of forest land which have been built upon and paid for originally by the present occupant, but which fell outside of the survey and therefore was covered back into the forest lands.

Mr. ROBINSON. Upon that statement I think the bill ought to be passed.

There being no objection, the bill was considered as in Committee of the Whole, and it was read as follows:

Be it enacted, etc., That Frances Mack Mann be permitted to purchase lot 11, comprising 3.70 acres; lot 12, comprising 1.58 acres; lot 13, comprising 28.38 acres; lot 16, comprising 39.67 acres; all situate in the east half of the northwest quarter of section 6, township 2 south, range 72 west of the sixth principal meridian, containing 73.33 acres, in the State of Colorado, at $1.50 per acre: *Provided*, That all coal and minerals contained therein are hereby reserved to the United States. That said coal and minerals shall be for sale or disposal of the United States under the coal and mineral land laws, and entrymen shall have the right to enter upon said lands for the purpose of prospecting for and mining such deposits.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

SURPLUS POWER IN SALT RIVER RECLAMATION PROJECT.

Mr. CAMERON. From the Committee on Irrigation and Reclamation I report back favorably with amendments the bill (H. R. 10248) authorizing the sale of surplus power developed under the Salt River reclamation project, Arizona, and I submit a report (No. 826) thereon. I ask for the present consideration of the bill. It has passed the House and is recommended by the committee and the Interior Department. It provides for the leasing of surplus power developed under the Salt River reclamation project in Arizona.

Mr. SIMMONS. Mr. President, what is the request?

The VICE PRESIDENT. For unanimous consent for the present consideration of the bill.

Mr. ROBINSON. I ask that the bill be read.

The VICE PRESIDENT. The bill will be read for the information of the Senate.

The Assistant Secretary read the bill.

Mr. CAMERON. There are several amendments to the bill to change the word "sale" to the word "lease," wherever the former word occurs in the bill.

Mr. ROBINSON. I inquire of the Senator from Arizona whether the bill was referred to the Interior Department?

Mr. CAMERON. Yes, sir; and it has been recommended by that department. The recommendation of that department is contained in the House committee report on the bill. The bill has been considered by and is now reported from the Committee on Irrigation and Reclamation of the Senate. It simply provides for an extension of time in connection with privileges which already exist.

Mr. ROBINSON. I have no objection to the bill.

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill, which had been reported from the Committee on Irrigation and Reclamation of Arid Lands with amendments.

The amendments were, on page 1, line 9, after the word "the," to strike out "sale" and insert "lease"; in line 10, after the word "such," to strike out "sales" and insert "leases"; in line 15, after the words "for the," to strike out "sale" and insert "lease"; and on page 2, line 7, after the words "for the," to strike out "sale" and insert "lease," so as to make the bill read:

Be it enacted, etc., That whenever a development of power is necessary for the irrigation of lands under the Salt River reclamation project, Arizona, or an opportunity is afforded for the development of power under said project, the Secretary of the Interior is authorized, giving preference to municipal purposes, to enter into contracts for a period not exceeding 50 years for the lease of any surplus power so developed, and the money derived from such leases shall be placed to the credit of said project for disposal as provided in the contract between the United States of America and the Salt River Valley Water Users' Association, approved September 6, 1917: *Provided*, That no contract shall be made for the lease of such surplus power which will impair the efficiency of said project: *Provided, however*, That no such contract shall be made without the approval of the legally organized water users' association or irrigation district which has contracted with the United States to repay the cost of said project: *Provided further*, That the charge for power may be readjusted at the end of 5, 10, or 20 year periods after the beginning of any contract for the lease of power in a manner to be described in the contract.

The amendments were agreed to.

The bill was reported to the Senate as amended, and the amendments were concurred in.

The amendments were ordered to be engrossed and the bill to be read a third time.

The bill was read the third time and passed.

The title was amended so as to read: "An act authorizing the lease of surplus power developed under the Salt River reclamation project, Arizona."

BILLS INTRODUCED.

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. HARRIS:

A bill (S. 3829) to establish the Benning National Forest in the State of Georgia; to the Committee on Public Lands and Surveys.

By Mr. McNARY:

A bill (S. 3830) granting a pension to Mary J. Baldwin; to the Committee on Pensions.

By Mr. FERNALD:

A bill (S. 3831) granting a pension to Isabell Guptill (with accompanying papers); to the Committee on Pensions.

By Mr. JONES of Washington:

A bill (S. 3832) providing for officers' retirement under certain conditions; to the Committee on Military Affairs.

By Mr. DU PONT:

A bill (S. 3833) granting an increase of pension to Frances Henrietta Bubb; to the Committee on Pensions.

By Mr. WATSON of Indiana:

A bill (S. 3834) to authorize the Chicago, Lake Shore & Eastern Railway Co. to construct a bridge across the Grand Calumet River in the State of Indiana; to the Committee on Commerce.

By Mr. UNDERWOOD:

A bill (S. 3835) for the relief of William B. Minor; to the Committee on Claims.

By Mr. FRELINGHUYSEN:

A bill (S. 3836) conferring jurisdiction upon the Court of Claims to hear and determine claims of the International Arms & Fuze Co.; to the Committee on Claims.

By Mr. KING:

A bill (S. 3837) to unify and improve the street car service in the District of Columbia, and for other purposes; to the Committee on the District of Columbia.

By Mr. HARRISON:

A bill (S. 3838) for the relief of the Cleveland State Bank, of Cleveland, Miss.; to the Committee on Claims.

AMENDMENT TO GRAIN FUTURES BILL.

Mr. NELSON submitted an amendment intended to be proposed by him to the bill (H. R. 11843) for the prevention and removal of obstructions and burdens upon interstate commerce in grain, by regulating transactions on grain future exchanges, and for other purposes, which was referred to the Committee on Agriculture and Forestry and ordered to be printed.

CONSTITUTIONAL POWERS OF THE SUPREME COURT (S. DOC. NO. 234).

Mr. HARRELD. Mr. President, inasmuch as the question of the constitutional powers of the Supreme Court of the United States has recently been the subject of considerable acrimonious discussion in the Senate and outside, I desire unanimous consent to print in the CONGRESSIONAL RECORD and also as a Senate document an article written by Judge Preston A. Shinn, of Pawhuska, Okla., a constituent of mine, the article being entitled "The Constitution is the higher law—An answer to articles written by Hon. Walter Clark, of the North Carolina Supreme Court." The article by Judge Shinn is a very able one and throws much light on the subject.

The VICE PRESIDENT. Is there objection? The Chair hears none, and it is so ordered.

The article referred to is as follows:

THE CONSTITUTION IS THE HIGHER LAW—AN ANSWER TO ARTICLES WRITTEN BY HON. WALTER CLARK, OF THE NORTH CAROLINA SUPREME COURT.

Hon. Walter Clark, of the North Carolina Supreme Court, has written several articles, which have been made public documents of the United States Senate, denying the authority of the United States Supreme Court to declare acts of Congress unconstitutional—"Government by judges"; "Some myths of the law"; "Some defects in the Constitution of the United States"; "Back to the Constitution." The question has recently been and is now before the Senate of the United States, and the articles of Justice Clark are receiving a generous circulation. It is evident from the documents that Justice Clark favors a Government not republican in form, but a democracy. Because of the very high position of Justice Clark, being the head of one of the great judicial bodies of the country, these articles will have very great weight with the public and may be expected to do the cause of constitutional government great injury.

The justice builds his structure on erroneous facts and history, fans the embers of prejudice until the castle is in flames, and then calls on the guests to save themselves by jumping from a tenth-story window. He says that the delegates who drafted and the people who adopted the Constitution of the United States did not know that the court would have authority to declare acts of Congress void, nor did they intend that the court have such authority; that the instrument itself fails to supply the authority.

The corner stone of his structure has been condemned by every master builder to whom it has been presented. He thus states it: "This is in accordance with the theory of our Government, which is that the lawmaking body is one of restrictions."

That is, that it represents the people and has all power that is not denied it by the organic law, whereas the executive and judicial are grants of power and have no authority except that conferred by the Constitution. This is the statement made by Black and sums up correctly the analysis of our State and Federal Constitutions as they are written. (Back to the Constitution, p. 3.) This statement is probably true as to the State constitutions, but no basic error could be greater than the above statement that Congress "has all power that is not denied it by the organic law," when applied to the Federal Constitution. The States were 13 years old when the Federal Government was born, and the States, or the people, created the Federal Government by delegating to it certain authority belonging to the State and its people, retaining in the State and its people all the remaining powers and authority which it then had. Nothing in the science of our Government is more firmly established than that the United States is a Government of delegated powers and authority—that we look to its Constitution to determine what the Congress can do; that the State constitutions are a limitation upon authority, and the legislature can enact all laws, except wherein it is forbidden. It is because of the fact that the Federal Constitution is an instrument of delegation that it becomes necessary for the people to have a tribunal, other than the Congress, to protect the States and the people from the encroachments of Congress.

"The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively or to the people." (Tenth amendment to United States Constitution.)

The convention that drafted the Constitution met in 1787 and was in session for more than six months. Justice Clark devotes much space to the convention and says:

"Even in such a convention, thus composed and thus secluded from the influence of public opinion, the persistent effort to grant the judges such power was repeatedly and overwhelmingly denied. The proposition was made, as we now know, from Mr. Madison's journal, that 'the judges should pass upon the constitutionality of acts of Congress.' This was defeated June 4, receiving the votes of only two States. It was renewed no less than three times, i. e., on June 6, July 21, and finally again, for the fourth time, on August 15, it was brought forward, and though it had the powerful support of James Madison, afterwards President Madison, and James Wilson, afterwards a justice of the United States Supreme Court, the proposition at no time received the votes of more than three States. On this last occasion, August 15, Mr. Mercer thus summed up the thought of the convention, as evidenced by its vote: 'He disapproved of the doctrine that the judges, as expositors of the Constitution, should have authority to declare a law void. He thought the laws ought to be well and cautiously made, and then to be incontrovertible.' (Government by Judges, p. 9.)

It is the intention of Justice Clark to say that the convention voted on this question: "The judges should pass upon the constitutionality of the acts of Congress," and he attempts to prove that Mr. Mercer expressed the thought of the convention by quoting a part of the speech of Mr. Mercer, as reported in Mr. Madison's Journal of the Proceedings of the Convention. I have examined three editions of Madison's Journal, and the convention did not have this question before it on August

15 nor on any other day. (Documentary History of United States Constitution, published by State Department, vol. 3; Scott's Madison's Journal; and Elliot's Debates, vol. 5.)

The Virginia delegation in the convention, by Governor Randolph, presented a set of resolutions to the convention, as a plan or basis for a constitution. The eighth resolution provided for a "council on revision" of the acts of Congress composed of the Executive and a convenient number of the Supreme Judiciary, and if this "council on revision" failed to agree with Congress on the policy of the proposed law, it then would become necessary for Congress to pass the same over the veto of the "council on revision" by a —— vote of Congress.

This number was left blank, same to be filled in by a vote of the convention. The debates of the convention conclusively prove that the object of having this "council on revision" was to pass upon the policy of enacting the proposed law, and it was what we know to-day as the veto power of the President. This question was before the convention several times, and each time practically in the same form. On August 15, the last time, Mr. Madison moved "that all acts before they become laws should be submitted both to the Executive and Supreme Judiciary Departments, that if either of these should object, two-thirds of each House, if both should object, three-fourths of each House, should be necessary to overrule the objections and give to the acts the force of law." (The three editions of Madison's Journal, August 15, 1787.) This motion was seconded by Mr. Wilson.

"Mr. Pinckney opposed the interference of the judges in the legislative business: It will involve them in parties and give a previous tincture to their opinions." (Madison's Journal, August 15, vol. 3, Doc. Hist. Con., 537.)

"Mr. Mercer heartily approved the motion. It is an axiom that the judiciary ought to be separate from the legislative: but equally so that it ought to be independent of that department. The true policy of the axiom is that the legislative usurpation and oppression may be obviated. He disapproved of the doctrine that the judges as expositors of the Constitution should have authority to declare a law void. He thought laws ought to be well and cautiously made and then to be uncontrollable [incontrovertible]." (Madison's Journal, August 15, vol. 3, Doc. Hist. Con., 537.)

"Mr. GERRY. This motion comes to the same thing with what has been already negatived." (Madison's Journal, August 15, vol. 3, Doc. Hist. Con. 537.)

Mr. Mercer, who had only been in the convention since August 6, had evidently been informed as to the previous attitude of the delegates on the right of the Supreme Court to declare laws of Congress unconstitutional, and he was opposed to this "doctrine" and favored the judges participating with the Executive in the veto power. But the convention voted against the view of Mr. Mercer by a vote of 8 States to 3. (Madison's Journal, August 15, vol. 3, Doc. Hist. Con. 537.) Mr. Mercer was with the minority and not the majority, as stated by Justice Clark, supra.

"Mr. Dickenson was strongly impressed with the remark of Mr. Mercer as to the power of the judges to set aside the law. He thought no such power ought to exist. He was at the same time at a loss what expedient to substitute." (Madison's Journal, August 15, vol. 33, Doc. Hist. Con. 538.)

Thus we find Mr. Dickenson supporting the position of Mr. Mercer, but admitting that some plan or "expedient" was necessary to hold the Congress in check. Delaware, the State of Mr. Dickenson, and Maryland, the State of Mr. Mercer, were of the three States that voted for the motion. The question had been settled in the minds of the delegates, as evidenced by their former proceedings, and they refused to concur in the view of Mr. Mercer, and he did not express the "thought of the convention, as evidenced by its vote."

The question was first before the convention on June 4 in this form: "*Resolved*, That the Executive and a convenient number of the national judiciary ought to compose a council of revision," being the first clause of Randolph's eighth resolution. (Madison's Journal, June 4, vol. 3, Doc. Hist. Con. 18, 54.)

"Mr. Gerry doubts whether the judiciary ought to form a part of it, as they will have a sufficient check against encroachments on their own department by their exposition of the laws, which involved a power of deciding on their constitutionality. In some States the judges had actually set aside laws as being against the Constitution. This was done, too, with general approbation. It was quite foreign from the nature of the office to make them judges of the policy of public measures. He moves to postpone clause in order to propose 'that the National Executive shall have a right to negative any legislative act which shall not be afterwards passed by —— parts of each branch of the National Legislature.'" (Madison's Journal, June 4, vol. 3, Doc. Hist. Con. 54.)

"Mr. King seconds the motion, observing that the judges ought to be able to expound the law as it should come before them, free from the bias of having participated in its formation. (Madison's Journal, June 4, vol. 3, Doc. Hist. Con. 55.) The Gerry motion carried and the question was not further considered until the 6th, when the question was the same as on the 4th. On the 6th Mr. Madison said: 'An association of the judges in this revisionary function would both double the advantage and diminish the danger. It would also enable the Judiciary Department the better to defend itself against legislative encroachments. Two objections had been made—first, that the judges ought not to be subject to the bias which a participation in the making of laws might give in the exposition of them; secondly, that the Judiciary Department ought to be separate and distinct from the other great departments. The first objection had some weight.'" (Madison's Journal, June 6, vol. 3, Doc. Hist. Con. 77.) He then goes on in explanation of these objections. Others spoke on the question, but the motion to join the judiciary with the Executive in the veto power was defeated.

The same question, upon motion by Mr. Wilson, was fully debated by the convention on July 21. It is somewhat strange that Justice Clark thought best not to advise the public of what was said in the debates on the 21st and the other days when this question was being considered. He mentions a very small part of the speech of Mr. Mercer on August 15, and then brushes the question aside as being settled by his own statement, that the convention did not intend that the court have this authority. Because of his high public position, the public is expected to consider the question as settled. On the 21st, Mr. Wilson moved as an amendment to the tenth resolution, "that the supreme national judiciary should be associated with the Executive in the revisionary power."

Mr. Wilson said:

"This proposition had been before made and failed; but he was so confirmed by reflection in the opinion of its utility that he thought it incumbent on him to make another effort. The judiciary ought to have an opportunity of remonstrating against projected encroachments on the people as well as on themselves. It had been said that the judges, as expositors of the laws; would have an opportunity of defending their constitutional rights. There was weight in this observation; but this power of the judges did not go far enough. Laws may be unjust, may be unwise, may be dangerous, may be destructive; and yet may not be so unconstitutional as to justify the judges in refusing to give them effect. Let them have a share in the revisionary power, and they will have an opportunity of taking notice of those characters of a law, and of counteracting, by the weight of their opinions, the improper views of the legislature." (Madison's Journal, July 21, vol. 3, Doc. Hist. Con. 390.)

Mr. Gorham did not see the advantage of employing the judges in this way. As judges they are not to be presumed to possess any peculiar knowledge of the mere policy of public measures. Nor can it be necessary as a security for their constitutional rights. (Madison's Journal, July 21, vol. 3, doc. Hist. Con. 391.)

Mr. Gerry did not expect to see this point, which had undergone full discussion, again revived. The object be conceived of the revisionary power was merely to secure the executive department against legislative encroachment. The Executive, therefore, who will best know and be ready to defend his rights ought alone to have the defense of them. (Madison's Journal, July 21, vol. 3, Doc. Con. 393.)

Mr. Strong thought, with Mr. Gerry, that the power of making ought to be kept distinct from that of expounding the laws. No maxim was better established. The judges in exercising the function of expositors might be influenced by the part they had taken in passing the laws. (Madison's Journal, July 21, vol. 3, Doc. Hist. Con., 393.)

Mr. L. Martiff considered the association of the judges with the Executive as a dangerous innovation, as well as one that could not produce the particular advantage expected from it. A knowledge of mankind and of legislative affairs can not be presumed to belong in a higher degree to the judges than to the legislature. And as to the constitutionality of laws, that point will come before the judges in their official character. In this character they have a negative on the laws. Join them with the Executive in the revision, and they will have a double negative. (Madison's Journal, July 21, vol. 3, Doc. Hist. Con. 395).

Colonel Mason observed that the defense of the Executive was not the sole object of the revisionary power. He expected even greater advantages from it. Notwithstanding the precaution taken in the constitution of the legislature, it would still so much resemble that of the individual States that it must be expected frequently to pass unjust, pernicious laws. This restraining power was therefore essentially necessary. It would have the effect not only of hindering the final passage of such laws but would discourage demagogues from attempting to get them passed. It has been said (by Mr. L. Martin) that if the judges were joined in this check on the laws they would have a double negative, since in their expository capacity of judges they would have one negative. He would reply that in this capacity they could impede, in one case only, the operation of the laws. They could declare an unconstitutional law void. But with regard to every law, however unjust, oppressive, or pernicious, that did not come plainly under this description, they would be under the necessity, as judges, to give it a free course. He wished the further use to be made of the judges of giving aid in preventing every improper law. (Madison's Journal, July 21, vol. 3, Doc. Hist. Con. 396.)

"Mr. Rutledge thought the judges, of all men, the most unfit to be concerned in the revisionary council. The judges ought never to give their opinion on a law till it comes before them. He thought it equally unnecessary. The Executive could advise with the officers of state, as of war, finance, etc., and avail himself of their information and opinions." (Madison's Journal, July 21, vol. 3, Doc. Hist. Con. 399.)

The motion of Mr. Wilson to join the judiciary with the Executive as a council of revision failed, and it was left as the convention had already decided, with the Executive, whose title at that time had not been fixed by the convention, but was afterwards termed "the President." He retains this authority to-day, and it requires a two-thirds vote to pass the act over the veto of the President. From the above debate it will appear that it was generally considered by the convention that under the Constitution the Supreme Court would have authority to declare void laws unconstitutional. Many of the speakers so declared, and in no instance was there a member who denied the right. It will be noticed from the debates, supra, that each speaker considered the council on revision only for the purpose of passing on the policy or advisability of enacting the proposed law, and not as suggested by Justice Clark, supra.

The mind of the convention was expressed incidentally on other occasions. It was urged in the convention that Congress have authority to negative any law of a State which might conflict with the Federal laws.

"Mr. Sherman thought it unnecessary, as the courts of the States would not consider as valid any law contravening the authority of the Union." (Madison's Journal, July 17, vol. 3, Doc. Hist. Con. 351.)

On August 22 the question of ex post facto laws was before the convention, and Mr. Williamson said:

"Such a prohibitory clause is in the constitution of North Carolina, and though it had been violated it has done much good there, and may do good here," because the judges can take hold of it. (Madison's Journal, August 22, vol. 3, Doc. Hist. Con. 593.)

And again on August 28 we find:

"Mr. MADISON. Is not that already done by the prohibition of ex post facto laws, which will oblige the judges to declare interferences null and void?" (Madison's Journal, August 28, vol. 3, Doc. Hist. Con. 631.)

So, if Madison's Journal, cited by Justice Clark, and the letters written by members of the convention are to be given their proper weight, there can be no doubt as to the intention of the convention to confer in the Constitution authority upon the Supreme Court to declare void acts of Congress unconstitutional. When the history of the Constitution is studied step by step we can not doubt but that the language of the Constitution confers the authority. On August 26 the present section 2 of Article III read:

"The judicial power shall extend to all cases, in law and equity, arising under the laws of the United States * * *."

On August 27 Doctor Johnson moved to insert the words "this Constitution and the" before the word "laws." (Madison's Journal, August 27, vol. 3, Doc. Hist. Con. 626.)

"Mr. Madison doubted whether it was not going too far to extend the jurisdiction of the court generally to cases arising under the Constitution, and whether it ought not to be limited to cases of a judiciary nature. The right of expounding the Constitution in cases not of this

nature ought not to be given to that department." (Madison's Journal, August 27, vol. 3, Doc. Hist. Con. 626.)

"The motion of Doctor Johnson was agreed to nem. con., it being generally supposed that the jurisdiction given was constructively limited to cases of a judiciary nature." (Madison's Journal, Aug. 27, vol. 3, Doc. Hist. Con. 626.)

Section 2 of Article III now reads: "The judicial power shall extend to all cases, in law and equity, arising under this Constitution, the laws of the United States * * *." No one will doubt but that the Constitution is an instrument of greater authority than congressional acts, and Article VI of the Constitution, wherein it says: "This Constitution, and the laws of the United States which shall be made in pursuance thereof * * * shall be the supreme law of the land," is conclusive on this point. The judicial power extends to all cases arising under the Constitution and the laws of the United States which shall be made in pursuance thereof—then, is it not necessary for the court, when the question is properly raised, to say whether or not the act of Congress is authorized by, or in "pursuance" of, the Constitution?

Justice Clark in each of his articles says that Jefferson, Jackson, and Lincoln criticized the Supreme Court, intending, no doubt, to leave the impression that each of them questioned the authority of the court to choose between the Constitution and the acts of Congress. Some of these men were on several sides of many questions—let them speak for themselves. Shortly after the election of Mr. Jefferson to the Presidency the Legislature of Rhode Island presented him with a congratulatory address soliciting an expression of his views on the Federal Constitution, and in his reply thereto Mr. Jefferson said:

"The Constitution shall be administered by me according to the safe and honest meaning contemplated by the plain understanding of the people at the time of its adoption—a meaning to be found in the explanations of those who advocated, not those who opposed it. These explanations are preserved in the publications of the time." (Elliot's Debates, vol. 4, p. 446.)

What were the publications of the time? After the convention had concluded its labors the proposed Constitution was submitted to the people of the States for adoption. Not to the legislatures of the States, as suggested by Justice Clark, but to the people through their chosen delegates, for that purpose. (Elliot's Debates, vol. 1, pp. 319, 335, Article VII of Constitution.) In many of the States there was great opposition to the adoption of the Constitution, both by speeches and through the press. Its enemies raised every conceivable objection to its adoption. That the Congress had too much power; that the President would become a king; and that too much authority had been given to the Federal courts. The friends of the Constitution did not deny that great power had been given to the courts, and that it would be the duty of the Supreme Court to declare void acts of Congress unconstitutional, but defended the same, both by public speeches and through the press.

Hamilton, one of the most active members of the Constitutional Convention, and Madison, also a member of the convention, known as the "father of the Constitution," with John Jay, published a series of articles under the name of "Publius" defending and expounding the meaning of the Constitution. These articles were copied by the press in most of the States where there was a contest, and were published in pamphlet form and given very wide circulation, becoming known as the "Federalist." Six of these articles are devoted to the judiciary, and they are most instructive. No doubt Mr. Jefferson had the Federalist in mind when he wrote to the Legislature of Rhode Island. In No. LXXVIII—and everyone should read the entire paper—Mr. Hamilton said:

"The complete independence of the courts of justice is peculiarly essential in a limited constitution. By a limited constitution I understand one which contains certain specified exceptions to the legislative authority; such, for instance, as that it shall pass no bills of attainder, no ex post facto laws, and the like. Limitations of this kind can be preserved in practice no other way than through the medium of the courts of justice, whose duty it must be to declare all acts contrary to the manifest tenor of the Constitution void. Without this, all the reservations of particular rights or privileges would amount to nothing.

"Some perplexity respecting the rights of the courts to pronounce legislative acts void because contrary to the Constitution has arisen from an imagination that the doctrine would imply a superiority of the judiciary to the legislative power. It is urged that the authority which can declare the acts of another void must necessarily be superior to the one whose acts must be declared void. As this doctrine is of great importance in all the American constitutions, a brief discussion of the ground on which it rests can not be unacceptable.

"There is no position which depends on clearer principles than every act of delegated authority, contrary to the tenor of the commission under which it is exercised, is void. No legislative act, therefore, contrary to the Constitution can be valid. To deny this would be to affirm that the deputy is greater than his principal; that the servant is above his master; that the representatives of the people are superior to the people themselves; that men acting by virtue of powers may do not only what their powers do not authorize but what they forbid.

"A constitution is, in fact, and must be regarded by the judges as a fundamental law. It therefore belongs to them to ascertain its meaning, as well as the meaning of any particular act proceeding from the legislative body. If there should happen to be an irreconcilable variance between the two, that which has the superior obligation and validity ought, of course, to be preferred; or, in other words, the Constitution ought to be preferred to the statute, the intention of the people to the intention of their agents.

"Nor does this conclusion by any means suppose a superiority of the judicial to the legislative power. It only supposes that the power of the people is superior to both; and that where the will of the legislature, declared in its statutes, stands in opposition to that of the people, declared in the Constitution, the judges ought to be governed by the latter rather than the former. They ought to regulate their decisions by the fundamental laws rather than by those which are not fundamental."

Can argument be more convincing than the above from Hamilton? John Marshall was one of the delegates to the Virginia convention which adopted the Constitution. The Constitution was most bitterly fought in that convention. Patrick Henry with all the force of his great eloquence led the fight against its adoption, and did not overlook the Supreme Court of the United States. In reply Mr. Marshall said in part:

"These, sir, are the points of Federal jurisdiction to which he objects, with a few exceptions. Let us examine each of them with a supposition that the same impartiality will be observed there as in other courts, and then see if any mischief will result from them. With respect to its cognizance in all cases arising under the Constitution and the laws of the United States, he says that the laws of the United States being paramount to the laws of the particular States, there is no case but what this will extend to. Has the Government of the United States power to make laws on every subject? Does he understand it so? Can they make laws affecting the mode of transferring property, or contracts, or claims, between citizens of the same State? Can they go beyond the delegated powers? If they were to make a law not warranted by any of the powers enumerated, it would be considered by the judges as an infringement of the Constitution which they are to guard. They would not consider such a law as coming under their jurisdiction. They would declare it void." (Elliot's Debates, vol. 3, p. 553.)

Patrick Henry, among other things, said:

"When Congress, by virtue of this sweeping clause, will organize these courts, they can not depart from the Constitution, and their laws in opposition to the Constitution would be void. If Congress, under the specious pretense of pursuing this clause, altered it and prohibited appeals as to fact, the Federal judges, if they spoke the sentiments of independent men, would declare their prohibition nugatory and void." (Elliot's Debates, vol. 3, pp. 540, 541.)

Wilson and others in Pennsylvania, Ellsworth and Sherman in Connecticut, and delegates in all the conventions where the question was raised, admitted that the Constitution gave the authority to the Supreme Court, and defended it. President Adams, knowing John Marshall's avowedly strong views on the authority of the court in this regard, appointed him in 1801 Chief Justice of the court, saying, "This is the greatest act of my administration." Luther Martin, a delegate from Maryland to the Constitutional Convention, refused to sign the instrument, and wrote a letter to the people of Maryland in which he called attention to the many things which he considered defects in the new Constitution, and urged the people not to adopt it, had this to say of the court:

"Whether, therefore, any laws or regulations of the Congress, any acts of its President or other officers, are contrary to or not warranted by the Constitution rests only with the judges who are appointed by Congress to determine; by whose determination every State must be bound." (Elliott's Debates, vol. 1, p. 380.)

For several years after the adoption of the Constitution there sat in Congress many of the men who had been active in the Constitutional Convention, and the debates of the early sessions of Congress throw much light on the meaning of the instrument. In the Senate, in January, 1800, Mr. Mason said:

"It will be found that the people, in forming their Constitution, meant to make the judges as independent of the legislature as of the Executive, because the duties they have to perform call upon them to expound not only the laws but the Constitution also, in which is involved the power of checking the legislature, in case it should pass any laws in violation of the Constitution. For this reason it was more important that the judges in this country should be placed beyond the control of the legislature than in other countries, where no such power attaches to them.

"He knew that they might pass unconstitutional laws, and that the judges, sworn to support the Constitution, would refuse to carry them into effect; and he knew that the legislature might contend for the execution of their statutes. Hence the necessity of placing the judges above the influence of these passions; and for these reasons the Constitution had put them out of the power of the legislature." (Elliot's Debates, vol. 4, p. 442.)

The celebrated "Virginia resolutions" of 1798, pronouncing certain alien and sedition laws unconstitutional and calling on the other States to join Virginia in resisting them, received a cold shoulder from most of the States; and the reply of Rhode Island is somewhat typical of the answers received by Virginia:

"In General Assembly, February, A. D. 1799.

"Certain resolutions of the Legislature of Virginia, passed on 21st of December last, being communicated to this assembly:

"1. *Resolved*, That, in the opinion of this legislature, the second section of the third article of the Constitution of the United States, in these words, to wit, 'The judicial power shall extend to all cases arising under the laws of the United States,' vests in the Federal courts exclusively and in the Supreme Court of the United States ultimately the authority of deciding on the constitutionality of any law of the Congress of the United States." (Elliot's Debates, vol. 4, p. 533.)

It is generally known that Webster had no doubts as to the authority of the court; and in the famous debate in the Senate in 1830 between Mr. Webster and Mr. Hayne, with which most schoolboys are familiar, Mr. Hayne said:

"But there is one point of view in which this matter presents itself to my mind with irresistible force. The Supreme Court, it is admitted, may nullify an act of Congress by declaring it to be unconstitutional. Can Congress after such a nullification proceed to enforce the law, even if they should differ in opinion from the court?" (Elliott's Debates, vol. 4, p. 514.)

Justice Clark says that Jackson had denied the authority of the Supreme Court in this respect. In November, 1832, South Carolina passed an ordinance touching the tariff laws of the United States which, had the State been permitted to carry out, would have taken the State out of the Union. President Jackson issued a proclamation to the State, which had the desired effect, wherein he said:

"If it should be said that public opinion is a sufficient check against the abuse of this power, it may be asked why it is not deemed a sufficient guard against the passage of an unconstitutional act by Congress. There is, however, a restraint in this last case which makes the assumed power of a State more indefensible, and which does not exist in the other. There are two appeals from an unconstitutional act passed by Congress—one to the judiciary, the other to the people and the States." (Elliot's Debates, vol. 4, p. 584.)

Lincoln exercised the right to criticize the court, but he never denied the right of the court to declare void acts unconstitutional. In a speech in Springfield, Ill., he said:

"We believe as much as Judge Douglas, perhaps more, in obedience to and respect for the judicial department of government. We think its decisions on constitutional questions, when fully settled, should control not only the particular case decided but the general policy of the country, subject to be disturbed only by amendments to the Constitution as provided in that instrument itself. More than this would be revolution." (Reply to Douglas, June 26, 1857; Centenary Edition of Lincoln's Speeches.)

History does not support, and for that reason I can not agree with the statement that "Judge Marshall recognized this in Marbury *v.* Madison, in which case in an obiter opinion he had asserted the power

to declare an act of Congress unconstitutional, for he wound up by refusing the logical result, the issuing of the mandamus sought, because Congress had not conferred jurisdiction upon the Supreme Court to issue it." (Some Defects in the Constitution, p. 14.) Marbury v. Madison, as to the point in question, was in no sense of that word an obiter opinion, as it was a necessary part of the court's opinion.

The people in the Constitution had established the original jurisdiction of the Supreme Court, but left it to Congress to regulate the appellate jurisdiction. The Congress in 1789, among other things, attempted to confer original jurisdiction on the court in mandamus. Upon the application of Marbury the court, under the act of 1789, granted the "rule" requiring the Secretary of State, Mr. Madison, to show cause why a mandamus should not issue compelling him to issue to Marbury his commission as a justice of the peace in the District of Columbia. When the case came on for hearing before the court its jurisdiction to issue the writ of mandamus was questioned. Every lawyer knows that the court's first duty was to decide that question, and the decision of that question could not be obiter, it being absolutely necessary. The court said:

"Congress can not confer on this court any original jurisdiction.

"When the Constitution and an act of Congress are in conflict the Constitution must govern the case to which they both apply.

"An act of Congress repugnant to the Constitution is not law.

"To issue a writ of mandamus requiring a Secretary of State to deliver a paper would be an exercise of original jurisdiction not conferrable by Congress and not conferred by the Constitution on this court." (Marshall's Constitutional Decisions (Dillon), 2.)

So instead of holding out for greater authority, the court refused to accept of authority, which the people in their Constitution had not conferred upon the court. The writ of mandamus was refused, not because "Congress had not conferred jurisdiction," but because Congress was acting without jurisdiction, as the people had already acted when they adopted the Constitution.

The court may have used obiter on another question in this case, but, if so, its words will sound very sweet to the readers of Mr. Clark. Keep in mind that it was the Secretary of State, a great Cabinet officer, whose acts were in question in this case. The court says:

"The very essence of civil liberty certainly consists in the right of every individual to claim the protection of the laws whenever he receives an injury. One of the first duties of government is to afford that protection. In Great Britain the King himself is sued in the respectful form of a petition, but he never fails to comply with the judgment of his court.

"The Government of the United States has been emphatically termed a government of laws and not of men. It will certainly cease to deserve this high appellation if the laws furnish no remedy for the violation of a vested right.

"Questions in their nature political or which are by the Constitution and laws submitted to the Executive can never be made in this court.

"But if this be not such a question, if so far from being an intrusion into the secrets of the Cabinet it respects a paper which according to law is upon record and to a copy of which the law gives a right on the payment of 10 cents, if it be no intermeddling with a subject over which the Executive can be considered as having exercised any control, what is there in the exalted station of the officer which shall bar a citizen from asserting in a court of justice his legal rights or shall forbid a court to listen to the claim or to issue a mandamus directing the performance of a duty not depending on Executive discretion but on particular acts of Congress and the general principles of law?

"If one of the heads of departments commit any illegal act under color of his office by which an individual sustains an injury, it can not be pretended that his office alone exempts him from being sued in the ordinary mode of proceeding and being compelled to obey the judgment of the law."

The court held that Marbury had a right of action against the Secretary of State to compel him to deliver his commission, but that he was in the wrong court, as the Constitution had not conferred original jurisdiction on the Supreme Court to issue mandamus.

Among the many criticisms of the Supreme Court made by Justice Clark he has this to say concerning the fourteenth amendment:

"Aware of this defect, the court since the war has sought to found its jurisdiction to nullify legislative action upon the fourteenth amendment. It has been well said that that amendment, which was intended for the protection of the Negro, had failed entirely in that purpose, but has become a very tower of strength to the great aggregations of wealth. Not only no force can be justly given to the construction placed by the Supreme Court upon the fourteenth amendment from the knowledge of the history of its adoption, but the words used can not fairly be interpreted as they have been. 'Due process of law' means the orderly proceeding of the courts and the 'equal protection of the laws' was never intended to give to the Federal courts irreviewable supremacy over Congress and the President. (Back to the Constitution (Clark), 11.)

That section of the fourteenth amendment referred to by Mr. Clark is an inhibition against the States, and confers no rights upon Congress other than to enforce the inhibition: "No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws." Shortly after the Civil War Congress passed laws which came before the court, and the attorney for the United States contended that they were authorized by the fourteenth amendment.

The court held that the language of the acts did not bring them within the fourteenth amendment and that the acts were repugnant to the tenth amendment, supra. I doubt if there can be found a single opinion by the Supreme Court that warrants the attack of Mr. Clark. The court has consistently held that the fourteenth amendment applies only to the States, acting by their authorized agents, as the legislature, the courts, etc., and that it does not inhibit the citizens of a State, except where they represent and speak for the State.

Many other statements of Mr. Clark are not supported by the facts, for instance, that the income tax law of 1894 was passed by "the lower House unanimously, and I believe there were only one or two votes against it in the Senate. The President, who was a good lawyer, approved it" (Government by Judges (Clark), 12), and then it was declared unconstitutional by "five elderly lawyers, selected by influences naturally antagonistic to the laboring classes." (Defects in Con. of U. S. (Cark), 13.) The facts are that the law passed the House not unanimously but by a vote of 204 for to 140 against it. In the Senate the vote was 39 for and 34 against, with 12 Members refusing to vote, and President Cleveland refused to approve of the bill and allowed it to become a law by holding it for 10 days. (Senate Document 547, p. 13, of Sixtieth Congress, second session.) It is more than likely that the ability of the minority who opposed the act and of the "President, who was a good lawyer," who refused to approve the same, was greater than the ability of those who "unanimously" passed the law. Read and study the lives of the "elderly lawyers" who compose the Supreme Court now, or at any time prior, and decide for yourself if there is any reason why they should be "antagonistic to the laboring classes." Read the opinions of the Supreme Court for the past 20 years and see if these "elderly lawyers" have not by obiter blazed the way for much of the progressive legislation during that period. Read the recent opinion of the court on the Adamson law and you will be able to make a pretty good guess as to the character of railroad legislation we have a right to expect within a reasonably short period.

The words of Lincoln in 1860 seem quite pertinent at this time. Senator Douglas, without going into the facts, declared to his people that his position on the question of slavery was the position of the "fathers." Lincoln, in a speech in 1960 in Cooper Union replied to the assertion of Douglas as to the position of the "fathers," using these words:

"But he [Douglas] has no right to mislead others who have less access to history and less leisure to study it into false beliefs that our fathers, who framed the Government under which we live, were of the same opinion, thus substituting falsehood and deception for truthful evidence and fair argument."

PRESTON A. SHINN.

PAWHUSKA, OKLA.

THE COAL SITUATION.

Mr. WALSH of Massachusetts. Mr. President, I ask unanimous consent to have printed in the RECORD a communication from the Governor of Massachusetts, Hon. Channing H. Cox, addressed to the members of the Massachusetts delegation in Congress in reference to the coal situation in Massachusetts and throughout New England.

There being no objection, the communication was ordered to be printed in the RECORD, as follows:

THE COMMONWEALTH OF MASSACHUSETTS,
EXECUTIVE DEPARTMENT.

To the Members of the Massachusetts Delegation in Congress:

The people of Massachusetts and New England view with the greatest concern the present serious condition caused by the prolonged strike in the coal mines. It is generally known that our people could not resist the rigors of our winter climate without coal, that coal is necessary for the conduct of our public utilities, and that industry and commerce in this section would be destroyed without an ample supply of cheap coal. It is doubtful if the actual conditions with reference to our supply of coal at present are known, and I therefore feel it my duty to present these conditions to you, as they have been determined by Mr. Hultman, the Massachusetts fuel administrator, and I urge that in any way possible action be taken which may insure to our people a supply of coal for the winter.

The troubles of the two branches of the coal industry are diametrically opposite. In the anthracite industry the trouble is due to underproduction made possible by natural monopolistic conditions; on the other hand, the bituminous industry is in trouble from overproduction. The production of anthracite is not capable of expanding in an emergency as is the case of bituminous. The demand for anthracite does not materially fluctuate, while the demand for bituminous is dependent upon industrial and commercial activities.

It is an interesting fact that the total yearly production of anthracite coal is less than the annual fluctuation in the production of bituminous coal.

So complete is our dependency upon coal for mechanical power and heat that the public health and welfare is seriously threatened by selfish quarrels in the coal industry between capital and labor. When such a menace confronts the people it is unquestionably the duty of the Government to act.

The proper time for the Government to intervene and the action that should be taken are matters of great importance and must be sanely and impartially considered by those who are responsible for the administration of our Government.

The people have a right to expect their Government to protect their rights. If relief from a menace can not be secured by methods of conciliation and arbitration, suitable action must be taken, either by the President or Congress, that will safeguard the welfare and health of the people.

1. ANTHRACITE COAL.

I would be remiss in my duty if I did not advise the people of Massachusetts in regard to the deplorable and dangerous situation that may confront householders who are dependent or rely upon anthracite coal for their domestic fuel next winter.

Resumption in mining of anthracite coal must be commenced without delay; otherwise the householders of Massachusetts will not be able to secure an ample supply of anthracite coal for domestic needs. This condition will exist in the entire eastern and northeastern sections of the country, with the exception of Pennsylvania.

2. BITUMINOUS COAL.

There is at present no shortage in the supply of bituminous coal available to Massachusetts and the other eastern and northeastern States of the country. While the future is uncertain in regard to our bituminous coal supply no trouble is as yet apprehended.

Below are the principal facts and figures on which the above conclusions are based.

ANTHRACITE COAL.

PRODUCTION.

On April 1 the anthracite miners officially "suspended production" and on June 26 the anthracite miners authorized the union officials to declare that a "strike" existed. The union leaders have as yet made no strike announcement. However, from April 1 to July 1, 1922, the production of anthracite coal has been about 140,000 net tons, mostly dredged from river bottoms and consisting of steam sizes not commonly

used for domestic purposes. During the same period last year approximately 23,000,000 tons, all sizes, were produced.

Since 1913 the annual production of anthracite coal, which is found and mined only in a small section of the State of Pennsylvania, has been:

	Net tons.
1913	91,525,000
1914	90,822,000
1915	88,995,000
1916	87,578,000
1917	99,612,000
1918	98,826,000
1919	88,092,000
1920	89,598,000
1921	90,473,000

About 65 per cent of the above is domestic sizes, the balance steam sizes.

From the foregoing figures it is evident that even war-time demand and high price for anthracite stimulated production less than 10 per cent. Included in this increased production were vast culm bank recoveries, which coal contained so much rock and bone that the increased production of coal was more apparent than real and resulted in producing what has been described as fire-proof coal.

Excluding Sundays and holidays, the anthracite mines have been obliged to operate at practically full time throughout the entire year to produce the above tonnage.

For more than a month there has been practically no domestic sizes except pea coal available for shipment from storage piles.

The production loss to date this year of approximately 23,000,000 tons can not be made up, and each month the anthracite strike continues will increase this deficit by approximately 7,500,000 tons.

CONSUMPTION, RECEIPTS, AND STOCKS OF ANTHRACITE COAL IN MASSACHUSETTS.

Anthracite coal of domestic sizes, i. e., broken egg, stove, chestnut, and pea, is the principal source of heating the homes of this Commonwealth. We consume about 5,500,000 tons of the domestic sizes each year.

On April 1 when the present coal strike began Massachusetts retail dealers had on hand 726,611 tons. Receipts during April, May, and June, although production at the mines had practically ceased, amounted to 419,824 tons, making the total available coal supply of the dealers from April 1 to July 1 of 1,146,435 tons. During April, May, and June 837,560 tons were delivered by the dealers, leaving a stock on hand in the dealers' yards July 1 of 308,875 tons.

Deliveries for April, May, and June, 1921, were 1,366,521 tons against deliveries for the same months this year of 837,560 tons.

Another matter to be considered is stocks in house cellars carried over from last coal-burning season. Business conditions in this section, together with the people convinced that the price of coal, which is twice as high as in 1913, is sure to be reduced, caused subnormal amounts to be carried over. This assumption is borne out by reports from the dealers that spring deliveries this year included a very large number of 1-ton and one-half-ton orders.

Although anthracite coal was not in any way connected with the recent establishment on May 30 of a "maximum price" for bituminous, the demand for anthracite was immediately stimulated by this action, and it is evident from the dealers' reports that during June the demand for domestic anthracite has been greater than during the same period last year while stocks on hand are rapidly shrinking.

FUTURE OUTLOOK.

In the thickly settled eastern and northeastern sections of our country the householders have allowed themselves to become dependent upon anthracite coal for domestic purposes. The existing strike in the bituminous regions, the unreasonable prejudice of many people against the use of this coal, the construction of the present heating apparatus, especially kitchen ranges, causes me to regard with apprehension the conditions that will probably be foisted upon householders of limited means this fall and winter.

The production of anthracite coal has not been flexible or in any way seasonal during the last 10 years, as has been the case in the bituminous industry. It is a climatic necessity for New England to accumulate large stocks of both anthracite and bituminous coal before winter sets in. This fact, together with the seasonal demand for cars for moving crops and other purposes, may again cause an acute transportation crisis.

The real trouble will come in the fall, when householders find that there is no anthracite coal available or only at prohibitive prices. Such conditions may enable coal "exploiters" to repeat their performance of 1920, when the price of poor quality coal at the mine reached $15 a ton in many cases. This tendency is already showing itself in the anthracite trade by the fact that dealers here are being solicited to buy now at an advance of $2 per ton over the April 1 prices.

The fact remains the anthracite operators and labor union officials have been in conference since March 15 without success. Production, which has been stopped since April 1, must be resumed without delay, or the anthracite-burning population in about 25 States will suffer unwarranted hardship and expense in obtaining an adequate amount of fuel to heat their homes next winter.

BITUMINOUS COAL.

PRODUCTION.

Production from the nonunion mines since April 1 has averaged about 5,000,000 tons weekly. Comparative production tables are shown below:

Bituminous coal production in the United States.

	January, February and March.	April, May, and June.	Total.
1919	106,772,000	106,765,000	213,537,000
1920	135,702,000	122,046,000	257,748,000
1921	101,513,000	94,664,000	196,177,000
1922	129,282,000	57,718,000	187,000,000

CONSUMPTION, RECEIPTS, AND STOCKS OF BITUMINOUS COAL IN NEW ENGLAND.

In considering the local aspects of the bituminous-coal situation it is necessary to consider New England as a unit.

The consumption of bituminous coal fluctuates with industrial and commercial activities, and bituminous-coal receipt figures may be regarded as a good barometer of business conditions.

New England tide and rail bituminous-coal receipts.

	Net tons.
1919	18,182,000
1920	22,434,000
1921	17,188,000

Another important factor in New England's fuel problem is the tremendous growth in the use of fuel oil. In three years the displacement of bituminous coal by fuel oil in New England has grown from 500,000 to 4,000,000 tons. The economic effect of fuel-oil competition upon the price and consumption of bituminous coal in New England is of inestimable value in safeguarding our industrial welfare.

From an examination of the monthly receipts of bituminous coal into New England and comparison with previous years there does not appear to be an abnormal shrinkage caused by the strike to date:

New England bituminous coal receipts (net tons).

	1919	1920	1921	1922
January	1,392,000	1,477,000	1,688,000	1,337,000
February	1,210,000	1,366,000	1,265,000	1,834,000
March	1,070,000	1,765,000	1,335,000	2,285,000
April	1,447,000	1,394,000	1,190,000	1,258,000
May	1,566,000	1,793,000	1,237,000	948,000
June	1,566,000	1,663,000	1,558,000	950,000
Total	8,241,000	9,428,000	8,273,000	8,613,000

The Associated Industries of Massachusetts, at the request of the Fuel Administrator, made a survey of the bituminous coal stocks in the hands of their members as of June 1, 1922, which is quoted in part below:

"From a summary of the questionnaires which we sent out to our members it does not look to us as if the situation was at all alarming at the present time.

"Concerns having annual requirements of 5,000 tons and over generally have a good supply on hand, running from two to six months.

"Concerns having requirements of from 500 to 5,000 tons have supplies to carry them 45 days on an average. The greater part of these concerns are not using coal now, but will be in the market for urgent requirements before December 1.

"Concerns having requirements of less than 500 tons either have very low stocks on hand or enough to carry them for from four to eight months, the former being true of about 60 per cent of this class."

FUTURE OUTLOOK.

Foreign demand for coal is about one-fifth as strong as during the 1919–20 strike emergency period, when exports were totaling about 1,250,000 tons a month compared with about 250,000 tons a month this year. In fact, there is a potential supply of soft coal available for import, and already small shipments have been received from Novia Scotia and England. The foreign demand for coal at any cost was one of the principal causes for the 1919–20 price orgy.

Therefore the only real competition that New England will experience in getting a supply of bituminous coal from the nonunion field, which is its principal source of supply, will come from other sections of the country normally supplied by the so-called union field. So far there has been no governmental diversion of this coal to meet shortage in the West, and natural competition has hardly absorbed the amount produced in excess of the eastern demand as is evidenced by the accumulating stocks of bituminous coal at Hampton Roads.

CHANNING H. COX.

THE TARIFF.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes.

The VICE PRESIDENT. The pending amendment will be stated.

The ASSISTANT SECRETARY. The pending amendment is on page 286, after line 16, where the Committee on Finance proposes to insert the following new section:

SEC. 321. That the dye and chemical control act, 1921, approved May 27, 1921, as amended, shall continue in force for one year after the date of the passage of this act.

Mr. McLEAN. Mr. President, I was expecting to address the Senate for a very few moments this morning in support of section 321, but I am informed that there has been a general understanding that all debate has been closed and that the vote is to be taken immediately. Of course, I do not wish to disturb an understanding of that sort, although I am deeply interested in this subject. I will, however, ask unanimous consent to have printed in the RECORD the views of leading chemists and others printed in the Yale Alumni Weekly of April 29, 1921, and May 12, 1922.

Yale University about a year ago adopted plans for the construction of one of the finest and best equipped chemical laboratories in the world and that institution is deeply interested in the subject involved in this amendment. I should like to call the attention of the Senate to the vast importance of sustaining chemical research in every legitimate way, but, under the circumstances, I shall desist, it not being my habit ever to interfere here with the taking of a vote.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

[Extracts from article entitled "Chemistry's Call," by Francis P. Garvan, president of the Chemical Foundation—Yale Alumni Weekly, April 29, 1921.]

The chemist is constantly laboring to make almost everything that we all eat, wear, buy, sell, and use a great deal better, cheaper, and more serviceable. If our chemical science and industry is destroyed by any foreign power, our chemists will be reduced to an unsupported minority or supplanted by foreign chemists whose heads and hearts turn toward the country whose invading forces they really represent. Not many years ago almost every American business man was obliged to depend upon German chemical experts, who spied on his plant for their Kaiser and betrayed its secrets to their country's competitive business forces. Americans must stand on guard at these key points in every business in the future.

* * * * * * *

Three shiploads of selected dyestuffs from Germany—upon which she will glady pay as high a tariff as can be imposed—can supply our whole country's dye needs for a year and serve to ruin every one of our drug, dye, and chemical plants, from the smallest to the very largest.

* * * * * * *

As our chemists lead the way to the higher civilization ahead, every man, woman, and child in America must push on behind them. To every hundred struggling chemists in this country Germany counts her tens of thousands of trained laboratory workers backed by tremendous financial, social, and governmental support, organized as only Germany can organize her most powerful cohorts, and entrenched behind an experience of a quarter century acquired before the rest of the world awoke to the vital need of systematic chemical research and industrial progress. To take her share in the promised land of creative chemistry America must mass an army of young, keen, and patient recruits behind her leaders in the science of chemistry. In every other nation the mustering of boys and girls for the promising career of chemistry is already well under way, all about their secondary schools, colleges, and universities. Shall our country fail, shall Yale fail to rally for this all-important call of chemistry?

—

[Extract from article entitled "The four-year course in chemistry," by Arthur J. Hill, assistant professor of organic chemistry—Yale Alumni Weekly, April 29, 1921.]

This brief survey would be incomplete without some statement relative to the type of men it is hoped that this training will produce. The underlying purpose of the course is thoroughly to acquaint the student, through theory and practice, with the fundamental concepts of the important branches of chemistry without attempt at specialization. Thus equipped the student should be capable of entering the industrial or educational field or continue his scientific training in graduate schools of chemistry, where he may specialize in the field which makes the greatest appeal to him. There is a pressing need of men capable and well trained for undertaking original chemical work, and it is the purpose of the department to foster and stimulate in every student an aptitude for independent chemical thought, and to encourage those men showing especial promise to undertake graduate work which will prepare them for a professional career in some branch of chemistry.

—

[Extract from article entitled "The course of industrial and engineering chemistry," by Harold Hibbert, associate professor of applied chemistry—Yale Alumni Weekly, April 29, 1921.]

The object of the four-year course in industrial and engineering chemistry recently organized in the Sheffield Scientific School is to give a student a broad training in chemistry accompanied by special instruction in such fundamental subjects as mathematics, physics, languages, machine design, kinematics, thermodynamics, power and electrical engineering, economics, and business finance. In the sophomore year the student of engineering chemistry will devote the greater part of his time to the study of physics, mathematics, languages, English, and drawing.

Commencing with the junior year, he will specialize more in chemistry, taking, in addition to the quantitative analysis, courses in physical and organic chemistry. During the same period considerable time will be devoted to special phases of mechanical engineering such as machine design, kinematics, thermodynamics, heat engines, etc., and he will still receive adequate instruction in English.

In the senior year the student's energies will be concentrated on the technical application of chemistry, the study of which will be much facilitated by the attention to be given during the same period to power and electrical engineering. The new course in chemical technology and the special courses in economics and business finance will, it is anticipated, serve to widen his outlook and to provide him with a well-balanced commercial judgment. A feature of this year's work is a two-hour period throughout the year which is devoted to seminar work in engineering chemistry.

—

[Extract from article entitled "Chemical research in the graduate school," by Treat B. Johnson, professor of organic chemistry—Yale Alumni Weekly, April 29, 1921.]

Along what lines we may expect the most important developments in chemistry in the next 20 years is very difficult to predict, and it is probable that no two men would agree to-day in their answer to this question. It is also probable that any chemist would give you a different answer if this question were put to him at an interval of five years. Chemistry is a progressive and intensely practical science, and has never received so much attention and advanced so rapidly in this country as at the present time, as is evident from the recent literature and increased activity in industrial and scientific research organizations. In its relations to other sciences, however, it is agreed by all who have knowledge of the facts that chemistry will always occupy a fundamental position. The two branches which promise to contribute the most to our general welfare in the future are organic and general or physical chemistry.

Chemistry may be defined as a study of all properties and changes of matter depending on the nature of the substances concerned. Geology is the study of the chemistry of the earth. In biology we are dealing with chemical changes taking place in living organisms. Normal growth and the internal and external structures of plants and animals are all the result of a series of chemical changes. It is the use of the scientific method and the application of the principles of chemistry and physics that has brought about the vast development of medicine within the past century. In this field of research physiology, with the aid of chemistry, has undoubtedly contributed more of practical value than any other subject except bacteriology, with which it is closely linked. Engineering, which is the art of making structural properties of matter useful to man, has reached the plane of a science through a knowledge of the chemical and physical properties of iron, copper, concrete, organic products, etc., and other engineering materials used in construction. Chemistry, therefore, occupies a strategical position in our educational program, and the time has come not only for a more aggressive concern with the nature and ideals of our advanced courses of instruction in this subject but also for greater emphasis on our new opportunities for advancing our knowledge of this science and for applying its fundamental principles to the many problems of industry.

* * * * * * *

The trend of therapeutics to-day is to limit the amount and number of drugs and supply hygienic and dietetic measures in the treatment of disease. It is undoubtedly true that the future discoveries in the field of biochemistry hold out promise of positive and far-reaching results of great benefit to mankind. It is through a concerted attack by chemists, physicists, biologists, and medical men that we may anticipate a final solution of such important problems in medicine as the cause of cancer, control of tuberculosis, cure of epilepsy, and relief of nutritional diseases.

—

[Extract from article entitled "Scientific cooperation between chemists and bacteriologist," by Leo F. Rettger, professor of bacteriology—Yale Alumni Weekly, April 29, 1922.]

It must be apparent to everyone that for an ultimate solution of some of these problems the cooperation of investigators from different fields is necessary. Few, if any, scientists can become masters of more than one of these fields. The well-trained chemist may have acquired some of the principles of bacteriology, and may even be familiar with much of the ordinary technique of the bacteriological laboratory, but his chief interest is in the science of chemistry, and his grasp of problems, even chemical, which lie well within the domain of bacteriology must of necessity be limited. Conversely, the bacteriologist, even though he may have had thorough instruction in the various branches of chemistry, is far from being qualified to conduct researches in biochemical problems related to bacteria which demand the most extensive chemical training and experience on the part of the investigator. It can not be denied that for the successful prosecution of any fundamental research cooperation between different departments of branches of study is indeed necessary.

—

[Extract from article entitled "Yale's pioneer chemist—Benjamin Silliman," by Edgar Fahs Smith, professor of chemistry in the University of Pennsylvania, and president of the American Chemical Society—Yale Alumni Weekly, May 12, 1922.]

The marvelous discoveries in chemistry during its entire history, but particularly during the recent decades, lead to the thought that training in this science should be a part of the business of every intelligent individual; further, that acquaintance with its achievements and epoch-making progress should extend to every class of men.

Medicine, through chemistry, will alleviate disease and suffering as never before. It is not alone in material comforts but in the things affecting life and health that chemistry has advanced by leaps and bounds. It brings riches, power, and uplift to nations giving it a real place among their activities.

—

[Extracts from article entitled "The impressions of a European with respect to the status of chemical research in America," by Prof. Oskar Baudisch, research associate in biochemistry in the graduate school—Yale Alumni Weekly, May 12, 1922.]

Every educated American knows that organic and physiological chemistry have been cared for and developed during decades in other countries much more intensively than in America. I had never thought much about this matter in my early life until my interest was aroused somewhat recently by a professor of chemistry at an English university, who asked me shortly before my departure for America the following question: "Can you tell me why, from so many American universities, only a few first-class researches in organic chemistry are carried out?"

* * * * * * *

There are naturally young chemists with the true spirit of research in America also, but their idealism will never be so strong and reach so far as to induce them to work several years without pay, because the title of professor is not so brilliant a goal for them to reach as it is to the academician of the Old World. To see his name printed in a publication is indeed a certain incentive to scientific work, but even that is no consolation for depriving oneself of the comforts of life, especially if he is going to be looked upon as a freak at the same time.

—

[Extracts from article entitled "Opportunities for the chemist in industry," by Herbert R. Moody, professor of chemistry in the College of the City of New York and chairman of Chemists' Club Employment Bureau, New York City—Yale Alumni Weekly, May 12, 1922.]

The research chemist solves the perplexities of hitches in the even tenor of production; he answers the complaints of consumers by the removal of conditions that give them rise; he introduces efficiency in manufacturing procedure by his ever constant study for its improvement; he finds new uses for old products, and by raising the commercial dignity of humble things he endows with value what formerly was worthless.

* * * * * * *

The chemical engineer is a plant man of administrative capacity. He knows how to handle help, to maintain discipline, to develop loyalty, to reduce costs of production by the introduction of those conditions, whether of equipment, apparatus, or the disposition of labor, whereby the maximum output may carry the minimum burden of manufacturing cost.

* * * * * * *

The demand for specially trained men is hard to fill. Students are advised to "major" along certain lines. It is with the greater difficulty that the bureau can find men to take positions involving working control of heavy acids, wood products, coke-oven by-products, textiles, dyes, rubber, soap, uncommon pharmaceuticals, perfumes, essential oils, storage and dry batteries, electrochemical products, hydrogen peroxide, etc.

[Extract from article entitled "The educational advantages of the national exposition of chemical industries," by Charles F. Roth, manager of National Exposition of Chemical Industries, New York City—Yale Alumni Weekly, May 12, 1922.]

In 1915 there were seven concerns making dyes in this country whose product amounted to about 7,000,000 pounds, having a value of $3,596,795. In 1920 there were 90 such concerns producing 88,263,778 pounds of dyes having a value of $95,613,749. The entire coal-tar chemical industry developed 183 concerns during this period whose products were valued at $135,482,100 in 1919.

—

[Extract from article entitled "Petroleum research," by Carl O. Johns, director research division, development department, Standard Oil Co. of New York—Yale Alumni Weekly, May 12, 1922.]

Since the days of Silliman, petroleum research has lagged woefully behind the rapidly growing industry. The many technical problems arising in the refinery give the chemist but little opportunity for research of a fundamental nature. Most of our knowledge of the chemistry of petroleum is due to the efforts of German and Russian chemists and to a small scattered group in the United States, among whom is Prof. Charles F. Mabery, who for many years has devoted much of his time to the isolation of individual compounds from petroleum.

—

[Article entitled "The chemist's part in the development of the cotton industry of the South," by David Wesson, technical director, the Southern Cotton Oil Co.—Yale Alumni Weekly, May 12, 1922.]

The average cotton crop of this country is normally about 12,000,000 bales of 500 pounds each. The fiber removes nothing from the soil, but in order to produce the fiber, which is attached to the seed, it is necessary to grow one ton of seed for every two bales of cotton. The seed, besides carrying 20 per cent of oil more or less, is rich in protein and carries considerable phosphoric acid and potash, which have to be replaced by fertilizer in some form. The demands of the cotton fields, together with discoveries of the large phosphate deposits of the South, have been responsible for building up the large fertilizer industry of that section of the country.

As late as 1875, most of the cotton seed was either composted for fertilizer or thrown away. Prior to 1860 laws were passed in some of the States imposing fines for throwing the seed into the watercourses. It was a nuisance, especially if left in piles until decomposition set in. About 1830 one or two small mills started up, and there were several in operation about 1860, but it was not until 1870 that the industry began to grow.

In 1879 the chemist appeared on the scene. He analyzed the seed and showed its value in oil and protein. He also analyzed the cake and meal, which were used for cattle food, and the ashes of the hulls, which were burned under the boilers in those days, and showed their value in phosphoric acid and potash for use in fertilizer. His chief work was in refining the oil and attempting to rationalize the rule-of-thumb method of adding caustic soda, which besides removing the impurities from the crude oil converted much of it into soap. The "foots," as the residue was called, was almost worthless, but methods were found to wash out the impurities with alkali and salt, and convert the fatty matter into a useful soap, suitable for laundry and scouring purposes and for use in washing powders.

Converting the dark red crude oil into a yellow oil was not sufficient greatly to extend its use. According to the quality of the crude, the yellow oil was sometimes sweet, sometimes rank in flavor, and attempts to utilize it for domestic purposes succeeded only in creating strong prejudices against cottonseed oil in general. The chemist found that filtering with fuller's earth removed most of the color, but left behind what is known as an earthy flavor. This put a limit on the use of the oil in any great quantities for food, though a great deal found its way into the soap kettle.

About 1893 it was found that by treating this oil with superheated steam most of the bad flavor was removed and the oil greatly improved for edible purposes. In 1899 the discovery of the Wesson process, which converted all kinds of cottonseed oil into a tasteless and odorless product, put cottonseed oil strictly into the edible class and removed it from the soap kettle. Cottonseed oil is now used mostly for salads and cooking and for the manufacture of vegetable shortenings. It is in the production of the latter that the chemist has shown his greatest skill.

About 1880 refined cottonseed oil was used in small quantities as an adulterant of lard. As refining methods improved as much as 40 per cent was used in the compound, to which beef stearin was added to offset the softening effect of the oil. About 1887 Congress started an investigation to find out why more lard was shipped from Chicago than could possibly be made from the hogs slaughtered there, and found the cause in the cottonseed oil used. The product was then branded "lard compound." When deodorizing was discovered in 1893 it became possible to leave out the hog lard and use only cottonseed oil and beef fat. The use of oil made by the Wesson process greatly improved the quality of the product and raised the standard. In 1910 the introduction of the hydrogenation process made it possible to eliminate beef fat, so the leading shortenings of to-day are strictly vegetable, and their popularity is so great they use up 70 per cent of the entire oil production.

In 1887 the first systematic chemical analysis of seed and mill products was started in Chicago. This laid the foundation of chemical control of the oil-mill business and saved the industry millions of dollars every year by increasing the efficiency of millwork. In the early days of the industry the products were sold on looks, smell, and taste. Now they are handled on chemical analysis. The cottonseed soap stock is now used for the distillation of fatty acids and the production of a special pitch largely used in the manufacture of paints and roofing.

As previously indicated, the cottonseed hulls used to be burned under the boilers of the oil mills. To-day it is the practice to remove from 2 to 10 per cent of short fiber from the seed before separating the hulls. The better qualities of fiber are used for batting, upholstery, etc., while the shorter fiber is being used in paper instead of rags. The cake and meal are very concentrated cattle food, and researches now being made seem to indicate that they may be developed into a valuable human food. During the crop year 1921–22, with only 8,000,000 instead of 12,000,000 bales, the seed added, at current price of $40 per ton, about $160,000,000 to the value of the cotton crop.

In the milling of the seed and the manufacture and selling of its various products employment is given to 20,000 workers and 5,000 officers and salaried employees. This development has been largely due to the activities of the chemist in supplying daily necessities from a waste product, and thereby adding to our national wealth and furnishing means of livelihood to thousands of people.

[Extract from article entitled "The future methods of manufacturing organic chemicals, by Dr. E. K. Strachan, chemical engineer, Buffalo, N. Y.—Yale Alumni Weekly, May 12, 1922.]

I imagine that the future industrial organic chemistry of America will depend on plant breeding and culture, bacterial action, catalysis, electrochemistry, and new chemical machinery. Those chemical processes afford promise of future greatness which are most conservative of power and material and labor. The most conspicuous of such processes are the life processes; it is they that are the most efficient. Why not grow our chemicals? Plant breeding has yielded a variety of corn rich in starch, also a variety rich in oil. The sugar beet, as everyone knows, was developed years ago to yield many times the amount of sugar that it did in its natural state. Plant breeding of indigo has recently improved natural indigo to a point where perhaps it will compete with manufactured indigo in shade and price. These performances are all tame compared to the achievements of Burbank. Organic chemistry needs a chemical Burbank.

—

[Extract from article entitled "A message from a southern university," by J. R. Bailey, professor of organic chemistry, the University of Texas—Yale Alumni Weekly, May 12, 1922.]

There is no denying the fact that many of the important problems in medicine awaiting solution demand talent of extensive training in the fundamental sciences and require a technique in the methods of research such as only post-graduate work in pure science offers. Chemistry at Yale, in cooperation with physiological chemistry, pathology, bacteriology, and pharmacology can in many ways contribute to the alleviation of human suffering, but their greatest combined service lies in turning into medical research men qualified for such a difficult task. It is one of the higher duties calling the universities to real service to train to the highest point of efficiency scientists to enter the fight against the ravages of cancer, tuberculosis, and other malignant diseases that to-day baffle medical skill.

The VICE PRESIDENT. The question is on agreeing to section 321 as reported by the Committee on Finance.

Mr. KING. I ask for the yeas and nays, Mr. President.

The yeas and nays were ordered.

Mr. KING. A parliamentary inquiry. A vote "yea" is a vote for the embargo?

The VICE PRESIDENT. A vote "yea" would be for the section reported by the Committee on Finance, the question being on agreeing to the amendment to insert section 321.

The Assistant Secretary proceeded to call the roll.

Mr. EDGE (when his name was called). I transfer my general pair with the senior Senator from Oklahoma [Mr. OWEN] to the junior Senator from Vermont [Mr. PAGE] and vote "yea."

Mr. HARRISON (when his name was called). I transfer my general pair with the junior Senator from West Virginia [Mr. ELKINS] to the senior Senator from Missouri [Mr. REED] and vote "nay."

Mr. MOSES (when his name was called). I have a general pair with the junior Senator from Louisiana [Mr. BROUSSARD]. He being absent, I transfer that pair to the senior Senator from Wisconsin [Mr. LA FOLLETTE] and vote "nay."

Mr. NEW (when his name was called). I transfer my pair with the senior Senator from Tennessee [Mr. MCKELLAR] to the junior Senator from Michigan [Mr. NEWBERRY] and vote "yea."

Mr. ROBINSON (when his name was called). I have a pair with the senior Senator from West Virginia [Mr. SUTHERLAND], which I transfer to the senior Senator from Nebraska [Mr. HITCHCOCK], and vote "nay."

Mr. SHIELDS (when his name was called). I transfer my pair on this question from the junior Senator from Missouri [Mr. SPENCER] to the Senator from Montana [Mr. MYERS], and vote "nay."

Mr. SMITH (when his name was called). On this vote I have a pair with the Senator from New York [Mr. WADSWORTH]. I transfer that pair to the Senator from Nevada [Mr. PITTMAN], and vote "nay."

Mr. TRAMMELL (when his name was called). I transfer my pair with the senior Senator from Rhode Island [Mr. COLT] to the junior Senator from Rhode Island [Mr. GERRY], and vote "nay."

Mr. WATSON of Indiana (when his name was called). I transfer my pair with the Senator from Mississippi [Mr. WILLIAMS] to the senior Senator from Pennsylvania [Mr. CROW], and vote "yea."

The roll call was concluded.

Mr. SIMMONS. I wish to announce that if the Senator from Missouri [Mr. REED] were present he would vote "nay."

Mr. FERNALD. I transfer my pair with the senior Senator from New Mexico [Mr. JONES] to the Senator from Maryland [Mr. WELLER], and vote "yea."

Mr. MCNARY. My colleague [Mr. STANFIELD] is temporarily absent from the city. He is paired on this vote with the junior Senator from Washington [Mr. POINDEXTER]. If my colleague were present he would vote "yea," and the Senator from Washington would vote "nay."

Mr. CAMERON. I have a pair with the junior Senator from Georgia [Mr. WATSON], and, being unable to secure a transfer,

I am compelled to withhold my vote. If permitted to vote, I should vote "yea."

Mr. HARRIS. My colleague [Mr. WATSON of Georgia] is absent on account of illness. If present, he would vote "nay."

Mr. CURTIS. I wish to announce that the Senator from Vermont [Mr. DILLINGHAM] is paired with the Senator from Virginia [Mr. GLASS].

The result was announced—yeas 32, nays 38, as follows:

YEAS—32.

Ball	Fernald	Lodge	Phipps
Brandegee	France	McCumber	Rawson
Bursum	Frelinghuysen	McKinley	Shortridge
Calder	Gooding	McLean	Sterling
Curtis	Hale	McNary	Townsend
du Pont	Jones, Wash.	New	Warren
Edge	Ladd	Oddie	Watson, Ind.
Ernst	Lenroot	Pepper	Willis

NAYS—38.

Ashurst	Harrison	Nicholson	Smith
Borah	Heflin	Norbeck	Smoot
Capper	Johnson	Norris	Stanley
Caraway	Kellogg	Overman	Swanson
Culberson	Kendrick	Pomerene	Trammell
Cummins	Keyes	Ransdell	Underwood
Dial	King	Robinson	Walsh, Mass.
Fletcher	McCormick	Sheppard	Walsh, Mont.
Harreld	Moses	Shields	
Harris	Nelson	Simmons	

NOT VOTING—26.

Broussard	Glass	Owen	Sutherland
Cameron	Hitchcock	Page	Wadsworth
Colt	Jones, N. Mex.	Pittman	Watson, Ga.
Crow	La Follette	Poindexter	Weller
Dillingham	McKellar	Reed	Williams
Elkins	Myers	Spencer	
Gerry	Newberry	Stanfield	

So the amendment of the committee was rejected.

Mr. McCUMBER. Mr. President, to conform other sections of the bill to the action of the Senate, I move that the Senate reject paragraph (d) on page 275, down to paragraph (e) on page 276. That is the paragraph providing for the additional year.

The VICE PRESIDENT. The amendment will be stated.

The ASSISTANT SECRETARY. The committee proposed to insert on page 275 a subdivision, (d), beginning with line 11 on page 275, down to and including line 6 on page 276.

The VICE PRESIDENT. The question is on agreeing to the amendment of the committee.

The amendment was rejected.

Mr. LENROOT. Mr. President, before the vote was taken I intended to ask to have placed in the RECORD a letter from the president of the Newport Chemical Works, which has a large dye plant in Wisconsin, involving an investment of upward, I think, of $6,000,000. Before arriving at my conclusion as to how I should vote upon this question, I was anxious to know whether that company was in any way connected with any other company and as to the existence of any monopoly within the United States. I have this letter from the president of the company, denying any connection whatever with any other company; and I ask unanimous consent to have it printed in the RECORD.

The VICE PRESIDENT. Without objection, it is so ordered.

The letter is as follows:

NEWPORT CHEMICAL WORKS (INC.),
Passaic, N. J., June 6, 1922.

Hon. IRVING L. LENROOT,
United States Senate, Washington, D. C.

DEAR SENATOR LENROOT: I am writing this letter in confirmation of my verbal advice to you Saturday that neither the Newport Co. nor the Newport Chemical Works has the slightest connection in any way, shape, or manner with any other dyestuff or dyestuff intermediate manufacturing concern.

As I explained to you, the recent newspaper reports of the transfer of the holdings of some of the Schlesinger heirs has not effected an alliance with any other chemical manufacturing concern but was simply an exchange of ownership of some of the stock in the company, which has not affected the direction of the company's affairs in any way.

If there is any additional or more specific information you desire in connection with any of our operations I shall be glad to furnish it.

So far as any charges of there being a monopoly in the organic chemical industry in this country are concerned, they are utterly unfounded. Competition is very keen among all manufacturers.

Yours respectfully,

C. N. TURNER, *President.*

Mr. McCUMBER. Mr. President, I now desire to return to paragraph 902, on page 122.

The VICE PRESIDENT. The amendment will be stated.

The ASSISTANT SECRETARY. On page 122, paragraph 902, cotton and sewing thread, on line 6 the committee proposes to strike out the word "thread" and to insert the same word with a comma and the following words:

One-half of 1 cent per hundred yards.

Mr. SHORTRIDGE. Mr. President, I had intended to make a few remarks in regard to the item which has just been disposed of. There has been so much misstatement of facts, so many feeble attempts at sarcasm and irony and epigrammatic expression, there has been so much distortion of the facts in relation to this American industry that later during the session, when the bill comes before the Senate, if for no other reason than to spread the facts upon the record, I propose under the rules, and I hope in proper fashion, to lay something before the Senate in respect of matters which are of great importance to the American people. I propose to lay before the Senate sworn testimony of honorable, patriotic American citizens in respect of the question of a trust in this industry, and I propose to lay before the Senate and the country sworn testimony as to each and every step taken by the various companies or organizations or foundations which have been referred to during the discussion which has gone on here during the last day or two.

I say this not in anger; I say it with regret, because I feel that certain Senators who have voted upon this proposition have not been and are not fully advised. I am persuaded they have not had opportunity to ascertain the facts, which should be known. Perhaps I myself am somewhat to blame. As Senators will recall, there was a committee appointed to investigate this matter. That committee was charged with the duty of inquiring, first, whether there was or is a monopoly in the dye or chemical industry in America; second, of inquiring into the activities, legal or illegal, of anyone interested in that supposed or alleged monopoly; third, of inquiring as to the activities, legal or illegal, of any resident or foreign person interested in a monopoly or in bringing about special legislation in aid of any monopoly or any private interest, and generally to investigate the dye and chemical industries of the United States, with a view of recommending legislation. That committee took a great deal of testimony, and I wish to advise Senators now that there was not one witness—not one—who testified that there was or is anything approaching a monopoly in this industry. Upon the contrary, each and every witness, though differing, it may be, upon other matters, testified that there was active, and, as they termed it, cut-throat competition.

Mr. FLETCHER. Mr. President, may I inquire of the Senator whether the committee has ever reported that testimony, or made any formal report of its findings?

Mr. SHORTRIDGE. I answer categorically, no. The testimony is being printed and will be in the hands of Senators within a few days, possibly by Monday.

Mr. FLETCHER. I asked because I had never seen a report, and did not know what the fact was in that regard.

Mr. SHORTRIDGE. It was my intention to make some remarks on the subject matter, remarks somewhat in the nature of an oral report, a written one, hereafter to be submitted, but I deferred to the suggestion of others. I have now troubled you too much. I rose merely to say that in the interest of the facts the work of the committee should be made very clearly known to the Senate; and even at the expense of time, if others do not do so, I shall ask the indulgence of the Senate to submit something in the nature of a report, supported by a considerable portion of the sworn testimony that was taken by this committee. Senators are aware of the law, I assume, that witnesses appearing before a congressional committee are granted certain immunities, certain privileges; and out of abundance of caution these several witnesses were specifically asked to waive any privilege or any immunity which the statute gave, and to be sworn to testify. They severally waived any immunity or privilege which the statute gives, were sworn, and testified. They were open to direct and to cross examination, all of which will be made to appear very fully later on.

Mr. FRELINGHUYSEN. Mr. President, although I know it is not necessary to give notice, I feel at this time that it might be proper for me to state that I shall offer these amendments in the Senate, feeling that when some Senators who have opposed the embargo realize the effect that it will have not only on the industry but also upon our policy of national preparedness, they may change their viewpoint. I therefore give notice that the two amendments which have been voted down to-day will be reoffered in the Senate.

Mr. KING. Mr. President, I am not surprised at the action of the able Senator from New Jersey [Mr. FRELINGHUYSEN] in signifying his intention to again present the question of an embargo upon dyes, medicines, chemicals, and other products to the Senate, but I venture to assert that no greater success will attend his efforts than he has met with to-day. I believe that as Senators study the questions involved, the more satisfied they will be with the action just taken by the Senate upon this subject. I also am firmly convinced that the more the public become acquainted with the vice and evils of the proposed embargo, the greater will be their opposition to it, and the

greater will be their satisfaction at the refusal of the House to grant an embargo, and the position just taken by this body.

The junior Senator from California [Mr. SHORTRIDGE] has just indulged in criticism of those who have opposed the embargo. Of course, I can not state with accuracy who are included within the circle of his condemnation, but I presume he particularly referred to the Senator from New Hampshire [Mr. MOSES] and to myself, because we are the only two who have spoken against the embargo proposal since it was presented for consideration yesterday morning. If I understood the Senator from California, he entertains the view that the presentation made by the Senator from New Hampshire and myself, if not others, was inaccurate.

Let me say to the Senator from California that in my opinion the junior Senator from New Hampshire can support the statements which he made, and I shall be ready at all times to vindicate the position which I have taken in respect to this measure and to offer competent evidence in support of the facts submitted.

The Senator may take such position as he pleases regarding the matter and may make such observations as he feels impelled. I am familiar with the questions involved in the dye embargo, and know the facts concerning the organizations which have sought legislation and particularly have endeavored to procure an embargo not only upon dyes but upon medicines, pharmaceuticals, drugs, and various chemical products. I have no doubt as to the correctness of the position which the Senator from New Hampshire has taken, and I am entirely satisfied with my opposition to what I regard as an un-American and as a very improper and unwise policy.

The question of whether there is a Dye Trust is important, but it is not the paramount or the controlling question presented in the proposal to establish an embargo not only upon dyes but upon all synthetic organic chemicals. Of course, the Senator from California is entitled to his views, and I have no quarrel with him because of his opinions, political, economical, or otherwise. He may believe, from what investigation he has made, that there is no monopoly or that an embargo is a proper thing.

I, upon the other hand, believe, after careful investigation, that through the Dyes Institute and other organizations, as well as the activities of various domestic dye corporations producing dyes, medicinal, pharmaceutical, and other products, that there is a monopoly, or at least such monopolistic control of the dye industry as to constitute a monopoly in fact. Undoubtedly various organizations, such as the Dyes Institute, the Chemical Foundation, the Textile Alliance, and other organizations and associations, including the domestic dye manufacturers, have united and confederated together and have mobilized all possible forces to secure the enactment of an embargo law. Hundreds of thousands of dollars have been expended in an extensive propaganda to put over this embargo scheme, and no forces or interests seeking legislation have ever been so persistent and determined as those back of this embargo measure.

The Senator from California advises us that he will tell us what the facts are in regard to the dye industry and all cognate questions. We shall, of course, be delighted to hear him and will welcome any facts not brought to the attention of the Senate. May I add in conclusion that other Senators will undoubtedly, when the Senator has concluded, seek opportunity to present facts, not fancies, to the Senate. I think, however, that the vote just taken discloses that a majority of the Senate are familiar with the facts and need no further enlightenment.

Mr. SHORTRIDGE. Mr. President, I will state the facts from the sworn evidence. I will not rely upon rumor; I will not draw upon my imagination. I will confine myself to the sworn testimony of men presumed to speak the truth, and as to whose character or general reputation nothing truthful can be said impeaching. The testimony was very elaborate. It may be that the smiling Senator from Utah read it, and, reading it, understood it. I shall not rely upon my statement of facts but upon sworn evidence. There I let the matter rest.

Mr. SIMMONS. Mr. President, I rise for the purpose of reading a very short letter. I am going to read this letter because I have contended, with respect to the pending measure, as have those who agree with me, that the effect of these tariff rates, if they should be adopted, would be to increase the prices of the products upon which they are imposed, thereby increasing the cost of living.

Every day we are getting information which corroborates that prediction, and I have a letter from a large concern in my own State this morning with reference to plate glass, which I want to put into the RECORD. This letter is from the secretary-treasurer of the National Furniture Co., of Mount Airy, N. C., manufacturers of furniture. It is dated July 12, 1922, and reads:

NATIONAL FURNITURE CO.,
Mount Airy, N. C., July 12, 1922.

Hon. F. M. SIMMONS,
Washington, D. C.

MY DEAR SENATOR: I thought best to write you and give you some information and experience we are having to-day in the way of buying glass. The plate-glass people have advanced their product to such an extent that it has amounted to 10 to 15 cents on the foot. This is an unreasonable advance, and they will not sell a piece of glass to-day or take an order for it, except subject to prices prevailing at date of shipment. They claim that the demand and scarcity of glass and the cost forces the price up. Still there are several glass plants closed down now.

We have been informed by good authority that their whole demand on prices is the cost of freight and raw material. Now, the freight has been reduced, and nothing they use in manufacturing plate glass has advanced. Their labor has been cut. Still they have advanced their prices. We are of the opinion that the man who pays the highest price for glass to-day gets it.

We do not believe there is any justice in protecting these people with this high tariff and letting them control prices and impose on the people of our country. Glass is getting to such a price that it will be almost impossible for furniture dealers to use it, but they are forced to use it, and it is still going up. We do believe the Government should go to these plate-glass people, investigate them, and see how they are imposing on the people.

We are aware that you will have a hard time fighting this tariff. However, we believe you are in position to show the facts to the Government and expose these plate-glass people. We wish you could give us some information and protect the people of our country on the high price of glass.

Thanking you in advance for your kindness in this matter, we are,
Yours truly,

NATIONAL FURNITURE CO.,
A. E. SMITH, *Secretary and Treasurer.*

Mr. SMOOT. Mr. President, I ask unanimous consent that when the Senate recess to-day it shall recess until 11 o'clock on Monday.

The VICE PRESIDENT. Is there objection? The Chair hears none, and it is so ordered.

Mr. SMITH. Mr. President, the paragraph now under consideration is that pertaining to cotton sewing thread. The Senate committee proposes an amendment in reference to cotton sewing thread, to make the duty one-half of 1 cent per 100 yards. They make a distinction between the sewing thread and the crochet, darning, embroidery, and knitting cotton.

I am quite sure that in arranging these schedules the Senate desires to be informed definitely as to just what their effect will be upon the public generally. The effect of this amendment proposed by the Senate committee will be to exactly double the duty now imposed. The present rate of duty is 15 per cent. Under the compensatory duty provided for by virtue of the adoption of the amendment putting a duty of 7 cents a pound on Arizona cotton about 5 per cent will be added. That, added to the proposed rate, will make it, as worked out by the tariff experts, about 30 per cent, or just about double the present rate.

Mr. President, I want to submit some facts, not gathered from this country alone but from abroad as well, because all are aware that the manufacturers of this cotton sewing thread have their plants in the Old World and the new, and in reference to this particular article I have an extract from the Textile Mercury, of Manchester, England, dated November 13, 1920. The article is headed "Trusts and combines," and the subject discussed is "The future trend of industry." I quote now from this article:

Mr. Robert Donald, formerly editor of the Daily Chronicle and now managing director of the Yorkshire Observer and other papers, gave a lecture before the Bradford Textile Society on Monday, November 8, on the subject of "Trusts and Combines." Mr. Ward Parkinson presided.

Mr. Donald said this was a subject which he had studied for more than 30 years. The movement toward trusts and combines in England had received a great impetus during and since the war. We were at present living in a phase of industrial evolution which led to big businesses and combines and the creation of self-contained firms. He thought the next step would be some kind of State control for the limitation of the profits of trusts and combines and the protection of consumers.

SEWING COTTON.

After reviewing the causes which led to the formation of combines and citing among them the menace of nationalization, guild socialism, and syndicalism, Mr. Donald reviewed briefly various types of combines, taking as his text the reports of the Government standing committee on trusts. With regard to sewing cotton, he said Coats now controlled an international trust which gave the parent company a profit of £4,000,000 a year after paying income tax and excess-profit duty. Exclusive of investments unconnected with the general business, it earned a net return of 17½ per cent on its capital. Over 80 per cent of its trade was for export, and from the evidence given before the committee one might be led to suppose that it carried on a semiphilanthropic business in this country. There was no means of testing the company's claim to generosity in this respect, because it did not allow competitors to get a chance to show what they could do. Coats defied tariffs by getting behind them. The reel of cotton encircled the globe. The only way to break down such a monopoly would be for several of the large drapers to become their own manufacturers. There were many big combines of

drapers in the country, and they were the people who could fight a trust like this by manufacturing for themselves. Although Coats's profit on the capital was 17½ per cent, it was actually 40 per cent when account was taken of the capitalization of reserve, and so on.

Mr. POMERENE. The article the Senator has just read refers to the "parent company." Does that mean the parent company in the United States or the parent company in Great Britain?

Mr. SMITH. The parent company in Great Britain. It has its subsidiaries in this country.

I now read a short article from the Journal of Commerce:

[From the Journal of Commerce.]

POINTED QUESTION ASKED ABOUT PRICE OF THREAD—HUGE MILL PROFITS AFTER PAYMENT OF HEAVY TAXES.

In the House of Commons recently it was stated by Mr. McCurdy, "We mean to find out why a reel of cotton costs 7½d." Apropos of this text, the London Chronicle publishes the following concerning recent showings:

"Housewives all over the country will learn with interest that J. & P. Coats, the huge Paisley cotton and thread manufacturers, have disclosed the fact that in their last year's trading they made a profit of close upon £4,000,000.

"This profit was made after paying excess profits duty, which probably runs into hundreds of thousands of pounds.

"The following table shows the profits earned and dividends paid during the past three years and those for the last complete year before the war:

Years.	Profit.	Dividend.
		Per cent.
1918–19	£3,399,400	40
1917–18	3,171,800	30
1916–17	3,360,950	30
1913–14	2,634,400	30

"In addition to providing for dividends, the directors propose to place £750,000 to war contingencies fund, £150,000 to marine and fire underwriting account, and £250,000 to pensions fund to form the basis of an enlarged scheme for workers. Even then there is only a slight reduction in the large carry forward at £2,299,400.

"Apart from this carry forward and the pension fund, J. & P. Coats now have various reserves amounting to over eleven millions sterling. A portion of this sum is to be capitalized and it is generally expected in the city that holders of ordinary shares will get a 100 per cent share bonus."

So much for the J. & P. Coats Co. In our own country, from the American Wool and Cotton Reporter, Boston, New York, and Philadelphia, February 16, 1922, we find the following very enlightening facts in regard to this poor, struggling industry, which needs a doubling of duty to 30 per cent. I want to read something about what they made under the Payne-Aldrich rates and under the Underwood-Simmons rates, none of which were as high as the proposed amendment offered by the Senate committee. I quote now from the American Wool and Cotton Reporter. I want to put into the RECORD a brief statement with reference to the American Thread Co. and what they did on a capital stock of $6,000,000. They were incorporated March 10, 1898, in New Jersey, combining previously independent thread plants located at Fall River and Westerly, R. I., and Willimantic and Glasgo, Conn. The plants just mentioned are now in operation. The others taken over were abandoned. I shall have incorporated in the RECORD without reading the names of all that were taken over and incorporated in this way with a capital stock of $6,000,000.

These are the earnings made by this company on an investment of $6,000,000. I will state in passing that in 1920 they enlarged their capital stock to $12,000,000, but the figures I am quoting are upon their investment of $6,000,000. Income record covering nine years, beginning with 1920—I wish there were more Senators present to hear these facts as I state them.

Mr. STANLEY. Mr. President, I regard this statement as very important. I wish the Senator would yield to me to suggest the absence of a quorum.

Mr. SMITH. Oh, no; I do not think it is necessary. The statement will go into the RECORD. My observation is that when a Senator suggests the absence of a quorum it simply takes time, because Senators come in and answer to their names and vanish.

Senators will bear in mind that these are profits based on a capital investment of $6,000,000.

For 1920 the profits were $4,587,282; dividends, $1,594,524; reserves, $2,100,000.

For 1919 profits were $3,024,478. I am just going to read the profits and will have the figures complete inserted in the RECORD.

Mr. SMOOT. Mr. President, has the Senator the profits for 1921?

Mr. SMITH. No.

Mr. SMOOT. There would be quite a difference shown.

Mr. SMITH. I do not think they needed any profits in 1921. I do not think they will ever need any more profits. I think they could make sewing thread for the balance of the natural life of the world and live on the profits they have already made. Just listen to this:

Profits in 1919, $3,024,478; 1918, $5,008,823; 11 months in 1917—I do not know why they put that, but I am reading from the record—$2,169,000; profits in 1916, $2,311,593; in 1915, $1,531,377; in 1914, $2,086,115; in 1913, $1,683,463; in 1912, $1,366,775—and all this upon an invested capital of $6,000,000. The aggregate is startling. No wonder that they propose to enlarge their business by investing another $6,000,000 in the business out of profits and then mulct the people who have to buy thread with a profit upon the profits.

After having read the article that I have emanating from a foreign source, showing what the J. & P. Coats people have made, I want to finish the comparison by turning to our own American concerns, where we find that in the way of profits and in the way of tremendous reserves and dividends they duplicate their English associates. Against whom do we propose to protect ourselves? They are entrenched in Europe and entrenched in America. As the letter said which I just read, they are an international trust. When you put your tariff on, against whom are you protecting yourselves? There are no competitors; they are all practically in one combination. Raise your tariff or lower your tariff, they dictate the price to the world. As the article said which I read from the Manchester Mercury, we do not know what would be the result if we had any competition, but we have no competition.

Now I want to read from the same publication as to the J. & P. Coats people. I am quoting now from the same American authority in reference to the J. & P. Coats people, as follows:

The thread firm of J. & P. Coats (Ltd.), of England, has announced that its profits for the year ending June 30, 1919, amounted to $18,976,372, compared with $15,435,540 in the previous financial year and $12,820,249 in 1913–14. The dividend now announced is 40 per cent, against 30 per cent in the two periods mentioned. During the war a contingency fund has been formed aggregating $13,382,875, including $3,649,875 added this year, while $1,216,650 has been set aside as a basis for an enlarged pension scheme. In June, 1914, the undivided profits carried forward amounted to $4,946,763; this has now been increased to $11,189,972.

* * * * * * *

I want to have this entire matter placed in the RECORD in connection with my remarks, if I may have permission.

The VICE PRESIDENT. Without objection, permission is granted.

The matter referred to is as follows:

American Thread Co.: Incorporated March 10, 1898, in New Jersey, combining previously independent thread and yarn plants located at Fall River, Mass.; Holyoke, Mass.; Westerly, R. I.; Willimantic and Glasgo, Conn. The above plants are now in operation. Others taken over were abandoned.

New York, N. Y. Robert C. Kerr, president; F. E. Kaley, E. Martin Philippi, Charles E. Barlow, vice presidents; J. G. Wylie, treasurer and secretary; A. L. Zimmerman, comptroller.

Directors: Charles E. Barlow, Frank E. Kaley, Robert C. Kerr, E. Martin Philippi.

Mills as follows: Glasgo Mills, Glasgo, Conn.; Willimantic Mills, Willimantic, Conn.; Kerr Mills, Fall River, Mass.; Hadley Mills, Holyoke, Mass.; Merrick Mills, Holyoke, Mass.; William Clark Mills, Westerly, R. I. Selling agents: The Thread Agency and The Yarn Agency, 260 West Broadway, N. Y.; Albany Building, Boston; 1015 Filbert Street, Philadelphia; 600 West Jackson Boulevard, Chicago; 1718 Washington Avenue, St. Louis; 57 Sansome Street, San Francisco.

Coats, J. & P. (Ltd.), of England, registered as a limited corporation in England, August 6, 1890, acquiring the cotton-thread business of a company of the same name at Paisley, Scotland; Pawtucket, R. I., and other manufacturing and selling establishments throughout the world. The title to the plant at Pawtucket is held by the Conant Thread Co., a Rhode Island corporation. In July, 1896, control was acquired of Clark & Co., with plants in Newark, N. J.; Jonas Brooks Bros.; and James Chadwick & Bros. These acquired concerns had plants in this country and in Great Britain. J. & P. Coats (Ltd.) were in control of the so-called Thread Trust, dominating the thread business of the world. By a legal decision in 1914 this company was required to dispose of, before January 1, 1915, any interest it held in the American Thread Co. and the English Sewing Cotton Co.

Capital stock, £2,500,000 cumulative preferred shares of £10 each, entitled to 6 per cent dividends, payable semiannually, December 31 and June 30; £3,000,000 preferred ordinary stock entitled to non-cumulative dividends of 20 per cent per annum, payable quarterly, December 31, etc.; £4,500,000 ordinary or common share of £1 each. Dividends on the preferred shares have been paid since issued and on the common share in recent years at the rate of 20 per cent in 1901 through 1905; 1906, 20 per cent and 5 per cent extra; 1907, 20 per cent and 10 per cent extra; 1908, 30 per cent; 1909 through 1913, 30 per cent annually, with 5 per cent extra each year.

Dividends in 1914, on the preferred stock, 6 per cent; on the preferred ordinary stock, 20 per cent; on the ordinary, 30 per cent, with a bonus of 5 per cent extra on the ordinary shares in 1914.

Mr. SMITH. Further on in the article, and I wish to call particular attention to this, it is said:

It is now proposed to capitalize further reserves and to increase the capital of the company to $98,546,600 by means of issuing to ordinary shareholders 4,500,000 ordinary share of $4.86 each.

I think I have read enough and stated enough to convince the people who buy thread, the women who have to purchase at

the stores, and the clothiers of the country, the ordinary work-aday people, dependent in civilization on cotton sewing thread, the millions and millions of people from the lowest to the highest who are compelled to use this article.

We are proposing here to increase their 40 per cent dividends, to increase their startling surplus and profits, by doubling the tariff and giving them an excuse to cut down the number of yards on a spool and increase the price on the decreased amount of thread.

Mr. POMERENE. Mr. President, as I understand, under the present law the duty is 15 per cent ad valorem.

Mr. SMITH. Yes.

Mr. POMERENE. That has been increased under the pending bill so that, according to the schedule I have here, the minimum duty is 25 per cent and the maximum 45 per cent.

Mr. SMITH. Precisely, and when we take into consideration that under the compensatory duty which will be necessary, by virtue of the fact that we put 7 cents a pound on the long-staple cotton—and this thread is made from the long-staple cotton—there will be added 5 per cent to that, making it 30 per cent minimum and 50 per cent maximum.

Mr. SMOOT. Mr. President, I want to say to the Senator from Ohio that I intend to offer an amendment to reduce 25 per cent to 20, and that will mean simply an increase of 5 per cent above the present rate. Of course, no Senator is going to say that they are going to impose a duty of 7 cents a pound on long-staple cotton, with all of this yarn made out of it, and not give them a compensatory duty. The increase that will be made over existing law will be 5 per cent and the specific rates named will not reach the 20 per cent.

Mr. SIMMONS. Is that an illustration of about how much the 7 per cent duty on Egyptian cotton is going to result in increasing the rates on manufactured cotton?

Mr. SMOOT. I do not know to what the Senator is referring.

Mr. SIMMONS. I understood the Senator to say that he was going to move to add a certain amount as a compensatory duty on account of the duty imposed on raw Egyptian cotton.

Mr. SMOOT. Yes; it will be 10 cents a pound on finished cloth.

Mr. SIMMONS. The Senator is proposing to make that increase on this particular item as a compensatory duty; and I am asking the Senator if that is a fair illustration of the increases that will have to be made throughout the cotton schedule by reason of the imposition of a duty of 7 cents a pound on Egyptian cotton?

Mr. SMOOT. There is no doubt of it. On the manufactured articles it is proposed that there shall be a compensatory duty of 10 cents a pound, and it is required. If the Senator wishes me to figure it out, I can tell him just how it will apply.

Mr. SIMMONS. I do not wish the Senator to figure it out. I was simply asking for information whether this was representative of the increases that would have to be made in the rates on cotton goods, cloths, threads, yarns, and things of that sort by reason of the duty that is imposed on raw Egyptian cotton.

Mr. STANLEY. Mr. President——

Mr. POMERENE. Mr. President, if the Senator from Kentucky will permit me, while the Senator from Utah is on his feet, I merely wish to ask another question.

Mr. SMITH. I yield to the Senator from Ohio for that purpose.

Mr. POMERENE. This schedule indicates that there is a minimum duty of 25 per cent and a maximum of 45 per cent. The Senator from Utah has stated that he expected to move to reduce the 25 per cent rate to 20 per cent. What reduction will he propose, if any, in the maximum rate of 45 per cent?

Mr. SMOOT. My proposed amendment will reduce it to 35 per cent.

Mr. POMERENE. The Senator did not state that.

Mr. SMOOT. I want to say that naturally the manufacturers would like to have it without any maximum at all; they would like to have no limit; but supposing thread should fall in price to what it was, we will say, in 1906 and 1907, then the specific duties would apply, and the equivalent ad valorem would amount, as it did in 1910, to 43 per cent.

Mr. POMERENE. I have not analyzed that at all.

Mr. SMOOT. The maximum is a limitation. On these articles in 1910 the equivalent ad valorem was 43 per cent under the Payne-Aldrich law, but I do not want it to ever go above 35 per cent for the future.

Mr. POMERENE. The duty, then, was specific duty?

Mr. SMOOT. Yes.

Mr. POMERENE. And in terms of present-day prices, it would mean an ad valorem of 43 per cent?

Mr. SMOOT. It was 43 per cent on the prices of that date, but not on the prices of to-day.

Mr. POMERENE. What would it be on the prices of to-day?

Mr. SMOOT. That I should have to figure out, and it would take some little time to do that.

Mr. POMERENE. I am not asking the Senator to do that now.

Mr. SMOOT. But the maximum rate is imposed, so that if the prices should go down to the same point as in 1910 the rate shall not exceed 35 per cent. Unless a stop is provided, or a maximum, they would go above 35 per cent, and in no case does the committee want them to go above 35 per cent. I have called attention to the fact that in 1910 the equivalent ad valorem was 43 per cent.

Mr. SIMMONS. Mr. President, under the Payne-Aldrich Act the duty was a half cent a yard specific, with a minimum of 20 per cent.

Mr. SMOOT. But there was no maximum.

Mr. SIMMONS. Of course there was not.

Mr. SMOOT. And the equivalent ad valorem went to 43 per cent.

Mr. SIMMONS. The point that I want to make is that the actual duty collected amounted to 26.3 per cent. We start out now with 25 per cent, for even when the duty is reduced to 20 per cent the compensatory duty of 5 per cent makes it 25 per cent. Then, if the maximum is fixed at 30 per cent the compensatory duty of 5 per cent added would make it 35 per cent, so that the present rate of duty under which these ungodly and enormous profits have been made is more than doubled.

Mr. SMOOT. The Senator certainly is mistaken. The Senator will admit—I think he must admit—that the specific duties will not take effect, but the minimum of 20 per cent will be in effect in every case; there is no question about that. To-day the rates are 15 per cent, so that the committee proposal represents an increase of 5 per cent. About the only reason why I wish to insert the amendment providing a maximum of 35 per cent is this: If the conditions in the industry should be such that the prices of cotton thread should decline to the point they reached in 1910, 35 per cent is all they shall ever get instead of 43 per cent, as was the case in 1910.

The Senator referred to 26 per cent, but that was on skeins and tubes and combs.

Mr. SMITH. No.

Mr. SMOOT. If the Senator will look again closely—I do not know who prepared his tables for him—he will find that what I have stated is the fact.

Mr. STANLEY. Mr. President——

Mr. SMITH. I yield.

Mr. STANLEY. The Senator from South Carolina has very justly expressed regret that there is not greater interest in so vital a matter as an increase in the cost of sewing thread to the sewing women, to say nothing of the factories and mills of the country. The woman who is compelled to earn her livelihood with her needle has commanded the commiseration of mankind since Hood pictured her—

> In poverty, hunger, and dirt,
> Sewing at once with a double thread a shroud as well as a shirt.

That woman still sits in unwomanly rags, in poverty, hunger, and dirt, but these money-mad grabbers in the Imperial Valley after Federal plunder can not see her; they can not see her behind the Roosevelt Dam, and they can not see her in the cotton mills of Coats & Co.

The Senator from South Carolina is perhaps the best-informed man on all that pertains to cotton in or out of the Senate, and his contribution to the subject, vital and practical, is supported by his learning and his wealth of statistical information. I can assure him that if the Senate is indifferent the country is not, the sewing women are not, the press is not, the conscience and the intelligence of the American people are not indifferent to the fight which he is so gallantly making.

Think of it, Mr. President. It is proposed to impose a duty of 7 cents a pound upon long-staple cotton produced in one county in Arizona and in a little spot in southern California. One thousand six hundred and fifty bales of the long-staple cotton of American production is all that it utilized for thread purposes, while there are 40,938 bales of Egyptian imported cotton used for the same purpose; in other words, every time we give to the Salt River planter or the Imperial Valley planter 7 cents a pound on a bale of cotton we take 40 times 7 cents from the thread users of the United States.

Well may the New York World characterize such legislation as "piling up the abominations." I send to the Secretary's desk a short editorial from the New York World on this very subject, which I ask unanimous consent may be read.

The VICE PRESIDENT. Without objection, the Secretary will read as requested.

The Assistant Secretary read as follows:

PILING UP THE ABOMINATIONS.

Southwestward the course of tariff gouge and bunco takes its way on long-staple cotton. The sea islands of the Middle South used to hold, or try to hold, this place at the tariff swill trough, and Democrats from that region in Congress were not lacking who would sell their political birthright for this mess of pottage. But now the larger growth of the staple, minutely small against the bulk of American cotton production, which no tariff can possibly protect, has passed to Arizona and southern California, whose Senators of either party are showing greater power to jam their way into this line of porkers.

They have failed to get a duty of 15 or 10 cents a pound on such cotton, but they have won a duty of 7 cents, and this will suffice, as Senator STANLEY, of Kentucky, figures it, to take about $10,000,000 out of the pockets of the American people and hand over $600,000 or more to the growers working on land reclaimed by the Government at enormous cost. Nor is this reckoning unreasonable. A duty on long-staple cotton against Egyptian competition calls for compensatory duties on all cotton goods using long-staple fiber, after the manner of the iniquitous woolen schedule.

This action of the Senate is probably not calculated to make the tariff of abominations any more acceptable to the increasing number of insurrectionists on the Republican side of the Chamber. But if the country can not make itself heard loudly enough to stop this outrage where it is something is likely to drop at the polls next November which the responsible party will not only hear but feel.

Mr. SMITH. Mr. President, it is hardly necessary for me to add anything more to the figures which I have given as to the profits realized by the concerns engaged in this business.

Mr. SIMMONS. Mr. President, if the Senator will allow me, at the beginning of his remarks when he was stating the annual profits made by one of the big concerns engaged in manufacturing thread, the Senator from Utah asked him if he had the profits for the last year, I think.

Mr. SMOOT. I did not have the figures for the last year.

Mr. SIMMONS. The Senator from South Carolina stated that he did not have the figures as to profits for the last year. I do not know whether or not the Senator from Utah meant by that question that the profits of the last year had been greatly reduced as compared with the profits of the year before, which the Senator gave. I have no information about it.

Mr. SMITH. I have no information, Mr. President.

Mr. SIMMONS. But I have this, if the Senator will pardon me——

Mr. SMITH. Yes.

Mr. SIMMONS. I do not imagine there has been any falling off in profits, because we have heard so much in the newspapers recently, a sort of political propaganda, that everything was beginning to boom, business was on the upward grade, and so on, that I was a little surprised to hear even an intimation by implication that a live concern like this was making less profits now than it did last year; but what I wanted to call the Senator's attention to was that certainly there is absolutely nothing in the import situation with regard to these articles that would indicate any falling off in profits from competition.

I was just running over out of curiosity the last report for January, 1922; and I discover that for the seven months ending in January, 1922, the total imports of manufactures of thread and yarn on beams, in skeins, spool thread, crochet, darning, and embroidery cotton amounted to $3,650,065, as against $13,220,201 for the same period for 1921; so that the imports for 1922 have fallen off enormously from 1921. That is where the tariff connects itself with this proposition. There is nothing in the imports, therefore, that would furnish any ground for apprehension, of a falling off of the profits. The Senator from Utah may have some information upon that subject, and I shall be very glad to have him enlighten the Senate with regard to it if he has.

Mr. SMOOT. Mr. President, there is not a man in the United States but what knows that the high peak of profits was in the year 1920. All I have to do is to hand to the Senator this price list of goods at the time of the high peak of prices in May, 1920, and compare the prices of cotton goods of every kind with the prices on May 22 of this year and the Senator will see that in many cases they were not one-quarter the amount. They fell from the high peak many times to a third, sometimes to a half, and in instance after instance to a quarter of the price of the same goods in 1920.

Mr. SIMMONS. Mr. President, 1920 was the high peak with respect to certain industries in this country. That was true of all industries during the first 6 months, probably, of 1920. During the last 6 months of 1920 certain industries in this country had the most disastrous slump that has ever taken place in the history of this country. So far as an industry of this kind is concerned, I do not think there has been a very great recession from the high peak of 1920. Of course, there have been some reductions all along the line; but wherever we find an industry that, in itself, possesses the power to fix and maintain its prices, we have not found that there has been any great recession from the war-time prices.

Mr. SMITH. Mr. President, right at that point, I have from the Tariff Commission the very figures that we want.

Mr. SIMMONS. That is what I wanted to bring out.

Mr. SMITH. In 1914, the Tariff Commission report shows that 200 yards of cotton sewing thread was selling at wholesale for 3.92 cents. It retailed at 5 cents. In 1922, 120 yards wholesaled at 4.29 cents.

Mr. SIMMONS. 1922?

Mr. SMITH. 1922; so that you have 33⅓ per cent less thread at about a third of a cent higher for the spool.

Mr. SIMMONS. It is infinitely worse than I thought it was.

Mr. SMOOT. Oh, well; the Senator must stop now——

Mr. SIMMONS. I must not stop because the Senator from Utah tells me to stop. I had stopped, but the Senator from Utah must not command me.

Mr. SMOOT. The Senator puts a wrong construction upon the word "stop," and how it was said.

Mr. SIMMONS. Yes; I know it was said good-naturedly.

Mr. SMOOT. The Senator knows this——

Mr. SMITH. Mr. President, I yield to the Senator from Utah.

Mr. SMOOT. The Senator knows that the reason of that increase was the price of cotton. Now, we want to be reasonable; we do not want to go off here on a tangent; and the Senator from South Carolina knows that in 1914 the price of cotton was lower in comparison than the yarn itself, compared to those prices.

Mr. SMITH. Yes; but, Mr. President, the Senator must not forget that in 1920 cotton went lower than it did in 1913 or 1914.

Mr. SMOOT. I am not talking about 1920. The Senator quoted 1914, and then quoted 1922.

Mr. SMITH. Yes.

Mr. SMOOT. Nineteen hundred and twenty was not mentioned at all; and the price of cotton in 1922 was more than double what it was in 1914.

Mr. SMITH. Mr. President, the price of the character of the cotton that enters into the manufacture of this thread—I will get the table and submit the figures—was not appreciably higher than the average price of like cotton for a great number of years. I will get the tables and submit them. It must be remembered that this thread is made from the long-staple or extra-staple cotton.

Mr. SMOOT. I have said it a good many times.

Mr. SMITH. All right. I will get the prices and submit them here, showing that there is no such percentage of increase as you find where the price is increased from 3.92 cents to 4.29 cents, a reduction of 33⅓ per cent in the amount offered and an increase of about 25 per cent in the price obtained.

It is certainly evident that the increase in the price of thread can in no sense be justified by any such variation in the price of cotton. Let me state to the Senator, and he knows, that there is nothing that fluctuates as violently as cotton fluctuates; and here you have nine years of the record of this concern, with cotton varying anywhere, as every man at all familiar with the cotton business knows, from $5 to $50 a bale in a season.

Mr. SMOOT. And of course the wholesale prices which the Senator quoted vary, too?

Mr. SMITH. The wholesale prices of these trust goods were put up to a point where, in spite of any variation, they never made less than $2,000,000 a year profit on an investment of $6,000,000. They have put their margin so far beyond the ordinary fluctuations of the price of the raw material that they do not appreciably affect the tremendous dividends that they make.

I am going to have figured out the amount of cotton used in sewing thread, to see what per cent of the long-staple cotton crop of the world is converted into cotton sewing thread. I will venture a guess that it is not one one-hundredth part of the cotton crop.

Mr. SMOOT. Whatever it may be, it is all long-staple cotton.

Mr. SMITH. Exactly; and yet, as will be shown by the tables I am having computed now, the amount of money made on this little, infinitesimal part of the long-staple cotton crop is almost 10 per cent of the value of the entire cotton crop.

Mr. SIMMONS. The Senator gave the profits they made in 1920.

Mr. SMITH. Yes.

Mr. SIMMONS. The Senator from Utah says that cotton was exceedingly high in 1920.

Mr. SMOOT. No; I said the price of goods was exceedingly high. I had nothing to say about cotton.

Mr. SMITH. All right. Let us take 1918 and 1919. There can be no question about the peak of prices being in those two

years. Let us take them and compare them with 1920, 1916, and 1917.

The profits in 1920 were $4,587,000.
In 1919 they were $3,024,000.
In 1918 they were $5,008,000.
In 1917 they were $2,169,000.
In 1916 they were $2,311,000.

Then the other pre-war years maintain about the same parity—about $2,000,000 profit made each year upon an investment of $6,000,000.

Mr. SMOOT. With the reserves.

Mr. SMITH. The reserves were made out of the business.

Mr. SMOOT. Certainly.

Mr. SMITH. Of course, they were.

Mr. SMOOT. If the Senator makes, out of raising cotton, a certain amount of money and invests it in some stock that year because that stock pays a dividend, why should he next year charge the dividend up to the raising of cotton?

Mr. SMITH. You are simply capitalizing your profits and compounding your interest——

Mr. SMOOT. So does the Senator compound his interest every time he makes an investment from his savings.

Mr. SMITH. It is not a question of investment.

Mr. SMOOT. It is a question of investment. Instead of investing in some stock or other, they invest in the business that they are in.

Mr. SMITH. They duplicated their stock. There is no evidence here that there was any great enlargement of the business out of the capital paid, because part of the time the J. & P. Coats people declared profits of 40 per cent and the rest of the time 30 per cent.

Mr. SMOOT. J. & P. Coats & Co. are in another country, not in the United States.

Mr. SMITH. They have their branches here. They have their connections here.

Mr. SMOOT. They sell their goods here.

Mr. SMITH. Yes; and they have their manufacturing establishments here, too.

Mr. SMOOT. And, of course, if we had no duty whatever upon the product, J. & P. Coats would control the market here.

Mr. SMITH. I am glad the Senator made that observation. It is a very significant and curious fact that all the sewing thread made by the American Thread Co. and the J. & P. Coats people has the same amount of cotton to the spool and is sold at identically the same price in this country and abroad.

Mr. President, I have given these facts to the public. Now the Senate proposes, without going any further into this matter, to amend the House proposition by putting on sewing thread a tax of one-half of 1 cent per 100 yards and then making it the beneficiary of the duty of that paragraph to the extent of not less than 25 per cent as a minimum or 45 per cent as a maximum, instead of 17 to 33⅓ per cent as the House bill provided. Why the committee put in the maximum of 45 per cent, knowing that cotton thread is never going to go down to a point where the maximum of 45 per cent would apply, I do not know. The average under the Dingley Act and through all the history of it was only 26.3 per cent, and why put that extra flourish there?

Mr. SMOOT. Does the Senator want the maximum to go out entirely?

Mr. SMITH. I want the maximum to go out and a 15 per cent duty put in. That covered it before; it will cover it now. The fact of the business is that I believe, from the showing made by the thread people, both American and foreign, that we would be justified in calculating just what would be a good revenue duty, based on the amount of thread which comes here, and I would apply that and no more. They have a monopoly of the thread business of the world, and if the duty were raised it would only encourage them to raise the price. They have an absolute monopoly of the thread business of the world, and, as this English writer says, until we break the stranglehold of this trust on the people of the world by Government interference in the form of nationalizing the business and taking it over, which is contrary to the genius of our Government, there will be no hope of any redress. What will be the effect of a duty under such circumstances? Recognizing that they have a monopoly of the world's production of sewing thread, they can at their own sweet will demand any price, without fear of competition or without fear of any interference. When you raise the duty, what effect does it have? It simply has the effect of giving them an excuse to raise the price still higher and reduce the number of yards on the spool. Therefore, we, as sensible men, should legislate here in the face of the actual facts and not on theory; on an actual condition, recognized by England and America, that we are in the grip of the most perfect monopoly known to the world. We perhaps may raise the duty and give them an excuse to still further mulct the people of the world who need this article.

It is up to the Senate. Here are the figures, produced by the friends of the industry, or at least from impartial reports, the American wool and cotton reports. Here are the letters I put in the RECORD from the patriotic men of England, unanimous in their denunciation of this absolute trust. Yet in this tariff bill we double the former rate of duty under which they made these profits. You encourage them to still further increase their predatory prices to the people.

Mr. SMOOT. We have heard about doubling the rate of duty so many times that it seems to me it is perfectly useless to try to answer that statement any further than we have already answered it. There is no doubling of the rate of duty; no such thing is intended; no such result will happen if the amendments proposed by the committee are agreed to. The maximum ad valorem provided for in this bill is 25 per cent, as reported to the Senate. I have already announced twice during the discussion that the committee will propose at the proper time to reduce that 25 per cent to 20 per cent.

In the act of 1909 there was imposed a duty of 6 cents per dozen on spools, rolls, or balls not exceeding 100 yards and a minimum of 20 per cent. The minimum cut no figure at all because of the fact that the ad valorem equivalent of the specific rates was 43 per cent. That was in the year 1910.

Mr. POMERENE. Mr. President, this question has no direct bearing on this subject, but can the Senator tell me why that rate was made as high as 43 per cent?

Mr. SMOOT. In the case of the rate of 6 cents a dozen, the specific rate, when reduced to the equivalent ad valorem, amounted to 43 per cent, according to the price of 1910.

Mr. POMERENE. I understand that thoroughly, but I am asking why it was made so high at that time? What reason could be urged in favor of a duty so high as that?

Mr. SMOOT. It was at that time supposed to be required for protection. The Senator from South Carolina says there is but one company making thread in the United States. I have here a list of 55 of them. I am not going to put it into the RECORD, but I have it here on my desk.

If the committee amendments are agreed to, the minimum rate will be 20 per cent, and I say that, without a question of doubt, no specific rate will apply, but the minimum of 20 per cent will apply, on to-day's prices. I insisted, as a member of the Finance Committee, on the amendment putting a maximum rate in the bill, because if there was no maximum rate, but only a minimum rate, and the prices declined to what they were in 1910, the equivalent ad valorem would have amounted to 43 per cent again, and I did not want that to happen. Therefore, the committee provides that there shall be a maximum of 35 per cent, not 45 per cent.

A few days ago the senior Senator from Wisconsin read to the Senate a statement of the wonderful profits which had been made by the cotton mills in the United States. The same thing was announced in 1909, and we have heard it a great deal during the discussion of this tariff measure. They do not point to the mills which fail, but they take the companies which are the best managed and the most successful and compare the profits of all the other companies in the United States with the profits of those particular companies.

The Senator from North Carolina I think made a statement that the profits of all of these cotton manufacturers were beyond the dreams of avarice.

Mr. SIMMONS. Mr. President, I did not mean that every mill manufacturing cotton had made those enormous profits. I was speaking, of course, of the average run in the industry.

Mr. SMOOT. Of course, I may have misunderstood the Senator, but I do not think he qualified it. I take his word now that he meant only the average.

In 1914, right after the passage of the Underwood tariff bill, the Parker Cotton Mills of South Carolina, with 515,000 spindles and 13,000 looms, failed for nearly $6,000,000.

Some two years ago the Parker-Hargraves Mills, at Fall River and Warren, with 227,000 spindles, 5,400 looms, and $3,200,000 of capital, was unable to meet its obligations, and after having been closed for several months was reorganized and the original stockholders got substantially nothing.

Mr. POMERENE. Mr. President, I want to submit to my good friend from Utah that that is hardly a fair argument.

Mr. SMOOT. If the Senator had just waited, I was about to say that it is not a good argument, but it is exactly the same argument that was used in presenting the other side of the question.

Mr. POMERENE. Failures were even known to occur during the operation of the McKinley tariff law, the Dingley tariff law, and the Payne-Aldrich tariff law. A lot of people go into

business who perhaps do not understand the business, where a dozen and one things might cause failure. This tariff bill in its present form would not be a panacea for that kind of ills, I dare say.

Mr. SMITH. Mr. President, if the Senator will allow me a moment, some of the failures to which the Senator refers, together with failures in other businesses, could not be chargeable to a profit when the business was properly managed, because some of these mills, like some of our railroads, failed and went into the hands of receivers, not because they did not have the proper patronage, but because there was a manipulation of their affairs looking to the getting of stock—high finance wrecking roads and wrecking mills.

Mr. SMOOT. The Senator from South Carolina need not tell me that; I know it. I am not pointing to these facts now as an argument for free trade or against free trade. Failures, as the Senator from Ohio has said, would occur, no matter what the rate may be, or whether they had no rate at all; more, of course, in the latter case than in the former case. But I wanted the Senate to understand that when a broad statement is made, and a few of the most profitable concerns are pointed out as making profits in that line of business because of the passage of the tariff act, there is another side to the question.

I am not going to take the time to put in this long list of failures in the cotton business, some very serious failures, which have affected thousands and thousands of people, not only stockholders, but employees as well. For instance, I think there was an impression made on the Senate the other day, when the senior Senator from Wisconsin referred, on page 10082 of the RECORD, to the Whitman mills, and stated that what cost an investor $3,800 in 1895 would have brought him, at the time he was speaking, $8,034.

Senators just hearing the statement made probably would not realize that if the stockholders in the Whitman Mills had in 1895 taken the same amount of money which they invested in the mills and deposited it in a savings bank, drawing 4 per cent, they would have had just a little more than the $8,034 mentioned by the Senator from Wisconsin as the price which could have been obtained for the stock at the time he was speaking.

I do not want to repeat what I said when this schedule was up day before yesterday, and I do not know that it would make any particular difference in the vote. But with the changes made, I see no reason why the paragraph should not be agreed to by the Senate.

Mr. SIMMONS. Mr. President, I want to refer to one phase of this matter. I see here in the Tariff Commission report that in 1919 the production of cotton thread amounted to 58 096,000 pounds, valued at $57,000,000, in round numbers.

In the nine months of 1921 the imports of these cotton threads were only $1,392,000, a mere bagatelle. Now, the Senator from South Carolina has stated that one great concern controlled the output of this product in Great Britain and that the same concern controls the output in this country. That does not mean that they manufacture all of it in Great Britain or that they manufacture all of it in this country, but that they are the dominant figure; they control the trade and fix the prices, the other or smaller concerns following their lead. Here we have a minimum of imports, and we also have the fact—I take it that it is admitted—that our competitor in this line of business is Great Britain.

Now the Senator from South Carolina asks the very pertinent question. Against whom will we protect the chief producer, the dominant producer, in this country by these rates? He asserted, answering his own question, that we will practically protect him against himself, and that would seem to be the situation. But let us assume that is not the case, and that we are merely by these duties protecting the American producer against the British producer.

I ask the Senator if his committee is able to furnish the Senate any information showing the difference in the cost of producing this particular article in Great Britain and the cost of producing it in this country. Can he furnish the Senate the difference in the selling price of the article in the foreign country and in this country?

I am asking the Senator these questions because unless there is a difference a duty can not be justified and if there is a difference a duty can not be justified that would more than measure that difference. Now, if the Senator will pardon me just a little further, I am not sure about it, but my impression is that in this particular case the raw material is Egyptian cotton and the cost of production in the English mill would be that much less than the cost of production in the American mill.

Mr. SMOOT. There would be a disadvantage to the American manufacturer unless he had a compensatory duty to take care of it. The Senator knows that these threads are made of the very highest grades of yarn.

Mr. SIMMONS. That is the reason why he should have a compensatory duty to take care of the difference in cost when his competitor gets the raw material without paying that cost.

Mr. SMOOT. That is the very reason why. If I can buy my cotton 7 cents a pound cheaper than the Senator from North Carolina can buy his and make exactly the same goods I know that I can produce my goods much more cheaply than the Senator from North Carolina and can sell them for less than he can sell his goods.

Mr. SIMMONS. Why should there be any duty except that which measures the difference growing out of the fact that the American, after the bill is enacted into law, will have to pay a higher price for his raw material?

Mr. SMOOT. The 7 cents is on the raw cotton, and by the time that cotton is combed and spun and made into cloth, particularly the fine counts of yarn that go into spool thread, there is a loss of at least 42 per cent. That is why they are given 10 cents a pound instead of 7 cents on the finished product.

I want to say to the Senator that there never has been a tariff bill written, including the one of which he was partly the author, which did not impose a duty upon the yarn according to the count of the yarn, and the finer the yarn the higher the duty. That is given for the purpose of covering the difference in the cost of producing those yarns in England and in the United States.

Mr. SIMMONS. Now, I understand the Senator to say that 10 per cent of the rates which he proposes here——

Mr. SMOOT. Oh, no; the Senator did not understand me. I will say to the Senator that the 10 cents a pound is about equivalent to 5 per cent ad valorem.

Mr. SIMMONS. But that has been added in another section?

Mr. SMOOT. Yes.

Mr. SIMMONS. That is provided for in another section?

Mr. SMOOT. Yes. All we have done is this: The rate under the existing law is 15 per cent, and we add 5 per cent to that, making a 20 per cent duty on these yarns.

Mr. SIMMONS. Then in another section the committee have provided for the compensatory duty?

Mr. SMOOT. Yes.

Mr. SIMMONS. It is proposed to cut the 45 per cent maximum down to 35 per cent?

Mr. SMOOT. Yes.

Mr. SIMMONS. And it is proposed then to compensate for this difference by imposing a duty of 35 per cent. Now, the question I want the Senator to answer is whether he can enlighten the Senate as to the actual difference in the cost of producing this product in Great Britain, our only competitor practically, and in this country; and if he has not that data, then will he give the Senate information as to the difference in the foreign selling price of this product and the American selling price—I mean the manufacturer's price and with no wholesaler's profits added in either case?

Mr. SMITH. Mr. President——

The PRESIDING OFFICER (Mr. NICHOLSON in the chair). Does the Senator from Utah yield to the Senator from South Carolina?

Mr. SMOOT. I yield.

Mr. SMITH. I want to call attention to the curious or interesting fact that under the emergency tariff on the Arizona cotton, exactly the same that we have put now in the present bill, the kind of cotton used to make this grade, according to the monograph of the Tariff Commission, that with the duty the Egyptian cotton was selling higher in this country than its competitor, the Arizona cotton, and without the duty it was selling higher than even when they paid the duty. So that the result is that we do not get any Egyptian cotton at a lower price than the American cotton. I mean the American cotton does not rise to the Egyptian price. The Egyptian cotton is selling with the duty or without the duty higher than the American cotton sells for here. So that the only result will be, not encouragement to the American but the imposition of that total amount on the manufactures and the things that we import. If the Egyptian cotton were to come in here at an even price with the Arizona cotton by virtue of the tariff, there might be some excuse, but even with the duty or without the duty it sells at a higher price than the Arizona cotton.

Mr. SMOOT. The Senate has already decided to put 7 cents a pound on long-staple cotton. Whether it is right or whether it is wrong, that is the decision of the Senate. I want to say to the Senator from South Carolina that there is not a single

cotton manufacturer in all the United States who wanted 7 cents a pound on long-staple cotton.

Mr. SMITH. I want to make a prophecy—and a year from to-day, if this bill shall be enacted into law and go into effect, I shall have the opportunity of knowing whether my prophecy is justified or not. The Senator says no manufacturer wanted the 7 cents a pound on Arizona cotton. I make the prediction now that not a single Arizona cotton producer will get the 7 cents a pound either.

Mr. SMOOT. I do not agree with the Senator at all. I stated the other day, when the question came up as to whether the Arizona cotton was as good as the Egyptian cotton, that for some purposes it was. When it is desired to make automobile tires it is as good, but the finer grade of Egyptian cotton can only be grown in one kind of climate, and that climate is not in America.

That climate makes the fiber the finest of any in all the world, Arizona never will be able to raise it, and no other country than the country in which it is now raised. But that only applies to cotton that is required to make the finer yarns. That is the difference. There are certain grades of Egyptian cotton that are not any better than the Arizona cotton and some not as good. There is no doubt about that at all. Arizona cotton does not bring the same price as the finer Egyptian cotton, because the Arizona cotton can not be used for making as fine a thread. But Arizona cotton is just as good as any cotton that was ever grown in the world for the making of tire fabrics and all classes of cotton goods, with the single exception of goods requiring the very finest of threads.

As I said, Mr. President, no cotton manufacturer in the United States wants this duty of 7 cents a pound, but a majority of the Senate said they want to undertake to protect that industry and see if Egyptian cotton through that protection can not be grown in this country and we not have to depend upon a foreign country for it. That is all there is to it. But there is no Senator who will not admit, as long as we do impose a duty of 7 cents on the raw cotton, that we must have a compensatory duty upon the yarns and cloths or threads into which that cotton enters.

Mr. SIMMONS. The Senator has not answered the question I asked him. I would be very glad to have him answer that question.

Mr. HARRIS. Mr. President, I desire to place in the RECORD a letter from the Wood Flong Corporation in regard to dry mats for stereotyping.

The bill reported to the Senate by the Finance Committee recommends a rate of 35 per cent ad valorem on stereotype-matrix mat or board, appearing in paragraph 1313, line 22, page 177 of the bill. The House bill provided a rate of 28 per cent under the American valuation plan. The Underwood law provides a duty of 25 per cent ad valorem. It is my information that the larger metropolitan newspapers do not now use the dry mats, their use being confined to the smaller dailies. Their use is becoming more general. The dry mats are composed largely of wood products, and they are used to make the impression of the type, upon which the stereotype metal is poured to make the page from which the paper is printed.

Chemical ground wood pulp, which was on the free list in the House bill, is given a rate of 5 per cent ad valorem. It is said that chemical wood pulp is used in making newsprint paper to the extent of about 20 per cent. Standard newsprint paper and mechanically ground wood pulp under the bill reported to the Senate is on the free list, but this bill takes chemical wood pulp from the free list, where it was in the House bill, and imposes a duty of 5 per cent ad valorem.

All of the articles should be on the free list, as the present cost is already a burden to newspaper production. I wish to quote from that letter, and the other letters I will also place in the RECORD. However, this letter to me states:

> It will be necessary for upward of 350 newspapers which now use our dry mats exclusively for all work to entirely reequip their plants at great expense and to largely increase their consumption of print paper by returning to the old wet-mat process.

The letter then enumerates certain newspapers in Georgia which will be affected; and states that there are 350 newspapers in the United States which will be affected. Mr. President, this is similar to much of the propaganda which is being carried on. This is a monopoly; it is the only corporation of this kind in the United States. If we raise the tariff rate, which they are trying to do, it will simply put a tax on the newspapers.

In this connection I wish to refer to another matter. I hope the Senate will not place the proposed 5 per cent duty on chemical wood pulp, for the paper mills in this country can not get the wood though the Canadian mills can obtain it, and such action would simply be putting a premium on Canadian manufactures and injuring the manufacturers in this country. I ask that these letters all be published in the RECORD. I thank the Senator from Utah.

Mr. SMOOT. I have no objection to the letters referred to by the Senator from Georgia being placed in the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

The letters referred to are as follows:

WOOD FLONG CORPORATION,
New York, June 21, 1922.

H. R. bill 7456, Schedule 13, paragraph 1313.

Hon. WILLIAM J. HARRIS,
United States Senate, Washington, D. C.

DEAR SENATOR HARRIS: Unless stereotype dry mats, included in paragraph 1313 of the tariff bill now under consideration, are granted a rate of at least 50 per cent this company will be compelled to immediately go out of business, and the industry will be totally destroyed in the United States. It will be necessary for upwards of 350 newspapers that now use our dry mats exclusively for all work to entirely reequip their plants at great expense and to largely increase their consumption of print paper by returning to the old wet-mat process.

The following are Georgia newspapers which already depend upon dry mats and will suffer if the altogether inadequate 35 per cent rate at present recommended by the Finance Committee is not increased: Atlanta Constitution, Atlanta Journal, Macon News, Macon Telegraph, Augusta Herald, Rome News, Albany Herald.

Trusting this matter will receive your earnest thought and immediate attention in the interest of these newspapers and this new American industry, I am,

Yours very truly, BENJAMIN WOOD, *President.*

Memorandum in behalf of American Newspaper Publishers' Association.

WHY DRY MATS SHOULD BE PLACED ON THE FREE LIST.

The flong, or dry mat, employed by many small newspapers, but seldom by the larger publications, is a sheet composed largely of wood products, used to convey the impression of the type to the stereotype metal used on the printing press.

The Underwood tariff provides a duty of 25 per cent ad valorem on dry mats, or $0.019275 per mat.

The Fordney Act, paragraph 1313, Schedule 13, provides a duty of 28 per cent ad valorem, American valuation of $0.0504.

There is but one American manufacturer of dry mats, the Wood Flong Corporation, of New York, whose present price is 18 cents per mat to all newspapers which use its mats exclusively in lots of 500 or more. Its price to occasional users is higher. During June, 1921, its price to occasional users in lots of 500 was 30 cents each, and in lots of 100, 35 cents each.

All dry mats used in this country, other than those of the Wood Flong Corporation, are imported from Germany, which enforces an export price of 25 cents per square meter of $0.0771 per mat.

We are informed there are but two importers of dry mats, the W. B. Wheeler Corporation and H. Reeve Angel & Co., both of New York.

The former states its cost, delivered in the warehouse, is $0.1046, or, including selling cost, $0.1433, exclusive of overhead; the latter stated its cost, under the present 25 per cent ad valorem duty, delivered New York, is approximately 11 cents, or, including overhead and selling cost, approximately 14 cents.

We are informed by these importers that they are unable to secure the price of 18 cents now paid for the American mat, and that therefore they must operate on a very close margin of profit to secure sales, and that only by largely increasing such sales, and thus decreasing the overhead average, may they secure even a fair profit under the present tariff.

Should the present duty of approximately 2 cents per mat be increased as provided by paragraph 1313, Schedule 13, of the Fordney Act to $0.0504, increasing the present cost by 3 cents, or should the present duty of approximately 2 cents be replaced by 4 cents, imports would cease, and the smaller newspapers, the main users of such mats, would be forced to purchase from the one domestic source of supply.

It is obvious that the present duty results in the 18-cent price now charged for the domestic mat. It is also obvious that every argument in favor of the free entry of newsprint and wood pulp applies equally to the free entry of dry mats.

We therefore ask that the flong, or dry mat, be placed on the free list. Attached are explanatory letters from the importers referred to above.

Respectfully submitted.

AMERICAN NEWSPAPER PUBLISHERS' ASSOCIATION,
L. B. PALMER, *Manager.*

MARCH 16, 1922.

NEW YORK CITY, *March 16, 1922.*

Mr. L. B. PALMER,
The American Newspaper Publishers' Association,
World Building, New York City.

DEAR SIR: Pursuant to your request for an expression of our opinion as to the effect of the proposed new duty of 50 per cent on dry mats, or flong, we may say that such a tariff will make it impossible for us to continue the importation of flong. This will be regretted by the many publishers whom we have had the pleasure of serving and who are very satisfied with the performance of our mats.

Under the present tariff—that is, 25 per cent ad valorem—flong costs us approximately 11 cents each, duty paid New York; or, including overhead and selling cost, approximately 14 cents. The initial selling cost is high, because of the technical nature of the application of the mats, but we have been satisfied with a very close margin of profit, on the assumption that the selling cost would be materially reduced as our sales increased.

If our cost is increased 2 cents per mat by higher duty, making the total approximate cost 16 cents, obviously we shall be unable to compete with the sole American manufacturer, if they maintain their present price of 18 cents each, as they naturally enjoy many advantages, regardless of the price. We know of but one other concern importing these mats. Any increase in the duty would wipe out our profit. Although our mat sales represent but a small part of our business, and but a small percentage of the total consumption, the result of a higher

duty, in so far as our customers are concerned, will force them to the only American manufacturer for their supplies.

We hold the opinion that the most serious aspect of a higher duty is the effect it will have in this country in retarding mechanical development of the stereotype process.

As you know, the American dry mats, also our own, are used chiefly by newspapers of relatively small circulation, as they are not suitable for the large metropolitan papers, which require from 16 casts upward from each mat.

Although many of the large publishers seem opposed to the use of dry mats, they do not deny the possibility of their ultimate general use. The publishers are not unmindful of the general use abroad of dry mats, and the large savings effected thereby.

For many sound technical reasons, the possibility of the manufacture of such mats in this country is very remote. For years, French and English manufacturers have tried, without success, to manufacture mats suitable for making a large number of casts, equal to the German mats. The fact that most of the leading French and English publications of large circulation insist upon the German mat speaks for itself.

This quality of mat, which will make upward of 50 casts, costs approximately five times that of the ordinary mat made in America. Consequently the duty, even at 25 per cent, is a serious handicap to the American publisher, and is one reason for their hesitancy to commence their use. You can well imagine that under a 50 per cent tariff the opportunity for development of the stereotype process in this country would be seriously handicapped.

The interest and importance of this subject is evidenced by the fact that during the last two years several American publishers have sent their representatives to Europe to investigate this matter.

Very truly yours,

H. REEVE ANGEL & Co. (INC.),
E. CHILD, *President*.

[W. B. Wheeler Corporation, foreign manufacturers' representatives, representing H. Albert von Bary & Co., Hamburg-Berlin.]

NEW YORK, *March 16, 1922.*

Mr. L. B. PALMER,
Care The A. N. P. A., 63 Park Row, New York City.

DEAR SIR: In confirmation of certain facts and figures in connection with the importation of dry mats from Germany, we call your attention to the fact that in our experience the average costs for mats of 20 by 24 inches have been as follows:

F. o. b. Hamburg	$0.0771
Ocean freight and insurance, duty and delivery to warehouse and insurance in warehouse	.0275
Delivered in warehouse, duty paid	.1046

In addition overhead expenses for selling mats on account of the technical nature of the product and its use has approximated 37 per cent.

At the present rate of duty the importation of dry mats has been unprofitable for us, and if the tariff were to be increased importation of dry mats would be entirely impossible.

Very truly yours,

W. B. WHEELER CORPORATION,
By A. B. BRADIE.

THE MACON NEWS,
Macon, Ga., July 5, 1922.

Hon. W. J. HARRIS,
United States Senate, Washington, D. C.

DEAR SENATOR HARRIS: It has been called to my attention that the Wood Flong Corporation are still pursuing their efforts to get a high tariff placed on imported mats, and that a communication has been addressed to the United States Senators naming a number of newspapers who are using their product, and that the importance of the high tariff being placed on foreign mats was "in the interest of these newspapers."

This letter is simply written for the purpose of reiterating my former position regarding tariff on foreign mats, as I feel that they should be placed on the free list if possible.

Having written you relative to this matter previously, you are no doubt familiar with all the details in connection with this matter, and I am not unmindful of the kind assurance you gave me regarding your position in the premises. As the News was no doubt one of the papers named by the Wood Flong Corporation in their communication to you, I simply wanted to restate my position in order that no misunderstanding may exist.

With kindest personal regards, I am,

Respectfully yours,

R. L. MCKENNEY.

THE MACON DAILY TELEGRAPH,
July 7, 1922.

Hon. WILLIAM J. HARRIS,
United States Senate, Washington, D. C.

DEAR MR. HARRIS: I have carbon copy of letter from Benjamin Wood, president of the Wood Flong Corporation, addressed to you under date of June 21, with reference to the horrible condition of the dry-mat industry that will occur in this country in the event the United States Government does not protect that industry with a 50 per cent protective tariff on foreign mats. I am asked to write you my views on this subject.

I feel that the Wood Flong people are endeavoring to build up a monopoly in this country, and if they can protect their industry with the tariff that is already prohibitive, as a newspaper publisher I am in favor of going out of business, as far as dry mats are concerned. The Wood Flong product is no better than the imported mat, and if we afford them the protection they want it means the newspapers in this country will be compelled to pay from 4 cents to 6 cents more than these mats are actually worth. I desire to enter my protest against any additional tariff on these mats.

In addition to the efforts these people have made to influence Congress in giving them undue protection, they have actually written to the stereotypers in the various newspapers asking that they refuse to handle any imported mats. I feel that this part of their propaganda is entirely out of order and seeks to destroy the newspaper business itself, rather than to protect their industry.

Very truly yours,

P. T. ANDERSON,
General Manager.

THE ALBANY HERALD,
Albany, Ga., July 3, 1922.

Hon. WILLIAM J. HARRIS,
United States Senate, Washington, D. C.

DEAR SIR: * * * I have received copy of a letter addressed to you by the Wood Flong Corporation, manufacturers of dry mats, in which it is stated that unless stereotype dry mats, included in paragraph 1313 of the tariff bill now pending in Congress, are granted a protective rate of at least 50 per cent that company will have to go out of business, and the industry be destroyed in the United States. It is further urged that it will be necessary for upward of 350 newspapers that now use dry mats exclusively to entirely reequip their plants at great expense, etc.

As one of the newspapers using the dry mats, the Herald is willing to let the Wood Flong concern, already a monopoly with a protective tariff of 35 per cent, go out of business rather than have its power as a monopoly increased by giving it the additional tariff rate it is now asking for.

This corporation induced newspaper publishers to put in the necessary equipment for using their mats, representing to us that it would be a permanent saving. Now that they have 350 or more of us hooked they seek a tariff protection that would enable them to increase the cost of their mats to more than what that of the wet-mat system was. It is unfair to those of us who have gone to the expense of equipping our plants for the use of the dry mats, and is in keeping with the general policy of monopolies in this country that are fostered by the iniquitous protective tariff system.

* * * * * * *

As one of the seven newspapers in Georgia now using the mats of the Wood Flong Corporation we say let them go out of business, as they threaten to do, unless they can get a tariff rate of 50 per cent. Their demand is unreasonable.

* * * * * * *

Yours very truly,

H. M. MCINTOSH,
President Herald Publishing Co.

Mr. SMOOT. I wish to say to the Senator from Georgia that these dry mats are not made in Canada; they are made in Germany.

Mr. HARRIS. The wood pulp I refer to is that coming from Canada.

Mr. SMOOT. I thought the Senator had reference to dry mats. Wood pulp is on the free list in the pending bill.

Mr. HARRIS. It is proposed to put a duty of 5 per cent on chemical wood pulp.

Mr. SMOOT. That is, on the chemical wood pulp.

Mr. HARRIS. Twenty per cent of that which goes into the manufacture of paper is chemical wood pulp.

Mr. WALSH of Montana. The Senator from Utah does not intend to say that wood pulp is on the free list?

Mr. SMOOT. Yes; I say ground wood pulp is free.

Mr. WALSH of Montana. But the Senator did not say that. I thought he had reference to chemical wood pulp.

Mr. SMOOT. I just stated to the Senator from Georgia [Mr. HARRIS] that the duty on chemical wood pulp is 5 per cent.

Mr. WALSH of Montana. I thought the Senator said that wood pulp was on the free list, and I am sure it was an inadvertence.

Mr. SMOOT. It was an inadvertence on my part, if I said so.

Mr. WALSH of Montana. Of course, the Senator meant to say ground wood pulp.

Mr. SMOOT. I stated to the Senator from Georgia [Mr. HARRIS] that chemical wood pulp was not on the free list.

Mr. HARRIS. Mr. President, I also wish to insert in the RECORD an article by Mr. John T. Hearn, a retired newspaper man of my State.

There being no objection, the article was ordered printed in the RECORD, as follows:

THE TAYLORS OF TENNESSEE; THE WAR OF THE ROSES.

[By John Tevis Hearn, formerly editor of the Knoxville Daily Sentinel, and now a resident of Bowden, Ga.]

Alfred Alexander Taylor, a lifelong Republican, has been governor of the Democratic State of Tennessee for more than a year. This statement of a remarkable fact brings to mind the famous campaign of 1884, in which Bob and Alf Taylor were candidates for governor, the political struggle being dubbed "the War of the Roses." During the campaign a lady had presented each of the two candidates with a bouquet of roses, one white, the other red. Bob took the white bouquet and Alf the red, and "the war of the roses" began. Many incidents of this remarkable political campaign are recalled that throw a pleasant sidelight upon the famous fraternal contention. That two young men should go out from the parental home as candidates for the governorship of a great State, one a Democrat, the other a Republican, was a strange departure from the trodden paths of politicians. The State of Tennessee was wrought up with excitement and the whole country watched with interest this brotherly rivalry.

When starting out upon the campaign the mother of the Taylor boys made them promise that they would not forget they were brothers, and that they would always treat each other with courtesy and kindness. It is related that at one of the early meetings Alf became warmed up politically and not only scored the Democratic Party severely but criticized Bob for belonging to such a party. At their hotel that night Bob announced that he was going home and would not speak any more; asked for an explanation, he reminded Alf of the promise made to their mother. Alf acknowledged his dereliction and promised that he would not again violate their agreement, and the campaign was conducted with due regard to the pledge made to their mother.

Upon one occasion some boisterous young Democrats began heckling Alf, using rude expressions. Bob advanced to the front of the platform and said: "The man who insults my brother insults me." There was no more trouble after that.

Robert Love Taylor, who was appropriately born in Happy Valley, Tenn., by his personal magnetism and his political sagacity won more honors than usually fall to the lot of the most aspiring politician. Elected to Congress in 1878, he was three times elected governor and closed his political career and his life in the United States Senate.

The third time Bob Taylor ran for governor it was over his protest. He was making more money on the lecture platform than would come to him from the governor's salary. Besides, the applause of delighted audiences was more grateful than the routine drudgery incident to the office of the State's chief executive. He yielded reluctantly to the urgent arguments of his friends, who claimed that "Our Bob" was the only Democrat who could be elected at that time, the Democratic candidate of the last election having won by a very narrow margin.

Gov. Alfred Taylor in his inaugural address paid this appreciative and touching tribute to his Democratic brother:

"I cherish no higher ambition than that by your sympathetic cooperation I may become as acceptable a governor as a brother predecessor, whose face I looked on for the last time in this very hall and whose spirit worked so effectively to aid in securing my elevation to this exalted position."

Although not as noted a platform speaker as his brother, Alf Taylor's addresses were characterized by both eloquence and wisdom.

A life-long Republican elected governor of a Democratic State—what higher honor could come to mortal man?

Happy Valley is happy indeed in giving to the Volunteer State these two notable brothers, Bob and Alf Taylor.

Mr. SHIELDS. Will the Senator yield to me for about five minutes, if I am not asking too much of the Senator? The discussion in which he is now engaged is likely to proceed for some time, and I have some business outside the Chamber.

Mr. SMOOT. I will yield to the Senator.

SENATOR JAMES A. REED.

Mr. SHIELDS. Mr. President, the Senate has now had under consideration the Fordney-McCumber tariff bill, an administration measure, since April 20, or nearly three months, and there is yet much of it to be considered. The embarrassment of the opponents of the bill has not been in finding objections to it but in determining what are the most important and objectionable of its multitudinous iniquities and provisions fraught with injustice to the plain people of the United States to which they should devote their attention. The Democratic members of the Finance Committee and other leading Senators upon this side of the Chamber have conducted the assault upon this unjust bill ably and courageously, and their efforts have been crowned with the success they hoped for. They did not, on account of the Republican majority, expect to succeed in defeating the greater part of its unjust provisions, but they did expect to expose its iniquities to the people of the United States, and in this effort they have succeeded beyond measure. They have torn the mask from its repulsive countenance and exposed its injustice to the people in all its hideous nakedness. They have brought about a general condemnation of it by the great press of the country, including both the Republican and Democratic papers, and there is every evidence that the great body of the American people fully realize the extortion to be perpetrated upon them for the benefit of special interests.

Mr. President, there has been necessarily absent during this long discussion one of the ablest Members of this body, a Senator who has always been in the forefront of the battle lines of his party, whose absence all good and true Democrats desiring the success of their party regret, but which rejoices all Republicans who, when the principles of democracy were at stake, have heard his fierce war cry and felt the force of his logic and eloquence.

All the Senators in this Chamber know of whom I speak, and it is not necessary for me to pronounce the name of JAMES A. REED, the senior Senator from the State of Missouri.

I have been led to refer to the absence of the senior Senator from Missouri [Mr. REED] by a statement made by his colleague, the junior Senator from Missouri [Mr. SPENCER], and commented on in an editorial appearing in the News Scimitar, an able paper published at Memphis, Tenn., and having a large circulation in southwestern Missouri. The editorial was written by Mr. George Morris, one of the ablest editorial writers and most loyal Democrats of the country. I wish to read it:

[Editorial from the News Scimitar, of Memphis, Tenn.]

SPENCER TAKES A HAND.

Senator SPENCER, Republican, of Missouri, has issued a statement in Washington in which he says Senator REED will be defeated by Breckenridge Long for the Democratic nomination.

At first glance it might appear that the fight in Missouri between REED and Long is one with which the Republicans have no concern. As a matter of fact it is of vital concern to them. Around the result revolves the question of whether Missouri is to have a Democratic Senator or two Republican Senators.

The observation of persons familiar with the Missouri situation for some weeks has been that the nomination of REED means his election, and the nomination of Long means his defeat. The Republicans know how easy it will be to defeat Long. No one knows better than SPENCER how very easy it is to defeat Long. He defeated Long two years ago, and there is no doubt that almost any candidate the Republicans put out against him this year will defeat him again.

There is more than a party reason for Senator SPENCER'S interest in Long's nomination. If there is to be a Democrat in the Senate from Missouri, the Republicans prefer anybody to REED. He has about succeeded in demolishing SPENCER, and if REED is in the Senate to bombard SPENCER for the remainder of his term the voters of Missouri undoubtedly will throw him into the discard.

It was SPENCER who led the fight to seat NEWBERRY, and it was REED who chastised his colleague with a speech that will sting SPENCER whenever he shows his head in Missouri politics. With a man of the caliber of Long in the Senate, even if he should be elected, he would be as harmless from the Republican point of view as he would be useless to the Democrats.

If the SPENCER statement has any influence with the Democrats of Missouri, it ought to be to convince them of the fallacy of selecting a candidate satisfactory to the Republicans. It is not often that a candidate has the privilege of selecting his adversary, and when he does it is no compliment to the opponent. The Republicans have tried Long once as an opposition candidate, and he met the full measure of their requirement.

I do not read this editorial in criticism of the junior senator from Missouri. I do not understand it was intended as a personal criticism of him. If I did, I would not put it in the RECORD. It concerns his political activities, along with those of other members of the Republican Party, all of whom are within their rights, and of whom I do not complain.

The able junior Senator from Missouri is always alert to advance the interest of his party in and out of this Chamber and to disintegrate and weaken the Democratic Party, and he may do so by strategy, as in his statement attempted, as well as by fierce assault.

Mr. President, I have nothing to do with primary contests in the State of Missouri, and it is not my intention to interfere with them. I do not believe it proper for me as an outsider to do so. I wish only to say a few words about the record of our colleague, the senior Senator from Missouri [JAMES A. REED], in order to explain why the junior Senator from Missouri wants him defeated.

I am not surprised that Republicans should desire his defeat. For the 10 years I have known him in this body he has ably and fearlessly upheld and defended the great principles of Democracy and the rights of the common people as taught by Jefferson and Jackson and others of the great founders of the party.

I have never known a man more loyal to his party and its principles. In every important debate where these great principles were under fire or were sought to be advanced he has been in the forefront of the fight, and his loyalty to those principles and to the interest of his party are amply proven by the great addresses which are recorded in the CONGRESSIONAL RECORD. His speeches are an enduring monument to his ability and to his Democracy that will last so long as our Government lasts. They place him in that brilliant constellation of Democratic Senators and patriots who have preceded him from his State, such as Benton, Vest, Cockrell, and Stone, along with whom also is to be included his friend, that great leader of Democracy and champion of the common people, Champ Clark.

I do not know what is in store for Senator REED, but I do know if his services in this body should be cut short the great Democratic Party will lose one of its ablest and most courageous champions in this Chamber, and the Republicans will rejoice in their hearts that one of their most formidable foes is gone.

Mr. SIMMONS. Mr. President, will the Senator from Utah permit me to make a brief statement?

Mr. SMOOT. I yield.

Mr. SIMMONS. Mr. President, the senior Senator from Missouri [Mr. REED] is a member of the Finance Committee. I know that he has deeply regretted, and, of course, as a member of that committee, I have regretted as much as has the senior Senator from Missouri, his inability to be present and to assist us in the discussion.

No man who has been in the United States Senate since I have been here is more capable of discussing such questions as those with which we are now dealing. His analytical powers, his tireless energy, his great ability would have been of vast help to us if he could have been here.

I say this much merely because the senior Senator from Missouri has asked me to let his colleagues understand how deeply he regretted his inability to be present with us during the consideration of the pending bill.

Mr. SMOOT. Mr. President, I want to say before answering the question of the Senator from North Carolina that I, too, have served with the Senator from Missouri [Mr. REED] on the Finance Committee. I know that he is an untiring worker, and if there is one thing that I admire above all else in a public man it is courage, honesty, and the ability and the willingness to express what is actually in his heart; and I want

to say that I know of no man I have served with in the Senate who has followed that course more than the Senator from Missouri [Mr. REED].

Mr. KING. Will my colleague yield to me for a moment?

Mr. SMOOT. Yes.

Mr. KING. The Senator from Tennessee [Mr. SHIELDS], the Senator from North Carolina [Mr. SIMMONS], and the senior Senator from Utah [Mr. SMOOT] have referred to the senior Senator from Missouri [Mr. REED]. When I saw him last he expressed his keen disappointment at being unable to be in attendance in the Senate during the entire period when the pending tariff bill was under consideration. The Senator from Missouri is a member of the Finance Committee, and his wide knowledge of public affairs and his profound study of the tariff and of economic questions make him an invaluable member of that important committee. His absence from the Senate at this time is a great loss to his party and to the country.

The able Senator from North Carolina [Mr. SIMMONS] has in a most brilliant manner presented the views of the Democratic Party upon the pending bill and has rendered services of inestimable value. His hands would have been greatly strengthened if the senior Senator from Missouri had been present, because there are few men in this body or elsewhere better qualified to discuss the schedules and provisions of this bill and the fundamental principles of the tariff than the Senator from Missouri. There is genuine regret upon this side of the Chamber that thus far in the debate we have not had the powerful support of the senior Senator from Missouri. It is to be hoped that he will be able to return in time to discuss some features of the pending bill and show to the country its many inequalities and injustices.

A tariff bill involves the consideration of constitutional questions. So long as we have a Constitution and support the theory of the relation of the States to the Federal Government, which the fathers of the Republic recognized, one of the vital issues will be as to the limitations upon the Federal Government. The Democratic Party has always contended for the inviolability of the States and their maintenance in all of their vigor and power. That issue can not be obscured, and it is presented in an acute form to the American people to-day. Shall the States be preserved? Shall the right of local self-government be maintained? Shall the rights of the individuals be respected? In other words, shall we have a democratic Government rather than a bureaucratic and a paternalistic one? These questions are involved in the pending bill, and it is, as I have stated, a serious loss to the country that the Senator from Missouri is not able to be here to aid in the fight which the Democratic Party is making against the selfish interests and the greed and avarice of protected interests.

I agree with the Senator from Tennessee that neither the Senate nor organizations outside of the State of Missouri have any right to interfere with the people of that sovereign State. They have the right to determine for themselves what political course to pursue and whom they will name to represent them. The Democrats of Missouri are competent to deal with their own political problems, and they will deal with those problems in a proper and satisfactory manner.

THE TARIFF.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes.

Mr. SMOOT. Mr. President, to come back to cotton, the Senator from South Carolina [Mr. SMITH], as well as everyone else who has studied the question of the manufacture of cotton goods, must admit without a doubt that the laborer in England is just as proficient as the laborer in the United States. There can not be any more proficient labor in the manufacture of cotton or woolen goods than is found in England. The mere fact of a weaver or a woolen manufacturer from England making application to me for a position in a woolen mill was sufficient for me to say: "Why, of course I will give you a position in the mill if there is one to fill."

Mr. President, the laborer in England, both in the manufacture of cotton and in the manufacture of woolen goods, is born to the trade. His father did nothing else, and in 8 cases out of 10 his mother never did any work outside of that class of work except what she was compelled to do in the discharge of her household duties. They are adepts at it. You can not find people anywhere in all the world who are equal to them in certain lines.

I will say to the Senator from North Carolina that the committee had the wage scale paid in England and the wage scale paid in the United States, and there is not a question but that the difference in the wage scale will justify the rates that we are asking in this paragraph.

If there is a world monopoly in this product, and if J. & P. Coats & Co. fix the price at which this cotton thread shall be sold, and if the American manufacturers follow that price, then I want at least to collect a little money for the Treasury of the United States out of the goods that are shipped into this country. I can not believe, however, that there is a world-wide monopoly in this product.

The Senator from South Carolina referred to the fact that there must be a world-wide monopoly because of the fact that the number of yards per spool of thread was changed in this country to the same number and at the same time that it was changed in England. War conditions upset everything in the world. Prices went sky-high. There was scarcely a limit to the advances in this country, and the peak was reached in 1920. If Senators will take occasion to examine into the prices of cotton goods of every character, and compare them as of April 1, 1920, with the prices of May 22, 1922, I think they will find that the average decline has been over one-half. In the case of many items, as I said before, the decline has been three-fourths, and as I look at the prices quoted upon these goods I wonder what profits were made in 1920. Either they were excessive profits or else the mills to-day are making little profit; and there are a good many mills, as I pointed out, that are making nothing.

So, Mr. President, the rates have been reduced—I will not take the time to go over them—and when the time comes to offer an amendment for a further reduction I am authorized to do it, and that rate will be only 5 per cent higher than the existing law.

Mr. SIMMONS. Mr. President, I asked the Senator from Utah if he could give the Senate some information sufficiently definite to be of assistance to us, showing the difference, if any, between the cost of production of these items in the cloth schedule between this country and Great Britain, our chief competitor. The Senator answers that by saying that the English laborer is just as efficient as the American laborer, and that there is a difference in the wages paid the English laborer.

Mr. President, the Senator from Wisconsin [Mr. LA FOLLETTE], in the great speech which he delivered a few days ago upon the cotton schedule, made it perfectly clear that even if there was equal efficiency, on account of certain rules and regulations with regard to the number of men that may be employed upon one machine, and other regulations dictated largely by the labor unions of Great Britain which do not obtain in this country, there is quite a difference in the output of the efforts of one man in that country as compared with the output of the efforts of one man in this country. That, I think, is pretty well understood, and that would account for a slight difference in the wages paid in the two countries. But, Mr. President, the fatal trouble about all this business is that the committee has sought to measure difference in cost of production by difference in wages paid, not taking into account at all the fact that the wage paid does not measure the cost of production. Where there is absolute equality of conditions, efficiency, machinery, and methods of manufacture it would; but that does not obtain as between this country and Great Britain, even if there is equal efficiency. I do not know how that is. I do not know that the British laborer is as efficient; but I do know that the British laborer in the cotton mills does not turn out as much work as the American laborer, because of certain rules and regulations that have been established and are maintained there that do not apply here but that tend to curtail the output of the single man. The more we do a certain kind of work with automatic machinery or semiautomatic machinery, the less the price paid to the laborer who operates that machinery has to do with the cost of production.

Mr. SMOOT. Mr. President, no automatic machines are used in this kind of manufacture.

Mr. SIMMONS. I do not know how that is; but I think that is a very bad way and a very unsafe and a very unsound way of attempting to measure the difference in the labor cost in different countries, because we know that the conditions of machinery and the conditions of hours of labor and the other restrictions that obtain in one country may not obtain in the other country.

Mr. SMOOT. Does the Senator from North Carolina think for a moment that the laborers in the cotton mills in England are not as efficient as those in this country?

Mr. SIMMONS. I said I did not know whether the labor was as efficient or not, but I said that there were certain rules and regulations with reference to the number of men required to operate a machine, as compared with the number of men who would operate a similar machine in this country, which affect the labor cost, if you measure it by wages paid, very fundamentally.

But that was not the object of what I was saying. I was simply criticizing the rule by which the committee in this case, according to the statement of the Senator from Utah, as in many other cases we have had before us, have attempted to measure the difference in the cost of production here and abroad. It might operate very well in some cases, but it seems from the discussions we have had that that has been the rule of measurement in the cases of practically all the rates the committee has written, where it has considered any rule of measurement at all.

But let us get down to the hard facts as to whether these threads produced in Great Britain do actually bring a higher or lower price at wholesale or at retail than those produced in this country. I have here an expert statement with regard to this particular item, which reads as follows:

ENGLISH PRICES OF J. & P. COATS (LTD.).

Retail prices of 200-yard spool: 1914, 1½d.; 1919, 4d.; 1922, 6d.
Retail prices of 400-yard spool: 1914, 3d.; 1919, 7½d.; 1922, 10d.
In December, 1919, Coats, when advancing prices, stated that their wholesale price was 5.729d. for 400-yard reel (spool) retailing at 7½d. If same ratio applies to the 10d. retail price their wholesale price is now 7.64d. per 400 yards (equal to 7.64×2×0.80 (exchange) divided by 4, or 4.08 cents per 100 yards). This would tend to show that wholesale and retail prices of cotton sewing thread are higher in England than in the United States.

That, I take it, has been very carefully, very accurately, and very technically worked out by the expert of the Tariff Commission. His conclusion is, taking this data given by Mr. Coats himself, that the retail and the wholesale prices of these threads are higher in England than they are in the United States. If that be true, in heaven's name upon what ground can we justify imposing a 35 per cent maximum rate and a minimum duty of 20 per cent, which I understand is the figure to which the Senator has now agreed to reduce it, under pressure, probably, from the other side of the Chamber. Thirty-five per cent is a reduction from 45 per cent which was originally proposed.

The very fact that before this pressure was brought to bear upon it, when it was acting on this in the same way in which it was acting on other paragraphs in this schedule, the committee fixed the maximum rate at 45 per cent in the face of such a situation as I have disclosed in these figures, based upon Mr. Coats's own statement, shows the recklessness with which these rates have been made. If 45 per cent was too much under those conditions, 35 per cent is equally too much now. If a minimum rate of 25 per cent was too much, a 20 per cent minimum is equally too much now. It will not do to say that the 20 per cent minimum is only 5 per cent higher than the present rate. The provision in the present law has no minimum and maximum. It is just a flat rate of 15 per cent. But with an output of cotton thread of nearly $60,000,000, with an import of only $1,000,000, threads selling in England at retail and at wholesale higher than in this country, they propose to raise the present rate. If these facts prove anything, they prove that although the existing rate might have been justified in 1913, when they were adopted, the developments in this industry in this country since that time as compared with Great Britain have changed the conditions and the situation which existed there, and the facts of this development show conclusively that the 15 per cent rate would not be justified now—that is, if justified then, it is not justified now.

I think the rates are entirely too high. It is true, concessions have been made to the other side which are accepted as meaning something, but which to my mind mean absolutely nothing. The substitute rates of the committee, substituted under the duress of opposition on the other side of the Chamber, have led to some reductions, but they are reductions which signify nothing to the American people, who are to pay these taxes.

If a nominal duty is all that is justified, then these reductions they are making for the purpose of securing support over there and saving themselves from another crushing defeat, if they amount to something from a political standpoint, may help in securing support which would otherwise not have been given on the other side, and may enable the committee to save its face; but so far as the American people are concerned, the reductions do not amount to a snap of the finger.

THE FEDERAL RESERVE BOARD GOVERNOR.

Mr. HEFLIN. Mr. President, I want to bring again to the attention of the Senate and the country the fact that a great propaganda for the reappointment of Governor Harding is being carried on by some of the agents and officials of the Federal reserve banks. But the people out in the States are beginning to wake up upon this question. The York Republican, a Republican paper published in the State of Nebraska, in the city of York, on June 29 of this year contained an article from which I read as follows:

Early in 1920 an edict was issued by the Federal Reserve Board that liquidation must take place, and I know of several cases where regional banks absolutely refused to renew paper of borrowing banks and demanded that a large element of their borrowing must be liquidated. In several cases the banks were unable to meet their liabilities and the Federal reserve bank charged them to the account of the borrowing bank, making an overdraft and compelling them to liquidate. So there was nothing left for the local banks to do but to compel their borrowers to put their stock on the market immatured. At the same time the men who usually buy cattle for feeding purposes were unable to get money to buy the stock. The result was the stock in many cases went to the slaughter far in advance of maturity. Over 65 per cent of the cattlemen and about 75 per cent of the tenant farmers of the country are insolvent.

* * * * * * *

I want to say to Senators and Representatives from Nebraska that I am voicing the sentiments of 95 per cent of their constituents when I say they should offer all the support they can to Senator HEFLIN and the farm bloc to defeat the reappointment of Governor Harding.

I am going to read an excerpt from a letter written by the president of a city national bank in a Southern State to another Senator in this body. I have not conferred with the other Senator, and I will not use his name. The president of that bank says this in the beginning of his letter:

MY DEAR SENATOR: Unless something is done to check the extravagance and gross mismanagement which has been and is still being displayed in the administration of our Federal reserve system, of which I have been an ardent supporter, I fear the system will be doomed. There is a real danger that the people will rise in their wrath and not only throw out the men responsible for its mismanagement, but may also try to do away with the system itself, unless abuses are corrected.

Mr. President, for nearly two years I have defended this system. I have striven to keep it out of politics and to have it honestly and fairly administered. I have stated on this floor two or three times that I, as well as other Senators, have received letters from bankers complaining of the deflation policy of the Federal Reserve Board and asking me and asking them not to use their names.

The time is fast approaching when the President of the United States must name a successor to Gov. W. P. G. Harding. The Manufacturers' Record has told the country how an indorsement was secured of him in a bankers' convention in New Jersey at the very close of the session, when nearly all the delegates were gone, all but about 15. Under those circumstances a resolution was gotten through asking for the reappointment of Governor Harding.

The Manufacturers' Record has pointed out that wherever a bankers' convention is held, whether by a district or by a State, somebody representing the Federal Reserve Board, with all its power, with all its control over the distribution of the currency and credits of the whole country, is on hand to handle and manipulate the situation so as to bring about an indorsement of Governor Harding.

Mr. President, the President of the United States ought not to tolerate that sort of thing. The President of the United States ought to put his foot down upon such reprehensible and dangerous conduct. Think of the governor of the Federal Reserve Board, coming up for reappointment, calling upon the men he has appointed to office in the various Federal reserve banks to use their influence upon bankers who must come to the Federal reserve banks to get their accommodations in currency and credits, to indorse this man for reappointment.

In this fashion our great Federal reserve banking system is being dragged into politics. The old national bankers in Hickory Jackson's day were rebuked and punished for less political activity. I do not believe there is an official in any one of these banks, except New York, who, if he were let alone, would drag the system into politics or would undertake to use the bank's influence for political purposes. The governor of the Federal Reserve Board is up for reappointment, and the man at the head of each bank, holding his position by appointment of Governor Harding, is influenced through this governor to call upon the bankers dependent upon him or the bank under his control for supplies, to indorse Governor Harding. What a dangerous and deadly power it is that he is using.

Mr. President, it was the purpose of myself and others who had to do with creating this banking system to keep it out of politics, to have it honestly administered, so as to meet the needs of business everywhere. It did that very thing until the late spring of 1920.

After that time, under the edict of the Wall Street bunch, it commenced the work of destruction to rob, literally rob, through deflation, the South and West of many billions of dollars. Now, of course, those people want Governor Harding re-

appointed. Of course they are using their power to have him reappointed, but I want the President to know and the country to know that indorsements are being secured through improper influences and under coercion and intimidation, and that men who fear and distrust him are being influenced to indorse him and ask for his reappointment.

Mr. President, in conclusion I wish to make a cross statement and I want the press to carry it to the country. A Republican Senator in this body told me day before yesterday that the bankers in convention in his State were induced to indorse Governor Harding for reappointment, and that since that time the bankers had been writing him personal letters, expressing the wish and the hope that he be not reappointed. What a horrible condition that presents. Bankers sitting in convention, with an agent of the great Federal reserve bank, with all its power and influence standing amongst them asking for an indorsement of Governor Harding, whispering it around that he is going to be reappointed anyway, and suggesting that they had better go on and indorse him and thus secure indorsements from men who as soon as they can express their real feelings write their Senators to ask the President not to reappoint him.

I do not intend that these requests and indorsements shall go to the President without him knowing how they are obtained. Go and ask the editor of the Manufacturers' Record about the information that is pouring into him from all over the country about how these indorsements are obtained. Talk to Senators on this floor. One of them told me this morning about a man writing him a letter asking him to indorse Governor Harding for reappointment. I said that man either belongs to the interests that have fed and fattened upon the substance of the people, wrung from them by deflation under the leadership of Governor Harding, or he does not understand what it is that deflation has done to millions of our people.

Mr. President, I would love to see the President of the United States come out and say that if he caught these bankers trying to influence other bankers that are to be served by them in their district to indorse this man, who, if let alone, they would bitterly oppose, that he would see to it that they were removed from office. But, Mr. President, what a dangerous power it is to permit a man to get on that board and then to pick out the men for positions in these banks and appoint them to office, place them under obligation to him, and then make them use their influence to keep him in office. Mr. President, if that is permited, what we sought to do when we established this system has been defeated. The banking system that we set up on a hill far removed from wirepulling and political chicanery has been dragged into the mud and mire of dangerous political activity.

Danger signals are going up. Here is a great banker in the South writing a letter to a Senator, who is sitting on this floor now, and saying unless this system is changed, this mismanagement stopped, the whole system is in danger. I have been here pleading day after day through the months that are gone in favor of keeping this great banking system true to the purposes for which it was created. These Federal Reserve Board members, or some members of it, have their publicity bureau; they have wires which they can pull reaching out into the Federal reserve districts wherever the Federal reserve banks are located; and they have had their press agents pouncing upon me, criticizing me, and trying to destroy my efforts to get the truth about the crime of deflation to the people.

Mr. President, are we going to permit that to go on in this country? I am going to have something to say in a day or two about another gentleman who has been very active in this work and who is on the pay roll of the Federal reserve system now. Little by little I hope to make some interesting revelations to the Senate and the country between now and the 1st of August.

Mr. President, I want to repeat, for the benefit of some Senators who perhaps did not hear my statement a moment ago. The editor of the Manufacturers Record tells us that a member of a bankers' convention wrote him that the governor of the Federal Reserve Board was indorsed when nearly all the delegates had gone. I want to repeat to my brother Senators that a Republican Senator told me that bankers in a convention in his State, who were induced to indorse Governor Harding, have since that time been writing him letters expressing the wish and the hope that he would not be reappointed.

Right here in the Capital of the Nation this great banking system, perverted from the ends of its institution, is made a veritable political machine. It ought to be free from political activities and ought to give service whole-heartedly to the business needs of the country, and yet it is using every influence possible to get indorsements to overwhelm the President and convince the President that the people want him reappointed. This ought not to be permitted, Senators. Mr. President, if the people of the United States—men and women old enough to vote—could vote to-morrow upon the question of whether Governor Harding should be reappointed or rejected and we should poll 30,000,000 votes, I do not believe he would poll 500,000 votes. I believe that 29,500,000 would be cast to remove him. And yet this propaganda is going on, persistent and insistent, in the effort to deceive the President into believing that the people want him reappointed. Senators are getting letters from their constituents asking them to fight his confirmation if he is reappointed. I believe that the President has already received indorsements that were obtained exactly in the way the Senator told me the bankers of his State indorsed this fellow or permitted him to be indorsed.

Mr. President, this is a horrible and deplorable situation to my mind. Suppose we assemble 100 bankers in a hall and a man comes in there from the Federal reserve system and every one of them look at him and say, "We have to go to that system for our money supply," and he stands up amongst them and says, "Gentlemen, I want you to indorse Governor Harding for reappointment. Just between us, I think he is going to be reappointed anyway, and it will be better for us to go ahead and indorse him, so I hope you will pass the following resolution."

The presiding officer says, "Those in favor say 'aye,'" and about a dozen say "aye," and eighty-odd of them sit there with their eyes upon the floor and say nothing. Why do they not oppose it? For the reason that they have written to me and written to other Senators: "Do not use my name. If you do, they have too many ways in which they will make me suffer and injure my business." Here is the man from a bank called upon to indorse this man, and he sits there and says to himself, "Well, I have to go over there next week to see if I can not get a little money to carry on my business. I guess I had better not antagonize them."

It is a horrible situation, Mr. President.

I do not believe that they can fool the President with the tactics that they are now employing to secure the reappointment of Governor Harding.

DISTRIBUTION OF SPEECHES BY FEDERAL RESERVE BANKS.

The PRESIDING OFFICER (Mr. STERLING in the chair) laid before the Senate a communication from the governor of the Federal Reserve Board, transmitting, pursuant to Senate Resolution 308, a letter from the Federal Reserve Bank of Boston relative to the circulation of a speech of Senator GLASS on the Federal reserve system, which was ordered to lie on the table.

LANDS IN MOHAVE COUNTY, ARIZ.

Mr. CAMERON. Mr. President, I ask unanimous consent for the present consideration of House bill 9257, which has passed the House and has been reported favorably to the Senate. It is for the transfer of lieu lands which have been selected by the Santa Fe Railroad Co., and gives them the right of selection of other Government lands. A survey was made, and I should like to have the bill passed.

The PRESIDING OFFICER (Mr. WILLIS in the chair). The Senator from Arizona asks unanimous consent for the present consideration of a bill, which will be read by title.

The ASSISTANT SECRETARY. A bill (H. R. 9257) to permit adjustment of conflicting claims to certain lands in Mohave County, Ariz.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

Mr. SIMMONS. Mr. President, what is the bill?

Mr. KING. The bill is all right, may I say to my colleague?

Mr. SIMMONS. Mr. President, knowing the wise and safe views that the Senator from Utah [Mr. KING] has wherever there is a trade in question, and upon his assurance that this is a mere trade as to lands, I shall not make any objection.

Mr. SMOOT. We have passed hundreds of such bills.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill, which was read, as follows:

Be it enacted, etc., That the Secretary of the Interior be, and he is hereby, authorized and empowered, in his discretion, to accept a relinquishment from the owners of the odd-numbered sections of land falling within townships 16, 16½, and 17 north of range 13 west, Arizona, and permit said owners to select and receive in exchange therefor patents of an equal area of vacant surveyed, nonmineral, nontimbered public land of the United States in the county of Mohave, State of Arizona.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

THE TARIFF.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes.

Mr. FLETCHER. Mr. President, I want to submit very briefly two propositions. In the first place, under existing tariff laws the amount of revenue derived through the customhouses is greater than it ever has been under any law, under the Payne-Aldrich tariff or any other. In other words, the existing law is serving the needs of the country in raising revenue. Then I propose to show that, so far as the manufacturers are concerned, there is no need for legislation to further protect them and their interests.

The first proposition is borne out by a statement which appears in the Washington Post of June 22, last, which states:

Customs receipts for the fiscal year ending June 30 will reach the highest figure in the history of the Government. On June 19 the receipts had exceeded the highest previous record, that of 1910, when the Payne-Aldrich tariff law was in effect. In that year the customs receipts were $333,000,000, while on June 19 they had reached $341,000,000, and probably will approximate $350,000,000 at the end of the fiscal year.

There has been a very great increase in the customs receipts over last year, when they were $298,000,000. The increase is said by Treasury officials to be due in large measure to the importation of large quantities of materials, the stocks of which were depleted during the war period, and also to the reorganization of the customs service under the present administration.

Internal revenue receipts will show a material decrease from last year. Income tax returns alone decreased more than $1,000,000,000. This year's income tax receipts up to June 19 were $1,949,120,809, as compared with $2,956,171,191 last year.

In view of those facts, where is there any crying need for a permanent revision of the tariff laws of the country, and especially under existing conditions, and especially also a revision such as is proposed here, which will result in increasing very vastly existing duties, imposing enormous tax burdens, shutting out imports, and, in my judgment, decreasing the revenue?

The article on this subject, which I desire to place in the RECORD without reading, appears in the Manufacturers News of Chicago of July 6, 1922, and is headed "The growth of United States manufactures—Government's fourteenth industrial census shows an increase of nearly 15,000 plants in five years."

This article gives the number of establishments in the important industries, such as food and food products, textiles and kindred products, iron and steel and their products, lumber and remanufactures, leather and finished products, paper and printing, liquors and beverages, chemicals and allied products, stone, clay, and glass products, metals and metal products, tobacco manufactures, vehicles for land transportation, railroad repair shops, and miscellaneous industries. The article shows the number of establishments in 1919 and the number of establishments in 1914 in these various industries. It shows a tremendous growth in the manufactures of the country under the existing tariff law.

In view of that statement, which is taken from the census of the Government, and, of course, is authoritative and may be depended upon, where is there any need for further protection of the manufacturers of this country? If we take the pending bill and analyze the various schedules we shall find that the bill proposes to increase the duties on the ordinary necessities of life very greatly over existing law and over any other previous tariff legislation. We shall find that under the provisions of this bill with respect to the ordinary daily requirements of the family, which all the people must have, it will take $1 to get 4 cents into the Treasury; that the consumers will have to pay more than twenty-six times the amount which the Government will receive as revenue.

Under many of these schedules the Government will receive as revenue less than 4 cents on the dollar of what the tariff will cost the people.

An examination of the data will show that the American manufacturers are shipping abroad, paying freight, and selling in the open markets of the world 7 per cent of their products, and that they are selling abroad more than four times as much as the foreigner is selling in this market; and with a duty of from 15 to 80 per cent, these industries pay their workmen only about 20 per cent of the value of their product.

It is preposterous for anyone to claim that the effect of imposing the high duties carried in this bill will be other than to restrict and limit our foreign trade and reduce exports as well as largely prohibit imports.

In view of those facts, I again insist that this is no time and there is no warrant or justification to press for higher duties and to repeal the existing tariff law of 1913 and enact a permanent law, increasing the burdens of the people by the excessive duties which are proposed in the pending measure. I ask to have the statement from the Manufacturers News printed in the RECORD.

The PRESIDING OFFICER (Mr. STERLING in the chair). Without objection, it is so ordered.

The statement is as follows:

Industrial establishments increased in the United States 14,314 from 1914 to 1919, according to the fourteenth annual census of manufactures, which has been completed by Eugene F. Hartley, chief statistician of manufactures for the Government. The average number of wage earners increased more than 2,000,000, while invested capital increased $21,778,613,834 and wages $6,455,067,907. The cost of materials used by the 14 groups of industries covered by the census increased $22,998,291,452, and the value of products went from $24,246,434,724 to $62,418,078,773, an increase of $38,171,644,049. The value added by manufacturing increased in the five years $15,163,352,597.

The manufacture of vehicles for land transportation led all the other industrial groups in growth. In 1914 there were 9,909 such establishments in the United States, but the number in 1919 was 21,152, an increase of more than 11,000 plants and shops, while the increase in invested capital in vehicle manufacture jumped more than $1,500,000,000. The number of persons employed in vehicle manufacture more than doubled and the pay roll increased nearly $500,000,000. The cost of materials used was nearly $2,500,000,000, the actual increase being $1,911,555,411. The increased value ran well over $3,000,000,000.

The number of plants manufacturing leather and leather products decreased 361; paper and printing plants decreased 793, and more than 2,000 establishments producing stone, clay, and glass products disappeared from the industrial field, either entirely or as the result of mergers. Tobacco manufacturing plants decreased by 3,660 and chemicals and allied products plants were reduced by 150. These increases and decreases undoubtedly have changed since 1919, but the census at least shows the remarkable industrial changes during the five years from 1914 to 1919. The following table shows the comparisons of the 14 groups and the comparisons in grand totals:

Statement showing growth of United States manufactures.

GRAND TOTAL FOR 14 GROUPS OF INDUSTRIES.

Year.	Number of establishments.	Average number wage earners.	Capital.	Wages.	Cost of materials.	Value of products.	Value added by manufacture.	Primary horsepower.
1919	290,105	9,096,372	$44,569,593,771	$10,533,400,340	$37,376,380,283	$62,418,078,773	$25,041,698,490	29,507,117
1914	275,791	7,036,247	22,790,979,937	4,078,332,433	14,368,088,831	24,246,434,724	9,878,345,893	22,470,872

FOOD AND FOOD PRODUCTS.

1919	61,312	684,672	$4,635,149,885	$722,539,843	$10,111,546,824	$12,438,890,851	$2,327,344,027	2,571,257
1914	59,317	496,234	2,174,386,295	278,009,375	3,828,511,989	4,816,709,664	988,197,675	1,994,983

TEXTILES AND KINDRED PRODUCTS.

1919	28,552	1,611,309	$6,096,161,183	$1,482,326,820	$5,382,079,303	$9,216,102,814	$3,834,023,511	3,274,090
1914	23,463	1,507,374	2,836,279,203	676,459,736	2,015,501,950	3,447,997,219	1,432,495,269	2,752,051

IRON AND STEEL AND THEIR PRODUCTS.

1919	20,120	1,585,712	$8,711,843,201	$2,193,203,301	$4,815,885,004	$9,403,634,265	$4,587,749,261	8,082,692
1914	17,719	1,061,058	4,281,997,816	723,162,595	1,762,312,126	3,223,142,260	1,460,830,134	5,537,842

Statement showing growth of United States manufactures—Continued.

LUMBER AND REMANUFACTURES.

Year.	Number of establishments.	Average number wage earners.	Capital.	Wages.	Cost of materials.	Value of products.	Value added by manufacture.	Primary horsepower.
1919	39,955	839,008	$2,590,045,756	$847,031,570	$1,359,998,567	$3,070,072,813	$1,710,074,246	3,417,941
1914	42,036	833,529	1,723,454,491	440,308,223	762,351,252	1,599,711,856	837,360,604	3,185,861

LEATHER AND FINISHED PRODUCTS.

New York City's factories produce one-twelfth the value of all manufactured goods in the United States. They turn out more than twice and a half as much as Philadelphia and 45 per cent more than Chicago, says the Review of Industry. The city has 32,590 factories employing 825,056 workers, and producing annually goods valued at $5,260,707,577. These factories pay $2,800,000,000 a year for raw materials, more than $1,000,000,000 in salaries and wages, and the average pay per person is $1,372.02 a year. The city manufactures about 90 per cent of the country's lapidary work, 80 per cent of its pipes and tobacco, 54 per cent of its pens, one-third of its lithographing, approximately a third of its mirrors and jewelry, over 29 per cent of its pianos, 23 per cent of its professional and scientific instruments, 17 per cent of its ivory, shell, and bone work, 13.5 per cent of its coffee and spices, 12.9 per cent of its wooden-boat building, and 10 per cent of its knit goods. By groups the apparel industries lead, with a total of $1,822,785,577. Food products come second, with a total of $602,649,499. Metal industries with $435,930,943, leather products with $123,280,584, and paper products with $104,897,317.

THE MUSCLE SHOALS PROJECT.

Mr. CARAWAY. Mr. President, some rather peculiar things happen in the United States Senate. Contrary to expectations, the dye monopoly failed to receive an indorsement. No one yet seems to be able to figure out how it missed its calculations. That, however, is not quite so remarkable as an occurrence which took place in the Committee on Agriculture and Forestry this morning, on which I wish briefly to comment. How it is that the dye monopoly should lose and the Fertilizer Trust win is one of the things that I presume we shall know after awhile; but in the Committee on Agriculture and Forestry, where the question was to be determined whether the great natural asset which the Government has at Muscle Shoals should be utilized in order to help the agricultural interests of the country, or should be stifled in its development in order that the Fertilizer Trust should continue to take an unrighteous profit from the American farmer, was determined in favor of the Fertilizer Trust. That a committee which was presumed to be sympathetic toward the needs of farmers—and I am not criticizing the members of the committee individually—should have refused by a number of record votes, which

it was agreed should be made public—and therefore I may discuss the action of the committee—to prevent any kind of development of Muscle Shoals, is more than I can understand.

If the committee had been in favor of some concrete plan, something that looked toward the final utilization of Muscle Shoals, I could understand that, whatever the conclusion might be; but that a committee, after having heard testimony for seven or eight months, all of which agreed that some use should be made of this great power dam, should then refuse to make any use of it, is something for which I shall wait for an explanation.

The peculiar thing about it, however, was that, under an agreement as to absent Senators and how their votes should be cast, if permitted to be cast at all, under the ruling of the Chair a proxy was permitted to be voted to determine whether it was a proxy or not. It was as illogical as to permit the defendant to sit on the jury to determine whether he was guilty of the charge upon which he was being tried.

Under that kind of parliamentary ruling it was determined to do nothing with this great natural resource. It was determined by a very narrow margin to permit the Fertilizer Trust for years to come to take toll of every farmer in America, and, incidentally, after the farmer has been robbed, to a certain extent at least, this charge will be passed on to the consumer.

I think every American man, woman, and child were interested, directly or indirectly, in what we did this morning. I think the great majority of them wanted the Congress to do something with Muscle Shoals; but, to the astonishment of everyone, the committee decided to do nothing, and voted down every proposition offered. Senators after saying they wanted something done with Muscle Shoals voted against every offer made. They voted against a lease to Ford; they voted against a lease to the Alabama Power Co.; they voted against Government development. What reasons actuated them I shall of course leave for them to say, but I am sure that they are going to find it necessary to give to the American farmer, at least some explanation.

Notwithstanding what I shall read—because I shall make no application of it—on appeal the one from whose ruling the appeal was taken voted to sustain his own ruling, and, as I have said, a proxy, whether it should be counted as a proxy or not, was voted in favor of the proxy. If anybody can figure out how that should happen, of course I shall leave it for him to say.

In Jefferson's Manual, which I understand has been to a large extent accepted as a sound exposition of parliamentary usage, I find this:

> Where the private interests of a Member are concerned in a bill or question he is to withdraw. And where such an interest has appeared his voice has been disallowed, even after a division. In a case so contrary, not only to the laws of decency but to the fundamental principle of the social compact which denies to any man to be a judge in his own cause, it is for the honor of the House that this rule of immemorial observance should be strictly adhered to.

The application I shall not make, because it will be apparent a little later. I know that there was an absent Senator who sent a telegram here on Tuesday of this week saying that he did not know enough about the matter to record his vote on either side, and, without any opportunity to know anything more about it to-day than he knew then, a telegram, without directing how he should be voted, but permitting another Senator to vote for him, was sent, and he was voted against every proposition that had any possibility of succeeding. He was made to appear to be so inconsistent as knowing nothing Tuesday about the matter at all, but to-day being voted against everything that looked to any development of this great project.

It is more than just a local matter. Everybody who has taken the time to study it knows that the so-called Fertilizer Trust has every agriculturist in America at its mercy. I say "mercy" only in the sense of in its power, because it has been disclosed that it has no mercy. It is known—I do not care what excuse may be offered—that the development of a supply of nitrogen is absolutely necessary if the farmers are to be relieved from this exorbitant, unrighteous tax that has been levied upon them; and yet a committee made up of men every one of whom expressed a desire to be helpful voted down every proposition that was offered, and makes us appear in the very ridiculous attitude of saying that "We want to do something, but whatever we want to do you can not guess, and we will not tell."

A little bit later I am really going to say something about it. Now it is sufficient to suggest that the combination in the committee was to defeat the Ford offer, which is the only real offer to release the farmer which was before the committee.

THE TARIFF.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the committee, which will be stated.

The ASSISTANT SECRETARY. On page 122, line 6, it is proposed to strike out the word "thread" and to insert the same word with a comma and the following words:

> One-half of 1 cent per hundred yards.

The amendment was agreed to.

The PRESIDING OFFICER. The next amendment of the committee will be stated.

The ASSISTANT SECRETARY. On line 9, it is proposed to strike out the word "yards" with a semicolon following it, and to insert the same word with a comma.

The amendment was agreed to.

The ASSISTANT SECRETARY. On line 11, the committee proposes to strike out "17 nor more than 33⅓," and to insert "20 nor more than 35," so that, if amended, it will read:

> *Provided*, That none of the foregoing shall pay a less rate of duty than 20 nor more than 35 per cent ad valorem.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the committee as modified.

Mr. LENROOT. Mr. President, when the Senate last considered this paragraph, day before yesterday, I offered an amendment to it. The committee has now proposed an amendment similar to that which I offered, making the minimum ad valorem 20 per cent, instead of 25 as originally proposed and 17 as proposed in the House bill, the 17, however, being upon the American valuation and the 20 being upon the foreign valuation; and I shall now support the committee amendment.

I want to say in this connection that it is very clear that it is the 20 per cent that will apply to the rates in this paragraph; and I do not believe that the time will ever come so long as this bill shall be in operation when a higher rate than 20 per cent will apply, although the paragraph does contain a maximum of 35.

I may say in this connection that during the year 1921 the imports and exports very nearly balanced, the imports being in value $1,980,000, and the exports being $2,055,000. I think I ought to say in this connection, too, that more than half of these imports came from France during 1921, evidently being the high embroidery threads. While personally I should have preferred to see the House rate remain, I am not inclined to make any contest over a difference of 3 per cent, and I shall support the committee amendment.

Mr. SIMMONS. Mr. President, may I ask the Senator a question? The Senator says, and probably correctly, that the minimum rate is the only one that probably will be operative. That being so, does the Senator see any reason why we should have any maximum rate?

Mr. LENROOT. I am very frank to say that in this particular paragraph I do not think the maximum rate means anything.

Mr. SIMMONS. Why should it not be stricken out, then?

Mr. LENROOT. It can do no possible harm, however.

Mr. SIMMONS. A condition might arise where the maximum rate might possibly take effect. I do not know.

Mr. LENROOT. That could not be, because if the specific rate went over 35 and the 35 were stricken out, it would take the higher rate, so the only effect of the maximum would be that if by any possibility the price of this thread should go so low as to make a higher rate apply, here would be a maximum. It can do no possible harm, but I am very frank to say that I do not think it ever will apply.

Mr. SIMMONS. I want to say that while the committee have imposed this maximum rate that is not the rule generally adopted. They have generally imposed a minimum rate. Why did you impose both a minimum and a maximum rate in this particular case and not in other cases?

Mr. SMOOT. Mr. President, there are some other cases in the bill; but I will repeat what I have already said, that I wanted a maximum rate, because if the price of cotton declines to the price that prevailed in 1910 the equivalent ad valorem would be 43 per cent, and I do not want it at any time any higher than 35 per cent. It is a limitation.

Mr. LENROOT. It can do no possible harm, and the 35 per cent can by no possibility increase the duty in any event.

Mr. SIMMONS. I do not know, Mr. President, that it can do any harm. I do not think it can do any good. I should very much prefer that we had one rate; but, of course, the

committee have fixed it that way, and I think probably they have had an understanding on the other side of the Chamber to accept these amendments, and as a result of that understanding it probably would be futile for us to call for a yea-and-nay vote. Unless the Senator from South Carolina desires to ask for a yea-and-nay vote, I shall not myself ask for it.

Mr. SMITH. Mr. President, I do not think it will be necessary. I think it would be a futile thing. We have made our protest here. I think the Senator from Wisconsin is absolutely right when he says that the House provisions ought to prevail—that is, that the Senate ought to be willing to accept the House provisions, in view of the showing that has been made here as to the intrenchment of the manufacturers producing this article. I am perfectly willing, however, for the other side to take the responsibility, in view of the showing that was made here, and content myself with voting against it. I am on record in what I have had to say.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment.

The amendment was agreed to.

The PRESIDING OFFICER. The next amendment of the committee will be stated.

The ASSISTANT SECRETARY. Two amendments have already been agreed to in paragraph 903. On line 19, the comma has been removed after the word "pound," and on line 24 the numerals "100" have been changed to "80."

On line 24, the committee proposes to strike out "9" and to insert "15," so that, if amended, it will read:

Provided, That none of the foregoing, when containing yarns the average number of which does not exceed No. 80, shall pay less duty than 15 per cent ad valorem.

Mr. LENROOT. Mr. President, exactly the same argument applies to this item so far as the threads of lower count are concerned that applies to the controversy that we had with reference to yarns; and I can find no justification anywhere in the reports of the Tariff Commission or in an examination of a table of imports and exports for the increase that is proposed by the committee. Taking a count of 40, if the increases proposed by the committee shall be adopted it will mean a 25 per cent ad valorem rate imposed upon all cloths with a count of 40.

What are the facts with reference to imports and exports, and what are the facts that justify any such increase as is proposed by the committee?

I want to take a little time—I shall not take very much—in calling attention to the reports of the Tariff Commission with reference to certain of the cloths that are included in this paragraph. In one of their information surveys they divide the cloths in this paragraph into three groups:

Group I, average yarns, 40s to 80s.
Group II, average yarns, 80s to 120s.
Group III, average yarns, 120s to 250s.

I am speaking of Group I, which is the one now under consideration. They say:

This group contains all the long cloths, the heavier typewriter cambrics, coarser nainsooks, and ordinary lawns. The domestic industry dominates the home market, exporting in increasing quantities, by virtue of large-scale production. The normal imports are negligible compared to those of Groups II and III, and are confined to cloths of special finish or textures, as organdy or typewriter cambric. The abnormal postwar demand in combination with price conditions temporarily broke down the normal limits of competition, allowing the importation of cloths of this group in quantities far beyond the normal.

Mr. President, the importations in 1920 were very large, but the Tariff Commission reports, as a reason for those imports being very large, that the demand was greater than our own mills could supply.

Now, as to these cloths—and remember, these cover only the unbleached cloths, not printed, dyed, colored, and so forth—let us see what the imports were.

In 1921 the total imports of all cloths under this paragraph amounted to $3,800,000, in round numbers, while at the same time we exported to the value of $19,609,000. In other words, our exports were six times our imports, and yet it is proposed by this amendment to increase the duty to 25 per cent ad valorem. This, again, is one of the instances where it seems to me the committee can not justify the increase in the rate that is proposed. The rate on the unbleached, under the Underwood law, runs from 7½ per cent to 27½ per cent. The average ad valorem on the unbleached, not made of long staple cotton, was 23 per cent, based upon the 1921 imports, and that includes all counts, of course. Most of them are the higher counts, as I think the Senator from Utah will acknowledge. That is to say, the very large majority of the imports which come in under the entire paragraph are of the high counts, and the imports of the low counts are negligible and nominal.

I shall not take the time of the Senate this afternoon to go into a discussion of the occasion for such imports as there are of these lower counts, but the Tariff Commission explains them very fully, and gives as a reason for the imports of these lower counts, and why there are any, in view of our very large exports, the fact that where there is a very limited demand for a certain design, where some one wants a limited quantity of the design furnished by him, the American manufacturer will not take the order unless the purchaser is willing to give an order for not less than 8,000 square yards, while the English manufacturer will take an order for any amount, and make his price. The American manufacturer depends upon quantity production and low cost, with his automatic looms, and has no desire to deal in very small orders, whereas in England they will take any kind of an order, which accounts in large part for the amount of imports which do come in.

I am not going to take further time in discussing this question, unless there be something to reply to later on; but the rate in the present law is practically prohibitive, and that being so, and this being an article of universal consumption in the United States, I can not and shall not vote for an increase in the rate such as is proposed by the committee.

Mr. SMITH. Mr. President, it seems to me that the position taken by the Senator from Wisconsin [Mr. LENROOT] is aside from the argument that these rates are inexcusably high and that we must keep the parity between the yarn that enters into the cloth and the cloth which is made out of the yarn. The Senate has restored the House rates in practically all of the yarn paragraphs. The relation of the yarn counts which enter into the cloth to be manufactured was scientifically adjusted, and the Senate in amending started with the yarns, and then, when they reached the cloth paragraphs, they amended them in a like manner. Therefore, as the Senate has acted upon the yarn paragraphs, if they leave this cloth paragraph as it is they will have the rates out of all proportion; in other words, they will have a higher protective duty on the cloth made out of a given yarn than they will have on the yarn out of which the cloth is made.

I have from the Tariff Commission a diagram showing the relative schedules of the yarns and the cloth made out of the yarns, and the gradation is scientifically exact. In making these amendments the Senate adjusted the matter by raising the lowest count yarn and then made a like raise in the cloth made from that yarn. Now we have arrived at the cloth paragraph, and the House provision should obtain.

But before we take a vote on this amendment, I want to read into the record a statement covering the very point the Senator has mentioned.

The Senate Finance Committee has used as a basis the progressive system of specific and ad valorem rates of duty that were placed by the House in paragraph 903—

Senators will notice that this is the same progression found in the yarn—

but not satisfied with these high rates, they have added to them by four different methods.

I want to call the attention of the Senate to these specific ways of gerrymandering:

First, they have, in paragraph 903 itself, added 5 per cent ad valorem for cloths of which as much as 40 per cent of the surface is vat dyed.

Second, they have, in the last sentence of paragraph 904, changed the method of determination of the average yarn count, thereby incidentally destroying the comparability of import statistics, so that the average yarn count of any cloth will become 5 per cent higher than what it is now worked out under the Underwood bill.

That is, by abandoning the yarn count, and counting the length of the thread when woven into the cloth, making it 800 in place of 840.

Mr. SMOOT. That has been disagreed to.

Mr. SMITH. Has it been disagreed to in these two paragraphs?

Mr. SMOOT. That was a provision in the bill which applies to all these paragraphs and the committee have disagreed to it. Therefore, there is no need to discuss that provision, because, as I stated day before yesterday, I think the committee has disagreed to it, and I have offered an amendment to strike that provision of the bill out.

Mr. SMITH. I am very glad to know that even that little mite is saved. I read further from this statement:

Third. They have added, in paragraph 905a, cumulative rates of 12 per cent ad valorem on coarse cloths and 15 per cent ad valorem on medium and fine cloths, when made with eight or more harness, or with drop boxes, Jacquards, lappets, or swivels. These cumulative rates will apply to at least a third, possibly a half, of the total imports of countable cotton cloth. There are no swivel looms in the American cotton industry, and the object in adding 15 per cent ad valorem to noncompetitive cloths, such as the dotted Swisses that are worn for summer dresses, has not been explained by the committee.

Just at this point I want to say that the Senator from Utah stated the other day that the dotted Swiss cloth had gone out of style. I dislike to think that as up-to-date a Senator as the

Senator from Utah has indicated the women of his country with being out of date. I do not know that he does as some people do—not to say that I do—walk on F Street sometimes and see the vast array of American beauty. Most of it is wonderfully enhanced by being clothed in dotted Swiss. I think if the Senator will just take a promenade up and down F Street at the proper hour of the day or evening he will be convinced of the fact that our American beauty is wonderfully enhanced by dotted Swiss.

Mr. SMOOT. Evidently the Senator from South Carolina has not been on F Street in the last eight months, because the style in dotted Swiss went out, and the importations now do not amount to anything. If the Senator were up to date, I am quite sure he would say that is true. I ask him to go on Connecticut Avenue or Massachusetts Avenue to-morrow, if he can, on the Sabbath Day, and see how many dotted Swiss dresses he will find.

Mr. SMITH. I will admit that my sight is not as good as it used to be, and it may be I was so taken up with the faces that I was not looking particularly at the dresses.

Mr. POMERENE. It is quite evident that both the Senator from South Carolina and the Senator from Utah have an eye for the beautiful.

Mr. SMITH. And it is so wonderfully enhanced, and the modern method of dressing is so enticing, that one is inclined to see just what manner of cloth is used in the dresses. But I am persuaded to believe, according to the actual figures of the imports, that the Senator from Utah is absolutely wrong in his statement as to the imports of these goods. I read further from the statement:

> Drop-box fabrics, such as ginghams and checks, also do not need any special rate inasmuch as the larger part of such fabrics is made here cheaper than abroad and imports consist almost entirely of goods, such as the fine Scotch ginghams, that are made of finer yarns and sell here at higher prices than the nearest comparable domestic fabric.

The Senator from Wisconsin covered the identical point I intended to emphasize. I have here the figures of the Cotton Manufacturers' Interests of the United States, the Harvard series, and they dwell on the specializing of the English manufacturers in producing a small quantity of anything which any customer may want, any particular form, whereas in America we have practically standardized our goods, just as Mr. Henry Ford has standardized his car, and the public are taking those standardized goods in volume, and at prices with which the world can not compete.

One reason why the American manufacturer is not competed with by these Englishmen is that he does not care to go to the expense and trouble of changing his loom or his machinery to adapt himself to the changing whims of fashion. On the other hand, those goods we import are imported here at a higher price than the American manufacturer can make those goods for.

Mr. SMOOT. I want to say to the Senator that the reason why England does that is because of the fact that she has the world's trade, and she can make a class of goods larger in quantity, even though they be specialties, than can the United States, because of the fact that we do not export them. That is exactly the same as the making of a piece of goods of any kind in the United States. One mill can not go to work and make a few pieces of cloth, no matter what price may be paid for it, but if they can have a wide trade within the United States, in different sections of the country, which will take enough to justify them making any one special line, they are only too glad to do it.

Mr. SMITH. But the fact remains, and the Senator can not gainsay it, that in spite of the Payne-Aldrich law, the Dingley law, and all the other protective tariff provisions we have had, our mills have not engaged in the production of this kind of goods.

Mr. SMOOT. I can not agree with the Senator.

Mr. SMITH. The figures of the imports and exports show it. We do not produce the goods.

Mr. SMOOT. I can not agree with the Senator. We do produce these higher-priced cotton goods, just as fine as are produced, with the exception of ginghams, and there is no spot in the world which produces them better and finer except one place, and that is Scotland. But that is only one kind of goods, and a plain kind at that, as to the pattern.

Mr. SMITH. Mr. President, before we are through with this schedule I shall have inserted a statement from those who have made a study of this, showing that we do not engage in that manufacture because it does not suit the particular genius of American manufacturers, and in spite of the protection we did not take advantage of it, because we were more profitably engaged in manufacturing another line of standardized cotton goods. Of course, the tariff on those goods tends to enhance the price all along the line.

Mr. LENROOT. Mr. President, will the Senator yield to me a moment?

Mr. SMITH. Certainly.

Mr. LENROOT. With reference to what the Senator is saying now, I thought I had at hand when I had the floor corroboration of the statement that I made with reference to quantity of production and the foreign manufacturer being willing to produce in very small quantities. I find in the Tariff Information Survey the following statement:

> Real competition between domestic and imported ginghams exists only in a small section of the domestic gingham trade, and is confined to ginghams above 40's actual average yarn count and above 140 threads to the square inch. These divide naturally into two classes, "shirting ginghams," with a fairly constant demand, and "dress ginghams," with a varying demand. * * * The marketing of new or novelty patterns, so necessary in keeping ginghams popular, is hazardous, especially in large quantities. Should the pattern not be acceptable to the buying public the goods would have to be sacrificed, and must, therefore, be tried out in small quantities of any particular pattern and color. Domestic manufacturers, because they are organized for large-scale production, can not afford to produce in this manner. Foreign manufacturers on the other hand have always produced in small quantities of any one pattern and color. The minimum amount which the domestic manufacturer will produce, if he is willing to accept special orders at all, is 8,000 yards of a pattern and color, and he will not give exclusive pattern rights. Foreign manufacturers will weave to special order, giving exclusive rights on a pattern and color combination as low as 300 yards.

Mr. SMITH. May I ask the Senator a question? Is not that, then, a question of trade policy rather than tariff?

Mr. LENROOT. Exactly.

Mr. SMOOT. Oh, Mr. President, I do not want the Senator to make that statement, because the reason for that is that England has a trade that enables her to take an order for 300 yards from one person, but that does not mean that she only makes 300 yards of that kind of goods. She has the world market.

Mr. LENROOT. The only point I wished to make is that a very considerable portion of the imports that do come in constitute the special orders that our own manufacturers would not take.

Mr. SMITH. They would not take them, because they do not have the ability to handle them or the desire to accept such small orders.

Mr. SMOOT. They can not afford to take them, nor could a woolen mill go to work and make a new pattern cloth for a 300-yard order; they can not do it. They can not make cotton cloth in that way. But England has the markets of the world. She does not make 300 yards only of a certain pattern of cloth and sell it to one buyer in one State of the United States, or in South America, or in Canada, or in Australia. She makes not only that 300 yards but, having the world for a market, she will make a thousand times that number of yards.

Mr. LENROOT. So do we.

Mr. SMOOT. Oh, no; not of this kind of goods.

Mr. LENROOT. I am speaking of the coarser goods.

Mr. SMOOT. But these are not the coarse goods.

Mr. LENROOT. They are the coarser ginghams.

Mr. SMOOT. Ginghams of the kind here are the Scotch ginghams. They are made in Scotland. They do not make them in this country.

Mr. LENROOT. The point I wish to make is that it is not an injury to the American manufacturer to have the special orders go over to England for a given pattern and come back here in small quantities, because if that pattern then becomes popular in the United States and there is a demand for a large quantity in the United States, the American manufacturer will then manufacture that pattern in large quantities.

Mr. SMOOT. But the patterns change every year.

Mr. LENROOT. Of course.

Mr. SMOOT. Samples that are shown are made perhaps six months before a piece of goods is delivered to any industry in this country or anywhere else, and it is only during one year that that particular pattern would be in vogue. The American manufacturer has got to make the goods and offer samples to select from the same year that they are made by the foreign country or he can find no purchasers.

Mr. LENROOT. Of course, the Senator is an expert in woolens and I am not, except that I have studied the question through two tariff revisions. I ask the Senator whether it is not true that there are patterns which are novelties in the beginning and which run through cycles of two or three or four years with very large demand?

Mr. SMOOT. I will say to the Senator that this paragraph has nothing whatever to do with that class of gingham. It applies to bleached and unbleached cloths. It is not figured cloths at all. There is nothing fancy involved, so far as the two paragraphs of the section are concerned.

Mr. LENROOT. That is true.

Mr. SMITH. Mr. President, this controversy got off into the question of these extra designs.

Mr. SMOOT. Dotted Swiss?

Mr. SMITH. Yes, of which the Senator says we do not partake.

Now, resuming the statement from which I was reading:

Drop-box fabrics, such as ginghams and checks, also do not need any special rate inasmuch as the larger part of such fabrics is made here cheaper than abroad and imports consist almost entirely of goods, such as the fine Scotch ginghams, that are made of finer yarns and sell here at higher prices than the nearest comparable domestic fabric.

Jacquard fabrics are imported in negligible quantities so the additional duties on such goods is not a matter of any importance. The additional rates on fabrics woven with eight or more harnesses, however, cover the largest item of import, the cotton venetian lining, and eight harness sateens intended to be finished into such linings. The production of such fabrics in the United States has largely increased since 1914 and imports have been confined more and more to the finest qualities so that the Underwood duty appears ample. This provision for fabrics, woven with eight or more harnesses, also cover dobby cloths, of which there is a substantial import, but one which is very small as compared with domestic production.

The cumulative rates of paragraph 905a appear totally unnecessary on top of the increase in rates in paragraph 903 itself. It should be remembered that the great bulk of imported cotton cloths sell on the American market at higher prices than the nearest comparable domestic fabric, because imports are mainly due to superiority, or at least difference from the domestic in quality, finish, or fineness of yarn count.

Fourth. They have given a compensatory duty of 10 cents a pound, to be tacked on to all the other duties mentioned, to cloths containing cotton of 1⅜ inches or longer. This is because a totally unnecessary duty of 7 cents a pound has been imposed on such cotton in paragraph 900. As shown in the report just issued by the Tariff Commission, entitled "The emergency tariff act and long-staple cotton," the imported "Sakellarides" cotton from Egypt does not undersell the American-Egyptian cotton known as "Pima." No. 2 Pima cotton is selling to-day at about 37 cents, about the same price as when the so-called emergency tariff act was passed, but the landed price, without duty, of fully good Sakellarides has gone up from about 36 cents to about 47 cents, due to world demand. The imported cotton was therefore selling on the American market at a higher price than Pima before the emergency act went into force and, even without the duty, is now selling at a considerable higher margin. The only result of this duty, and the compensatory duty entailed thereby, is to increase the cost to the American people of goods made of such long-staple cotton, and to retard the development in this country of the weaving and export of such fine cloths.

The system of duties worked out in paragraph 903 appears to be based on a logical and coordinated plan, even though the rates inserted in the ad valorem sections are inordinately high, but, having worked out such a system and inserted rates of duty, why has the Finance Committee attempted to edge up its own rates here and there and there and there by four different devices? It would appear as if these patches must have been put on by manufacturers, especially gingham and venetian manufacturers, against the wish of the committee, for otherwise they would have been incorporated in a single set of logically adjusted rates that would apply equally to all.

Taking this paragraph, the whole subject involved has already been decided in the votes on yarn. It is not necessary for us to repeat the vast amount of cloths produced in this country in excess of any importations. The only importations that we ever have that amount to anything are the cloths that have been shown here by the Senator from Wisconsin [Mr. LENROOT] and by excerpts from standard writers to be those that our manufacturers do not engage in the production of at all—novelties and specialties; as to the foreigners, they are willing to take a chance on creating the machinery and going to the trouble of producing—and which sell higher in this country when imported than any comparable fabric that we have here. Yet we impose a duty here that runs the whole gamut of cotton cloths, in the manufacture of 80 per cent of which we have not a competitor in the world. We can manufacture and undersell any manufacturer in any part of the world.

I want to repeat, just as I said the other day in opening the debate on the cotton schedule, that we must not forget that 90 per cent of the spinnable cotton of the world is produced in America, and 70 per cent of all the kinds of cotton produced in the world are produced in America. That cotton is produced by American labor. The land is owned by American citizens. The whole world has to come to America to get its raw material. I submit to the Senate and to the American people that it is an indictment against the common sense, the common business sense of the country. We have a monopoly of the raw material, and the only competitor of whom we have any fear at all is the United Kingdom, Great Britain, whose civilization is on a par with ours, if not in some respects, as to education, superior, whose labor unions are in advance of ours, whose living conditions are as highly civilized as ours. They have to come 3,000 miles across the ocean to buy their raw material from us, transport it, convert it into the finished cloths, and yet we stand here declaring that we must erect a tariff wall against English competition when we have a monopoly of the very raw material out of which she is to spin her finished products.

It is true that practically all that is imported into this country, or the greater per cent of it, comes made out of cotton not produced in America, and which we could, until the action of the Senate the other day, get as cheaply as or cheaper than England could get the same identical Egyptian cotton. So that any imports which come into the country are made of Egyptian cotton, and we stand on a parity in getting the raw material. We have the advantage in the volume of goods produced per man, because in this very volume which I hold in my hand here, written by Mr. Copeland, of the Harvard University Series, he says the American manufacturer and the American mill operator produce more per man than in any place in the world; that the machinery is of the very latest design; and the output per man greater than in any mill in the world. Having a monopoly of the raw material, having more than an advantage in the output per man, having an inventive genius in this country equal or superior to any, having every natural facility and advantage in the world, together with monopoly of the raw material, we are erecting a tariff wall to keep Great Britain and civilized Europe from competing with us in the manufacture of goods out of our own materials on our own soil.

I say to you, Mr. President, that I can not see why we should have these duties on cotton cloths that we ought to admit we can make more cheaply and as to which we have no competition. We produce millions and millions of yards, and we preempt the markets of the world with these standardized cotton cloths, and yet in these paragraphs we have practically a prohibitive duty on importations. I sincerely hope that the Senate in voting upon this paragraph will reject the amendment proposed on the part of the Senate committee.

Mr. SMOOT. Mr. President, I simply wish to say that the junior Senator from Wisconsin [Mr. LENROOT] has made a statement that the duties on unbleached cotton cloth and cotton cloth not printed are not now in conformity with the yarn schedule which was adoped on yesterday by the Senate.

Mr. SMITH. If the Senator will pardon me, I should like to hear the statement which he has just made.

Mr. SMOOT. I say that I agree with the statement of the junior Senator from Wisconsin that the duties imposed in the first section of paragraph 903 on "cotton cloth, not bleached, printed, dyed, colored, or woven-figured," do not conform to the action of the Senate yesterday in reducing the rates on the lower-count yarns. Therefore I am going to offer amendments as the items are reached so as to conform to the action taken in relation to cotton cloth yarns on yesterday.

Mr. SMITH. On what line does the Senator from Utah intend to offer an amendment?

Mr. SMOOT. If the Senator will follow me, I will tell him what changes will be made. On page 122, at the beginning of line 24, it has been agreed to strike out "100" and to insert "80." Then, in the same line, where the language reads "shall pay less duty than 15 per cent ad valorem," it is proposed to change 15 per cent to 10 per cent; and where the language continues, "and in addition thereto, for each number," it is proposed to retain "one-fourth"; in other words, the minimum rate will be 10 per cent ad valorem and one-fourth of 1 per cent for each number, which on 80's will be 20 per cent. The total is equivalent to 30 per cent ad valorem.

Mr. SMITH. Does the Senator insist on the one-fourth instead of the one-fifth?

Mr. SMOOT. The Senator will see that on page 122, line 24, the House has fixed the rate at "9 per centum ad valorem, and in addition thereto for each number one-fifth of 1 per centum." That made 29 per cent ad valorem. Now, I propose to change that 9 per cent to 10 per cent, and then to strike out "one-fifth" and insert "one-fourth." On 80's that would make the rate 30 per cent. The committee propose to reduce the 40 per cent, in line 2, on page 123, to 30 per cent, which will make the paragraph conform to the action already taken according to the number of yarns in the cloth.

The PRESIDING OFFICER. Then does the Senator from Utah move——

Mr. SMITH. Just one moment, Mr. President; I wish to figure this out, so as to ascertain just what the changes are. It has been agreed, as I understand, to reduce the number of the yarn from 100 to 80, and the ad valorem rate to 10 per cent.

The PRESIDING OFFICER (Mr. WILLIS in the chair). The question is on agreeing to the amendment offered by the Senator from Utah on behalf of the committee, which will be stated.

The ASSISTANT SECRETARY. On page 122, line 24, the committee proposes to strike out "9" and insert "10."

Mr. SMITH. Mr. President, it is very evident, of course, that the amendment proposed constitutes a material reduction, but, according to the contention made by the Senator from Wisconsin and as I attempted to explain, the amendments suggested will not keep the yarns and the cloth upon the same parity. If we reduce the 100 to 80 and the ad valorem to 10 per cent and then

leave the one-fourth and put the maximum at 30, the rate on the cloth will be from 3½ to 4 per cent out of line with the rate on the yarn that enters into the cloth. To keep the exact parallel where the rate is based upon 80 counts in place of 100 counts, 27 per cent should be the maximum rather than 30. The House rate was 29 per cent based upon 100 counts, at 9 per cent, with one-fifth per cent for each additional number, so that if worked out according to the percentages, the rate should be about 26 per cent instead of 30 per cent.

Mr. SMOOT. Mr. President, the object of the amendments is to provide a rate of 30 per cent on the unbleached cloth, 35 per cent on the bleached, and then 45 per cent on cotton cloth that is printed, dyed, colored or woven, containing above 80 counts. We do not want to impose a higher duty than 40 per cent on cotton cloth coming into this country, and that is what we have provided for—on unbleached cloth 30 per cent, on bleached 35 per cent, and on the fancy, high-priced novelties and luxuries 45 per cent. I hope the Senate will agree to the amendment.

Mr. LENROOT. Mr. President, will the Senator yield?

Mr. SMOOT. Yes.

Mr. LENROOT. It seems to me that to make the rates harmonize, assuming that the House progressive rate was on a correct basis, we should retain the one-fifth and provide 10 per cent ad valorem and one-fifth of 1 per cent for each additional thread.

Mr. SMITH. That would just about be correct.

Mr. LENROOT. That would make 26 per cent up to 80 counts, and would leave 30 per cent for cloth over 80 counts.

Mr. SMOOT. I want to say to the Senator that I do not believe when we get up to cloth of 80 threads that 30 per cent will be any too much. When the cloth is above 80 threads it gets in the class of very fine goods.

Mr. LENROOT. I agree with the Senator as to that, but the Senator himself only proposes 30 per cent on cloth containing in excess of 80 counts.

Mr. SMOOT. And that is ample.

Mr. LENROOT. Very well; but it is on the higher counts that the highest ad valorem should prevail.

Mr. SMOOT. But I do not want it reduced down to 26 per cent.

Mr. LENROOT. I do not suggest that it be reduced down to that point on counts over 80, but under 80 is where I suggest that we make the additional rate one-fifth instead of one-fourth, which would bring it to 26 per cent.

Mr. SMOOT. Of course, Mr. President, that would make the duty on 80 thread 26 per cent and on 81 thread 30 per cent, and that would hardly be right.

Mr. SMITH. Mr. President, if action could be taken whereby "100" would be retained and the remainder of the House provision, the contention the Senator is making would be met.

Mr. SMOOT. We have got to provide for counts between 80 and 100; there is no question about that.

Mr. SMITH. I suggest that the Senate recede from the amendment substituting "80" for "100," and then the paragraph would be in conformity with the action taken up to the present time, and that would take care of the very point for which the Senator is contending.

Mr. SMOOT. I will say to the Senator from Wisconsin if we do that then we will have imported a great quantity of fancy yarns up to 79; they will not be made up to 80, but will stop just under that mark. What we want to do is to take care of the goods that we know come in here in sharp competition with the American goods in great quantity.

Mr. SMITH. The parity will be preserved by leaving in "one-fifth" instead of "one-fourth."

Mr. SMOOT. I do not care whether a straight line drawn is maintained or not.

Mr. SMITH. It is not a question of a straight line, but we are trying to reduce the rates of duty to the point where they would have some semblance of science and equity.

Mr. SMOOT. They have that now, Mr. President, with the amendments which I have proposed.

Mr. SMITH. I was simply trying to show that a diagram would portray the accomplishment of just the thing we are trying to avoid.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment as modified.

Mr. SMOOT. What is the pending amendment?

The PRESIDING OFFICER. The pending amendment will be stated.

The ASSISTANT SECRETARY. On page 122, line 24, it is proposed to strike out "9" and insert "10."

Mr. SMOOT. That is correct.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment as modified.

The amendment as modified was agreed to.

The PRESIDING OFFICER. The Secretary will state the next amendment.

The ASSISTANT SECRETARY. On page 122, line 25, it is proposed to strike out "one-fifth" and insert in lieu thereof "one-fourth."

The PRESIDING OFFICER. The question is on agreeing to the committee amendment.

Mr. LENROOT. Mr. President, on a 40-count cloth, if this amendment is adopted, we will still be imposing a tariff of 20 per cent ad valorem. I very much wish we might upon these lower counts at least preserve this one-fifth. I am very sorry that the committee have not seen fit to make one additional grouping, so as to cover the lower counts. That they have not done. They run from 1 to 80——

Mr. SMOOT. The Senator will notice that the House gave 29 per cent.

Mr. LENROOT. Yes; in excess of 100.

Mr. SMOOT. In excess of 100.

Mr. LENROOT. I am not objecting to the 30 per cent in excess of 100—not at all—but we are imposing an excessively high rate on the counts below 60. That is my point. Can we not let this go over until Monday? I do not think there is very much difference between us here.

Mr. SMOOT. Does the Senator mean also the next bracket of cloth bleached, and so forth?

Mr. LENROOT. Mr. President, if the Senator will give assurance that in conference this matter will be worked out so that there will be a proper relation on the lower counts, I would have no objection to adopting this amendment now; but I do not like to have the amendment adopted imposing——

Mr. SMOOT. I will say to the Senator that in conference if 100 is agreed to instead of 80, of course, then it will fall naturally, as the Senator says.

Mr. LENROOT. That would be true; yes.

Mr. SMOOT. But really, I want to say to the Senator, the keenest competition comes between 80's and 100's.

Mr. LENROOT. I agree with the Senator upon that.

Mr. SIMMONS. Mr. President, I think it would be better to let it go over and work it out. Of course, the Senator intends to do this and that in conference, but he may not be able to do it.

Mr. SMOOT. I did not say that I could do it, but I say it is in conference.

Mr. SIMMONS. Oh, it is in conference, but I do not think it is very good policy to rely upon a conference taking care of things of that sort. I suggest that we let it go over until Monday and see if we can not adjust it.

Mr. President, the little controversy that is going on between Senators on the other side of the Chamber with reference to the adjustment of this rate so as to make it satisfactory to the other side of the Chamber is taking up some time; and to help them out I am going to put into the RECORD a letter which I received shortly after the 22d day of June, and which I ought to have put into the RECORD before, but I failed to do so. It is a letter from the managing director of the National Retail Dry Goods Association. It seems that the executive committee of the National Retail Dry Goods Association entered into a careful consideration of certain charges that were made by the Senator from North Dakota [Mr. MCCUMBER] and placed in the CONGRESSIONAL RECORD with reference to profiteering. This letter was addressed to the Senator from North Dakota [Mr. MCCUMBER], but never by him, I think, put in the RECORD. It is as follows:

NEW YORK, *June 22, 1922.*

Hon. PORTER J. MCCUMBER,
Chairman Senate Finance Committee,
Washington, D. C.

DEAR SIR: The executive committee of the National Retail Dry Goods Association, after having given careful consideration to certain charges made by you, as reported in the CONGRESSIONAL RECORD of June 14 (p. 8709), have unanimously adopted the following statement and directed me to send it to you:

The CONGRESSIONAL RECORD reports you to have said—

1. "The great metropolitan newspapers to-day are attacking the McCumber tariff bill because their prosperity for the moment depends upon the prosperity of their advertisers. With every metropolitan paper the mouthpiece of the importer who buys its advertising pages, the very foundation of the temple of protection is being undermined by this insidious propaganda.

2. "* * * And their advertisers are making fortunes, buying cheaply abroad and selling at tremendously high prices to the American consumer."

The answer to charge No. 1, in effect that the great metropolitan newspares are venal and corrupt, should more properly come from the newspapers; but we desire to record our belief that this charge is untrue and unsupportable and unworthy of the chairman of a com-

mittee as important and responsible as is the Senate Finance Committee. For the good of our American institutions this assertion should either be proven or withdrawn.

We consider it fitting that the National Retail Dry Goods Association should answer your second charge, that of "profiteering," as our membership includes about 2,000 stores, both large and small, situated from the Atlantic to the Pacific, from the Canadian border to the Rio Grande, doing a net business yearly of more than $2,000,000,000. We shall refute this charge, not by mere assertion but by actual published figures determined by the investigations of one responsible, independent organization and by three important Government commissions and agencies.

You base your charge on the presentation of a number of imported articles, such as a cuckoo clock, imitation pearl necklace, kitchen table knife, barber's clipper, linen napkin, electric-light bulb, silver-backed watch, lady's glove, shears, razor, curling iron, paper thermos bottle, English straw hat, cane, carving set, pocketknife, decorated plate, flapjack turner, briar pipe, and smoothing iron. You designate the "spread" between the foreign cost and the retail price of each of the articles of your exhibit as the "profit," as follows: (p. 8711). "Here is a little watch, silver-backed, I think. I do not know whether it is bought by the gross or by the piece. The foreign cost is a dollar, and it is retailed in this country for $9.45. The spread, therefore, is $8.45 and the profit, of course, would be 845 per cent." Without questioning the accuracy of the cost and selling figures presented, or your method of computing them, or whether they are due to depreciation of exchange, the truth as to the "profit" is, of course, entirely different from your statement, because to the foreign cost must be added the cost of foreign buying, inland freight abroad, consular fees, freight, and insurance, duty to the United States Government, customhouse charges, general overhead, the cost of doing business in this country, and Federal and other taxes. The spread between the cost so determined and the price at which the goods are sold is the true profit. Thus it is apparent that every percentage of "profit" of importer and retailer stated by you "in some cases to be upward of 2,000 per cent" is incorrect and misleading. It appears that you have made the error of designating as "profit" the difference between the first cost of the merchandise and its marked retail selling price. How profitable all business would be if there were no expenses!

As to the articles selected to create this impression it can fairly be said that they are not important items or representative of the imports which come into America, nor do they reflect the general condition of the trade. It has been stated on the floor of the Senate that the annual production of clocks in the United States is about $230,000,000, of which there is exported almost $5,000,000 in free competition with the clocks of other countries, while but $500,000, or about two-tenths of 1 per cent, is imported annually in competition with our own clocks. Of electric-light bulbs there was imported in 1921 into the United States about $250,000 worth, there was exported $4,000,000 worth, and there was manufactured in this country about $60,000,000 worth, imports thus being less than one-tenth of 1 per cent. Other examples given are similar.

The truth about the so-called "profiteering" by department stores has been authoritatively proven to be at complete variance with your assertions. In 1920 the United States Department of Justice completed, under the Lever Act, a searching investigation into the charges of retail "profiteering" so widely circulated in the press at that time. Their agents visited practically every big store in this country, called for invoices and statistics of every sort, which were freely supplied by the stores. To the best of our knowledge and belief, out of thousands of department stores investigated, profiteering was found in practically no cases. It is interesting, in view of your charges that the newspapers are controlled by their large advertisers, to note that for a period of six or eight months the press of this country at that time carried on the hue and cry against the retail stores, although the members of our trade were large users of their advertising columns. The investigation by the Department of Justice convinced the press that the charges were unfounded, and the campaign was not only in fairness discontinued but hundreds of papers apologized editorially for the publicity which the newspapers had given to the unwarranted and unsupported charge of "profiteering."

The Bureau of Business Research of the Graduate School of Business Administration of Harvard University conducted an inquiry into the cost of operation in retail dry goods and department stores throughout the United States. We quote from their report:

"Profit and loss statements for the year 1920 were obtained from 305 stores located in 39 States, with aggregate net sales of $535,193,000, varying per store from $71,000 to $29,000,000. The average net profit was shown to be .018 per cent of sales."

In other words, out of each $1 of sales one and eight-tenths cents was retained as profit. Certainly a net profit of one and eight-tenths cents would not be regarded as satisfactory by even the most bitter critic of the retailer.

Nineteen hundred and eighteen was a more profitable year for retailers, as the published figures show. These figures were compiled for the United States Department of Justice by a committee of store controllers representing the National Retail Dry Goods Association. They covered 120 large stores doing an aggregate business of $203,451,000—from $34,000 to $21,000,000 each—and showed an average net profit of five and seventy-one one hundredths per cent before Federal taxes.

The final record about the so-called department store "profiteering" has just been written by the Joint Congressional Commission of Agricultural inquiry appointed to investigate the prices of food, clothing, etc., for the purpose of finding out whether profiteering was going on or whether the spread between the cost of producing and what consumers have to pay was due to other causes. The complete report has not yet been made public, but the commission's findings relating to dry goods and clothing were announced by its chairman on June 14, 1922. Chairman SYDNEY ANDERSON, forecasting the section of the report dealing with retail dry goods stores, says: "Retail dry goods profits are found to have averaged .053 per cent for the nine-year period from 1913 to 1921. From this profit must be deducted such items as shrinkage in inventory value of merchandise, Federal taxes, and stock-moving reductions in response to price declines or movement of stock accumulation."

Thus it is apparent that after the deduction of Federal taxes and merchandise reductions the actual final net profit of department stores for the last nine-year period must have been considerably less than 5 per cent.

The results of these authoritative investigations, three of which were conducted by agencies of the United States Government, establish how untrue and unfair have always been and now are the oft-repeated charges of "profiteering" by department stores, and should suggest the justice of ending such unwarranted attacks against the department stores of this country.

There is no monopoly or combination among the thousands of storekeepers that enables them to charge exorbitant prices. As a matter of fact, competition is probably keener and more unrestricted than in any other line or trade in the country.

We understand the traditional Republican tariff policy to be of sufficient protection for American labor and the American manufacturer to offset the difference in the cost of production here and abroad. The American retail merchant strongly favors such protection, but is convinced that no American manufacturer can honestly ask for more.

That the importance of imported merchandise to retail stores lies in quite another direction than "profits" was shown in the brief which the National Retail Dry Goods Association submitted to the Senate Finance Committee on January 17, 1922, after the committee had denied us a hearing on the tariff bill. In that brief it was stated, "Of the entire membership of the association, a very small proportion only do any direct importing and the total amount of imported commodities, whether directly imported or otherwise, sold in the stores which support the organization has been estimated as probably less than 5 per cent of the entire volume of goods handled by such stores," thus proving conclusively that the department stores are not dependent on imported merchandise for their livelihood. The importance of imported merchandise to the retailer and to the consumer lies in the competition which it gives to domestic manufacturers to hold down prices. Having this in mind, it seems against the public interest to write the tariff duties so high as to eliminate foreign competition and so high as to raise prices to the consumer.

The opposition manifested by retailers and by the country at large to the proposed tariff bill is quite understandable and is based on the necessity of lower and not higher prices for all the necessities of life. When the public refuses to pay the bill all industries are adversely affected. We record again our conviction that the consuming public will not stand for higher prices. As expressed by the Comptroller of the Currency, D. R. Crissinger, before the Maine Bankers' Association, June 17, at Augusta, Me., "The great buying and consuming public is not going to be brought into the market by asking it to pay higher prices when it has already proved unable to pay lower ones."

The National Retail Dry Goods Association is opposed to the proposed tariff because its rates have not been constructed in a scientific, nonpartisan, nonpolitical manner, because it carries higher rates on most finished products than a sound, protective principle requires; because it will tend to raise prices to the consumer; because it will tend to restrict imports necessary to the international commerce of the United States, and in so doing will damage the interests of all those on whose exportable surplus the international price has a vital and direct influence, namely, the farmer, the cotton grower, the producer of metals, the exporting manufacturer, etc.

Inasmuch as your charges against department stores were made openly on the floor of the Senate and printed in the CONGRESSIONAL RECORD, we respectfully request that this entire statement also be printed in the RECORD.

As your charges were given wide publicity in the newspapers, copies of this statement are being given to the press.

Respectfully yours,

NATIONAL RETAIL DRY GOODS ASSOCIATION,
LEW HAHN, *Managing Director.*

That letter, I think, has never been published in the RECORD. It came to me probably about the 24th of June, and I should have put it in at that time; but I put it in my desk and did not find it until a short time ago, and it occurred to me that the hiatus created by this little diversion was a good time to put it in without infringing upon the time of the Senate.

Mr. SMOOT. I think there is one statement in the letter that is altogether too broad. They say they were denied a hearing by the Finance Committee.

Mr. SIMMONS. I do not know anything about that.

Mr. SMOOT. The committee had hearings on the American valuation, as the Senator knows, because he was in the committee when we spent days and weeks upon the American valuation, and, as I remember, after that subject had been closed, and after repetition after repetition had been made by the witnesses on that subject, there was a request made by the retailers' association to open that subject up again, and, of course, the committee refused to do so. I think now they are very well satisfied that they did not, because when the final vote was taken it was shown that there were seven votes in the committee against and three for, and if the committee had given them a week or a month longer on the question of the American valuation it could not have come out differently from the way it did come out, and from the way they wanted it to come out.

Mr. SIMMONS. Does the Senator state that they only asked to be heard on the American valuation? I infer from this letter that they desired to be heard generally in opposition to the bill.

Mr. SMOOT. They were heard generally, but, as I remember now, they wanted to open up the question of the American valuation again, thinking that the committee had not determined just what they were going to do, and of course it had not been given out, because it was one of the very last things determined by the committee. I thought it was only fair to make that statement. It may be that they made an application at some other time, or for some other purpose; but that is all that came before the committee.

Mr. SIMMONS. The letter was not directed to me. It was sent to me in a letter inclosing it, saying it had been sent to the

chairman of the Finance Committee. I think there was a request that I put it in the CONGRESSIONAL RECORD.

Mr. SMOOT. I am not complaining because the Senator has done that.

Mr. SIMMONS. I did not put it in on account of that statement. I think that is of minor importance. But I was glad to read the latter part of it, because it seemed to me a particularly strong and vigorous statement in opposition to the bill.

Mr. SMOOT. I wanted to make the statement because the Finance Committee gave everybody a chance to be heard who wanted to be heard. That kept us there weeks and weeks. Every Representative who came was admitted into the committee, no matter whether we had settled upon the rates or not, and was allowed to make a statement and to bring whomever he wanted. Every Senator who wanted to be heard, even on paragraphs we had passed upon, was allowed to come before the committee. I do not want the impression to go abroad that the committee tried to choke off any hearings.

Mr. SIMMONS. I did not want to create that impression. I am rather inclined to think that in those general hearings anybody who wanted to be heard could be heard. I care nothing about that statement. The letter was not read for the purpose of bringing that out, but I read the letter for the purpose of emphasizing the fact that the retailers of this country, speaking through their authorized agents, declare emphatically and unequivocally that these rates will tend to raise prices at a time when the country expects and demands lower prices.

The VICE PRESIDENT. The question is on agreeing to the committee amendment.

The amendment was agreed to.

The VICE PRESIDENT. The Secretary will state the next amendment.

The ASSISTANT SECRETARY. On page 123, line 2, the Senator from Utah has sent to the desk and proposed an amendment, in the paragraph covering cotton cloth, not bleached, to strike out "100" and to insert in lieu thereof "80," so as to read:

Nor when exceeding No. 80, etc.

The amendment was agreed to.

Mr. SMOOT. The next amendment is on line 21, page 123. Instead of "35," the rate I sent to the desk, I move to strike out "40." as originally proposed by the committee, and to insert in lieu thereof "30," so as to read:

Nor when exceeding No. 80, less than 30 per cent ad valorem.

The VICE PRESIDENT. The question is on agreeing to the amendment as modified.

The amendment as modified was agreed to.

The VICE PRESIDENT. The Secretary will state the next amendment.

The ASSISTANT SECRETARY. On page 123, line 10, under cotton cloth, bleached. the Senator from Utah moves to strike out "100" and insert in lieu thereof "80," so as to read:

When containing yarns the average number of which does not exceed 80, etc.

The amendment was agreed to.

The next amendment of the committee was on page 123, line 11, to strike out "13" and to insert in lieu thereof "15," so as to read:

Provided, That none of the foregoing, when containing yarns the average number of which does not exceed No. 80, shall pay less duty than 15 per cent ad valorem.

Mr. LENROOT. Will the Senator from Utah state the justification for a higher ad valorem on bleached cotton cloth than upon cotton cloth not bleached?

Mr. SMOOT. Every manufacturer who appeared said that the 5 per cent was not sufficient. Everything they use bears a tax in the bill, and not only that, but the differential between the labor costs in this country and other countries, with the extra cost of the items used in the bleaching and dyeing, justifies at least 5 per cent.

Mr. LENROOT. We are taking care of vat dyeing.

Mr. SMOOT. I did not say vat dyeing; I said dyeing. The vat dyeing is taken care of.

Mr. LENROOT. The Senator is aware, is he not, that the Tariff Commission finds that bleaching costs less in the United States than in England?

Mr. SMOOT. That is denied.

Mr. LENROOT. Denied by whom?

Mr. SMOOT. By every man who is compelled to bleach cloth in this country.

Mr. LENROOT. In this Tariff Commission survey the Tariff Commission has taken occasion at least three times to discuss this very question, and on each occasion they have stated most emphatically that dyeing and bleaching costs less in the United States than in England. The Senator admits that that statement is made by the Tariff Commission, does he not?

Mr. SMOOT. Yes; they make that statement, but I can not see upon what basis it is made.

Mr. LENROOT. Why not?

Mr. SMOOT. Because the same mode of dyeing is used in England and foreign countries as is used here. We have a duty upon the dyestuffs, in paragraph 26, and also on the intermediates, in paragraph 25, which we have never had the like before.

Mr. LENROOT. I understand that; I am not referring to that.

Mr. SMOOT. I am not speaking of vat dyes. I am speaking of the great mass of coal-tar dyes.

Mr. LENROOT. What I want to know is whether there is any justification for any increase in the ad valorem other than by way of the compensatory duty imposed because of the duty imposed upon dyes?

Mr. SMOOT. It is very small, indeed.

Mr. LENROOT. How does the committee arrive at this 5 per cent—for it amounts to 5 per cent?

Mr. SMOOT. Yes; it amounts to 5 per cent.

Mr. LENROOT. Upon what basis do they arrive at 5 per cent; by reason of the additional cost of the dyes?

Mr. SMOOT. If these goods were worth, say, $1 a pound, that would be only a difference of 5 cents, and we have a duty on those goods of 7 cents a pound and 60 per cent ad valorem. Outside of the common different wood extracts, every coal-tar product in this bill, in paragraph 26, carries a duty of 7 cents a pound and 60 per cent ad valorem. I stated frankly the other day that those rates were put in this bill so that it would not be necessary to put an embargo upon those very goods.

Mr. LENROOT. What articles enter into the bleaching? It is just bleaching we are talking about now.

Mr. SMOOT. Of course, if it is just white yarn, they would use sulphur or specially prepared acids.

Mr. LENROOT. That is the only paragraph we are discussing now.

Mr. SMOOT. It depends on the kind of cloth to be bleached. No bill has ever been written that I know of where there was not a differential between the cloth in gray and the cloth bleached.

Mr. LENROOT. Of course, the committee recommends a larger differential than the House did.

Mr. SMOOT. I do not think so.

Mr. LENROOT. The committee recommends a differential of 5 per cent, and the House made one of 4.

Mr. SMOOT. That is on account of our beginning at No. 80 instead of No. 100. In fact, there is not as much difference in this as in the unbleached, because in the unbleached the House gave them 29 and we gave them 30, and here the House gave them 33 and we give them 35; and the 29 and 33 was on the American valuation.

Mr. LENROOT. The committee proposes no reduction whatever in the lower counts of bleached cloth?

Mr. SMOOT. No; not in the lower counts of bleached cloth.

Mr. LENROOT. But it does propose a reduction in the higher counts of bleached cloth?

Mr. SMOOT. Yes.

Mr. LENROOT. Does the Senator think that is consistent?

Mr. SMOOT. It is consistent with the rates the House provided. That is the way the House wrote it.

Mr. LENROOT. If we are going to have a reduction in the higher counts, does not the Senator agree with me that we ought to have a reduction in the lower counts, if the committee was correct in its basis in the first instance? Will the Senator not accept the House rate of 13 per cent there?

Mr. SMITH. Let me understand the Senator from Wisconsin. He is contending that as we have reduced the number from 100 to 80, then the normal reduction would be from the 15 to the 13?

Mr. LENROOT. The committee brought in a minimum of 40 per cent on the higher counts. I have said many times that it is the higher counts which justify a liberal duty. Now the committee comes in and proposes, very properly—I am not criticizing it—a substantial reduction in the higher counts, but proposes no reduction in the lower counts. If the committee was right in the first instance, they have not the progressive rate here which ought to apply when they reduce the minimum of the high counts to 35 and make no reduction on the low counts. Here again, I may say, it is upon these low-count bleached cottons that our imports are only a small fraction of our exports.

Mr. SMOOT. The class of goods falling in the class of bleached is altogether a different class of goods from the unbleached. There are so many of them which are sold even without bleaching.

Mr. LENROOT. Do plain white goods come in under this paragraph?

Mr. SMOOT. Yes; but generally, where they are plain and bleached, they carry a fine thread, particularly the importations.

Mr. LENROOT. I think that is true; but that merely emphasizes what I have been saying many times, that we are exporting in large quantities the low counts, and we are importing, what we do import, of the high counts, and I do insist that when the committee comes in and proposes a reduction in the high counts there ought to be a reduction in the lower counts as well.

Mr. SMOOT. I have not figured out just what change it would make.

Mr. LENROOT. I suggest we disagree to the amendment, leaving it 13 per cent, and it can be taken up afterwards and harmonized.

Mr. SMOOT. Why not let it go at 15 per cent, and then let that be figured up?

Mr. LENROOT. The Senator very well understands the difference between the committee bringing in an amendment later on and having it adopted, and an individual trying to open it up. It would be very simple for the committee to do it if it is found necessary to do it. I ask that this amendment be disagreed to.

Mr. SMOOT. I will agree to disagree to the amendment. I want to see just how it brings the relativity between the yarn and the cloth, and if there is that difference I shall want to ask that it be reconsidered.

Mr. SMITH. Let me understand the two Senators who have had this argument. On line 10 we reduce to 80, and disagree to the Senate proposition of 15 per cent on line 11.

Mr. SMOOT. And then disagree to the amendment.

Mr. SMITH. We disagree to 100 and leave it 80, and disagree to 40 and leave it 33.

Mr. SMOOT. Yes; disagree to the amendment and leave it 33 per cent ad valorem.

Mr. SMITH. All right; I am ready for a vote.

The VICE PRESIDENT. The question is on agreeing to the amendment.

The amendment was rejected.

The ASSISTANT SECRETARY. The next amendment is, on page 123, in line 12, to strike out "one-fifth" and insert "one-fourth."

The amendment was agreed to.

The ASSISTANT SECRETARY. The Senator from Utah [Mr. SMOOT] has sent to the desk and proposes an amendment, on line 13, to strike out "100" and insert "80."

The amendment was agreed to.

Mr. SMOOT. I now ask that the committee amendment be disagreed to in the next line.

The ASSISTANT SECRETARY. In line 13 the committee proposes to strike out "33" and insert "40."

The amendment was rejected.

The ASSISTANT SECRETARY. In line 23, in the next paragraph, paragraph 903, the Senator from Utah sends to the desk a proposed amendment to strike out "100" in the House text and to insert "80."

The amendment was agreed to.

The ASSISTANT SECRETARY. On page 123, line 23, the committee proposes to strike out "13" and to insert "15," with the modification proposed to change "15" to "20."

Mr. LENROOT. Mr. President——

Mr. SMOOT. I will say to the Senator that when this is done I shall ask that three-tenths be reduced to one-fourth, so it will make it 40 per cent instead of 45.

Mr. LENROOT. I did not quite understand the Assistant Secretary with reference to the committee amendment. When it does not exceed 100, is it to be 20 per cent ad valorem?

Mr. SMOOT. It reads:

When containing yarns the average number of which does not exceed 80, shall pay a less duty——

Mr. LENROOT. The Senator can not mean that.

Mr. SMOOT. Yes; that is right. The rate is 20 per cent ad valorem and one-fourth of 1 per cent ad valorem for each additional count. One-fourth of 80 is 20, which would make 40 per cent instead of 45 as reported by the committee. These are all higher numbers.

Mr. LENROOT. No; they are lower numbers.

Mr. SMOOT. They are above 40. They are exceeding 40, 22 per cent.

Mr. LENROOT. But it reads "none of the foregoing," and that excludes all below 40.

Mr. SMOOT. If the Senator will read the language, he will see that it reads:

Cotton cloth, printed, dyed, colored, or woven figured, containing yarns the average number of which does not exceed No. 40, forty-five one-hundredths of 1 per cent average number per pound; exceeding No. 40, 22 cents per pound, and, in addition thereto, sixty-five one-hundredths of 1 per cent average number per pound for every number in excess of 40: *Provided*——

Mr. LENROOT. Then the Senator's 20 per cent will apply to the 20 count or the 40 count. It will make 30 per cent ad valorem on a 40 count.

Mr. SMOOT. Then I suppose the best way to make it will be to leave the 15 per cent as it is, and then for each number add five-sixteenths of 1 per cent, which makes the 40 per cent.

Mr. LENROOT. Whatever increase there is should be by ad valorem per number, because otherwise we will carry the highest rate to the lowest count.

Mr. SMOOT. It will figure exactly the same in the end with the exception of those on the lower count. I ask that "15" be agreed to instead of "20."

The ASSISTANT SECRETARY. On page 103, in line 23, the committee proposes to strike out "13" and to insert "15."

The amendment was agreed to.

The ASSISTANT SECRETARY. The next amendment is in line 24, where the committee proposes to strike out "one-fifth" and insert "five-sixteenths."

The VICE PRESIDENT. The question is on agreeing to the amendment.

Mr. SMITH. If we want to keep the parity with what we have just done, in place of one-fifth, certainly one-fourth would be high enough.

Mr. SMOOT. No; one-fourth would be 27½ per cent. Fifteen per cent is 15 per cent on those lower than 80, and above 80 it would be 15 per cent and five-sixteenths. Five-sixteenths of 80 is 25 per cent, and 25 and 15 is 40 per cent on the higher count.

Mr. LENROOT. Is the Senator striking out 100 and inserting 80?

Mr. SMOOT. Yes; and striking out 45 and inserting 40.

Mr. WALSH of Montana. So the duty on the count of 80 will be 40 per cent?

Mr. SMOOT. Yes. Those are the finest goods that are made.

Mr. SMITH. If the Senator reduces that to one-fourth in place of five-sixteenths——

Mr. SMOOT. Then we would only have 35 per cent.

Mr. SMITH. And the House only had 33 per cent on the higher count.

Mr. SMOOT. That is on the American valuation.

Mr. SMITH. But 33 per cent even when restricted to the higher count, and now you have lowered the count and raised the rate of duty.

Mr. SMOOT. Because of the very fact that the goods that we have to protect are goods the count of which is over 80.

Mr. WALSH of Montana. I inquire of the Senator if I have it accurately now? The House proposed 33 per cent and one-fifth. Assuming the count is 80, one-fifth would be 16, and plus 13 would be 29 per cent under the House rate. We propose to make it 15 per cent.

Mr. SMOOT. But the House had up to 100, which would be 13, and one-fifth of 20.

Mr. WALSH of Montana. The rate would then be one-fifth of 80, which would be 16, and plus 13 would be 29. As we have it, we have 15 per cent and three-tenths. Three-tenths would be 24 and plus 15 would be 39. The House proposed 29 and we raise it to 39. Are my figures correct? Five-sixteenths is 25. Twenty-five and 15 are 40, but the House rate practically figured 29 per cent.

Mr. SMOOT. No; the House rate figured it up to 80, but 100 up to 33.

Mr. WALSH of Montana. But we are figuring on the basis of not to exceed 80. Figured on that basis the House rate was 29 and the Senate committee rate is 40.

Mr. SMOOT. That is correct on the one particular number.

Mr. WALSH of Montana. That is, those that do not exceed 80.

Mr. SMOOT. That is on the one particular number if it were 80, American valuation.

Mr. SMITH. The present rate of duty, figuring on a count of 80 and above, is 27½. Now, we propose to add to that the difference between 27½ and 40, or a 12½ per cent increase on that character of goods.

Mr. SMOOT. Yes; and these are the very character of goods that ought to have the increase.

Mr. SMITH. It seems to me that on the imports and exports of the kind of goods here described, reducing the count down to 80, a 12½ per cent raise is absolutely unjustifiable, even taking the American valuation. As we have already agreed to the 15

per cent, if we want to keep a parity, in place of making it five-sixteenths we should make it one-fourth, and then it works out 35 per cent, which is an increase of 7½ per cent over the Underwood rate over the present tariff duty, and it seems to me that in all conscience is sufficient.

Mr. SMOOT. On these very goods the importations for the year 1910 were 37,000,000 square yards, in round numbers; in 1914, 39,000,000 square yards, in round numbers; in 1921, 74,000,000 square yards; and for January, February, March, and April of 1922 are greatly increased over the period of 1921; in other words, if the same rate of importations continues during 1922 as for the first four months of 1922, there will be 197,830,967 square yards imported into the United States. If there is any count of yarn or any class of goods which needs protection, it is the very class that we are discussing at this time. They are just as much of a novelty as the silks are.

Mr. SMITH. The exports of cotton goods in 1921 were 419,501,808 yards. For the nine months ending March 31, 1922, the exports were 432,281,567.

Mr. SMOOT. Where does the Senator get those figures?

Mr. SMITH. From the Commerce Reports for May 1, 1922.

Mr. SMOOT. Then I have copied them wrong.

Mr. SMITH. I have the report itself. There were 419,501,808 yards exported in 1921, and for the nine months ending March 1, 1922, there were 432,281,557 yards exported.

Mr. SMOOT. I have no such figures, I will say to the Senator.

Mr. SMITH. It is stated here as follows:

> The most convincing indication that the United States export trade in cotton goods has passed the post-war periods of overbuying and depression and that a period of normal expansion in foreign markets has set in is found in the statistics for the nine months ending March, 1922. After declining from its 1920 yearly total of 799,156,000 yards to 544,121,400 yards in the calendar year 1921, an actual increase from 419,501,800 yards for the three-quarter-year period ending March, 1921, to 432,281,600 yards for the corresponding period ending March, 1922, is registered.

Mr. SMOOT. All I can say is that I hold in my hand the Monthly Summary of Foreign Commerce of the United States, part 1, and I find this to be the fact as to cotton cloths: For the 11 months ending with May of this year there were exported of cotton cloths 102,620,544 square yards.

That is what this report states. The value of those exports was $18,027,709.

Mr. SMITH. The table which was furnished by the Tariff Commission and which, I think, all Senators have——

Mr. SMOOT. I will hand this report to the Senator if he wishes to see it. It is from the department.

Mr. SMITH. Shows that for the calendar year 1921 the quantity of cotton cloth imported was 112,340,259 square yards.

Mr. SMOOT. That is true.

Mr. SMITH. The exports for the same period—that is, for 1921—were 551,512,942 square yards.

Mr. SMOOT. That is correct.

Mr. SMITH. That is the information furnished as to the exports in 1921.

Mr. SMOOT. Yes; but when we come to 1922, instead of there being 551,512,942 yards exported, there were only 102,000,000 yards exported.

Mr. SMITH. That was only for 9 months.

Mr. SMOOT. That was for 11 months.

Mr. SMITH. The figures which I have read are the figures furnished by the Commerce Reports for 9 months.

Mr. SMOOT. The exports for 11 months ending May, 1922, were 102,620,544 square yards, as against 551,512,942 square yards for the calendar year 1921—not one-fifth of the amount. That is where we are drifting.

Then, take the imports; just think of the imports into the United States. Here they are: In 1910 there were imported 61,000,000 square yards—I am not going to give the odd figures; in 1914, 59,000,000 square yards; in 1921 imports jumped to 112,000,000 square yards; and then, when we come to the first four months of 1922, there were nearly 66,000,000 square yards imported. In other words, during the entire year, on that same basis, there will be 197,000,000 square yards imported. I should think the Senate could see the direction in which we are going. As I have stated, if a duty is required for the protection of any industry in the United States it is for this very industry. We are only proposing to increase the duty from 27½ per cent, which is the existing law, and under which these importations are coming in, to 40 per cent.

Mr. WALSH of Montana. Mr. President, I have followed the figures, and the increase over the present rate on the particular commodity we are now considering is 45.45 per cent, almost a 50 per cent increase on that particular class of goods. If any such increase were necessary, of course, there would have been no production whatever of those goods in this country. As a matter of fact, if an increase of 50 per cent over the present rate is required in order to give it protection, the industry would have been destroyed in this country.

Mr. SMOOT. It is a 50 per cent in the ad valorem rate, but not a 50 per cent rate increase.

Mr. WALSH of Montana. The rate proposed constitutes a 50 per cent increase over the existing rate.

Mr. SMOOT. Yes; it is about 45 per cent of the ad valorem rate.

Mr. WALSH of Montana. That is the minimum, and the bill provides that the specific rate shall never be less than that.

Mr. SMOOT. I did not want the Senator's statement to go in such a form as that it would be misunderstood. Under the Senator's statement as to an increase of 50 per cent it might appear to some that instead of the rate being 27½ per cent it would be 77½ per cent.

Mr. WALSH of Montana. This matter is so simple that there ought not to be any possibility of mistake about it. There is an existing ad valorem rate upon this class of goods of 27½ per cent. In place of the ad valorem rate, the pending bill carries certain specific rates; but it is provided that those rates shall never be less than a certain per cent, which we have figured out to be 40 per cent, if the count of the goods does not exceed 80, which is an increase from 27½ per cent ad valorem to 40 per cent ad valorem, and it may be higher than that.

Mr. SMOOT. Oh, no.

Mr. WALSH of Montana. The specific rate may go higher, but it can not be lower than that, because, if the specific rate goes lower than that, the ad valorem rate, which is a 40 per cent rate, goes into effect. The increase, therefore, of the ad valorem rate or its equivalent being from 27½ per cent, the existing rate, to 40 per cent, it is an increase of 45.45 per cent over existing law; in other words, it is practically a 50 per cent increase upon this particular class of commodity.

Mr. SMOOT. The 27½ per cent is practically the same as the existing law, and I admit, and everybody else admits, that the minimum rate will apply just the same as it applies to-day.

Mr. LENROOT. Will the Senator from Utah yield to me?

Mr. SMOOT. Yes.

Mr. LENROOT. Is not the Senator from Montana [Mr. WALSH] mistaken in the statement that the existing Underwood rate maximum is 27½ per cent? It is 30 per cent. As fixed in that law, the duty on cotton cloth exceeding 99 threads is 30 per cent ad valorem.

Mr. SMOOT. That is true as to dyed cloths.

Mr. LENROOT. And those are included in the figures of exports and imports.

Mr. SMOOT. What the Senator from Wisconsin states is true; in the Underwood law the duty on this cloth was 30 per cent. I was mistaken.

Mr. SMITH. I want to put in the RECORD at this time figures showing the total quantity of countable cloth produced in this country. In 1919 we produced 5,628,858,000 square yards, valued at $1,131,374,000. In the Tariff Information Summary it is shown that of countable cotton cloth the imports are less than 1 per cent of our production. Yet it is proposed to lower the count to 80 and increase the duty 45 per cent over the present rate of duty.

Mr. SMOOT. Mr. President, of course the Senator does not want to create any erroneous impression as to the production here. The great bulk of it, I think 85 per cent of it, does not consist of the class of goods which we are now discussing at all, but consists of the ordinary common cloth that falls under a lower rate. That is not the kind of cloth we want to base the tariff rate on in this particular instance. We are dealing here with a certain grade of cotton cloth; we have passed the paragraph dealing with the great bulk of cotton-cloth production, and we are dealing now with specialties. I have not the figures as to the importations of that particular class of cloth, but I think it must be in the neighborhood of from 15 to 20 per cent of our total consumption, and if the importations continue as they have been coming in recently, the percentage will be even higher than that, and some of the mills in the United States will absolutely be closed.

Mr. WALSH of Montana. Mr. President, I will respond to the suggestion of the Senator from Wisconsin and put in the RECORD the actual rates of the Underwood law. It is there provided that on cotton cloth containing yarns the average number of which exceeds 79 but does not exceed 99 the duty shall be 27½ per cent ad valorem. If cloth contains 80 threads, therefore it bears under the Underwood law a duty of 27½ per cent. If it contains less than 79 and more than 59, it bears only 25 per cent; that is to say, if it contains anywhere

between 59 and 79 it bears 25 per cent duty and if it contains from 79 to 99 threads it carries a 27½ per cent duty.

Mr. LENROOT. And over 99?

Mr. WALSH of Montana. Over 99 it carries 30 per cent. But the commodity which we are now considering does not contain threads in excess of 80.

Mr. LENROOT. It includes 80 and over.

Mr. SMOOT. The manufacturers could put in number 79 threads, and the cloth would then fall in the lower bracket.

Mr. LENROOT. The 40 per cent rate, as I understand, applies on cloth exceeding 80 counts.

Mr. SMOOT. Exceeding 80.

Mr. LENROOT. That is not the language of the bill. The bill provides—

that none of the foregoing when containing yarns the average number of which does not exceed 80—

When the average number does not exceed 80.

On the next page the Senator will find that where not exceeding 100—which, perhaps, will be changed—a higher rate, 45 per cent, is proposed.

Mr. LENROOT. The committee has changed that to 40. That is what we are discussing.

Mr. SMOOT. That is what we are discussing.

Mr. WALSH of Montana. That was not the amendment which I understood was under consideration.

Mr. SMOOT. When the cloth reaches that count, as I have said right along, the minimum rate will prevail, and that is 40 per cent.

Mr. WALSH of Montana. I thought that I had figured this out to the entire satisfaction of the Senator from Utah a little while ago.

Mr. SMOOT. But the Senator did not go far enough.

Mr. WALSH of Montana. I was figuring out with the Senator the rates found at the bottom of page 123, and I figured them out as compared with the rate of 27½ per cent in the Underwood law.

Mr. SMOOT. But these goods will be manufactured in such a way that they will always fall under the minimum rate, and that will be 40 per cent, if the Senate agrees to the committee amendment, instead of 45 per cent.

Mr. WALSH of Montana. It is a matter of no consequence, as a specific rate is fixed here, but it is provided that that specific rate shall never be less than a certain amount; that is to say, that it may amount to more than the ad valorem rate, but it never will be less than the ad valorem rate. That is plainly what is meant.

Mr. SMOOT. If cotton goods were to fall in price to perhaps a quarter of the price for which they sell to-day, that would take effect, but it will not take effect unless they do.

Mr. SIMMONS. Mr. President, I want to make the general facts about this matter clear in the RECORD. We need not muddy the waters by too many technicalities. The Tariff Commission has considered the provision in the House bill and has given us a statement with reference to the international traffic in these cloths, with reference to the production here, and the imports and exports, and I think we can reasonably rely upon it. Certainly the other side of the Chamber ought not seriously to object to it, because I think there is no doubt that a majority of the members of the commission are in sympathy with the protective policy.

Some general statements have been made with reference to production and importations, but certain very important things stated by the Tariff Commission have not been developed. I want them to go into the RECORD, because I think they throw a flood of light upon this subject.

The Tariff Commission, in its survey, says:

Production in 1914 of woven goods, including plain, figured, and pile fabrics (but excluding narrow fabrics of 12 inches and under), amounted to 6,813,540,681 square yards, valued at $489,985,277, from 672,754 looms, of which 30.9 per cent were automatic. Corresponding statistics for 1919 were 6,232,842,000 square yards (1,819,980,000 pounds), valued at $1,487,723,000, produced on 691,738 looms, of which 51.3 per cent were automatic. The United States has more automatic looms than are contained in all other countries.

I want to call special attention to that statement because it is well understood that the labor cost of producing a product is very much less where the automatic machine has displaced the old process. The automatic machine is used for the purpose of greatly curtailing labor costs, and it appears that the United States has more automatic machines engaged in the manufacture of these cotton cloths than all the rest of the world combined. With that general statement there must go the implication that in the United States we do reduce and curtail and, to a large extent, eliminate labor costs that have to be incurred in the processes used more largely in competing countries.

The main cotton-cloth producing States are Massachusetts, South Carolina, North Carolina, Rhode Island, and Georgia.

Imports of countable cotton cloth—

That is the subject we are dealing with in this paragraph—countable cotton cloths. That is the kind of cloth of which I have just been giving the American production, 51 per cent of it being produced with automatic machinery.

Imports of countable cotton cloth are less than 1 per cent of domestic consumption. Annual imports during the 30 fiscal years ended June 30, 1920, averaged 53,916,530 square yards, valued at $9,310,321. Imports in 1914 were 58,621,496 pounds, valued at $11,523,829. The United Kingdom has always supplied the bulk of such cotton cloths as were required from abroad, particularly dyed linings (including venetions); fine, plain white goods, such as muslins, cambrics, lawns, and volles; high-grade ginghams; piques; and fancy shirtings and dress goods. Switzerland supplies fine white goods, such as lawns, organdies, and dotted Swiss; and France supplies principally plain and novelty dress goods. Imports from Germany are mainly novelty dress goods. Imports from Japan are chiefly of the specialty known as "Japanese crêpe."

Imports of cotton cloths—

I wish to call especial attention to this. This is dealing with the whole subject of this paragraph.

Imports of cotton cloths are supplementary, rather than directly competitive, and are confined largely to goods of a quality or finish different from the domestic. Investigation by the Tariff Commission shows that the bulk of the imported cloths are sold on the American market at higher prices than are obtained for the nearest comparable and competitive domestic cloths. Certain cloths, such as dotted Swisses and transparent organdies of extremely fine yarn count, are not made here at all.

So that, Mr. President, with reference to this particular paragraph upon which these absurdly high rates are to be imposed, we have the statement of the Tariff Commission dealing directly with that paragraph that 50 per cent of these goods are made with automatic machinery, that only 1 per cent of the domestic production is imported, that the goods imported are generally of such kinds as are not made in this country at all, and that the importations are supplementary and not competitive. In addition to that, we have the statement that such goods as are imported into the United States sell at a higher price than the comparable domestic product, where any such can be found.

If there ever was a case where the facts negatived the necessity of high rates of duty, this is the case; but what have we, Mr. President? The Senator from South Carolina [Mr. SMITH] has told us that the rates proposed here would be 12½ cents higher than the rates of the present law.

Mr. President, under the present law the conditions which the Tariff Commission discloses in this survey have come about. They have been practically prohibitive as to all of these cloths that are produced in America. Such as have come in have sold for higher prices than the domestic product, showing that there was no necessity for duties; but it is proposed, notwithstanding that—which, I think, shows that the present rates are unnecessarily high—to raise them up to 40 cents.

But it does not stop there, Mr. President. What have we here? Fixing these rates at 40 cents, as I understand—I have not examined them——

Mr. SMITH. Mr. President, let me explain it to the Senator. The Underwood rate was 27½ cents.

Mr. SIMMONS. Yes.

Mr. SMITH. We now propose to raise it to 40 cents, which is a 45 per cent increase on the Underwood rate.

Mr. SIMMONS. Very well; that is what I understood the Senator to say—and it makes a 45 per cent increase. Mr. President, that gets it up to a percentage of 40 cents upon these manufactured goods. It does not stop there, Mr. President. We have to consider what taxes the American people will have to pay upon these novelties, these products that we do not produce here. The American people not only have to pay the 40 cents levied in this paragraph, but, if you will go to the end of the paragraph, you will see that there is another tax imposed. This does not end the tax that is imposed. At the end of that very paragraph is this proviso:

Provided further, That when not less than 40 per cent of the cloth is printed, dyed, or colored with vat dyes, there shall be paid a duty of 5 per cent ad valorem in addition to the above duties.

That is on account of the dyestuffs that go into these cloths. That has to be added to the 40 cents. If you will go to another paragraph you will find that 10 cents a pound more has to be added because of the duty which has been imposed upon Egyptian cotton. So that we have superadded to the duty of 40 cents 5 per cent for the dyes that are in the cloth and 10 cents a pound for the Egyptian cotton that happens to be in it.

Mr. SMOOT. Mr. President, of course, the Senator knows——

Mr. SIMMONS. Oh, I know that they are compensatory, but I am talking about what the American people have to pay on these goods.

Mr. SMOOT. That is not what I was going to say to the Senator. As far as the 5 per cent for dye is concerned—it should be 4 per cent—that applies only to an infinitesimal amount of the goods imported into this country.

Mr. SIMMONS. It applies when not less than 40 per cent of the cloth is printed, dyed, or colored with vat dyes.

Mr. SMOOT. That refers only to the shirtings that are imported here.

Mr. SIMMONS. Oh, well, it is part of these very things.

Mr. SMOOT. But, I say, it is so small a part.

Mr. SIMMONS. Mr. President, we have that constantly—"it is so small." I say to the Senator from Utah that an outrageous and an oppressive and a plundering tax against the American people can not be justified upon the ground that it is small; and that is what you have here, Mr. President, in addition——

Mr. SMOOT. I was speaking of duty; I was speaking of the small amount of goods that are dyed with vat dyes.

Mr. SIMMONS. Very well. It does not make any difference whether the Senator was speaking about the duty or about the amount of goods to which the duty would apply.

Mr. SMOOT. The duty can be justified.

Mr. SIMMONS. You can no more defend putting an outrageous and a plundering duty upon a small amount of imports than you can defend putting such a duty upon a large amounts of imports. In either case you raise the price to be paid by the people on the entire American consumption.

Mr. SMITH. Mr. President, if the Senator will allow me, the argument which has been made heretofore, and made by all parties on both sides, was that if the amount imported was small it was evidence of the fact that the duty ought to be low, because it was not jeopardizing, but if the imports were tremendous, then it was jeopardizing American manufacturers and the duty ought to be raised. Therefore the Senator from North Carolina is correct.

Mr. SIMMONS. Mr. President, we are getting away from the point I wish particularly to present. I do not want to elaborate it. I think I have already pretty well explained what I wished to get before the Senate, though not perhaps as clearly and forcefully as I could desire. Here, Mr. President, we are dealing with a class of imports which are not competitive, according to the statements of the Tariff Commission, which are merely supplementary to the American production, which sell for more than the American product sells for, and which, therefore, can require no duty.

We are dealing with that class of goods here, and yet it is sought by the majority to impose a tax on the American people with respect to these imports, things the people must have, and which in the main are not produced by our own manufacturers. We are asked to impose a tax upon them of 40 cents, and to that must be added, of course, these other fancy taxes which are provided, and which will have to be added to practically all the cotton goods consumed in this country, 5 per cent on account of the excessive duty you are putting upon dyestuffs and 10 cents a pound on account of the absurd and unnecessary duties you are placing upon Egyptian cotton. When you add up all these duties, the duty you impose upon the manufactured product, the duty you impose upon the dye the manufacturer puts in it, the duty you impose upon the raw cotton he buys from Egypt, you have the American consumer in this country loaded down with a duty of something over 600 per cent, largely upon goods not produced in the United States, and not competitive with goods produced in this country, and which already sell in the markets of America at higher prices than the American goods command.

Mr. SMOOT. Of course there is a provision that no rate shall be more than 45 per cent. The Senator has forgotten that.

The VICE PRESIDENT. The question is on agreeing to the committee amendment as modified.

The amendment as modified was agreed to.

The VICE PRESIDENT. The Secretary will state the next amendment.

The ASSISTANT SECRETARY. The Senator from Utah sends to the desk and proposes an amendment to the House text, on page 124, line 1, to strike out "100" and insert in lieu thereof "80," in the paragraph on cotton cloth, printed, so as to read:

Nor when exceeding No. 80, etc.

The amendment was agreed to.

The next amendment of the committee was, on page 124, line 1, to strike out "33" and to insert in lieu thereof "45," so as to read:

Nor when exceeding No. 80, less than 45 per cent ad valorem.

The amendment was agreed to.

The VICE PRESIDENT. The Secretary will state the next amendment.

The ASSISTANT SECRETARY. On page 124, line 1, the committee proposes to strike out "ad valorem" and to insert the following:

ad valorem: *Provided further*, That when not less than 40 per cent of the cloth is printed, dyed, or colored with vat dyes, there shall be paid a duty of 5 per cent ad valorem in addition to the above duties.

Mr. SMOOT. In line 4 I move to insert "4" instead of "5."

The ASSISTANT SECRETARY. On line 4, to strike out "5" and insert in lieu thereof "4."

Mr. SMITH. This is put in to provide a compensatory duty for the duty we are laying upon the imported dyes?

Mr. SMOOT. The vat dyes.

Mr. SMITH. To take care of the dyestuffs we bring in?

Mr. SMOOT. The Senator knows those dyes are carrying a very high rate of duty, and we did the same with yarn.

Mr. SMITH. It is getting late, and I would like to ask the Senator to take a recess at this point.

Mr. SMOOT. Let us pass this amendment and then the one at the bottom of page 124.

Mr. SMITH. In what paragraph is that?

Mr. SMOOT. In paragraph 904. That will take us up to paragraph 905, the cloth paragraph.

Mr. SMITH. Does the Senator intend to strike that language out?

Mr. SMOOT. I want to strike that out entirely.

Mr. SMITH. I have no objection to that.

Mr. SMOOT. That will clean it up, and then I shall ask for an executive session.

Mr. WALSH of Montana. Mr. President, I had not intended to say anything further about this, but inasmuch as the Senator has repeated the statement made in respect to this particular amendment which he made in connection with one like it touching yarns, I desire again to say that I have been unable to understand the statement that this is a compensatory duty. I have been looking into the subject of vat dyes a little myself, and I discovered that vat dyes are dyes that are insoluble to water. It may be that the coloring of cloths by vat dyes is a more expensive process than coloring cloths with dyes that are not vat dyes—that is, dyes that are soluble in water—and it may be that a higher rate of duty is justifiable for that reason on cloths dyed with vat dyes than on cloths dyed with dyes of other qualities. But when you talk about a compensatory duty, I am utterly unable to understand it. Dyes, either soluble or insoluble in water, carry just exactly the same rate of duty.

Mr. SMOOT. I will say to the Senator that there are wood extracts which do not carry the same rate.

Mr. WALSH of Montana. I mean coal-tar products; all colors—dyes or stains—whether soluble or not in water.

Mr. SMOOT. That is true.

Mr. WALSH of Montana. If it is true, then it is also true that vat dyes, which are insoluble in water, carry exactly the same rate of duty as dyes which are soluble in water, because this expressly provides for both of them.

Mr. SMOOT. That is, providing they are in paragraph 26; but there are dyes outside of paragraph 26. Those are only the coal-tar products.

Mr. WALSH of Montana. But there is no reason for supposing that vat dyes are not included. Vat dyes are included in paragraph 26, because vat dyes are dyes that are insoluble in water.

Mr. SMOOT. There is no doubt about that.

Mr. WALSH of Montana. And this paragraph covers vat dyes.

Mr. SMOOT. There is no question about it.

Mr. WALSH of Montana. If the cloth is dyed with an insoluble dye mentioned in paragraph 26, it will carry 5 per cent additional——

Mr. SMOOT. Yes; but the cloth——

Mr. WALSH of Montana. Just a moment. If it is dyed with a dye soluble in water, mentioned in paragraph 26, it will not carry the 5 per cent extra duty. So far as compensation is concerned, the dye, whether it is soluble in water or insoluble in water, carries the duty provided in paragraph 26.

Mr. SMOOT. Provided it is a coal-tar dye.

Mr. WALSH of Montana. Are they not all coal-tar dyes?

Mr. SMOOT. No.

Mr. WALSH of Montana. But the vat dyes are coal-tar dyes, and they fall under paragraph 26.

Mr. SMOOT. Nobody has denied it, and nobody has even thought of denying it.

Mr. WALSH of Montana. All right; I will not follow any controversy with the Senator. I will state my position with respect to the matter, and we will let it go at that.

Mr. SMOOT. Very well.

Mr. WALSH of Montana. Vat dyes are those that are insoluble in water, and dyes that are insoluble in water carry exactly the same rate of duty, under paragraph 26, which dyes soluble in water carry, so that if you give a compensatory duty on cloth dyed with vat dyes you must also give a compensatory duty on cloth dyed with dyes that are not vat dyes, because they both carry exactly the same rate of duty if they fall under paragraph 26. So this is not a compensatory duty at all. It is a duty imposed for some reason other than to compensate for a duty which is imposed upon dyes.

Mr. SMOOT. I do not know that I want to take any further time of the Senate, as it is Saturday afternoon and late, but I think I could convince the Senator that there are other dyes besides those found in paragraph 26 which do not carry this duty.

Mr. WALSH of Montana. The Senator need not take that trouble, because I am sure of that.

Mr. SMITH. The point the Senator from Montana makes is one which should be considered. He has made the point that the cloths which are dyed with vat dyes carry a duty of 5 per cent. The paragraph to which he refers has provided for a scope of dyes upon which a duty is laid. You have picked out a part of those and imposed a duty, not a compensatory duty, but a duty on the part of the dyes included in paragraph 26 and left the others out. Therefore it is not a compensatory duty. You have selected only those dyes which would be denominated as vat dyes. So it is imposed for some specific, definite reason other than as a mere compensatory duty.

Mr. SMOOT. The dyes falling in paragraph 26 are acid dyes, and there are the direct cotton dyes, and there are the vat dyes. I tried to tell the Senate the other day that there is an immense difference in the method of putting the dyes upon the cloth, but we do not want them to have a 4 per cent duty if they are other dyes than vat dyes. We do not impose it because of the fact that the duties provided will take care of it. What we want to come into the country is a dye that has to be put upon the cloth through the dye-vat process, none other. Therefore we limit it to that kind of a dye and that kind of a process.

Mr. SMITH. But you have the same duty on all the dyes in paragraph 26.

Mr. SMOOT. But we are not giving a compensatory duty in this item for that purpose. That is only upon the cloths which shall be dyed by the vat-dye process.

Mr. SMITH. I am looking for information. My attention was not called to this until the Senator from Montana raised the question as to why that particular process of dyeing was selected and was given an advantage over the others when they all bear the same rate of duty.

Mr. SMOOT. The vat-dye process is the most expensive process of dyeing. You can dye with all the other dyes which fall in paragraph 26, and in comparison with the vat-dye process I do not think they would cost more than one-tenth in labor as compared with vat dyeing. That is the reason for the difference.

The VICE PRESIDENT. The question is on agreeing to the amendment as modified.

The amendment as modified was agreed to.

The next amendment of the committee was, on page 124, line 24, after the word "process," to insert:

> The average number of the yarn in cotton cloth shall be based on the weight and length as above determined, and shall be the number of 800-yard lengths that weigh 1 pound.

Mr. SMOOT. I ask that that amendment be disagreed to.

The amendment was rejected.

Mr. SMITH. I ask the Senator from Utah if by disagreeing to the last lines on page 124, striking out the innovation of 800 yards in place of the ordinary 840, we restore the count of 840?

Mr. SMOOT. It restores the count of 840, so that the statistics hereafter will have the same basis, and can be compared. It restores the number that has been in every tariff bill since we began to make tariff bills.

Mr. SMITH. If the Senator is agreeable, I suggest that we lay the bill aside at this point.

Mr. SMOOT. That is what I rose to ask.

Mr. BURSUM. Mr. President——

The VICE PRESIDENT. Without objection, the bill will be informally laid aside.

MATTIE ALEXANDER.

Mr. BURSUM. Mr. President, from the Committee on Public Lands and Surveys I report back favorably without amendment the bill (H. R. 8845) for the relief of Mattie Alexander. The purpose of the bill is to clarify the title to 79 acres of land in Alabama to Mattie Alexander. The report of the House committee shows that the land was surveyed in 1825, and that the survey then made does not conform to the survey on the ground at this time. The bill is recommended by the department and has passed the House. I ask unanimous consent for its present consideration.

There being no objection, the bill was considered as in Committee of the Whole, and was read, as follows:

> *Be it enacted, etc.*, That the Secretary of the Interior is authorized and directed to issue a patent to Mattie Alexander for the north half of the northeast quarter of fractional section 35, township 17 north, range 14 east, St. Stevens meridian, survey in Alabama.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

EMMETT OTTO COONEY.

Mr. BURSUM. From the Committee on Public Lands and Surveys I report back favorably without amendment the bill (H. R. 9746) for the relief of Emmett Otto Cooney, and I submit a report (No. 828) thereon. The bill authorizes the Secretary of the Interior to grant a patent to certain land. I ask unanimous consent for its present consideration. The bill has passed the House.

Mr. SMOOT. Is there a favorable report from the committee?

Mr. BURSUM. I am authorized by the committee to report it favorably.

The VICE PRESIDENT. Is there objection to the present consideration of the bill?

Mr. WALSH of Montana. Mr. President, I do not like to object to these bills brought forward by the Senator from New Mexico, but——

Mr. BURSUM. Was not the Senator present in the committee when we passed on the bill?

Mr. WALSH of Montana. No. I have endeavored to be present at all sessions of the Committee on Public Lands, but the bill seems to have been considered in my absence.

I venture to suggest that unless there is some urgency about measures it is scarcely fair to ask for their consideration at an hour as late as this on Saturday afternoon. The measure before us is perhaps not of very much public interest, and yet I do not like to see it passed without an opportunity to examine it.

Mr. BURSUM. I desire to say to the Senator that the bill may not be of large public interest but it is of vital concern to the homesteader, who has a mortgage on his land for $4,000. If he does not receive this patent very soon he will be bankrupt. These facts are shown by the report of the Secretary of the Interior. The man has lived on his land for five years and placed improvements on it, and while it is not an important matter, so far as the public is concerned, it is a very important matter to the individual concerned.

Mr. WALSH of Montana. If the Senator will say that there is any urgency about the measure or that the homesteader is liable to lose his land unless immediate consideration is given to the measure, I shall interpose no objection.

Mr. BURSUM. I not only say that, but the Secretary of the Interior has said it in his report.

Mr. WALSH of Montana. I suppose that some time soon we shall have a call of the calendar when we can take up such measures for disposition; but if the Senator says it is a matter of urgency I shall not object. However, I submit it is hardly fair to ask that these bills be considered in this way at such a late hour.

There being no objection, the bill was considered as in Committee of the Whole, and it was read as follows:

> *Be it enacted, etc.*, That the Secretary of the Interior be, and he is hereby, authorized and directed to issue patent to Emmett Otto Cooney for the southeast quarter of the southeast quarter, section 34, east half of the east half, south half of the southwest quarter and southwest quarter of the southeast quarter, section 35, township 4 south, range 21 east, Willamette meridian, being the land embraced in his homestead entries 013424 and 015142, The Dalles, Oreg., land district, upon which he has submitted satisfactory proof of compliance with the provisions of the homestead law.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

EXECUTIVE SESSION.

Mr. LODGE. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to, and the Senate proceeded to the consideration of executive business. After five minutes spent in executive session the doors were reopened and (at 5 o'clock and 10 minutes p. m.) the Senate, under the order previously entered, took a recess until Monday, July 17, 1922, at 11 o'clock a. m.

CONFIRMATIONS.

Executive nominations confirmed by the Senate July 15 (legislative day of April 20), 1922.

ASSISTANT DIRECTOR BUREAU OF FOREIGN AND DOMESTIC COMMERCE.

Louis Domeratzky to be assistant director Bureau of Foreign and Domestic Commerce.

REGISTERS OF THE LAND OFFICE.

Louis W. Burford to be register of the land office at Del Norte, Colo.

Charles R. Smith to be register of the land office at Durango, Colo.

Edgar T. Conquest to be register of the land office at Sterling, Colo.

PROMOTIONS IN THE ARMY.

William LeRoy Thompson to be captain, Medical Corps.

Donald Frank Stace to be first lieutenant, Air Service.

Joe David Moss to be first lieutenant, Coast Artillery Corps.

Clarence Francis Hofstetter to be captain, Ordnance Department.

Joshua Ashley Stansell to be captain, Signal Corps.

SENATE.

MONDAY, *July 17, 1922.*

(Legislative day of Thursday, April 20, 1922.)

The Senate met at 11 o'clock a. m., on the expiration of the recess.

Mr. CURTIS. Mr. President, I suggest the absence of a quorum.

The VICE PRESIDENT. The Secretary will call the roll.

The reading clerk called the roll, and the following Senators answered to their names:

Ashurst	Fletcher	McCumber	Sheppard
Ball	Glass	McKinley	Shields
Borah	Gooding	McLean	Simmons
Brandegee	Hale	McNary	Smith
Broussard	Harreld	Moses	Smoot
Calder	Johnson	Nelson	Spencer
Capper	Jones, N. Mex.	New	Sterling
Caraway	Jones, Wash.	Nicholson	Trammell
Culberson	Kellogg	Oddie	Underwood
Cummins	Kendrick	Overman	Walsh, Mass.
Curtis	Keyes	Phipps	Walsh, Mont.
Dial	King	Pomerene	Warren
Edge	Ladd	Ransdell	Willis
Ernst	Lodge	Rawson	

Mr. SHEPPARD. I desire to announce that the Senator from Georgia [Mr. WATSON] is absent on account of illness, and that the Senator from Nevada [Mr. PITTMAN] is absent on account of illness in his family.

The VICE PRESIDENT. Fifty-five Senators have answered to their names. A quorum is present.

THE LEAGUE OF NATIONS.

Mr. BRANDEGEE. Mr. President, I ask unanimous consent that there may be printed in the RECORD in 8-point type an interview carried in the New York Times of to-day entitled "League unhampered by us on mandates, declares Hughes."

It is an interview given by Secretary of State Hughes to the correspondent of the New York Times in relation to his responding to communications received from the League of Nations, and in refutation of the intimation that the course adopted by this Government had hampered the administration of the mandates by the League of Nations.

There being no objection, the article was ordered to be printed in the RECORD in 8-point type, as follows:

[From the New York Times of Monday, July 17, 1922.]

LEAGUE UNHAMPERED BY US ON MANDATES, DECLARES HUGHES—SECRETARY CONTRADICTS FOSDICK, WHO CHARGED THAT WE "NEARLY WRECKED" LEAGUE PROGRAM—EXPLAINS DELAY ON REPLIES—SAYS RECORDS SHOW WILSON ADMINISTRATION ANSWERED ONLY 15 OUT OF 33 NOTES—INTENDS COURTESY ALWAYS—COOPERATION IN HEALTH WORK CERTAIN, HE TELLS NEW YORK TIMES CORRESPONDENT.

[Special to the New York Times.]

WASHINGTON, July 16.—Secretary Hughes defended to-day, in an interview obtained by the New York Times correspondent, his course in dealing with the League of Nations, and answered criticisms that he had been discourteous to the league and had hampered it in its work. These criticisms were voiced yesterday in a statement issued by Raymond B. Fosdick, former undersecretary general of the league.

Mr. Hughes was seen by the correspondent at Greystones, his suburban residence, near Rock Creek Park. When his attention was called to Mr. Fosdick's comment he made an exception to the general practice of Secretaries of State and talked freely, with the understanding that what he said might be published.

One of the statements made in his interview was that in the last 14 months of the Wilson administration 18 communications out of 33 from the League of Nations had not been answered. This was shown by an examination of the files of the State Department, the Secretary said. One of the charges against Mr. Hughes by advocates of the league has been that he failed to respond to its communications, and Mr. Fosdick repeated the charge in his statement published to-day.

The Secretary made public on Friday his answer to Hamilton Holt, president of the Woodrow Wilson Democracy of New York City, who asked whether it was not time for the Harding administration to give the people an unequivocal statement of its position regarding the League of Nations.

In his statement, as printed in the New York Times to-day, Mr. Fosdick said that Mr. Hughes's response to Mr. Holt "is interesting for what it omits," and he cited several instances of alleged shortcomings of this Government in dealing with the league. He ended the statement by saying:

"Do we have to treat the league with contempt just to prove we do not belong to it? Nonmembership is one question; open hostility is another."

DENIES HAMPERING MANDATES.

The first statement by Mr. Fosdick to which Secretary Hughes called attention was "that the attitude of the State Department on the league's program of mandates nearly wrecked the whole plan." To this Mr. Fosdick added:

"For over a year the mandate situation has been blocked, and the vast territories involved have been deprived of international supervision, which was one of the most forward-looking principles laid down in the covenant of the league."

Mr. Hughes said that he was "surprised and deeply regretted that such a statement had been made." He felt obliged, he said, to characterize it as "seriously misleading." He thought it a pity that those who were so keenly interested in the work of the League of Nations should not endeavor at least to be fair to their own Government.

It was contrary to the fact, said Mr. Hughes, to state that the attitude of the State Department with respect to the mandates had "nearly wrecked the whole plan" or that "for over a year the mandate situation has been blocked" through the State Department.

The Secretary said that the facts were these:

There were three classes of mandates—the A, B, and C mandates. The C mandates related to the former German islands in the Pacific Ocean and to territory in Southwest Africa. Instead of the program being blocked by any attitude of this Government, the other powers had gone ahead and, in December, 1920, issued mandates without waiting for a treaty with this Government.

Secretary Hughes recalled the fact that soon after he came into office he addressed identical notes to the powers relating to the mandates, and especially with reference to Yap. The result was, he added, that the propriety of the position of this Government was recognized and a treaty had been made with Japan relating to the administration of the mandate for the Pacific islands north of the Equator, on terms to conserve American interests.

There had been no treaty yet, he went on, with respect to the islands south of the Equator or the territory in Southwest Africa, but mandates had been issued. So far from the attitude of the American Government, in asking assurances for the protection of American interests, blocking the way, administration under the mandates had actually gone on, he said.

The A mandates, Mr. Hughes stated, related to former territories of Turkey. These, it was recognized by the powers, could not be issued until there was a treaty of peace with Turkey. The United States, he pointed out, did not go to war with Turkey, and had in no way delayed the consummation of a treaty that would furnish a basis for issue of mandates.

POINTS OUT ALLIES' DELAYS IN REPLYING.

Secretary Hughes said that after stating in April, 1921, the general attitude of the United States on the subject of mandates, he sent in August notes to all the powers concerned, stating specifically the provisions that were deemed necessary to protect the United States in the case of both A and B mandates.

It should be remembered, he added, that the guaranties of these mandates ran only to the members of the League of Nations and their nationals. The United States simply sought fair and equal opportunity and the same rights for the United States and its nationals that members of the league would have in the territories acquired by the Allies as a result of the vic-

tory to which the United States contributed. The other powers concerned recognized this as a reasonable position, he said. It was also necessary, Mr. Hughes stated, to have assurance of protection for our missionaries and educational institutions.

Mr. Hughes said he had no desire to criticize the action of any of the powers, but in view of Mr. Fosdick's criticism of the State Department, it was fair to say that there had been no reply to the notes of August, 1921, on the A and B mandates until the latter part of December. Even then, the reply with respect to the Mesopotamia mandate was specifically postponed, and, as to that mandate, the Secretary said that he was still awaiting a reply from the British Government.

Mr. Hughes told the Times correspondent that following the notes, received in December, he had interviews during the Washington conference, in January, with Lord Balfour (then Arthur J. Balfour) regarding the Palestine mandate. After the conference this matter was the subject of a formal communication in April. Within the last two or three weeks, Mr. Hughes said, he had received further communications on this subject and had promptly replied.

So far as the Syrian mandate was concerned, the Secretary said that he received no answer from the French Government to the proposals in his note of August until three or four weeks ago. The matter had then been promptly taken up, and he believed that an agreement had been substantially reached between this Government and France with regard to the terms of that mandate.

The Secretary again called attention to the fact that none of these A mandates could actually issue until the treaty with Turkey had been arranged.

The B mandates relate to former German territories in East Africa, Togoland, and the Cameroons, the mandates to be held by the British and French. Secretary Hughes said that he made his suggestions as to the provisions for the protection of American interests in his note of August and the answers in December related to these. The matter was taken up again after the Washington conference. Three or four weeks ago he received the text of the proposed conventions as to the mandates and replied at once so that the subject could be dealt with at the coming meeting in London.

It would thus be seen, the Secretary stated, that the attitude of the United States had not delayed matters in connection with the C mandates or the A mandates, while, so far as the B mandates were concerned, the attitude of the United States, which he held was entirely reasonable and had been met by the other powers, was fully explained in August, and, so far as the United States was concerned, could have been disposed of then. Secretary Hughes was glad to say, he remarked, that the conventions, now virtually agreed upon, were the same as those he had proposed in August.

AS TO NOT ANSWERING LEAGUE.

Mr. Hughes said that he was pleased to note that Mr. Fosdick's reference to alleged neglect to answer communications from the league apparently related to a period prior to August, 1921. Certainly, since that time, the Secretary said, he had been most solicitous to see that all communications were dealt with, as he said in his letter to Mr. Holt, courteously and appropriately.

With regard to the period prior to August, 1921, Secretary Hughes made it clear that he did not regard himself as personally responsible for any delay that had occurred. He said that he did not think it accurate to say that no communications had been answered prior to August, but certainly, when he found out what had not been answered or acknowledged, he had directed that the whole matter should be taken up and that suitable acknowledgments should be made.

Mr. Hughes added that he had been advised, as a result of an examination of the department files, that in the last 14 months of the preceding administration 33 communications were received from the League of Nations, of which only 15 had been answered. When he came into office he did not know of this accumulation and he dealt with the matter when it was brought to his attention.

So far as the white-slave traffic is concerned, the Secretary said that, as he had pointed out, there was nothing new in the attitude of this Government. The United States had refused to adhere to the convention of 1910 for the reason that it involved provisions relating to matters which, under our system of government, fell exclusively within the control of the States. Our recent attitude, he added, was in conformity with this position. The Secretary said that this had been made clear to the other Governments inquiring, and, he was quite sure, to the secretary general of the League of Nations as well. The United States, of course, he said, was doing its share by Federal and State legislation to combat the evils involved.

So far as the international health bureau is concerned, Mr. Hughes answered that he could only repeat what he had said in his letter to Mr. Holt, that he was advised that the interests of health had not suffered by maintaining the international office at Paris intact, and he was assured that there had been established a proper degree of cooperation between that office and the league office. This Government, said Mr. Hughes, desired to do all in its power and is constantly acting to promote the cause of health.

At the end of the interview Secretary Hughes said that while the United States had none of the obligations of members of the league, he, of course, always desires to recognize the obligations of courtesy.

PETITIONS.

Mr. CAPPER presented resolutions of the Chambers of Commerce of Concordia, Hill City, and Atchison, all in the State of Kansas, favoring full enforcement of the decree of the United States Supreme Court ordering divorcement of the Central Pacific Railway from the Southern Pacific Co., etc., which were referred to the Committee on Interstate Commerce.

Mr. TOWNSEND presented a petition of sundry citizens of Adrian, Mich., praying for the enactment of legislation to prohibit transmission through the mails of information giving odds, bets, and tips on horse races, prize fights, etc., which was referred to the Committee on Post Offices and Post Roads.

He also presented a resolution unanimously adopted by the China Farmers' Club, of St. Clair County, Mich., favoring the passage of the so-called French-Capper truth in fabric bill, which was referred to the Committee on Interstate Commerce.

He also presented resolutions of the city council of the city of Chicago, Ill., protesting against the lynching and burning of human beings and favoring the passage of the so-called Dyer antilynching bill, which were referred to the Committee on the Judiciary.

He also presented resolutions unanimously adopted by the Pensacola (Fla.) Chamber of Commerce, favoring the passage of the bill (H. R. 10159) to protect interstate and foreign commerce against bribery and other corrupt trade practices, which were referred to the Committee on Interstate Commerce.

BILL AND JOINT RESOLUTION INTRODUCED.

A bill and a joint resolution were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. SHIELDS:

A bill (S. 3839) granting a pension to Sallie E. Pyle (with accompanying papers); to the Committee on Pensions.

By Mr. KING:

A joint resolution (S. J. Res. 225) supplementing the trading with the enemy act; to the Committee on the Judiciary.

AMENDMENT OF COTTON FUTURES ACT.

Mr. DIAL. Mr. President, on April 21, 1921, I introduced the bill (S. 385) to amend section 5 of the United States cotton futures act, approved August 11, 1916, as amended. On February 13 of the present year I introduced the bill (S. 3146) to amend section 5 of the United States cotton futures act, that being intended as a substitute for the former bill which I had introduced. The bills were referred to the Committee on Agriculture and Forestry, which appointed a subcommittee, and various hearings were had. Some time since the subcommittee reported to the full committee, but the full committee has made no report to the Senate. Several days since I gave notice that I would move this morning to discharge the Committee on Agriculture and Forestry from the further consideration of Senate bill 3146. I now ask unanimous consent to call up that motion.

The VICE PRESIDENT. Is there objection?

Mr. DIAL. I hope there will not be any discussion at all.

Mr. McCUMBER. I do not know how much time will be required or what debate will be indulged in.

Mr. DIAL. I could not hear the Senator's statement.

Mr. McCUMBER. I am not informed as to what extent the debate will be protracted upon the motion. I do not wish to consent to laying aside the tariff bill to take up anything else unless it is something that we can dispose of right away.

Mr. DIAL. I hope there will be no objection at all.

Mr. RANSDELL. Mr. President——

Mr. SMOOT. The Chairman of the Committee on Agriculture and Forestry is not present.

Mr. RANSDELL. I was just about to say that the chairman of the committee is not present. I am tremendously interested in the subject, and if it is taken up I shall feel obliged to discuss it. I do not care to discuss it now. I would be compelled to take some time, however, to discuss the measure if it is proposed to discharge the great Committee on Agriculture and

Forestry from its care of one of the most important measures ever submitted to it, when the committee has been working on it, to my certain knowledge, very laboriously and has not yet reached a definite conclusion. If it is desired to discharge that committee, which in a way is a reflection on it, I certainly would be obliged to have something to say in defense of the committee before that action is taken, and it would require a good deal of time.

Mr. McCUMBER. In view of the probable time that would be taken, I hope the Senator suggesting the motion will talk to the chairman of the Committee on Agriculture and Forestry and see if he can not get an agreement to take up the matter and dispose of it with very short debate. I do not feel like consenting now to laying aside the tariff bill to discuss another subject.

Mr. DIAL. I do not mean, of course, to cast any reflection on the Committee on Agriculture and Forestry, although I think there has been unnecessary delay. I have a telegram which I received from the Senator from Louisiana [Mr. RANSDELL] in June, 1921, asking me to postpone the matter then until he returned. The matter has been delayed unnecessarily. Of course, I make no reflection whatever upon the committee, but I understand they are hopelessly divided. I think I am entitled to a hearing on the bill. So far as the chairman of the committee is concerned, I gave notice on Friday that I expected to move this morning to take up the bill. I am sorry the chairman is not here. The fact is that some time ago the chairman of the committee, the Senator from Nebraska [Mr. NORRIS], told me to make the motion and that he would join in asking that the matter be brought before the Senate.

Mr. SMOOT. Does the Senator ask for action at this time?

Mr. DIAL. Not action on the bill. I merely ask leave to call up the motion.

Mr. SMOOT. I shall have to object.

Mr. DIAL. I hope there will be no discussion of it. I merely desire to take up the motion in order to get the bill on the calendar.

Mr. SMOOT. I object.

Mr. BORAH. Mr. President, I want to ask the Senator from South Carolina a question, if I may do so.

Mr. DIAL. I yield to the Senator from Idaho.

Mr. BORAH. How long has the bill been before the committee?

Mr. DIAL. The first bill was referred to the committee on April 21, 1921.

Mr. RANSDELL. May I ask the Senator when the last bill to which he referred was presented?

Mr. DIAL. On February 13, 1922, it was introduced and referred to the committee, but I may say that the two bills are very similar.

Mr. BORAH. As I understand, the chairman of the committee does not object to this matter coming up to-day?

Mr. DIAL. He told me he would join in the motion.

Mr. SMOOT. I object if it is going to lead to any discussion, and I am sure it will do so at this time. I have no objection to the Senator from South Carolina making his motion at some time when it will not interfere with the consideration of the tariff bill.

Mr. DIAL. Mr. President, the bill for which I desire consideration is the most important, according to my mind, which could possibly be passed for the protection of the growers of cotton of the South. It is not merely a local matter, but it is a national matter. Under present conditions, in all probability there will not be enough cotton raised this year to supply the mills of the world next year; and in all probability many mills in the United States will be shut down next year. The time for the sale of this year's cotton is already approaching; indeed, some of the present crop is now on the market. If the bill which I desire considered shall not be passed pretty soon, it will not afford any relief for the sale of the present crop. I have been extremely patient. So far as objecting to the consideration of this bill is concerned, of course, Senators have a right to object; but I propose to discuss the bill many times, if it is necessary to do so in order to get action upon it, for I think I am entitled to a vote of the Senate on the proposition.

I wish to repeat to all Senators here that this proposed legislation is not a local matter but is a national matter, and other Senators are as much interested in this subject as am I. I am going to appeal particularly to Senators from the South to join me in helping to get the bill passed. I do not believe it will meet any serious objection; in fact, I know of but one Senator on the floor who objects to the bill on its merits, but dilatory tactics have been applied all of the time to prevent its consideration. I desire the matter disposed of.

Mr. BORAH. Could not the Senator offer his bill as an amendment to the pending tariff bill?

Mr. DIAL. I am going to offer it as an amendment to the tariff bill and to every possible proposition that I can under parliamentary law, and I will thank the Senator from Idaho for helping me.

Mr. OVERMAN. Mr. President, I should like to inquire of the Senator from Louisiana why some kind of a report can not be made on the bill. I think the bill should be reported either adversely or favorably, or without prejudice. The bill has been here for over six months, and I do not see why the committee does not make some sort of a report on it.

Mr. RANSDELL. Mr. President, in answer to the question of the Senator from North Carolina, I will say that I should be delighted to have an adverse report made on the bill; I do not object to that at all. I wish, however, to make just a very brief statement in reference to the measure.

Several years ago we had considerable debate in regard to cotton futures legislation.

Mr. SMOOT. Mr. President, if we are going to discuss the question, we might just as well let it come up now, and have it disposed of, rather than have time occupied three or four different times by debate and discussion.

Mr. RANSDELL. I will say to the Senator from Utah that I want to help him to make all the progress he can with the tariff bill, and I am not going to make a speech now. I am merely going to say a few words more.

Legislation in regard to cotton futures was threshed out here ad nauseam several years ago, and a law was passed making several substantial changes in the existing legislation, as the Senator from Utah will recollect. That law, known as the Smith-Lever cotton futures bill, corrected a number of alleged evils at that time. If there are any other evils now, we would like to correct them, but the measure of the Senator from South Carolina, in the opinion of the subcommittee which examined it, and in the opinion of the Committee on Agriculture, will not correct those evils. I am prepared to explain the matter fully at any time, but I am not going to take up the time of the Senate now to do so. The legislation proposed by the Senator from South Carolina does not afford the correction of the evil which the Senator desires.

I am a cotton grower; I am not a cotton manufacturer; I am interested in getting the best price possible for cotton. I assure the Senator from South Carolina that I will join my colleagues on the Committee on Agriculture in reporting his bill back to the Senate with an unfavorable report to-morrow, but not with a favorable report. If that will satisfy the Senator from South Carolina, I will gladly join the committee in taking such action.

Mr. DIAL. That would be perfectly satisfactory to me. All I ask the committee to do is to make some kind of a report on the bill.

Mr. RANSDELL. I will try to get that done, I will say to the Senator from South Carolina.

Mr. DIAL. I thank the Senator. On June 11, 1921, the Senator from Louisiana sent me the following telegram:

LAKE PROVIDENCE, LA., *June 11, 1921.*

Senator DIAL,
Washington, D. C.:

Please do not press action on your cotton-futures amendment until I return on 19th. Friends insist your amendment will destroy the exchanges, and I agree with them; therefore it should receive closest consideration. Am detained here by very important business.

JOS. E. RANSDELL.

The Senator says he is a cotton grower; so am I, and what I want to do is to secure the enactment of a law which will help the growers of cotton. I am glad to know that the Senator will consent to have the bill reported, even though the report be without recommendation, and I will leave it to the Senate to say whether or not my amendment does not cure the defects of which complaint is made.

I deny that the law now on the statute books was discussed ad nauseam several years ago. I do not think any such designation could be applied to the discussion which took place on the present law. That law corrected many evils which had grown up under the old custom, and it has saved our people millions and hundreds of millions of dollars every year, but it needs some amendment now.

Mr. CARAWAY. Mr. President, I rather imagine the Senator from Utah himself wanted me to make a speech, because he looked at me and smiled. I dislike to join with him in a filibuster against the tariff bill, although I have done so once or twice, as I thought, at his invitation. However, I should like to make a brief statement.

Long before the Senator from South Carolina [Mr. DIAL] introduced his bill to regulate the cotton exchanges I intro-

duced a real, genuine farmers' bill to protect the farmers against the extortions and robberies of those who sell what they do not own and never expect to own. The committee is considering it. I do not want to be critical of the committee, but I myself think that they ought to have reported that bill, and I think they ought to have reported it favorably, and I believe that even the Senator from South Carolina will join with me in voting for its passage, because I am sure when he discovers that his bill will outlaw the lower grades of cotton and be a fine spinners' bill but a poor farmers' bill that he will not press it.

Of course, the Senator from Louisiana will join in adverse reports on both of them. He is one of those farmers who is designated in my section of the country as a "shade-tree" farmer. I seriously doubt if he would know a cow from a horse if the cow were dehorned, but he honestly thinks he is a farmer and is for the farmer. I never expect to be able to convince him of his error, but I expect to find every other Member of the Senate agreeing with us and against his view.

I want to say now seriously that the situation does require consideration. It requires an amendment of the law which permits people to sell what they never owned and never expect to own and other people to buy what they do not expect to receive and do not want to receive. It seems to me indefensible that we should say that gambling is morally wrong and forbid it when the gambling is done with cards or dice, and yet permit gambling in the prime necessities of life, thereby destroying almost to a certainty the producer and very largely burdening the consuming public of America. The man who plays poker and loses money loses what he owns and the man who wins from him gets what the other man owns; they hurt each other and also hurt society; but the man who gambles in the products of the farm, who gambles in that which he does not own, and, if he loses, loses that which he does not possess, hurts the consuming public and destroys the farmers. I have seen the future market cost the producers of cotton in my State in half a day a million dollars when there was not a bale of spot cotton involved in the transaction and the men who sold and the men who bought neither owned nor expected to own the products they sold. That sort of a situation, Mr. President, I do not believe the Senate is going to allow to continue.

I want the Committee on Agriculture, of which I am a member, to report out a genuine farmer's bill. I do not mean that in the sense that the farmer is entitled to particular consideration, but I mean a bill which will prevent people who never farm and who never expect to farm from destroying the man who does farm by wholesale gambling in the farmer's products and selling those products long before they are produced. If I had the money I could go on the cotton exchange and sell or buy, as the case might be, 50,000,000 bales of cotton in any season, before a single acre was planted and when no man living could know whether there would be 10,000 000 bales grown or 15,000,000 or only 6,000 000 bales, and when no man could know what the demand would be. Yet men thrive, they grow rich, by selling this product in amounts which exceed the most optimistic dreams of actual production.

I know it is true, Mr. President, that a man who deals in that which he does not own and sells that which he knows he can not deliver is either a fool or he has some means of controlling the price of the product when settlement day shall come; and since the gamblers in cotton are able to make money by their gambling, I take it that that negatives the statement that they are fools. It then becomes apparent that, by some process, they are able to control the price of the product in which they gamble, otherwise they could not afford to gamble in that product. No man could afford to sell a thing that he does not own and knows he never can own and agree to pay the man to whom he sells the difference between what it is really worth and the fictitious value which he has placed upon it by reason of his bargain in the futures market, unless he has some way to control that market.

I know; I have watched the operation; I have produced cotton and I have sold cotton, and I know that the people who sell cotton on the New York and New Orleans exchanges have each year taken hundreds of millions of dollars from the farmers and given them nothing in exchange. I want some bill enacted to correct that situation. The bill I have introduced will do that.

Mr. POMERENE obtained the floor.

Mr. RANSDELL. Mr. President, will the Senator from Ohio yield to me for a few moments. I wish to say just a few words, inasmuch as I have been called a farmer who did not know a cow from a horse. If I did not, I am quite sure that my friend from Arkansas could inform me thoroughly in regard to both cows and horses, and, of course, everything else that is known on the farm.

Mr. CARAWAY. I think the Senator knows as much about cows and horses as he does about the cotton futures exchange act.

Mr. RANSDELL. Now, Mr. President, just a word about this bill. I am going to quote very briefly from a distinguished gentleman from the city of Little Rock, Ark., a constituent of the Senator who has just taken his seat. I refer to Mr. S. Y. West, of Little Rock, who is said to be a cotton buyer and exporter.

Mr. CARAWAY. Yes; he deals in futures. I know him very well. It is a very excellent business, and so long as that business continues legal, I presume he has a perfect right to engage in it, but that is his business, and I know him intimately well.

Mr. RANSDELL. He says he is a cotton buyer and exporter; he speaks for himself and the Little Rock Cotton Exchange and the Arkansas Cotton Trade Association, and says that he is not a member of any futures exchange. I say for him that he appeared before the subcommittee of which the Senator from New Hampshire [Mr. KEYES] is chairman and gave testimony there very fully, and I never heard a more intelligent man testify before a committee of any House of Congress than he during the 23 years in which I have been a Member. He may deal in futures; I believe he does. Here are some of the things he says:

> I have very little to add to the wisdom of these gentlemen who have been speaking here this morning.

Let me say, Mr. President and Senators, that this subcommittee, composed of the Senator from New Hampshire [Mr. KEYES], who does not live in a cotton region, the Senator from South Dakota [Mr. NORBECK], who does not live in a cotton region, and the Senator from South Carolina [Mr. SMITH], who is a cotton grower, summoned witnesses from various sections. They took all the testimony they could get. They heard the Senator from South Carolina [Mr. DIAL] and the Senator from Arkansas [Mr. CARAWAY]. They heard everybody who wanted to testify in regard to the matter. I have here a document of 175 pages of this testimony. They heard people from the various sections of the South where cotton is raised, and they were not convinced that there was anything very far wrong.

Mr. CARAWAY. Mr. President, may I interrupt the Senator?

Mr. RANSDELL. I yield to the Senator.

Mr. CARAWAY. Is it the impression of the Senator that this subcommittee is not going to report some kind of a bill to change the present system?

Mr. RANSDELL. I understand that the subcommittee reported back the Dial bill to the full committee without recommendation. I do not understand that they have reported back the bill of the Senator from Arkansas at all, pro or con.

Mr. CARAWAY. If the Senator will stay here a little while, he will understand that they will.

Mr. RANSDELL. All right; I will stay here just as long as the Senator from Arkansas will, or anyone else.

Now, I want to go on and read just a little bit from the testimony of this witness; and I refer to page 42 of the hearings before the subcommittee on Senate bill 385, Senate bill 399, Senate bill 3146, and Senate bill 2231. Mr. West says:

> A number of years ago, before we had marine insurance, people who shipped stuff around the world had to make much larger profits than they do to-day, when we can, for a very small premium, have our marine risks insured. The cotton people, under the present system, have price insurance.

I call that to the attention of Senators. This future business is a price insurance.

Mr. CARAWAY. May I ask the Senator another question? It insures the price to the speculator and the dealer, but who insures the farmer that he is going to get anything from it?

Mr. RANSDELL. One gets the same insurance that the other does.

Mr. CARAWAY. Does the Senator contend that the man who buys cotton takes out a guaranty that the farmer shall get a certain price for it?

Mr. RANSDELL. If the result of this speculation causes the price to go up, as it is very apt to do and in many instances does, then the farmer who owns the cotton will get the benefit of the increased price.

Mr. CARAWAY. Nobody will live long enough to see him get it.

Mr. RANSDELL. I shall be very glad to answer the Senator's questions, but I am not going to be deterred from presenting this evidence:

> The cotton people, under the present system, have price insurance, and it would be much better if these exchanges were called price-insurance associations, as Lloyd's is called an insurance, than if they were really called futures.

He goes on:

Lloyd's is not an incorporation, as an insurance company is in this country, at all. It is just a meeting place where these underwriters get together, this terrible speculating that we hear so much about. We have underwriters of marine risk, underwriters of fire, underwriters of credit insurance, underwriters of all sorts of insurance. They are speculators, if you please. That is just exactly what they are, speculators, as much so as in the cotton business. In the cotton business there is a price underwriter. He bets it is going up or down, just like if I have insured a home in Little Rock, the insurance company will bet me a hundred dollars to two that it will not burn up this year. That is all it amounts to.

Then I asked Mr. West:

And the ultimate buyer in this country is the spinner?

I am not representing spinners. I am trying to represent the producers. Mr. West replied:

Yes, sir; he is the spinner. I am a buyer this minute and a seller the next. I am one of those horrible middlemen, and maybe I should be eliminated, and I will be whenever there is a cheaper way of handling the cotton crop than the present one; I will go by the board, and ought to go by the board.

Now, I want Senators to listen especially to this sentence:

The spinners, being much wealthier men, commanding much greater credit than any conceivable combination of farmers that I can think of, if we have no futures markets, the spinners could get together and make a combination of credits and would not pay very much for the commodity which they were trying to buy, because the speculator would not be in there. Maybe some man in India believes cotton is selling too cheap in the United States and he buys a lot of cotton here. That helps to stabilize the price. It helps the spinner because it gives the farmer enough money so that he won't starve to death.

Mr. President, we had this bill up in a pretty lively form a year or so ago, when the Senator from Alabama, Mr. Comer, was here. He was tremendously interested in it, and in the course of that debate he admitted that he and his family owned about 200,000 spindles. I do not know whether or not that influenced him, but it is natural for a man to be influenced by self-interest. There is nobody in the Senate growing cotton, so far as I know, who is so tremendously interested in this Dial bill.

I asked Mr. West this question:

Suppose the spinners were the only buyers, Mr. West, and they chose to get out of the market for a few weeks; what would happen then?

The spinners, mind you, are the men who use the cotton. They are the only people who use it. We can not use cotton in its raw form. We must use it as cloth. It has to be converted into thread or into cloth before it can be used, and the spinners are the people who convert it. They are the people who use it.

Mr. West replied:

It would be just like it was in 1914. There would be no bottom to it.

The Senator from New Hampshire [Mr. KEYES] said:

Then I understand your position to be that they are really a protection to the grower?

Mr. West answered:

Positively.

Senator KEYES. It is a fact that they do not buy through the exchanges?

Mr. WEST. I should say that 98 per cent of the spinners, or 99 per cent of them, never take up a bale through the exchange, Senator. The exchange is simply an insurance association. It is a body politic. The cotton exchanges do not make money at all; just like you might belong to a church or something of that kind. It is just a trading place.

Mr. CARAWAY. Mr. President, will the Senator let me interrupt him?

Mr. RANSDELL. I shall be delighted to have the Senator do so.

Mr. CARAWAY. The Senator spoke of insuring a house against fire. Do you ever insure a house until there is a house to insure?

Mr. RANSDELL. No; I do not believe you do.

Mr. CARAWAY. They sell cotton when there is no cotton, do they not? If that is so, the Senator's analogy about the insurance is absolutely inapplicable.

Mr. RANSDELL. I have known people to sell lumber that was not cut, either—to take it on future contract to be delivered at a certain time.

Mr. CARAWAY. We are not talking about that.

Mr. RANSDELL. That is an analogous case.

Mr. CARAWAY. No. The man who sells the lumber expects to produce the lumber and deliver it; but there were 100,000,000 bales of cotton sold last year that were not in evidence, were they?

Mr. RANSDELL. There were a good many sold, and there were a great many bales of cotton insured which are not in existence. Now let me read you, right in that connection——

Mr. CARAWAY. Mr. President——

Mr. RANSDELL. Hold on now; I have the floor.

Mr. CARAWAY. Yes; I know that.

Mr. RANSDELL. All right, sir. I will answer the Senator politely, but when he asks a question I am going to answer it before I let him ask another one. Then I will let him ask another, and 40 of them if he wishes.

Mr. CARAWAY. I will wait until I can get the floor.

Mr. RANSDELL. All right.

The Senator asked about the 100,000,000 bales. Here is what his constitutent, Mr. West, says about that:

Then we are attacked about this 100,000,000 bales traded in when only 10,000,000 bales are raised. You take the matter of fire insurance on that same number of bales, you will find it relatively about the same number as the 100,000,000 they speak of being traded in on the future exchanges, because every time I move a bale of cotton from one warehouse to another—buy it, for instance—when it is moved out of the warehouse that insurance policy is canceled out and when it gets to my warehouse my policy covers it. When it gets to the depot my policy is canceled out and another one takes effect when it gets on the railroad. Then when it arrives at the compress at Little Rock the railroad policy is canceled out and the other policy takes effect at Little Rock. Then when I sell that cotton, if it goes on the railroad again, I cancel my Little Rock insurance and another policy takes it up, and so on, and it is carried right through. Each bale of cotton is insured, on an average, against—

Bear that in mind—

against fire about six different times. There are 10,000,000 bales of cotton and there are at least 60,000,000 bales insured against fire.

If that is not an analogous case to the 100,000,000 bales traded on in the futures market, where, as every man knows, the future market is used as a hedge, I should like to know what is an analogous case.

Mr. SIMMONS. Mr. President——

Mr. RANSDELL. I yield to the Senator from North Carolina.

Mr. SIMMONS. I know that the Senator is discussing a very important question, and one in which southern Senators are deeply interested, but I wish the Senator might let us go on with the bill before the Senate. This matter will all have to be gone over again.

Mr. RANSDELL. Mr. President, I think that request of the Senator is very reasonable. If the Senator will just allow me to put into the RECORD one or two additional brief paragraphs here—and I am entirely willing to put them in without reading—I will yield the floor and let the tariff debate go ahead.

I ask that I may put in, on pages 43, 44, and 45 of the hearings before the subcommittee the testimony of Mr. West. If I may be permitted to put that in the RECORD now, I will yield the floor, provided, of course, that we are not going to have this debate in extenso. If so, I shall have to speak in reply.

Mr. SIMMONS. I rose to ask Senators on this side if they could not withhold their discussion of this matter until the bill comes before the Senate.

Mr. RANSDELL. I gladly yield.

Mr. SIMMONS. I understand that one speech provokes another speech. I hope that we may all agree to drop the subject until the bill comes before the Senate.

Mr. CARAWAY. Mr. President, may I interrupt the Senator? I am perfectly willing to let it go on. The Senator from Louisiana is something like the lady who was testifying, who was asked by an attorney if she had told all she knew about the matter in controversy, and she said, "Yes; she thought a little the rise."

Mr. RANSDELL. I have no doubt the Senator thinks I have told more than I know about it, but Senators will probably find that I know just a little bit more—not half as much as the Senator from Arkansas knows, of course. No one could know as much on any subject as he knows on all, but I will try to say a little bit more about it when the proper time comes.

Mr. SIMMONS. I think we all agree that that is one of the senatorial infirmities. We are very apt to talk a great deal about subjects that we do not know much about.

The PRESIDING OFFICER (Mr. ODDIE in the chair). Without objection, the matter referred to by the Senator from Louisiana will be inserted in the RECORD.

The matter referred to is as follows:

STATEMENT OF MR. S. Y. WEST, LITTLE ROCK, ARK.

Senator RANSDELL. Will you please give your name, Mr. West, your residence, and your business?

Mr. WEST. S. Y. West, cotton buyer and exporter, speaking for myself and the Little Rock Cotton Exchange and the Arkansas Cotton Trade Association, not a member of any futures exchange.

I have very little to add to the wisdom of these gentlemen who have been speaking here this morning, but, boiled down very briefly, the thing looks to me like it comes to this: A number of years ago, before we had marine insurance, people who shipped stuff around the world had to make much larger profits than they do to-day, when we can, for a very small premium, have our marine risks insured. The cotton people, under the present system, have price insurance, and it would be much better if these exchanges were called price insurance associations, as Lloyd's is called an insurance, than if they were really called futures.

Senator RANSDELL. They are really price insurance?

Mr. WEST. They are really price insurance associations. They are not themselves companies. It is simply a place for people to meet.

Senator RANSDELL. It is very much like Lloyd's in that respect, is it not?

Mr. WEST. Yes; it is, exactly. Lloyd's is not an incorporation, as an insurance company is in this country at all. It is just a meeting place where these underwriters get together, this terrible speculating that we hear so much about. We have underwriters of marine risk, underwriters of fire, underwriters of credit insurance, underwriters of all sorts of insurance. They are speculators, if you please. That is just exactly what they are, speculators, as much so as in the cotton business. In the cotton business there is a price underwriter. He bets it is going up or down, just like if I have insured a home in Little Rock, the insurance company will bet me a hundred dollars to two that it will not burn up this year. That is all it amounts to.

Any changes, as we know, upset confidence. I am from a farm State. The exchange that I represent there, of which I happen to have been president, 60 per cent of its membership are farmers, and we do not know a lot about the technical side of these things, but we do know this: We know what happened to us there in our State. I am also interested in a little bank. Futures went up very high in 1919 and 1920, during the winter of 1920, and then the next fall they were very cheap, and still kept getting cheaper. The man who had taken price insurance—and they were forced to do it in my town of Little Rock, because the banks would not loan them any money—was able to pay off his bank, and there was not a dollar lost by a bank in Little Rock on a cotton man. In other sections of Arkansas, where they are not quite so conservative, cotton shippers and merchants, the banks do not understand the economic functions of the futures, they did, or lots of them, and I will say they are in a poor condition. I don't mean that any of the banks are going to bust down there, but they are not flourishing with money.

Here is a buyer and here is a seller. Their interests are diametrically opposed. They have got very little in common. The buyer wishes to buy as cheaply as possible always, and the seller wishes to sell at the highest price obtainabe all the time.

Senator RANSDELL. And the ultimate buyer in this country is the spinner?

Mr. WEST. Yes, sir; he is the spinner. I am a buyer this minute and a seller the next. I am one of those horrible middlemen, and maybe I should be eliminated, and I will be whenever there is a cheaper way of handling the cotton crop than the present one; I will go by the board, and ought to go by the board. The spinners, being much wealthier men, commanding much greater credit than any conceivable combination of farmers that I can think of—if we have no futures markets, the spinners could get together and make a combination of credits and would not pay very much for the commodity which they were trying to buy, because the speculator would not be in there. Maybe some man in India believes cotton is selling too cheap in the United States and he buys a lot of cotton here. That helps to stabilize the price. It helps the spinner, because it gives the farmer enough money so that he won't starve to death.

Senator RANSDELL. Suppose the spinners were the only buyers, Mr. West, and they chose to get out of the market for a few weeks. What would happen then?

Mr. WEST. It would be just like it was in 1914. There would be no bottom to it.

Senator RANSDELL. Just like some other agricultural commodities—no bottom?

Senator KEYES. Then, I understand your position to be that they are really a protection to the grower?

Mr. WEST. Positively.

Senator KEYES. It is a fact that they do not buy through the exchanges?

Mr. WEST. I should say that 98 per cent of the spinners, or 99 per cent of them, never take up a bale through the exchange, Senator. The exchange is simply an insurance association. It is a body politic. The cotton exchanges do not make money at all, just like you might belong to a church, or something of that kind. It is just a trading place.

Senator RANSDELL. The spinners do use the exchange as an insurance to hedge? When a spinner wants a thousand bales of spot cotton six months in advance he will go on the exchange and buy a thousand bales of future cotton for the time?

Mr. WEST. That is right.

Senator RANSDELL. To insure that he is going to get his spots at the price?

Mr. WEST. Mr. Chairman, I did not mean that the spinners did not use the exchanges as price insurance, but for the actual acquisition of their spot cotton which they spin they do not use it.

Senator KEYES. Yes; that is what I understood.

Mr. WEST. That is the way I understood your question.

Senator DIAL'S bill, the one that he withdrew and the one that he now wishes passed, I believe that is the thing we are talking particularly to-day——

Senator KEYES. Yes; also a bill introduced by Mr. CARAWAY.

Mr. WEST. Well, I was going to come to that, too.

Senator DIAL'S bill would have the same effect upon the marketing of cotton as if insurance companies with whom I have my fire insurance policies would say to me, "I will only insure certain qualities of your cotton against fire." Immediately my financial backers, my bankers, would want to know, "Well, what part of that cotton is insured? That is the cotton that we want to loan money on. We won't loan you any money on this other cotton that you can not get fire insurance on." That is, the whole thing is a question of insurance. A great many people don't believe in insurance. I think Senator CARAWAY does not believe in insurance. He told me that yesterday afternoon—that he had practically no insurance. We are able to get this price insurance to handle cotton on about as close a profit as possible, 1½ to 2 per cent, and out of that we have to pay everything. If I handle 50,000 bales of cotton in a year, at $2 a bale, and do $5,000,000 worth of business, if I make $50,000 a year on my business I am delighted and have done very well. People in the wholesale dry-goods business, wholesale jobbers and grocers who handle $5,000,000 worth of business, if they don't clear pretty near a million they feel like they have got a very hard deal. That is true in the State of Arkansas. I don't know about any place else. Without price insurance it would be impossible for us to do business on so small a margin.

Senator DIAL misunderstands the functions of the future exchanges, I believe. He wishes to force everybody to trade on a modified form of section 10 of the Smith-Lever bill. Now, I am from the country, and before the passage of this Smith-Lever bill I felt that people in my position were at a very serious disadvantage many times. Under the present system I have just as much protection as anybody. The Government functions in this matter just as in any other law for the protection of the farmer, and the Smith-Lever bill is as much a protection for the farmer as for the cotton exchanges.

Mr. CARAWAY wishes in his bill to eliminate the speculator.

Senator RANSDELL. That would destroy the exchanges?

Mr. WEST. That would destroy the price-underwriting feature of the cotton exchanges just as if you said to any insurance underwriter they could not any longer underwrite. To-day you get credit insurance from Lloyd's. It costs you pretty big, but you can get it. In 12 months' time they will guarantee the bank against loss under certain conditions.

Then we are attacked about this 100,000,000 bales traded in when only 10,000,000 bales are raised. You take the matter of fire insurance on that same number of bales; you will find it relatively about the same number as the 100,000,000 they speak of being traded in on the future exchanges, because every time I move a bale of cotton from one warehouse to another—buy it, for instance—when it is moved out of the warehouse that insurance policy is canceled out, and when it gets to my warehouse my policy covers it. When it gets to the depot my policy is canceled out, and another one takes effect when it gets on the railroad. Then, when it arrives at the compress at Little Rock, the railroad policy is canceled out and the other policy takes effect at Little Rock. Then, when I sell that cotton, if it goes on the railroad again, I cancel my Little Rock insurance and another policy takes it up, and so on, and it is carried right through. Each bale of cotton is insured on an average against fire about six different times. There are 10,000,000 bales of cotton, and there are at least 60,000,000 bales insured against fire.

Senator RANSDELL. That is a very interesting fact. I did not realize that, but I see the truth of it.

Mr. WEST. Mr. Chairman, you asked for suggestions that would better the situation.

Senator KEYES. Yes. We would certainly be very glad to have them if you have any.

Mr. WEST. No. I must frankly admit that I am not intelligent enough to offer any constructive suggestions on this subject, unless it would be to increase the number of grades deliverable on a contract rather than to decrease them. That is the interest of my State, because we are pretty far north and our growing season is short. Our cotton is generally of poorer grade than the rest of the people's, with the exception of western Tennessee, Missouri, and northern Mississippi, possibly. That is the only suggestion I could make of that nature.

Another thing. We all know that uncertainty upsets confidence, and we have had this Smith-Lever bill as an excellent thing, but this business of putting a law in that changes your price insurance policy over night is very destructive of confidence in values. I think one thing that is the matter with the markets now—it has been sluggish for six weeks or more—one thing is the fear on the part of a lot of us that something drastic will be done in regard to futures, and our ability to get price insurance will be destroyed or so badly impaired that we won't be able to finance our business.

The head of the Arkansas Bankers' Association, president of one of the biggest banks in that State, told me that if this law passes there was not a firm that would do business in Arkansas in the cotton business that his bank would be willing to loan more than 40 per cent of the value of cotton or any other commodity which could not get price insurance which in a very short time would concentrate the cotton business into the hands of a very powerful, rich firm. People working way back in the woods, willing to work for a small profit, sort of keep the thing from getting into the hands of a very few people.

Senator RANSDELL. Mr. West, do you know of any very well-defined sentiment in your State for the passage of this Caraway bill or the Dial bill?

Mr. WEST. The only sentiment in my State is in opposition to both bills. I have heard no favorable expression about either.

Senator RANSDELL. But there is a decided opposition to them?

Mr. WEST. The very fact that I am here, sent here by my exchange to fight this thing——

Senator RANSDELL. Which is not a futures exchange at all?

Mr. WEST. Not at all.

Senator RANSDELL. And you are not a member of any futures exchange?

Mr. WEST. Not at all. There is only one man a member of our spot exchange in Little Rock, Ark., that is a member of any futures exchange, and I think he is the only member of any futures exchange in the State of Arkansas.

Senator KEYES. He is a member, as I understand it, as an individual?

Mr. WEST. As an individual; yes, sir.

Senator KEYES. Not representing your exchange?

Mr. WEST. Not representing our exchange at all. Now, as I told you, 60 per cent of our membership are farmers.

Senator RANSDELL. That is, cotton farmers; men who produce cotton themselves?

Mr. WEST. Yes, siree.

Senator KEYES. Mr. West, do you agree with the previous witness that the passage of the proposed legislation, instead of benefiting the grower, would actually injure him?

Mr. WEST. Yes, sir. I think he would be very much in the same predicament that he was in 1914, when there was no futures market. With price insurance I am ready to buy cotton every day at a pretty fair value, based on that price insurance, and without it I could not.

Senator RANSDELL. And there are a great many other people in your position, sir, ready to buy cotton every day, thereby furnishing buyers for the commodity?

Mr. WEST. Yes, sir.

Senator RANSDELL. And without these exchanges you would not be buying?

Mr. WEST. I would not.

Senator RANSDELL. So there would be no people in the market purchasing the commodity, and without purchasers it would naturally go down, wouldn't it?

Mr. WEST. Yes, sir. I agree thoroughly with the other witnesses in that respect. I think it is much better for the farmer. He gets a better price. He can market and does market, I believe, 60 or 75 per cent of his cotton in a very few months out of the year. The mills do not buy anything like that amount of cotton from the farmer at that time. Somebody must take up that slack. They must carry that stock of cotton just as a wholesaler carries a stock of dry goods, or whatever business he may be in. The reason he carries it is because he is convenient to the market, for his retailers to come in and buy from him. The farmer is selling from 60 to 70 per cent of his product in 90 days, and the world is using 1,000 per cent, or about 100 per cent of his product, in 12 months. You can readily see what would happen to him without a lot of people taking up that slack in that time.

Senator KEYES. Is there anything more, Senator RANSDELL?
Senator RANSDELL. No more from this witness. I have one or two more witnesses. Are you willing to go on?
Senator KEYES. Yes; for a while.
Senator RANSDELL. I now wish to produce Mr. Evans, of Houston, Tex.

Mr. DIAL. Mr. President, just one word, and then I will stop. The Senator from Arkansas said that my amendment would interfere with the marketing of low-grade cotton. I do not desire to interfere with the 10 grades tenderable under the law as fixed now, but I have no objection to joining the Senator from Arkansas or the other Senators in making a greater number of grades tenderable, if that is thought advisable. That is not the object of my amendment at all.

THE TARIFF.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes.

The PRESIDING OFFICER. The Secretary will state the pending amendment.

The READING CLERK. In paragraph 905, page 125, the committee proposes to strike out lines 3 to 9, inclusive, as follows:

PAR. 905. Cotton cloth with extra threads introduced by means of the lappet or swivel shall be dutiable at the rate on the basic cloth and, in addition thereto, 7½ per cent ad valorem.
Cotton sateens, woven with eight or more harness, shall pay, in addition to the rate on cotton cloth, 10 per cent ad valorem.

Mr. LENROOT. I would like to have the Senator from Utah explain that amendment. Is paragraph 905a intended to take the place of it?

Mr. SMOOT. It is.

Mr. LENROOT. Then I think before we vote on the pending amendment there ought to be an explanation both of the part that is proposed to be stricken out and of the paragraph proposed to be inserted.

Mr. SIMMONS. The Senator from Utah does not propose to strike out all of paragraph 905?

Mr. SMOOT. No; just the part which has been read. I do not propose to strike out that part reading:

Tire fabric or fabric for use in pneumatic tires, including cord fabric, 25 per cent ad valorem.

In my original remarks I called attention to this particular paragraph, and I will repeat my statement briefly. The part of paragraph 905 proposed to be stricken out by the committee reads as follows:

PAR. 905. Cotton cloth with extra threads introduced by means of the lappet or swivel shall be dutiable at the rate on the basic cloth and, in addition thereto, 7½ per cent ad valorem.
Cotton sateens, woven with eight or more harness, shall pay, in addition to the rate on cotton cloths, 10 per cent ad valorem.

Paragraph 905a is to take the place of that part of paragraph 905 which I have just read, and it will read as follows:

PAR. 905a. In addition to the duty or duties imposed upon cotton cloth, there shall be paid the following duties, namely: On all cotton cloths woven with eight or more harnesses, or with Jacquard motions, or with drop boxes, or with lappet or swivel attachments, 12 per cent ad valorem.

Then the committee have offered an amendment to strike out of the committee amendment, following what I have just read, these words:

For cloths containing yarns the average number of which does not exceed No. 30; exceeding No. 30, 15 per cent ad valorem.

That is to be stricken out, and this proviso will be inserted following the words "ad valorem", on line 16:

In no case shall the duty or duties imposed upon cotton cloth in paragraph 903 or 905a exceed 45 per cent ad valorem.

In other words, as I have so often stated upon the floor, taking into account the rates upon cloth found in paragraph 903, and all the cumulative duties of any name or nature, the rate shall not exceed 45 per cent ad valorem.

Mr. LENROOT. Do I understand, then, that with the proposed committee amendment there will be imposed a flat rate of 12 per cent ad valorem, with 45 per cent as the maximum on all cotton cloths woven in this way?

Mr. SMOOT. The weaves are very difficult, and it takes one person to each loom. One person can not run more than one loom in manufacturing this class of goods.

Mr. LENROOT. How did the committee arrive at 12 per cent as being the proper addition?

Mr. SMOOT. It is always understood by every manufacturer that it costs from 10 to 15 per cent more, depending on the class of loom that is being run. The running of the loom in making that class of goods costs at least 15 per cent more, with the Jacquard weave, and some of the eight harness weaves, I suppose, run 10 per cent, and with the swivel even more than that, and 12 per cent was the rate the House agreed upon.

Mr. LENROOT. Do I understand that the Senator's statement is that it costs from 10 to 15 per cent more to manufacture this cloth than to manufacture the plain cloth? Is that the statement?

Mr. SMOOT. Not the labor cost alone, but taking the cost of the article itself into consideration.

Mr. LENROOT. How much additional does the article itself cost on account of putting in these figures?

Mr. SMOOT. Ten to fifteen per cent.

Mr. LENROOT. If that is true, is not the committee adding as a tariff rate the entire cost?

Mr. SMOOT. I took particular pains to say to the Senator that it was not only the labor cost alone but it was upon the article itself.

Mr. LENROOT. The Senator says now that it costs from 10 to 15 per cent ad valorem upon the entire article to make this figure. That is what the Senator said.

Mr. SMOOT. I did not mean to state it as broadly as that. I meant that it cost 10 to 15 per cent more on the goods itself to manufacture this line of goods in this country than it does in foreign lands.

Mr. LENROOT. If that is the statement, what basis did the Senator have? I can not find any information upon the subject. In the hearings the Senator himself seemed to seriously question that.

Mr. SMOOT. I rather thought it was too high; but taking the cost of the goods and the labor cost in foreign countries and in this country into consideration, it was demonstrated to the committee that 12 per cent was necessary. The Senator will notice that the House put in a provision that, exceeding No. 30, the rate should be 15 per cent ad valorem, and the Senate committee struck that out. I thought the 15 per cent ad valorem was too high, and so stated before the committee, and we decided upon the 12 per cent on all sizes of yarns, taking the lowest rate that the House had put in.

Mr. LENROOT. Taking the lowest rate that the House had put in?

Mr. SMOOT. Yes; the House put in 12 per cent ad valorem for cloths containing yarns, the average number of which does not exceed 30, and then exceeding 30, 15 per cent ad valorem. That was the provision the House put in.

Mr. LENROOT. The House?

Mr. SMOOT. No; I am mistaken about that. That was what the Senate committee first proposed.

Mr. LENROOT. It is a very substantial increase.

Mr. SMOOT. That is true. If the Senator will look at the equivalent ad valorem in the act of 1909, he will see that without that limit the tax would have run up to 60 and 65 per cent, but the committee thought that in no case should it run above 45 per cent. This does not say "less than 45"; it changes it so that it will state that it shall not be more than 45 per cent. So the very fancy goods—I do not care what they are, how they are woven, upon what loom they are woven, if they are cotton—can not carry a heavier rate of duty than 45 per cent. I want to state frankly to the Senator that this is one of the amendments which many of the manufacturers think is a very drastic provision.

Mr. LENROOT. This amendment was proposed by Mr. Lippitt himself.

Mr. SMOOT. Oh, no; it was not proposed by Mr. Lippitt himself in the form it is presented. Mr. Lippitt proposed that the rate should be not less than 45 per cent.

Mr. LENROOT. I mean the original committee amendment.

Mr. SMOOT. There is quite a difference, if you figure the equivalent ad valorem. This is a limit upon the rates on the fine goods, I say to the Senator now, which is just as low as it is possible to give with safety.

Mr. LENROOT. The amendment as originally reported by the committee is word for word the amendment proposed by Mr. Lippitt himself. Is not that true?

Mr. SMOOT. Mr. Lippitt does not propose that in no case shall the rate be more than 45 per cent.

Mr. LENROOT. I understand that.

Mr. SMOOT. I will say to the Senator that, without any limitation, in many cases it would go to 60 or 65 per cent. That is why I insisted that there should be a limitation, and that limitation is put in covering the cloths in paragraphs 903 and 905a.

Mr. SMITH. Mr. President, I would like to call attention to the fact that we are striking out that part of paragraph 905 through which the lines are drawn, but the Senate on Saturday, in place of lowering the duty on these dyed and figured cloths, raised it. The Senate has lowered the duties proposed for single gray yarn and for advanced yarns. It has also, to a less

extent, lowered the duties on plain gray cloths and on plain bleached cloths.

I desire to call your attention to the fact that on advanced cloths, including printed, dyed, colored, or woven figured, the Senate has increased the duties up to 80s by reason of substituting a rate of advance of five-sixteenths instead of three-tenths of 1 per cent ad valorem per number. Under the House rates the minimum ad valorem at 80s would have been 29 per cent American valuation; the Senate bill carried 39 per cent foreign valuation, and this has been increased to 40 per cent foreign valuation. The Senate has slightly reduced the rate on advanced cloths above 80s average yarn count, but as imports of this particular class are most largely under 80s, it should be noted that such cloths have now a wider differential over gray and bleached cloths and a much wider differential over the yarns from which they are made than was intended in either the House or the Senate bill.

In other words, by substituting five-sixteenths we have raised it to 40. With the addition of a compensatory duty it will run it up to in the neighborhood of 45, and then on all woven cloth with eight or more harnesses, with Jacquard motions, or with drop boxes, you have added an additional 12 per cent. It is true the Senator has offered an amendment that the rate shall not exceed 45 per cent.

Mr. SMOOT. That is true.

Mr. SMITH. But you start out practically with a 45 per cent rate on this kind of cloth. You have kept the parity on the plain gray yarns and cloths, but when you get to this paragraph you have increased it from about 25 per cent up to 45 per cent.

Mr. SMOOT. Mr. President, we have passed over all those paragraphs, and there is no question as to what the rates are. The highest rate that is given is on cloth above No. 80. The rate is not less than 15 per cent ad valorem, and for each number above 80, five-sixteenths of 1 per cent ad valorem; and 45 per cent is the highest rate that can possibly be given on the finest goods in paragraph 903.

Mr. SMITH. Let us take imported gingham. Under the Underwood Act the importers pay 20 per cent, and under paragraph 903 they will pay 30 per cent. The committee adds an additional 12 per cent under paragraph 905a, which raises the duty to 42 per cent above the other cloths. This is in addition to what we have already provided for in paragraph 903. We have amply taken care of that under paragraph 905a, in that we have given gingham a differential of about 10 per cent over the plain cloths already. In other words, the plain gray and the ordinary run of cloth pay 30 per cent under the modification in regard to these figured cloths, and you have raised that to 40, and now you add an additional rate by virtue of the so-called Jacquard motions and drop boxes. Anyone familiar with the Jacquard process knows that in standard figures the cards are made by the millions. After the machine is set up any kind of a weaver has no more trouble in producing the figures than he does on the ordinary loom.

Mr. SMOOT. No; he does not have any more trouble in producing the figure if it runs all right, but he has to have more knowledge to run the loom, and he can work only one loom.

Mr. SMITH. The Senator knows that in the use of the Jacquard machine it is an attachment to the loom and practically adds no additional expense except the overhead charge for fixing the machine, and it becomes as standard and permanent as the loom itself.

Mr. SMOOT. The Senator also knows that he can take a plain loom and run a plain piece of cloth, and almost any weaver can run it; but almost any weaver can not run a difficult pattern that is woven on a Jacquard loom.

Mr. SMITH. It takes not a particle more experience to run a loom with the Jacquard attachment than to make a piece of brown cloth, for the machine is automatic. The attachment is as automatic as the loom itself, and when it is a standard fissure the cards are printed by the millions. All manufacturers who use standard patterns use the standard Jacquard machine, and they draw their threads through the dies at particular places, and when the machine starts it is automatic. That is familiar to anyone who knows anything about cotton-cloth weaving.

Mr. SMOOT. The Senator gives a description of what the loom boss does who fixes the loom ready for some one to operate, but then he tries to make us believe that whenever any thread breaks a novice can fix it, for almost any novice who knows anything about it can run a plain piece of cloth, because the loom will run itself when it is once set. But I have seen the time when 50 or 100 threads would break through some accident. Who would put them through the holes in the card in a case like that? Does the Senator think a novice can do it? If he does, he is greatly mistaken.

Mr. SMITH. The Senator knows that on the Jacquard loom the Jacquard thread when it breaks indicates itself where it is broken as much as it does in the ordinary plain cotton weave.

Mr. SMOOT. That is not what the Senator from Utah said at all. The Senator from Utah has seen as many as 100 and sometimes 200 threads break at once, and they stop just as quickly as when one thread breaks.

Mr. SMITH. But these are different. They are put through as quickly as any one thread, for the reason that when they break they indicate where they came from.

Mr. SMOOT. I learned to weave and I know what it is to weave a plain piece of cloth. I know that I could not have gone from a plain piece cloth loom over to a Crompton loom and drawn the threads in the Crompton harness correctly without having had experience in that kind of work. I do not care what the Senator said; I know that to be true.

Mr. SMITH. As a matter of course this is a mere question of opinion, but I would like to have some authority. If I had thought anyone would question the fact that the standard Jacquard process was any different from the ordinary process when the machine was set up I would have been delighted to bring along some authorities to show that when the machine is set up any man in the factory can operate it. The same is true of the drop box, in which we have the colored yarn that automatically is fed into the warp just as the ordinary thread when the loom is installed with that process.

Mr. SMOOT. The drop box is quite different from the Jacquard.

Mr. SMITH. It is no more difficult to work the drop box than it is the Jacquard.

Mr. SMOOT. The Senator is talking about something with which he never had any experience; I know what I am talking about.

Mr. SMITH. But that is a mere difference of opinion.

Mr. SIMMONS. Mr. President, I would suggest that these are the two great cotton experts of the Senate and it seems they can not agree at all. I am afraid Mr. Lippitt has rather confused somebody, and that we need arbitration here.

Mr. SMOOT. I am not an expert on the raising of cotton. I never did that; I never have taken any interest in how it is raised; but I do know, after the cotton gets into the mill, what has to be done with it. I do not think the Senator from South Carolina has ever worked a day in a mill. I have worked in the mill. I have used cotton with woolens; I have used cotton mixed with wool, and the process is exactly the same.

Mr. SMITH. I doubt if they had the Jacquard machine when the Senator was in the mill.

Mr. SMOOT. Oh, yes; they had the Jacquard machines. We have had them for 40 years or more.

Mr. SMITH. What I desire to state is that the Senator's opinion on this matter or my opinion on the matter does not change the fact. The fact is open to any Senator. I assert, and will risk my reputation on this particular article, that the cost is practically negligible, after the machines are installed, when it comes to the question of operating the machine.

Mr. SMOOT. I want to call the Senator's attention to the fact that there never has been a tariff bill written, including the existing law, which made more than a 10 per cent difference in the Jacquard weave and the plain woven cloth.

Mr. SMITH. But that does not justify it. If the facts had been known when the other laws were being written, as Senators ought to know the facts now, they would not have written it then and they would not write it now.

Mr. SMOOT. Any Senator knows that where we have to take one man to run the loom, or one good, experienced weaver, whether it be a man or woman, it costs more to produce goods than it does where we can take an automatic machine and one person can tend 10 or 12 or even 16 of them. There is no need of arguing that.

Mr. SIMMONS. Then I would suggest to the Senator that he do not argue it.

Mr. SMOOT. It is an absolute certainty, as I view it.

Mr. LENROOT. Mr. President, the Senator from Utah just stated that there was no law, which would include the present Underwood law, where there was not a difference of 10 per cent or more between the Jacquard woven goods and the ordinary goods. Did I correctly understand the Senator to say that under the present Underwood law there is a difference of 10 per cent or more for this particular class of goods?

Mr. SMOOT. I am speaking of the Jacquard cloths under the Underwood law, which run as high as 40 per cent.

Mr. LENROOT. Covered by this paragraph?

Mr. SMOOT. Oh, no; not covered by this paragraph.

Mr. LENROOT. That is confined to upholstery.

Mr. SMOOT. It is the same principle exactly that is used in the other.

Mr. LENROOT. Under the Underwood law many of these goods are coming in under the rate for woven goods, are they not?

Mr. SMOOT. The drop-box goods would come in as woven goods.

Mr. LENROOT. Certainly.

Mr. SMOOT. And the drop-box ginghams about which we have been talking are the highest price ginghams and higher in price than the American ginghams.

Mr. LENROOT. But they are coming in now, and the Senator stated there was a difference under the present law of 10 per cent or more for the Jacquard woven goods. Now, the Senator does not mean that, when the Jacquard woven goods come within this class of cloth?

Mr. SMOOT. Take, for instance, the damask cloth under the Underwood law to-day. Has the Senator the rates there under the Underwood law on damask cloth?

Mr. LENROOT. I believe I have.

Mr. SMOOT. They are all made by the Jacquard loom. I think the rate is 25 per cent. As the Senator will notice on the building-up rates of the existing law, they were built why? Because of the kind of loom that has been used. Tapestries are all the same way, the upholstery cloths are the same way, and I know there is a special rate in the existing law.

Mr. LENROOT. Only upon upholstery goods.

Mr. SMOOT. And tapestries and cotton damask.

Mr. LENROOT. Not upon table damask.

Mr. SMOOT. Table damask is only 25 per cent.

Mr. LENROOT. Yes; but there is no special provision for it as there is for the Jacquard. Is it not true, I ask the Senator, that under the Payne-Aldrich law there was a specific cumulative rate given for Jacquard woven goods, with a maximum per cent per square yard?

Mr. SMOOT. No; it was not a maximum.

Mr. LENROOT. That is my recollection.

Mr. SMOOT. I think the Senator is in error when he speaks of 2 cents a yard. There is an additional rate given on all cotton cloth in which other than the ordinary warp and threads are used.

Mr. LENROOT. Now, can the Senator turn to the provision of the Payne-Aldrich law covering Jacquard woven goods? There is no special provision for it except for upholstery.

Mr. SMOOT. For special goods?

Mr. LENROOT. Was that in the Payne-Aldrich law? There is no differential, I believe.

Mr. SMOOT. But the rate provided in the Payne-Aldrich law, the equivalent ad valorem provided, is higher than the cumulative rates added in the pending bill with a limit of 45 per cent ad valorem.

Mr. LENROOT. Let us see whether that is so or not. Of course we have no classification and there are no figures upon it unless the Senator has them.

Mr. SMOOT. I have the figures.

Mr. LENROOT. Will the Senator read them?

Mr. SMOOT. The average under the Payne-Aldrich law was 44.82 per cent, and under the present bill it is 35.88 on the samples that we had at the time.

Mr. LENROOT. But take the actual imports.

Mr. SMOOT. Those are the actual imports.

Mr. LENROOT. Under the Underwood classification they all come in under woven figures and tapestry and upholstery.

Mr. SMOOT. I want to say, before the Senator proceeds further, that the changes we have made will bring the rate down considerably lower than 35.88.

Mr. LENROOT. Let us see. The import price of printed, dyed, colored, or woven figures, all four together, was 34 cents a yard on the imports of 1921. The Senator does not question that, of course. That would add, even at that rate, 4 cents a yard additional duty by reason of those processes. The Payne-Aldrich law did not add more than 2 cents per square yard. Is not that true?

Mr. SMOOT. I can not say what the average was, I will say to the Senator.

Mr. LENROOT. I was just reading the figures of the imports. Is not that double the rate under the Payne-Aldrich law?

Mr. SMOOT. If that is the case, there is a higher class of goods coming in and the prices have been higher. There is no doubt about that. The equivalent protection would be no more. As I said, this shows that the prices existing in 1910, when the equivalent rates upon these importations amounted to 44.82 per cent, at to-day's prices are only 35.88 per cent; but what would they be if the price was down to what it was in 1910? Therefore, I say that under the pending bill we ought to limit it so that no rate shall be more than 45 per cent. I want to say to the Senator that it is claimed that this rate is a hardship upon the eastern manufacturers.

Mr. LENROOT. The difficulty again arises. The committee is making a limitation of 45 per cent which will apply upon the very high quality goods, the very high count goods. Of course it will not apply upon the other goods, and the effect of the paragraph is to very greatly increase the duty upon the lower goods, because the maximum will not apply.

Mr. SMOOT. No manufacturer can afford to make goods upon the Jacquard loom unless they are specialties, and this paragraph applies to that character of goods. No manufacturer can afford to run a swivel loom to make ordinary common goods. Even if the rate were 100 per cent, they would not undertake it; it could not be done. This rate only applies to a certain variety of goods which are woven in a special way. It does not apply to articles which are ordinarily used by the great mass of the people of the United States. They, of course, use bedspreads and also tablecloths, but we have those classified by themselves. By the way, I wish to say that we are going to cut the rate on table damask to 30 per cent, and by the time we get through with the cotton schedule I do not believe anybody in the United States ought object to it. The only thing we could do would be to cut the rates on low-count yarns and upon plain goods. I have tried to support a consistent protective tariff bill, I do not care to what part of the country it may apply. I think that is the only proper way to legislate.

Criticism is being offered here because a duty of 7 cents a pound having been imposed on long-staple cotton, it is proposed to give a compensatory duty. As I stated on Saturday, there is no manufacturer who desires the imposition of a duty of 7 cents on long-staple cotton; they do not want to be charged up with the compensatory duty which that action makes necessary, but the Senate in its wisdom has decided to try to establish a long-staple cotton industry in the United States. If there is anything to which it may be charged, it is to that and nothing else.

Mr. LENROOT. Will the Senator at that point yield, for I should like some information?

Mr. SMOOT. I yield.

Mr. LENROOT. As I understand, according to the statistics, cotton cloths made of long-staple cotton are imported at a less price than are the cotton cloths which are made of the ordinary southern cotton, are they not?

Mr. SMOOT. I will say to the Senator that happened, as was explained the other day, in the case of cloth of very low-count yarns. That is why we took out and put by themselves, with only a 25 per cent rate, cotton tire fabrics made wholly of long-staple cotton. Such cloth is made of low-count threads, and therefore the necessity does not exist as it does when a piece of cloth is made of a fine cotton thread. I know the Senator understands that.

Mr. LENROOT. I wondered why it was that imports of cotton cloths made from long-staple cotton come in at a less price than other cotton cloth.

Mr. SMOOT. That is why it is. I will say further to the Senator from Wisconsin that there is one great defect in this bill. As I said the other day, in view of the reduction which has been made in the low count yarns, at some time when such low count yarns are made into fancy cloths we are going to suffer through importations of that particular cloth in a particular year. That will not happen, perhaps, in many years, I will say to the Senator, but such importations will come in, for there will be fancy cloths woven of low-number yarns and finished to take the place of the finer cloths. That involves a most difficult process and it is not every manufacturer who can manufacture such goods.

Mr. LODGE. Mr. President——

Mr. SMITH. I should like to call the attention of the Senator from Utah to the third clause of paragraph 503, which relates to "cotton cloth, printed, dyed, colored, or woven-figured, containing" certain yarns. On Saturday we increased the differential on these particular kinds of cloth, which includes the Jacquard weave, 10 per cent, whereas under the present law the differential is only 2½ per cent. In addition to that, in paragraph 905a there is an additional duty imposed on identically the same goods of 12 per cent, which gives 22 per cent differential on this kind of cloth as against the other cloth.

Mr. SMOOT. Mr. President, these are dobby cloths, and whenever in a tariff bill an article is specifically named, of course it always takes the rate applicable to it over and above

the rate on articles which are not specifically named, but which may be construed to be the same class of goods. There will not be any question as to the rate if the goods are woven on the Jacquard loom or by the swivel process.

Mr. LENROOT. Does the Senator mean to say that there are no imports of woven cloth coming in under the countable cloth paragraph?

Mr. SMOOT. Yes; I should think there are.

Mr. LENROOT. When they come in under these provisions, in addition to the increase that we made in the countable cloth paragraph, they will bear a duty of 12 per cent ad valorem.

Mr. SMOOT. But we give them, as the Senator understands, an extra per cent not because of the fact that they are woven but because they are printed, dyed, or colored.

Mr. LENROOT. They are woven also.

Mr. SMOOT. Certainly; but that does not make the difference, unless it should be some kind of figured woven cloth or dyed or colored.

Mr. LODGE. Mr. President, I wish to say in connection with what the Senator from Wisconsin [Mr. LENROOT] has stated that I have found great difficulty in securing figures as to the different classifications. The statistics are given for cotton cloths, but it is almost impossible to tell what are ginghams and what are fine goods; in fact, I know of no way of getting that information. Therefore the statistics are very unsatisfactory. If I can get the floor, I wish to say something about that matter.

Mr. SMITH. Mr. President, what is the use of paragraph 905a when the same cloth has been covered in paragraph 903, with a differential of 10 per cent? That is 8 per cent over the differential existing under present law. Then, the committee selects certain specific woven figured goods and adds 12 per cent. What is the use of section 903 if the committee is going to take care of that with an additional section—905a? There is already a differential of 10 per cent provided to protect this identical kind of cloth.

Mr. LODGE. Mr. President, I will leave it to the Senator from Utah [Mr. SMOOT] later to answer the last question of the Senator from South Carolina. I should like to say something in general about this part of the schedule, because it is of such vast importance to the State which I have the honor in part to represent.

When I heard the Senator from South Carolina talking about the Jacquard loom, which, by the way, was invented in 1835——

Mr. SMITH. And by a Frenchman.

Mr. LODGE. It reminded me of a story of Rufus Choate. He had a patent case involving a loom invention, and his junior counsel brought to him the client, who wished an interview with him. The client sat down, and said, "Of course, Mr. Choate, you understand the principle of the Jacquard loom." Mr. Choate replied, "Of course, of course; but assume for the moment I do not understand the principle of the Jacquard loom, and expound it to me." As I have listened to this debate it has seemed to me that an exposition of the Jacquard loom would not be out of place.

Mr. President, I did not mean to discuss that question; but the State which I have the honor in part to represent has 11,206,855 spindles, equal to the number of spindles of both North Carolina and South Carolina, which are the two next States in order. The total number of spindles in New England is 17,542,926. Spindles, perhaps, do not give a very good idea of the point I wish to emphasize; but there are employed in the State of Massachusetts in the cotton-textile industries 124,000 persons. That probably means that at least 300,000 people in my State derive their living from the cotton-textile industry. As we have a population of nearly 4,000,000, the Senate can understand what a very serious matter anything affecting the cotton industry is to Massachusetts.

I may add that the figures which I have just obtained from the census show that those 124,000 people were employed 93 per cent of the time during the year.

I merely mention this to impress upon the Senate the very great gravity of the cotton schedule to the people of Massachusetts and of New England. The number of people employed in 1913 in the whole cotton goods industry of the country was 430,000. It is, therefore, a very large and very important industry.

I have said nothing about the question of the yarns or the coarse goods, but this matter of the fine goods is of vital importance to us. The great development of the cotton textile industry in the South, in which everybody must rejoice, has, of course, limited the field, so far as the coarser cotton goods are concerned, and their place in New England has been filled, or we are attempting to fill it, by the manufacture of finer goods which we can make in our climate, but which can not be made in all climates, the temperature and humidity both being important.

I wish in this connection to speak briefly about the cotton schedule as it was reported to the Senate. I have not worked out all the changes which the Senate committee has made, but there are certain general propositions which I think ought to be considered.

In order to understand thoroughly the cotton schedule reported to the Senate, it ought to be considered in its relation to the other two great textiles—woolens and silks—and to previous tariffs. In all previous Republican protective tariffs the three great textile products—cotton, silk, and woolen cloths—were in a general way protected alike. That is, the rates were from 40 to 60 per cent, roughly averaging perhaps 50 per cent.

The average rate of duty on importations of cotton cloth under the Dingley and McKinley laws was about 42 per cent, with maximum rates on such importations of from 55 to 60 per cent. That, of course, applies to all cotton cloths and does not make an exception in favor of the fine goods. If it were possible to find the average rate that applied to all cotton goods for consumption, both domestic and imported, the rate probably would have been about 50 per cent.

This general equality of treatment between cottons, silks, and woolens was entirely abandoned for the first time in the Underwood law. That law gave a flat rate of 45 per cent on silk cloth, 35 per cent on woolen cloth, and on cotton cloth gave rates that varied from 9 per cent to 30 per cent, the average rate on importations in 1920 being 22 per cent, which is about one-half the silk rate and only a little more than one-half the woolen rate, and yet the difficulties of the industry are quite equal.

The present bill as it came from the House retained this discrimination, the rates on cotton cloth being very much below previous Republican tariffs and not much higher than the Underwood rate. These rates were only slightly raised by the Finance Committee as applied to cotton cloth in general. For instance, on colored cloth made from No. 40 yarn the Underwood rate is 20 per cent, the committee rate 27 per cent. On colored cloth made from No. 50 yarn the Underwood rate is 22½ per cent, the committee rate 30 per cent.

The principal items of the cotton schedule consist of the duties on cotton yarns, on cotton cloth, and those that are applied especially to a few particular fabrics, such as upholstery, blankets, and so forth.

The principal change that has been made by the Senate committee as compared to the House bill is in the duty upon cloths, where paragraph 905a has put additional duties of 12 and 15 per cent upon certain classes of fancy woven cloths. The committee has further amended that proposed paragraph, fixing the rate at 12 per cent throughout, and providing that it shall not at any point exceed 45 per cent. The reason for the change is because the bill as reported from the House made a variation in cotton-cloth duties that depended solely upon the fineness of the yarns of which those cloths were composed, the duty being higher as the yarn became finer. This, of course, is a legitimate cause for variation, as the conversion cost—that is, the cost other than the cost of cotton—increases as the yarns become finer; but this is not the only cause of increased conversion cost. An equal or greater variation in weaving costs results from the ornamentation of the fabric with various kinds of checks, figures, and patterns in what are generally described as fancy woven cloths.

The effect of the omission of the House bill to give consideration to this factor of costs results in the more artistic and difficult fabrics, requiring the most skill to produce, actually having a lower rate of duty than the simple, ordinary, and most easily woven fabrics. The result is, of course, unjust and undesirable, as, instead of encouraging the development of the higher branches of cotton manufacturing, it puts a premium upon their importation.

The House rates not only gave no consideration to these artistic productions of the loom, but the rates of duty that were proposed for the cotton schedule were far below those proposed for the sister industries of silks and woolens, and also far below those of any previous Republican cotton-cloth schedule.

I have here a table showing the Underwood rates, the Finance Committee rates on ordinary bleached cloths, the Finance Committee rates on fancy cloths as affected by paragraph 905a, the Finance Committee rates on woolens and silks, and the Payne-Aldrich and Dingley rates on cotton. I ask to have the whole table printed at this point in my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

The table is as follows:

Average yarn.	Underwood ad valorem rate.	Committee ad valorem, not fancy.	Committee fancy woven.	Committee woolens.	Committee silk.	Payne-Aldrich and Dingley.
	Per ct.	*Per ct.*	*Per ct.*			
20	15	20	32	40 to 55 per cent.	Not less than 55 per cent.	Average imports about 42 per cent; maximum over 60 per cent.
30	15	22.5	34.5			
40	20	25	37			
50	22.5	27.5	39.5			
60	25	30	42			
70	25	32.5	44.5			
80	27.5	35	47			
90	27.5	35	47			
100	30	35	47			

Mr. LODGE. They show the difference. For instance, on the average yarn No. 20 the Underwood rate is 15 per cent; the committee rate on not fancy, 20 per cent; the committee rate on fancy woven, 32 per cent—not at all a serious increase. This goes all through until you get to No. 100, where the Underwood rate was 30 per cent, the committee rate on not fancy 35 per cent, and the committee rate on fancy woven 47 per cent.

The rates on colored cloth as covered, as I understand, by the recent committee amendment, are about 5 per cent higher than the rates on these bleached cloths, the maximum being 40 per cent for plain cloth and 52 per cent for the highly decorated fancy woven fabrics.

By reference to this table it is possible to see how far below either the committee's woolen and silk rates or the Payne-Aldrich and Dingley cotton rates the committee's proposed basic rates for ordinary cotton cloths are. The Payne-Aldrich and the Dingley rates applied alike both to ordinary and to fancy woven fabrics, but were made high enough to give reasonable protection to the ornamental and artistic weaves. This made in many cases rather high rates on ordinary weaves, practically none of which were imported. The intense domestic competition that has always existed in the cotton manufacturing industry, however, reduced all fabrics to a similar basis of profit, ordinary cotton fabrics always selling materially below the parity of foreign fabrics plus the duty, so that in this industry, at least, the height of the duty is by no means a measure of the cost of such duty to the consumer.

The table also shows the duties that will apply to the fancy woven cloths. The great bulk of these cloths are made of yarns from 20s to 50s, the duties on which will run from 32 to 39.5 per cent. As will be seen, even these are materially below the Payne-Aldrich and Dingley rates, or the minimum woolen and silk rates of the present bill. It is not until we reach fancy cloths made from No. 80 yarn, where the duty will be 47 per cent, that we approach the woolen and silk duties, and the quantity of such fabrics is practically negligible. Of course now we have put in the limitation of 45 per cent, so that it will not even reach the 47 per cent as proposed in the original committee report.

It seems to me—and I have given some attention to the matter—that the cotton schedule as presented to the Senate, and still more so since the amendments have been offered, is extremely low. The committee rates for cloths of ordinary weaves made of yarns below 50 probably do not average one-half as high as the Payne-Aldrich and Dingley rates, and these cloths comprise a very large percentage of the total cloths made. They have been estimated to make up fully 75 per cent of that total. Even with the extra rates, the duties on fancy woven goods will still be materially under the rates of previous Republican tariffs.

The cotton industry consider this schedule a great experiment. They know of no reason in the relative conversion costs of turning silk, wool, and cotton into cloth why one material should be treated radically different from the others. All three industries are carried on under similar conditions, with the same general types of machinery, in the same locations, and the workers in one branch frequently change to the others. The cotton schedule may perhaps be high enough to retain the industry that has already been developed here. It may open the door to great inroads by foreign manufacturers. No one can speak positively on that point, as sufficient data do not exist.

The Underwood bill has resulted in great increases of importations of cotton cloth, from which the industry is now suffering badly. The argument we have heard so much of here about there being no importation does not apply to this schedule. The importations for the last two years of the Payne-Aldrich law of what is classified as cotton cloth in the Department of Commerce reports upon imports vary materially from previous years, but were, for the fiscal year 1912, $7,638,631; for the fiscal year 1913, $7,717,809. The average rate of duty in the latter year was 40.97 per cent. The average rate of duty in this bill, as I understand, is 35 per cent. The importations under the Underwood law for the calendar year 1920 were $44,802,000, and for the calendar year 1921 $29,426,000.

To show further what a disaster the Underwood rates would be to the cotton-manufacturing industry of New England if they or anything like them are allowed to continue, I am going to submit a table showing monthly importations of cotton fabrics classified as cotton cloth from January, 1921, up to and including March, 1922, these being only a portion of the importations that are made under the cotton schedule, which shows an increase from $1,724,710 for the first month to $5,702,277 for March of this year, the latter being at the rate of $68,427,324 per annum, of importations in this one branch of cotton manufacturing alone, as against less than $8,000,000 annually under the Payne-Aldrich law.

The PRESIDING OFFICER. Without objection, the table will be printed in the RECORD.

The table referred to is as follows:

Importations classified as cotton cloth.

January, 1921	$1,724,710
February, 1921	1,615,046
March, 1921	2,747,976
April, 1921	2,392,746
May, 1921	2,452,723
June, 1921	1,719,795
July, 1921	1,965,943
August, 1921	1,756,607
September, 1921	2,338,193
October, 1921	2,874,197
November, 1921	3,358,779
December, 1921	4,479,534
January, 1922	4,346,869
February, 1922	4,777,415
March, 1922	5,702,277

Mr. GOODING. Mr. President, I should like to ask the Senator from what country the imports come? Does the table show that?

Mr. LODGE. I have not looked at the countries of export. They are all given here.

Mr. GOODING. I wish to say that any imports we receive from countries with depreciated currency are very much greater when the gold value is added to them. That is, there is a greater volume coming in with a depreciated currency.

Mr. LODGE. In reply to the Senator's first question, the principal imports come from Switzerland—this is colored cloths, but it gives the source—5,094,000 square yards. Great Britain—England, 7,790,000 square yards; Scotland, 2,954,000 square yards. The other importations, except from Japan, are comparatively small. From Japan we got 1,874,000 square yards of colored cloth.

Mr. GOODING. The point I wanted to make is that the figures of the imports from countries where they have a depreciated currency, which imports come in on the foreign valuation, do not show the real, true amount of imports, as far as volume is concerned, coming from those countries.

Mr. LODGE. That is true.

Mr. GOODING. They are even very much greater than what they seem, measured by the volume which comes in, which, of course, has the effect of the displacement of labor in this country.

Mr. LODGE. The currencies of Switzerland, Great Britain, and Japan are less affected than those of other countries.

Mr. GOODING. Yes; that is true.

Mr. LODGE. Mr. President, I have here the schedules showing the steady growth of these importations of cotton cloths from January, 1921, when they amounted to $1,724,000, to March, 1922, when they amounted to $5,702,000. They are steadily going up.

That means that the mills of New England, which are especially equipped to make these fine goods, are being deprived of business at the rate of about $60,000,000 a year, according to the present figures, and it would be almost disastrous if we should not give these fine goods some additional protection over the coarse goods. Of course, it is to duties on these articles to which the importers of foreign goods particularly are opposed. They are fancy goods; they have not a popular sale; and they are in the nature of a luxury. They are a perfectly reasonable subject for a revenue duty.

During the war the foreign cotton manufacturing industry was, of course, greatly disorganized, as all the industries of the European countries especially were; but it is getting back to normal in the countries I mentioned, and they are now making these large importations into this country.

It must be remembered that fancy cotton goods require a great deal of labor. Labor is a more important portion of the expenditure in the manufacture of cotton goods than in other goods. As the Senator from Utah said a little while ago,

where a man can run only one loom it is very much more expensive to make those goods than where one man can run 16 mules.

The samples to meet fashions have to be prepared and submitted to customers, and the actual cloth is only made as orders are received, so it frequently takes several months, perhaps the better part of a year, to start such a business. It is now getting established, and if the duties, which have been cut down by the committee already, are cut still further it will have a most disastrous effect on what constitutes a very valuable part of the New England industry of cotton spinning. I want to repeat what I began with, that there are about 124,000 people earning their living in the cotton mills of Massachusetts. That means that at least 300,000 people are dependent for their daily bread on the work of those mills.

I also want to repeat that those mills have run 93 per cent of the time, and employment has been given for that period, on the average, through the year, and if this were cut any lower than the committee proposes it would produce results in Massachusetts, and in New England generally, of the most serious kind. I have asked for no increases. So far as I am concerned, I have submitted to the reductions of the committee; but I do hope the Senate will not cut these duties any further, especially on the expensive, fine goods, which can perfectly well afford to pay the duties, and which are of enormous importance to the maintenance of the entire industry in the United States.

Mr. SMITH. Mr. President, I want to submit for the RECORD the total amount of imports and the consumption of cotton cloth for the calendar year 1921, giving the count of the yarns used in the composition of the cloth.

Figuring these imports in relation to American production, we import less than 1 per cent of the American production of all counts, and of the imports into this country less than 15 per cent are of the fine class of figured woven goods. This is a table gotten up by the Tariff Commission.

Mr. LODGE. If the Senator will allow me, he does not assume that the fine goods are made exclusively of fine yarns?

Mr. SMITH. I did not say anything of the kind. I gave the count of the yarns.

Mr. LODGE. It is almost impossible to get a proper classification of these things. I have been trying for some time to get it and to know just what composes the $60,000,000 worth of goods which have been imported from January, 1921, to March, 1922, and to find just what constitutes the $60,000,000 of imports is very difficult.

Mr. SMITH. At the customs, of course, under the provisions of our law, they have to take into account the count of the yarn.

Mr. LODGE. I know that, of course.

Mr. SMITH. According to these tables, it will be found that less than 15 per cent of the total is the woven, figured goods, and the total will figure out less than 1 per cent of the American production of cotton cloth. I ask to have the statement printed in the RECORD in connection with what the Senator from Massachusetts has said.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Imports for consumption of cotton cloth for calendar year 1921 (in square yards).

Mr. LODGE. I am very glad to have that table printed. Of course, $60,000,000 of importations of cotton cloths, I have no doubt, seems trifling to the Senator from South Carolina in comparison with the total manufacture, but taking $60,000,000 worth of cotton cloth from the manufacture of American mills is a very serious thing indeed.

Mr. SMITH. Mr. President, I do not care to enter into any discussion of the point made by the Senator from Massachusetts save to make one remark. The larger per cent of cloths which are imported, of the finer grade, are manufactured from cotton which we do not produce in this country. They are manufactured from the Egyptian cotton. Therefore the American manufacturer is hardly handicapped in that respect, because he has practically the same access to the supply of the raw material that the foreigner has. For the same reason, the American manufacturer has found it more profitable to manufacture the standard American type of goods, and he is preempting the markets of the world; and these finer goods, as was brought out the other day, are more of novelties and specialties than of any standard varieties.

The only effect of the imposition of this higher rate on cloths of that kind will be to raise the rate on approximately comparable goods in this country, for which we have no competitor in the world. I do not think any duty we might impose, or the absence of any duty, would affect the importation of the kind of goods of which the Senator from Massachusetts has spoken, because in any event we would have to let in free of duty the Egyptian cotton. We have seen fit to impose a duty upon that cotton, with a totally inadequate supply in this country, so that we shall have to pay a duty upon the importation of the cotton we desire to weave in competition with England, handicapping the American manufacturer to that extent, even if he desired to import the finer Egyptian cotton, and making it more difficult for him to meet the competition if he were in the field in that kind of goods.

My information is to the effect that these novelties and fine specialties are better prepared, and the fact is, perhaps, there is more profit in our manufacturing the other forms which take up practically all the spindles.

Mr. LENROOT. Mr. President, it seems very clear to me that the duty now proposed is illogical. It does not give any protection to the higher counts, and gives an excessive protection to the yarns of the lower counts. The Senator from Utah will correct me if I am wrong in the statement that if a cloth that is woven is dyed with vat dyes that cloth would not get a penny of protection under the amendment if it were No. 80. It would not receive one penny of benefit under this amendment. Am I correct or not?

Mr. SMOOT. No; with the maximum of 45 per cent it would not.

Mr. LENROOT. It would not get a penny of protection, but when we come down to a cloth of No. 55 it would get the full benefit of the 12 per cent. How can the Senator defend such a proposition as that?

Mr. SMOOT. I thought I showed the Senator that that is absolutely necessary.

Mr. LENROOT. How can the Senator defend giving an additional rate to a cloth of a low count and giving no additional rate whatever to a cloth of a higher count?

Mr. SMOOT. The Senator must know that they must be woven on a certain loom and in a certain way before that applies to them at all, and they are all novelties, no matter whether they are 40's or 60's or 80's. Many times novelties have a fine warp, and of course filling. Some of the very low counts of yarns are the most difficult goods to make. Nothing will be covered by this provision unless it has been woven in a certain way, and all these goods are novelties or specialties.

Mr. LENROOT. That is true, and if woven in a certain way, and if the count is as high as 80, the industry will get no benefit from this paragraph. If the count is as low as 60, it will get practically the full 12 per cent.

Mr. SMOOT. That comes from providing a maximum rate.

Mr. LENROOT. Certainly it does.

Mr. SMOOT. And the committee thought that a maximum rate ought to apply. In some of these counts, 120's and 160's, without the maximum rate the tax would run away above 45 per cent.

Mr. LENROOT. That is true, but if the cloth with a count of 80 does not need the protection, then a cloth of 60 does not need the protection. That is my point.

Mr. SMOOT. That would be true, but the count of 80 does.

Mr. LENROOT. But it does not get it under the amendment.

Mr. SMOOT. It will just about get it.

Mr. LENROOT. No; it does not get it at all under the amendment, if it happens to be vat dyed, and if it is not vat dyed the utmost it would get would be 5 per cent.

Mr. SMOOT. Yes; under my proposed amendment.

Mr. LENROOT. Not under the Senator's amendment.

Mr. SMOOT. Oh, yes.

Mr. LENROOT. I think if the Senator will read it he will see that it is not.

Mr. SMOOT. Oh, yes, it is.

Mr. LENROOT. Will the Senator read the amendment and see whether it is?

Mr. SMOOT. It reads as follows:

In addition to the duties imposed in paragraph 903, there shall be paid the following duties, namely: On all cotton cloths woven with 8 or more harnesses, or with Jaquard motions, or with drop boxes, or with lappet or swivel attachments, 12 per cent ad valorem for cloths containing yarns the average number of which does not exceed No. 30; exceeding No. 30, 15 per cent ad valorem. In no case shall the duty or duties imposed upon cotton cloth in paragraphs 903 or 905a exceed 45 per cent ad valorem.

Mr. LENROOT. The vat dyes are in paragraph 903.

Mr. SMOOT. But in the vat-dye provision it is named there as the addition.

Mr. LENROOT. I have it—

That when not less than 40 per cent of the cloth is printed, dyed, or colored with vat dyes, there shall be paid a duty of 5 per cent ad valorem in addition to the above duties.

That is not taken care of.

Mr. STERLING. Mr. President, where does the Senator from Wisconsin find the language which he just read?

Mr. LENROOT. At the top of page 124. As the amendment now stands, I insist that a cloth with a count of 80 will not receive one single penny under the committee amendment, but if it has a count of 60 it will get eleven and a fraction per cent, almost the full benefit of the amendment. That can not be justified. It is not logical, because if there is any additional duty that can be justified at all, it is justified upon the higher counts rather than the lower counts.

Mr. SMOOT. I do not know what more I can say in relation to these fancy cloths than I have already stated. I will assure the Senator of one thing, that as to some of the lower count yarns made in the fancy goods, they can not be woven unless woven by the dobby process or by a Jacquard loom, because of the fact that the twist in the thread is not sufficient and the thread not strong enough, on account of the soft twist, to be woven in the ordinary way. They have to be spun loosely when woven into certain cloth, because of the fact it would be impossible to get the finish otherwise. Those goods are included and are given a 45 per cent duty. I think they need it just as much as the higher count yarns in that particular class of goods.

Mr. LENROOT. The amendment is based on the additional cost for this kind of weaving, but does the Senator say a lower count needs it and that if the Jacquard weaving is a count of 80 it does not need it?

Mr. SMOOT. No, I would not say that; but so far as the higher counts are concerned if there was not a limitation the rate would be higher than 45 per cent and the committee decided 45 per cent ought to be as high as the rate should go.

Mr. LENROOT. That is just the point.

Mr. SMOOT. But the goods the Senator complains of, if the maximum was not put in, would reach about 45 per cent.

Mr. LENROOT. I took the count of 60. I got it from the Senator's expert that with the count of 60 it would just about absorb the 12 per cent, but on the count of 80 it would not get one penny of the 12 per cent.

Mr. SMOOT. I am aware of that. It would actually amount to 45¾ on the 60, but, of course, the limit would take off the three-fourths of 1 per cent on the 60 count. After that there would be no more than the 45 per cent straight duty upon the balance of the cloth in that paragraph.

Mr. LENROOT. That is why I insist that if the manufacturer of cloths with a count of 80 does not need or is not to receive any benefit from this paragraph, the manufacturer of the lower count ought not to receive any benefit from it. There ought not to be any such discrimination as is proposed by the committee amendment.

Mr. SMOOT. I want to say again that as to the class of goods woven in this way with the low count yarns, they are quite different on the low count yarns woven into a plain piece of goods. The finish is different; it is more difficult to finish them than it is with the hard twist thread, no matter whether it be 80 or 100. Forty-five per cent is not too much and I think it is as high as we ought to go on any kinds of goods, whether 100 or 120 count.

Mr. LENROOT. I am not objecting to making it 45 per cent, but it should be graded down so as to have a logical progressive rate.

Mr. SMOOT. With our proposed amendment the 120 yarn does not receive a particle more protection than the 80 yarn.

Mr. LENROOT. I understand that.

Mr. SMOOT. So we think that 45 per cent will perhaps cover everything. In fact, we should not have a higher rate, in my opinion, than 45 per cent, although the manufacturers differ with me on that point.

Mr. LENROOT. Mr. President, I insist again that upon the higher-count cloth, where it is admitted and insisted through the whole debate that a very liberal duty is justified upon the finer counts, the committee now takes the position that no additional protection shall be given upon the finer counts, but a very great and substantial increase shall be given upon the lower counts. That is the position in which the committee finds itself.

Now, Mr. President, it seems to me that if the Senator from Utah would be logical, or if the committee would be logical, they might exclude the vat dyes from the maximum and then give 5 per cent all the way through, which would give a 5 per cent protection upon the finer count yarns and a 5 per cent protection upon the lower-count yarns in addition to the rate upon the countable cloth. Whenever it is proper to do so I shall offer an amendment to that effect, reducing the rate from 12 to 5 per cent. However, I understand the amendment has not been formally proposed.

Mr. SMITH. Then, would the Senator propose to strike out "vat dyes" where the words occur at the top of page 124?

Mr. LENROOT. That is merely a suggestion to the Senator from Utah. I shall let him take care of that as he sees fit.

Mr. SMOOT. I hope the Senator will not do that. I will say frankly that in my opinion it would be unjust to do it. Our competition is entirely between sixties and eighties. That is where the competition of goods comes in. Those are the numbers of goods that come in here and which have shown the immense increase in the last four months. It is not the low-count ordinary goods, but it is the goods between sixties and eighties.

Mr. LENROOT. We have increased the duties upon counts in the countable-cloth paragraph upon that very basis and because of that situation.

Mr. SMOOT. That is the situation, I will say to the Senator.

Mr. LENROOT. I understand that.

Mr. SMOOT. And whatever change is made would be hitting the very goods that are coming in here in great quantities now. If they continue for the balance of the year as they came in during the first four months of this year, there will 197,000,000 square yards come in during the calendar year 1922.

Mr. LENROOT. When we see, as we do in the bill, that upon those counts over 80 the rate shall not be less than 40, or not less than 45 if dyed with vat dyes, it seems to me that we have gone pretty far and as far as can be justified in the matter of protection.

Now, Mr. President, I want to say a word with reference to what the Tariff Commission said about the whole subject. It is the only authority that I have. I do not pretend to have any personal knowledge of this matter except such knowledge as I have gained through two tariff revisions upon the cotton schedule. I have paid a good deal of attention to this schedule whenever we have had a tariff revision. I have relied necessarily upon reports from the Tariff Commission. I want to read just a paragraph from the report of the commission upon the Jacquard woven fabrics. The Tariff Commission in its survey upon this subject said:

In fancy weaving the dobby attachment is widely used, but its range is limited, since it works with harnesses, and all threads governed by a harness must rise or fall at the same time. The utmost limit is possibly 40 harness, thus dividing the total warp threads into not more than 40 groups. In practice the dobby is rarely used for work requiring more than 24 harness, and in recent years the Jac-

quard has become such a common attachment that it is often employed for typical dobby fabrics of less than 24 harness construction. One reason for its use on "dobby goods" is that its method of operation puts less strain on the yarn. Jacquard looms producing the most elaborate designs have to be operated very slowly, but on less elaborate designs they can be run at good speeds and produce about as cheaply as the dobby.

This is the important point:

There is, therefore, to-day not much object in having, as has sometimes been suggested, a differential on Jacquard-woven fabrics as distinguished from the general run of woven-figured fabrics.

That is what the Tariff Commission said about it, and of course that is why I take it for granted that the House made no special provision for a cumulative duty upon this class of woven fabric. We find from the hearings that the suggestion came, and all the information that the committee had concerning it apparently came, from Mr. Lippitt, who drafted the provision. I want to correct, however, what I stated some time ago to the effect that the committee adopted it exactly. They did eliminate the "more than one color" proposition and the "more than one number" proposition.

Mr. SMOOT. That is all Mr. Lippitt was really fighting for, and if there was any joker at all that is what it was.

Mr. LENROOT. If that is all Mr. Lippitt ever intended to have, then I want to suggest that under Mr. Lippitt's theory the paragraph is not necessary.

Mr. SMOOT. I want to say it was all, with what follows: Of course, when that provision was stricken out, then there was nothing to the proposition at all. The Senator knows the House provided for a high duty upon cloths woven with eight or more harness.

Mr. LENROOT. Yes; on certain cotton sateens. No such provision as this has been found in any previous tariff law. It was not found in the Payne-Aldrich law. The additional duty that would be imposed, so far as I can figure it from such figures as we have—and we can not tell exactly, because these are not stated in the present Underwood law——

Mr. SMOOT. The Senator, however, must know that under the Payne-Aldrich law it was not necessary, because under that law there was a progressive value per yard.

Mr. LENROOT. That is just the point I was coming to.

Mr. SMOOT. That has been cut out of this bill, and I think more than likely that it is the best way to handle the cotton schedule. I do not see any other way. I think it is better to cut out the value per square yard and put it in upon the classes of goods as to their weave than to try to take it on the basis of value per square yard.

Mr. LENROOT. Can the Senator tell me what he thinks is the average value per square yard of this weave that is imported?

Mr. SMOOT. Does the Senator mean the cost per square yard for weaving?

Mr. LENROOT. No; I mean the value of the imported goods of this character. What will it run?

Mr. SMOOT. It would be an absolute guess on my part. I could not say.

Mr. LENROOT. The only information I have is where they are all put together, the woven and the dyed and the printed. If the Senator has any information as to what that value runs, I would like to have it.

Mr. SMOOT. I can tell the Senator what it was per pound, but I do not know about the rate per square yard, although I could give some estimate if the Senator wants that. In fact, I can take the samples and tell the Senator about what certain samples run that we have.

Mr. LENROOT. All right; let us have that on the low count.

Mr. SMOOT. On No. 44 it was $1.51 per pound. Under the Payne-Aldrich law it was only 53 cents a pound. It runs all the way in that group from sample 44 down to sample 56, and sample 56 is $4.74 a pound.

Mr. LENROOT. Is there anything by the yard?

Mr. SMOOT. I am sorry to say to the Senator that that information has not been furnished.

Mr. LENROOT. I will not trouble the Senator further. I will simply say that, taking the classification as it comes in, which includes all woven goods of the character here proposed to be affected, the average rate was 34 per cent per square yard in 1921. That would mean a specific additional rate of 4 cents per square yard. Under the committee amendment the rate per square yard is double that imposed by the Payne-Aldrich law. That was the only point which I wanted to make.

Mr. SMOOT. And I think the price also is more than double.

Mr. LENROOT. It may be, but I am simply stating the facts.

Mr. SMOOT. I am quite sure that the price is more than double.

Mr. LENROOT. Mr. President, I have examined the hearings and there is not one word of information which I can find recorded therein concerning the difference between cost of production at home and abroad for this additional weave.

Mr. SMOOT. I am handed a compiled statement as to these cloths; and the price of the cloth which I referred to, I will say to the Senator, is 77.51 cents per yard.

Mr. LENROOT. Very well. The 77.51 cents per square yard would mean, under the proposed committee amendment, an additional duty, then, of about 9 cents per square yard, which is more than four times the rate per square yard which is imposed by the Payne-Aldrich law.

However, Mr. President, I am not going to discuss the matter further. The committee admits that the higher count yarns, an 80-count yarn, for instance, will receive no benefit whatever from this paragraph, but when it comes to the lower counts they will get the full benefit of it. It has been admitted all the way through the debate that it was the higher counts which needed protection.

As I have stated, I shall, when the opportunity offers, move to reduce the proposed rate from 12 per cent to 5 per cent; and I am not at all satisfied, Mr. President, that we should on these cloths have any duty.

Mr. SIMMONS. Mr. President, I do not wish to enter into any technical discussion of this matter, but I think section 905a is one of the most ingeniously constructed paragraphs that ever crept into a tariff bill with purpose to extort a high rate of protection upon articles which are consumed by the people. The first clause of that paragraph adds 12 per cent to the standard duty already imposed upon cotton cloth if it is of a coarse number, and if it is of finer number it adds 15 per cent ad valorem. The paragraph provides that the additional rates, which in themselves are very high duties, shall be added to the standard duty in the case of "all cotton cloths woven with eight or more harnesses, or with Jacquard motions, or with drop boxes, or with lappet or swivel attachments."

So you will get it going and coming; and it will be very difficult to escape these additional duties, because every process by which cloths may be artificially embellished or slightly changed from the standard method of making is embraced in these several provisions; and practically I think this language would apply to more than half the cloths which are manufactured, because the provision is so arranged that it catches the coarse grade and the fine grade alike, the only difference being that on the coarser grades the additional duty is 12 per cent and on the finer grades the additional duty is 15 per cent. Somebody most skilled in the drafting of highly technical provisions must have drafted that. It is stated that Mr. Lippitt drafted it. Well, I suppose there is hardly a more skillful draftsman of technical provisions designed more or less to screen the real intent than Mr. Lippitt.

Mr. President, the next clause of the paragraph is also very ingeniously constructed. The additional rates, amounting to 10 per cent in each case, relate to different characters of cloth, to different manufactures. First the language reads:

There shall be paid on all yarns finer than No. 60—

That is, this additional sum is to be paid on the yarns—

and on all yarns finer than No. 60 contained in threads and cloth—

The committee provides not only for the duty on yarns where the yarn has been worked up into cloth, but they follow it into the cloth and impose a duty on yarns in the cloth or the threads—

if constituting more than 10 per cent in weight of such threads or cloth, 10 cents per pound.

That is, if these fine yarns constitute more than 10 per cent in weight, then this extra duty is to be imposed. Ordinarily when an extra duty has been imposed for some specific reason, having relation to the raw material in the finished product, it has been referred to as the "component material of chief value"; but we do not use that language in this case.

Mr. SMOOT. The Senator does not quite understand the language or else his argument does not apply to it.

Mr. SIMMONS. I think I understand what I am talking about, and I do not require any information from the Senator from Utah. The Senator from Utah may not understand my argument; probably he does not.

Mr. SMOOT. That may be; but I want to state to the Senator that unless there is 10 per cent in weight of such threads the duty does not apply and if there is 10 per cent and over it applies only to the amounts that are contained in the cloths.

Mr. SIMMONS. The provision reads:

If constituting more than 10 per cent in weight of such threads or cloth——

Mr. SMOOT. If they are less than that, no account is taken of them at all.

Mr. SIMMONS. Oh, certainly, that may be so; but I am not concerned so much about that. I was merely calling attention to it as a very remarkable illustration of the windings in and windings out of these two provisions, but always winding in or winding out so as to catch the victim, who is the consumer of the product. Then the clause adds:

And on all laps, sliver, and roving—

Mr. President, after imposing outrageous duties upon the plain cloth, if there is anything unusual in it because of the process of manufacture or in the materials of warp or filling an extra duty has to be paid. If there happens to be in it a little Egyptian cotton it will have to pay an extra duty; if there happen to be some dyes in it, it has got to pay an extra duty; if it is manufactured with an automatic motion or Jacquard motion it has got to pay an extra duty; if it is woven with eight or more harnesses it has got to pay an extra duty; if it uses the drop-box attachment, which I understand is a very simple process and one which is used extensively, it has got to pay an additional duty. If a lappet or swivel attachment has been employed, the cloth has to pay an extra duty. These are ordinary processes. Jacquard motions, drop boxes, and all that are ordinary machines. A duty has to be paid on the cotton cloth when it is made out of our short-staple cotton—our own short-staple cotton, which is grown down in the South and which is the finest cotton in all the world, Mr. President; not the finest fiber, but the best material for the manufacture of cloth; and if it has anything in it besides that pure cotton, whether it is dye or some other coloring matter, it has to pay an extra duty; and then for every little attachment that may be used in its manufacture in supplementing the regular machinery out of which this cotton is manufactured you propose to attach an additional duty of 12 or 15 per cent.

We have in this country probably the finest cotton machinery in the world. All of these different processes of manufacturing that are referred to here, and the use of which is made the excuse for adding 12 and 15 per cent duty to the cotton, have been in use for many years. According to the Senator from Massachusetts the Jacquard process has been in use since 1835.

The drop-box process has been in use from time immemorial. They have the machinery. The labor is not increased. The duty is added simply because they use these additional attachments that they have always used and have been using almost from time immemorial. I suppose it is for the wear and tear on these little attachments that they want the consumer to pay an additional duty of 12 or 15 per cent. Nobody has said that it requires any extra labor cost. Just because they use an ordinary, old Jacquard attachment that has been in use in this country since 1835, according to the Senator from Massachusetts, or the drop-box process, they must pay 12 or 15 per cent additional.

Again, Mr. President, here are laps, slivers, and rovings:

On all laps, sliver, and roving, and on all yarns coarser than No. 60—

After you have imposed duties on all these kinds of cotton, why is it necessary to go back and pick out the laps and the rovings and the slivers and put on an extra tax of 10 cents on account of that? That is what has been done, however.

On all laps, sliver, and roving—

That includes all the laps and the slivers and the rovings, all of them, whatever the quality may be—

and on all yarns coarser than No. 60 contained in threads and cloth, if containing cotton of 1⅛-inch staple or longer, 10 cents per pound.

Think about that. In the case of those cloths and those coarse yarns, coarser than No. 60, according to this, if there happens to be a fraction of 1 pound either of Egyptian cotton or of American long-staple cotton of a staple measuring 1⅛ inches or longer, there is an additional duty of 10 cents per pound. The Senator from Utah nods his head. It reads:

On all yarns coarser than No. 60 contained in threads and cloth, if containing cotton of 1⅛-inch staple or longer, 10 cents per pound.

Does the Senator mean to say that it is all made out of that? If so, then he ought to change the language.

Mr. SMOOT. No; the Senator does not have to change the language. The Senator says that unless there is 10 per cent of it they do not get anything, and if there is more than 10 per cent they pay whatever there is in it.

Mr. SIMMONS. There is no limitation there as to 10 per cent as there is in the other part of the section. There is a limitation in the first part reading as follows:

If constituting more than 10 per cent in weight of such threads or cloth, 10 cents per pound.

But that does not relate to the second section as it does to the first section of that paragraph.

Mr. SMOOT. Then it will have to be all——

Mr. SIMMONS. The Senator is not going to put anything over on me. I will tell him that. If he thinks it means that, let him add it to his bill. I say it does not mean that. I say it means that if there is any cotton of this staple in there, 10 per cent additional tax is imposed.

Mr. President, I had not intended to enter into any elaborate discussion. The Senator from Wisconsin [Mr. LENROOT] has read what the Tariff Commission says of the Jacquard loom. It is just about what cotton manufacturers in my State have said to me, that there is absolutely no justification for adding these duties on account of the use of the Jacquard process or these other processes. The Tariff Commission is right. It is just another excuse for getting more duty and subsidy. It was thought to be entirely out of reason to demand a duty of 47 per cent or 49 per cent on these cotton goods, and hence they have cast about to see by what devices and by what ingenious schemes, worked out by the best brain among that crowd in the industry, they could by hook or crook get their protection increased away beyond the point of necessity. It is not because they need it to protect themselves against competition, because in many instances there is no competition at present. The present duties are sufficient to protect them against foreign competition. It is because they want to increase their prices, and they can not increase their prices above the present high level without inviting foreign competition unless they can by hook or crook get some more duty. It does not mean anything but more profits. That is what they are after, higher prices, and they are being aided by the committee in these schemes to obtain additional tariff duties which they do not need to protect them against any importation under present conditions, but that are designed to protect them against the danger of foreign competition in case they should further raise their prices.

Mr. President, I have taken the duty on ginghams. That is an average, I believe, of 48 per cent. The initial duty would be 30 per cent. Under this section the duty added would be 12 per cent. That is 42 per cent. Then add the dye duty, and you have 5 per cent more. That would raise it above the maximum. It could not go higher than 45 per cent; but the compensatory duty on account of the Egyptian cotton is not embraced in that limitation, and the compensatory duty according to the calculation that I have here, made by the expert, would amount to 4 per cent if there was Egyptian cotton used in the cloth, which, added to the 45 per cent, would make 49 per cent, as against 20 per cent under the present law.

Mr. President, how can such a duty as that be defended upon the coarse and upon the fine cotton goods alike that are produced here, in view of the fact that three-fourths of all the cotton that we use in this country is not imported at all? The importation is confined to about one-fourth of the cotton that we produce in this country, and it has never been overwhelming as to that.

In these circumstances, Mr. President, there can be no excuse for putting these high duties upon cotton cloths and cotton yarns. Cotton cloths are used more extensively by the people of this country than any other fabrics known. They are used in the clothing worn by all of the people, the young and the old. Nobody is exempt from the necessity of using cotton cloths for the purpose of clothing his body, and they are used in the home in all sorts of ways. The use of wools and the use of silks and the use of linens are merely supplementary. The staple, fundamental fabric upon which the people of the United States rely to meet their daily needs for clothing and for household purposes is cotton fabric. We make cotton goods in this country cheaper than they are or can be made anywhere else upon the face of the earth. We have the raw material; we have the machinery; we have skilled laborers; we have an efficiency not surpassed in the world, and we are not surpassed in price anywhere in the world for the classes of goods that we produce and the most of these goods that we are importing; and those imports which are made the excuse for imposing these high duties upon all cotton goods are novelties or classes of goods that are not produced in this country at all.

There is no excuse for it, Mr. President. It is an outrage upon the people of America; and it illustrates the fact that all that some man of commanding influence in the industry—like Mr. Lippitt in the case of cotton or Mr. Wood in the case of wool or Mr. Littauer in the case of gloves—has to do is to come down here and make a demand, and his demand is met. It is met in a way which in my judgment the people of the United States are not going to stand for and ought not to stand for.

If Senators on the other side could have gotten this bill through quickly, Mr. President, as they thought they would when they first brought it in here, when we were told that they

were ready to vote without talking, the people never would have discovered what was in it, and they might have suffered and borne the burden of it for years without realizing just how and the extent to which they were being taxed. But we have advised them, and we are advising them now from day to day, and we are going to continue to advise them until we get through with these schedules, especially those which relate to the necessities of the people, things which protect the people against the cold and saves them from starvation. The people are going to be advised about it, and when they are advised about it, if this bill passes carrying these high rates the Republican Party is going to hear from it, and hear from it in a very emphatic way.

Mr. President, the majority have not been able to do this thing as quickly as they wanted to, as quickly as they had calculated upon, before the people found out what they were doing to them, and what they were putting over on them. They have not been able to get it through so quickly. This is a sort of a "get-there-quick" administration. They were going to "get there quick" in the passage of this tariff bill before the people found out much about it. They were going to "get there quick" about the passage of the ship subsidy bill, and all that sort of thing. It is a "get-there-quick" administration, with apparently no capacity to get anywhere except in the mud.

The PRESIDING OFFICER. The question is on agreeing to the amendment, on page 125, to strike out lines 3 to 9, inclusive, in paragraph 905.

The amendment was agreed to.

The PRESIDING OFFICER. The Secretary will state the next amendment.

The READING CLERK. The next amendment is, in paragraph 905a, page 125, line 12. The committee proposes to modify the amendment by inserting, in line 13 after the word "cloth" and before the comma, the words "in paragraph 903," so that it will read:

In addition to the duties imposed upon cotton cloth in paragraph 903 there shall be paid the following duties—

And so forth.

Mr. SMITH. Mr. President, the Senator from Wisconsin [Mr. LENROOT] intimated to me that he has an amendment he desired to offer to the amendment, and before the vote is taken I think he ought to be notified. I call attention to it because he made the argument upon the ground that you do have a duty in paragraph 905 on these identical cloths, a differential in favor thereof of 10 per cent.

Mr. SMOOT. The Senator from Wisconsin gave notice that he wanted to move to strike out "12" in line 16 and to insert "5." I suppose he is down at his lunch, or he may be detained from the Senate by some other cause. I suggest the absence of a quorum. That will give him time to get into the Chamber.

The PRESIDING OFFICER. The Secretary will call the roll.

The roll was called, and the following Senators answered to their names:

Ashurst	Hale	McKinley	Shields
Ball	Heflin	McLean	Simmons
Broussard	Hitchcock	McNary	Smith
Bursum	Johnson	Moses	Smoot
Calder	Jones, N. Mex.	New	Spencer
Capper	Jones, Wash.	Nicholson	Stanley
Caraway	Kellogg	Oddie	Sterling
Curtis	Kendrick	Overman	Townsend
Dial	Keyes	Pepper	Trammell
Edge	King	Phipps	Underwood
Ernst	Ladd	Pomerene	Walsh, Mont.
Fernald	Lenroot	Ransdell	Warren
Glass	Lodge	Rawson	
Gooding	McCumber	Sheppard	

The PRESIDING OFFICER. Fifty-four Senators having answered to their names, a quorum is present. The Secretary will state the next amendment.

The READING CLERK. The next modification appears in paragraph 905a, where the committee proposes to modify the amendment on lines 16, 17, 18, and 19 by striking out, beginning with the word "for" in line 16, the following words:
